MARAVILLA COCOA.

TAYLOR BROTHERS (the largest Manufacturers of Cocoa in Europe), having the EXCLUSIVE Supply of this UNRIVALLED COCOA, invite Comparison with any other Cocoa for Purity—Fine Aroma—Sanative, Nutritive and Sustaining Power—Easiness of Digestion—and especially, HIGH DELICIOUS FLAVOUR. One trial will establish it as a favourite Beverage for breakfast, luncheon, and a Soothing Refreshment after a late evening.

N.B. Caution—"MARAVILLA" is a registered Trade Mark.

MARAVILLA COCOA.

"The *Globe* says, "TAYLOR BROTHERS' MARAVILLA COCOA has achieved a thorough success, and supersedes every other Cocoa in the market. Entire solubility, a delicate aroma, and a rare concentration of the purest elements of nutrition, distinguish the Maravilla Cocoa above all others. For Invalids and Dyspeptics, we could not recommend a more agreeable or valuable beverage."

For further favourable opinions vide *Standard, Morning Post, British Medical Journal*, &c., &c.

HOMŒOPATHIC COCOA.

This original preparation has attained a world-wide reputation, and is manufactured by TAYLOR BROTHERS, under the ablest HOMŒOPATHIC advice, aided by the skill and experience of the inventors, and will be found to combine in an eminent degree the purity, fine aroma, and nutritious property of the FRESH NUT.

SOLUBLE CHOCOLATE.

MADE IN ONE MINUTE WITHOUT BOILING.

THE ABOVE ARTICLES are prepared exclusively by TAYLOR BROTHERS the largest Manufacturers in Europe, and sold in tin-lined packets only, by Storekeepers and others all over the world. Steam Mills, Brick Lane, London.

EXPORT CHICORY MILLS, BRUGES, BELGIUM.

(309)

EASTERN BENGAL RAILWAY.

NOTICE.

WEEKLY Communication by Railway and Steamer between Calcutta, Dacca and Naraingunge for Sylhet, Cachar, Tipperah and Eastern Districts.

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7-30 A. M. or 8 P. M. Train on the Saturday preceding the departure of the Steamer, and goods for despatch should be delivered at the Sealdah Terminus before 3 P. M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. Railway, Agent's Office, 17th November, 1873. } FRANKLIN PRESTAGE, *Agent.*

(218)

EASTERN BENGAL RAILWAY CO.

Fortnightly service to Chuttuck for Sylhet and Cachar.

A Steamer and Flats plying in conjunction with this Railway, will, until further notice, perform the service to Chuttuck for Sylhet and Cachar regularly every fortnight, instead of every third week as formerly commencing as from Sealdah on Saturday the 17th instant.

Goods for despatch by this route will be received at the Sealdah Terminus.

Full particulars as to the dates of departure, rates and fares, &c., may be obtained of the Enquiry Officer Sealdah Terminus, or of the District Agent at Dacca and Naraingunge.

Agent's Office, 6th October, 1874. } (Sd.) FRANKLIN PRESTAGE, *Agent*

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼-lb. and 1-lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, AND 170, PICCADILLY.

Works—EUSTON ROAD and CAMDEN TOWN.

Makers of Epps's Milky Cocoa (Cocoa & Condensed Milk).

LIGHT-BROWN COD LIVER OIL

GOLD MEDAL OF MERIT

LEOPOLD I ROI DES BELGES

PRESENTED BY THE KING OF THE BELGIANS

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHEBY,
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. DE JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

General Debility and Emaciation.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, Esq., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility, I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed. I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents, the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and, from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who, in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., Esq., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion of DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now, when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

The Wasting Diseases of Infancy and Childhood.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hope of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary transition to a state of normal health.

THOMAS HUNT, Esq., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold **ONLY** in bottles sealed with a metallic capsule impressed with his stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD, and Co. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

IMPERIAL Half-Pints, 2s. 6d. Pints, 4s. Quarts, 9s.

Sole Consignees—ANSAR, HARFORD, and Co., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

THE WEEK.

THE reception given to His Excellency the Viceroy by the people of Delhi has been most enthusiastic and hearty. The procession into the city and subsequent durbar appear to have been very imposing, and we have every reason to believe that Lord Northbrook has been much gratified by the welcome given him. The elephant procession has been so well sketched by a correspondent of the *Pioneer* that we publish an extract from the letter to that journal amongst our "selections." The Viceroy's elephant was conspicuous by its enormous proportions and splendid trappings. At a distance of thirty paces the other elephants came two and two abreast. On the first two were Mr. Aitchison, Foreign Secretary to the Government of India, and the Maharajah of Puttiala. Then followed a long retinue of Nawabs and Rajahs, among whom was an interesting little fellow, the Prince of Chamba, who is only eight years old. Mr. A. C. Lyall, the Governor General's Agent for Rajpootana, led the Rajpoot procession.

AFTER a succession of brilliant pageants, banquets and parades the *tamasha* at Delhi culminated on Tuesday in a Grand Durbar, when the Viceroy, in a speech from the throne, referred to the prosperity of the Punjab, the increase of trade and the diminution of crime. A special telegram in the *Indian Daily News* thus epitomises the address: Lord Northbrook observed that the "province had been firmly administered by the Lieutenant Governor; and the native states well governed by representatives of the princely houses present. A treaty of friendship and commerce had been concluded with the Ameer of Kashgar, which, with the co-operation of Cashmeer, would benefit trade. The opening of a new commercial route to Afghanistan promised success. He referred to the value of railway communication during the late distress in transporting grain in Bengal and Behar; to the construction of the railway through Scinde to Kurrachee, which would afford an additional outlet for the Punjab trade; to the strengthening of the civil administration of the Punjab; to the Baroda case, and the necessity for inquiry; expressing satisfaction that the Maharajahs of Gwalior and Jeypore had served on the Commission; to the difference between the British Government and the King of Ava, and to Sir Douglas Forsyth's deputation to Mandalay. The question had assumed a serious aspect, but he trusted that it would be eventually amicably settled. His Excellency concluded with thanks for the loyal reception he had met with, and with the announcement that the Prince of Wales would visit India next winter." The Viceroy will visit the Kootub Minar to-day and return to Delhi on Friday.

THE speeches of Counsel before the Baroda Commission having been completed, Sir Richard Couch and the other Commissioners are busily engaged reviewing the evidence and considering their verdict. Serjeant Ballantine and his son left for England by Mail Steamer on Monday. The former has roused quite a strong feeling of admiration among the educated natives of every part of India. They have read his address to the Commission with great delight, and even the women of the country have shown a keen interest in it, husbands translating it to their wives, &c. The general idea is that he has more than earned his heavy fee.

ON Friday last His Honour the Lieutenant Governor gave a garden party of a unique kind at Belvedere; the visitors assembled at half past 9 o'clock in the evening, and in the beams of a bright moon promenaded the spacious garden of the house, which was rendered an enchanting rendezvous by lamps, flambeaux, awnings and a band of music. The effect was fairy-like, especially that of a group of Chinese lanterns partially concealed in a bed of ferns. The taste of a true artist was apparent in every detail, and the guests were highly delighted, the more so as Sir Richard and Lady Temple "did the honours" most graciously.

A contemporary has brought to notice the good service rendered to Madras by Colonel Walker, the Secretary to Government in the Public Works Department, in connection with the harbour scheme. It is undoubtedly true that he gave Mr. Parkes every encouragement and assistance when that Engineer first visited the place for the purpose of reporting on its capabilities. But it would be wrong to overlook the fact that the chief credit in connection with the whole affair is entirely due to Lord Hobart, who took up Mr. Parkes' scheme with surprizing energy and heartiness. We feel the greater pleasure in calling attention to the fact that Lord Hobart has really initiated a great work which will honourably associate his name, for all time, with the Government of Madras, inasmuch as we have unhesitatingly condemned the bestowal of his patronage. It is to be hoped that his Lordship, who is a truly good Governor and is most desirous of benefiting his Presidency, may succeed in obtaining a tramway extension of the Madras Railway to the summit of the Neilgherries.

THE *Times of India* imputes the hostility to Colonel Browne's Mission on the part of the Chinese to the belief that they were friendly to the Panthays, the Chinese being heavily bribed by the Court of Mandalay and the Chinese merchants of Upper Burma to arrest the progress of the party at any cost. Our contemporary anticipates that the conduct of the Chinese officials will be repudiated at Pekin, and that a sufficient force will be sent from Talifu to coerce them, and enable Colonel Browne to continue his mission. "On the present occasion, as the approach of the English party was known and expected, it unquestionably devolved on the Pekin Government to have adopted every precaution in order to secure the safety of the strangers. Possibly the recent death of the Emperor may have had something to do with the remissness which has been shown."

THE arming of the native army of the Bombay Presidency with the Snider rifle is now being rapidly proceeded with. In addition to the 7th and 9th N. I. the 5th, 6th, and 14th N. I. will shortly be supplied with this weapon.

WE learn that a circular has recently been issued by Government to several officers of the Public Works Department, giving them the option of accepting service, on increased pay, under the District Road Cess Committees in the Mofussil, and intimating that the service is quite distinct and separate from that of the Public Works Department, and does not entitle to pension, unless members of the service contribute one-fifth of their salary towards it. Officers accepting the service will be allowed to return to the department, if they so desire, on the same pay which they were in receipt of when they left it, and promotion, or increase of pay, may be given, on their return, if a favourable report of their service under the District Committees is obtained.

ON Saturday last at the Meeting of the Bengal Legislative Council the Mahomedan Marriage and Divorce Registration Bill was once more discussed. In consequence of a memorial from certain inhabitants of Behar, an amendment was proposed with the object of excluding Behar and Orissa from the operation of the bill, until it should be expressly extended thereto by the Lieutenant Governor. The memorial, however, not being before the Council, some exception was taken to the amendment, and its consideration was postponed until the next meeting. The interpretation of the term *purda nusheen* was slightly extended, so as to include women, who, according to the custom of the country, might reasonably object to appear in a public office. The other amendments

adopted were of an unimportant character. There would appear to be a good deal of opposition to this Bill among the class solely affected, and it becomes a serious question whether the measure ought not to be abandoned.

DR. SHORTT, of Madras, the Superintendent of Vaccination in that Presidency, is about to start for Europe on furlough. In his absence Dr. Benson will take charge of the office. Dr. Shortt is the *savant* whose researches in regard to snake-poison have attracted so much attention from their boldness and thoroughness; but it is not only as a naturalist that this eminent man has become famous. He has been highly successful in more than one branch of science, and has promoted vaccination very greatly by a skilful administration of his department.

THE following address delivered by His Excellency the Commander-in-Chief to the Buffs, on the occasion of his presenting to the regiment a prize cup for good shooting, is a capital specimen of military eloquence; it has, however, the much greater value of distinctly enunciating the principle, that it would be unwise of Great Britain to abandon its regimental system, an idea entertained by many military critics whose views cannot carry anything like the same weight as Lord Napier's.

Major Morley, Officers, Non-commissioned Officers, and men of the Buffs—it has given me much pleasure to comply with your request that I should present in person the prize for good shooting, which you have so honorably won. The consideration that the prize has been carried off from many regiments of such high character for shooting as those with whom you have competed, about three thousand, seven hundred men having competed for it must ever be a source of great satisfaction to you. A prize so hardly fought for, and won by no easy victory will be a lasting memorial of your prowess. The change which has taken place in the weapons of war since the time, three hundred years ago, when the Buffs stood beneath their colors, is great indeed. The battle-axe, the sword, and the pike, are very far away from the beautiful weapon which you now use so well. Your prize is the more valuable, because it was not won by any lucky shooting, but was the result of your steady high figure of merit for successive years, a result alike creditable to your Commanding officer, Colonel Cox, and to the officers who have trained you, and the men who have so profited by their teaching. What the weapon of the day may be, when the next three hundredth anniversary of the Buffs arrives, we can hardly imagine; but tender-hearted people may find consolation in the fact, that the wars of the present day are much less bloody than they were when people always fought hand to hand with ruder weapons. I consider a good, well-commanded well-drilled, and well-conducted British Regiment, such as yours, the most perfect combination of nature and art. I do not believe that there is in any other country so perfect a military machine as a good British Regiment, and I trust that when the next three hundredth anniversary of the Buffs may arrive, the British Regimental system may remain unchanged, and that your colours, which you have so valiantly and gloriously carried over so large a part of the world, Europe, Asia, America, and the West Indies, may still wave over the Regiment. You will, I am sure, always remember that you have the high character of three hundred years to maintain; and that the best conducted, obedient soldier, is always the best soldier in the field. I wish the Regiment every future success.

ARJOON, the Trinidad immigrant who runs race horses in the West Indian colonies, would seem to be always coming to the front, for we have just received further news of him. He has recently ordered from this country a cup which he intends to present as a prize to the winner of one of the races to be run at the next Trinidad Meeting. Nineteen years ago this man sailed from Bengal utterly penniless. A Hindoo contemporary is of opinion that a coolie of so much energy would have done equally well by remaining here; but we are quite certain he would not. If Bengal offers such a field as our contemporary imagines, how was it that the man was ever driven to emigrate at all?

A correspondent asks whether the Government of India has made any arrangement for an observation of the total eclipse of the sun on the 6th proximo at the Nicobar islands. We are glad to say that such an arrangement has been made, and that the task has been confided to a thoroughly capable man, Professor Pedlar, of the Presidency College, Calcutta.

THE *Indian Daily News* makes the following pertinent observations on the Madras Salt Act—"We cannot think that the Viceregal Council has done itself much credit by passing the bill for the enhancement of the salt duties in parts of Madras. We had hoped that any alteration in the present law would have been made in the opposite direction. The salt tax in one sense is a reproach to the British Government. It is a tax on a first necessary of life, a thing unknown in most civilized countries, though it may be almost necessary in a country like India. It is enormously high, being in Bengal, according to the official report, 'from 500 to 2,500 per cent. on the cost of production at different places.' It is most unequal, as it is equivalent to an income-tax of three per cent. on the ordinary labourer, while it is hardly felt by the well-to-do classes. It is so levied as to interfere with the preservation of wholesome food, as the salting of fish in Orissa, and to necessitate the keeping up of costly and vexatious lines of customs between province and province. In fact, it is bad in its principle, and bad in its working. We do not say it should be abolished, because the money it produces is wanted, and we might find it difficult to raise it in a better way. It is often better to retain an old bad tax than to impose a new good one. But we certainly think that it should never be increased."

THE London Missionary Society's report on the Mirzapore and Singrowlee Missions during the year 1874 has reached us. We are sorry to learn that there has been no "accession" during the period under review. One odd result of the famine is recorded; it is given as follows. "The English fortnightly service, held on Thursday evenings in the Institute Room of the Railway Station, has been persevered with. During the early months of the year the attendance somewhat fell off in consequence of the increase of work caused to the Railway *employés* by the great number of trains running daily to convey corn to those parts of the country threatened by famine. But later in the year, when the members of the establishment had more leisure, they responded somewhat encouragingly to special efforts made by us to induce them to attend more regularly upon the ordinances of religion." We cannot regret the demand made on the time of the railway people; never was there a work of which it might be more truly said, *laborare est orare*. The report abounds in valuable matter, and we regret that want of space precludes us from noticing it more fully.

ON the 16th instant, at 6 P. M., at the Delhi Institute, the Lieutenant Governor of the Punjab, in the presence of a large gathering of ladies and gentlemen, performed the ceremony of unveiling a portrait of the late Lord Mayo with "melancholy pleasure." We understand this portrait has been presented to the Institute by Agha Saheb, in memory of his Lordship's last meeting with him in 1872. Above the Portrait is an Earl's Coronet, and beneath it is the following inscription:

THE RIGHT HONOURABLE
RICHARD SOUTHWELL BOURKE,
EARL OF MAYO, K.P.G.C.S.I.,
VICEROY OF INDIA,
Died 8th February, 1872.

In grateful memory of his princely hospitality and unequalled affability towards the Princes, Nobles and people of India, in whose hearts his memory is cherished with loyal devotion to the Sovereign he so ably represented.

On the 11th January 1872, His Excellency was riding towards the Camp of Exercise, then assembled at Dehlie; though he had passed my carriage, he recognised me, returned, shook hands and spoke with me for several minutes. This portrait is placed here by His Excellency's most loyal Admirer,

AGHA SAHEB.

MR. CARR STEPHEN, Barrister-at-law, of Lincoln's Inn, has just published at the Simla Station press the third edition of his Commentary on the Indian Registration Act of 1871. By leaving out the rulings on special registration, and those on the older Acts which no longer serve to elucidate the provisions of the existing Act, fully a third quantity of new matter has been added to the book without any great increase to the bulk. Mr. Stephen's notes have been rearranged, and contain all the Government of India notifications and reports of judicial decisions on the Indian Registration Act which have been published to the 1st instant. The "get up" of the book is excellent, and in every important respect there is evidence of care on the part of the author. There are about 220 citations of cases, and among them we notice one mentioned as that of *Percy Wyndham*. In this case the reference is under section 73 of Act VIII. of 1871 (the Indian Registration Act), which runs that when a registrar refuses to register a document "any person claiming under such document" "may within thirty days after the making of the order of refusal, apply by petition to the District Court, in order to establish his right to have the document registered." It was held that although the subject of the deed presented for registration was without the jurisdiction of the High Court of Calcutta, the Registrar General being within the jurisdiction of such High Court, the High Court was the District Court.

THE FIJI ISLANDS.

Now that Sir Arthur Gordon is about to take charge of the Government of the Fiji Islands, and to be Consul General of Polynesia, we are glad to have met with a perfect mine of information in regard to that part of the world in a book written by Mr. James Hutton, and recently published by Messrs. Henry King & Co., London. The Fiji Islands are 225 in number, though only 80 are *inhabited*. The group takes the form of a horse-shoe and contains islands of all shapes and sizes; in one place the voyager sees coral reefs; in another volcanic rocks rise from the blue water; and when the islets are large they are characterized by romantic beauty. The first European to visit this part of the Pacific Ocean was the Dutch seaman Jansen Tasman. In 1789 and 1792 Captain Bligh sighted several members of the cluster, and four years later the missionary ship *Duff* was nearly lost off one of them, Tavuni; this island is also known as Somosomo; it is twenty-five miles in length, and sixty-eight in circumference; evidently it once formed the cone of a volcano rising 2000 feet above the sea; the ancient crater is now a lake. Not far to the west is Vanu Levu, or Great Land, twenty-five miles in breadth, and upwards of a hundred in length, with a population of more than 30,000. Bearing to the south-west is another large island, Na Viti Levu, sometimes called the Great Fiji, measuring ninety miles from east to west, and fifty from north to south. "The mountains in the interior possess an altitude of over 4000 feet, and the scenery is everywhere grandly picturesque, softened by tropical vegetation. The population is not less than 50,000. Further away to the south the lofty island of Kundoon contains upwards of 10,000 inhabitants, and is twenty-five miles long by about seven in breadth."

It is believed by some ethnologists that the original inhabitants were derived from the dark skinned primitive races of India. There are traces of Tongan blood in the Windward section of the islands; but the practice of slaying and cooking all foreigners has preserved the Leeward section from Malay or other colonists. There are no less than fifteen dialects used by the islanders, the purest being that spoken at Mbau, an islet connected by a coral reef with the south-eastern extremity of Viti Levu, The English aspirate is unknown, as also *ch* as in *church* and *th* as in *thistle*. Writing about these people the Rev. J. D. Geden says: "The sounds of *d* and *b*, even though standing, where they continually stand, at the beginning of a word, are never enunciated without a nasal before them, *n* being heard before *d*, *m* before *d*. Thus Doi one of the islands, is pronounced Ndoi, and Bau, Mbau." For some reason or other which no one living can apparently explain, the early missionaries adopted *C* to represent the Fijian *th*, and thus it happens that Thama is spelt Cama, and king Thakombau, who has ceded the islands to Queen Victoria, is known to the world as Cacobau.

"Theft," writes Mr. Williams, a missionary, "is punished by fine, repayment in kind, loss of a finger, or clubbing. Either fine, or loss of the finger, ear, or nose, is inflicted on the disrespectful. The other crimes are punished with death, the instrument being the club, the noose, or the musket. Adultery taxes vindictive ingenuity the most. For this *offence* the criminals may be shot, clubbed, or strangled: the man may lose his wife, who is seized, on behalf of the aggrieved party, by his friends; he may be deprived of his land, have his house burnt, his canoe taken away, or his plantations destroyed." Mr. Hutton tells us injured persons are allowed to be the redressers of their own wrongs. A man may be tied to a log and exposed for hours to the fierce rays of the sun beating full upon his face, or the roof may be stripped off his house, or he may be pelted with huge stones, or his fingers may be cut off, in expiation of private and trifling offences. "Not unfrequently vicarious punishment is inflicted, and a native has been known to offer his father to be hanged in order to save his own neck."

A singular custom existing in Malabar and possibly in other parts of India may perhaps throw some light on an institution in the Fiji Islands called the Vasu. This word signifies a nephew or niece. The caprices of a nephew or niece rule the most potent and the feeblest of the Islanders alike, with the same iron sway. Mr. Hutton furnishes some instances; one was the case of a chief who being at war with his uncle, claimed and was allowed the right of obtaining ammunition from the enemy's store. In Malabar a nephew by a sister succeeds to property in preference to a son, because the nephew in such a case is indisputably of the blood, whereas a so-called son may be merely a son in name owing to a wife's infidelity. Our idea is that some such explanation must lie at the root of the Fijian singularity. When a nephew warred against an uncle with the uncle's ammunition he would probably be fighting against the retainers of the relative rather than against the relative himself. The people of Malabar with all their fondness for nephews have not gone quite so far as the nude race in Fiji, for in the beautiful islands going under that name, an uncle may lay out a plantation, erect a dwelling house, or build a canoe, and straightway a nephew may blow a conch-shell, and thereby announce his entering into possession.

Formerly battles were very frequent in the Fiji Islands, but since the introduction of fire-arms the chiefs have been less prone than formerly to proclaim war against one another, bullets being no respectors of persons. The impartiality of fire-arms may have something to do with the fashion now common in Europe for royal personages to keep away from battle-fields. William Mariner, a survivor of the crew of the *Port au Prince*, massacred by the Friendly Islanders in 1806, was present at a feast after a victory obtained by a Fijian chief. The king was seated in the open air, with his warriors forming a ring round him, when a procession was marshalled from the kitchen; the servants advanced two and two carrying on their shoulders a long basket containing a human body barbecued like a pig. "Roasted hogs were then brought in after the like fashion, followed by baskets of yams, each surmounted by a baked fowl. When this horrid fare had been duly arranged, the guests were informed that 200 human bodies, 200 hogs. 200 fowls, and 200 baskets of yams had been provided for them. These ample supplies were then divided into small lots and distributed among the inhabitants, so that every man and woman in the island had a portion of each article, though only the chiefs and great warriors are specially mentioned as devourers of the human flesh."

Cannibalism has prevailed more generally with the Fijians than among any other inhabitants of the Pacific islands. From the report of a missionary it appears that, so recently as 1858, human bodies were sometimes eaten in connection with the building of a temple or canoe, or in launching a vessel, or on taking down the mast of one which had brought a chief on a visit. A chief has been known to kill several men for rollers to facilitate the launching of his canoes, the "rollers" being afterwards cooked and eaten. Formerly a chief would kill a man or men on laying down a keel for a new boat, and add a dead body for each plank as food for the carpenters. We have given a sufficient illustration of the cruelty of the Fijians to show the nature of these people, not that we have drawn at all largely on Mr. Hutton's stores of horrible tales. Pages on pages of his book are full of harrowing descriptions, the object being, we suppose, to stimulate zeal to attempt, more energetically than ever, the conversion of the anthrophagi to Christianity. One thing we are indeed glad to learn, viz. that women seldom partook of human flesh, though their own was preferred to that of men. "Priests were prohibited from touching this unnatural food, so that it was said of the head, which no one cared to eat, that it was the priest's portion. A confirmed cannibal thought little of any other kind of flesh in comparison with that of his fellow-men. It is on record that one particular Fijian must have eaten 900 bodies without assistance from his neighbours" Such are some of the traits of the people whom Sir Arthur Gordon is called upon to govern. These miserable islanders are savages in every shape and way, for Mr. Williams thus describes them when irritated, and surprised from their self-possession. "The forehead is suddenly filled with wrinkles; the large nostrils distend and smoke; the staring eye-balls grow red, and gleam with terrible flashings; the mouth is stretched into a murderous and disdainful grin; the whole body quivers with excitement; every muscle is strained, and the clenched fist seems eager to bathe itself in the blood of him who has roused this demon of fury." The population of the Fiji islands has been estimated at from 135,000 to 300,000; Mr. Williams is convinced that about one-half of the latter number is nearest the truth. We are afraid that Sir Arthur Gordon, capable man as he is, will not have an easy time of it for a good while to come.

OUR FOREST MANUFACTURES.

INDIA is indebted to Mr. Baden-Powell for many valuable books on its products and its people, and he has lately added to the list a descriptive account of Forest Industry and Manufactures, in which he first describes the use of minor forest products and ends by showing the indirect utility of the great wood-lands of the Peninsula.

Among the lesser forest products we need only refer to the bamboo, whose universal utility is such that its use supersedes in many instances the necessity for timber. We gather from Mr. Baden-Powel that bamboos are not common in the northern districts. Thus, in the Punjab, only a few are found in the lower hills, at Kangra, Hushyarpore,

and Umballa, and a few near Rawulpindee and the salt range. Some are small and solid, and are prized for spear handles and staffs. In the higher hills a small graceful species is found above 8,000 feet. It is used only for the stems of pipes. In the North-Western Provinces bamboos are found throughout the forests of Dehra Doon, Kumaon, Gurhwal, and Goruckpore, and form a considerable item of revenue. In Bengal they are everywhere abundant. In Sikkim they are almost as much used as in Burma; buckets, water-troughs, and every kind of utensil being made from them. The very large *Bambusa gigantea* is not found, and indeed it is said that no true *Bambusa* is found in Sikkim. A small *Arundinaria* is found in the higher hills, something like the Punjab *A falcata*, but not indentical with it. Almost everywhere the peasantry are dependent on these useful reeds for building. In many districts two-thirds of the houses are mere huts, consisting of a bamboo framework thatched with grass, and filled up at the sides with mats made of split bamboos or of grass screens. In the Central Provinces bamboos are everywhere found; but a large and valuable species, the "Katang," is getting scarce. Three years ago the species flowered and died off, and only seedlings are now found. They would yield stems of 25 feet clear length, with a girth of 5 to 9 inches. In Bombay the bamboo is chiefly produced in the moist districts around the Ghats to the west, as Surat and the Dangs, Tanna, Dharwar, and Kanara. In 1872-73, from Tanna alone 610,774 were taken and paid for from Government forests, and this can only be a very small portion of the total production. In Madras Dr. Cleghorn remarks that immense quantities are floated down the various rivers of the Western coast. The bamboo is one of the riches of these provinces. The stems are ordinarily 60 feet long and 5 inches in diameter near the root. They are readily purchased standing at 5 rupees, and small ones at 3½ rupees *per mille*. Millions are annually cut in the forests and taken away by water in rafts. From their great buoyancy they are used for floating heavier woods, and piles of them are lashed to the sides of pattimars going to Bombay. The larger ones are selected as outriggers for ferry boats or studding-sail booms for small craft. In addition to the vast export by sea, it is estimated that two lakhs are taken eastward from the Supat talook. The export by land is stated to have affected those jungles near the railway line so as to threaten exhaustion. But of all provinces producing bamboos, Burma is unrivalled. As there is no fee charged on the cutting, use, or export of the stems, it is impossible to give even an idea of the quantities cut and exported. The Burmese and Karens have names for twenty-eight varieties, from the *Bambusa gigantea*, whose huge hollow stem is often from 10 to 16 inches in girth and upwards, to the useless creeping bamboo that is found in shady dells by the side of streams. The Burmese turn the bamboo to every purpose; they weave it into mats and baskets, floor their rooms with flattened pieces, and weave fine slips into boxes, which are then lacquered, and but for their beautiful elasticity would never be supposed to be made of bamboo mat-work as a basis. These boxes, when the lacquer is well applied and finely ornamented, fetch as much as Rs. 40 each. The common kinds are used by all classes to hold betel and tobacco. The Karens readily light a fire with two pieces of dry bamboo. They place the half bamboo on the ground, cut a notch on it, put a little bit of tinder under the hole of the notch, and then inserting a small bar crosswise saw it backwards and forwards with great rapidity till the heat produced ignites the tinder below. A joint of bamboo serves as a holder for pens, small instruments, and tools. It is used as a case in which things of little bulk are sent to a distance; the eggs of silkworms were brought in a bamboo cane from China to Constantinople in the time of Justinian. A joint of bamboo answers the purpose of a bottle; and a section of it is a measure for solids and liquids in bazars. A piece of it is used as a blow-pipe, and as a tube in a distilling apparatus. A small bit split at one end serves as tongs to take up burning charcoal; and a thin slip is sharp enough to be used as a knife in shelling betel-nuts. Its surface is so hard that it answers the purpose of a whetstone, upon which the ryots sharpen their bill-hooks and sickles. Cut into lengths and with the partitions knocked out, the stems form durable water-pipes, or by a little contrivance are made into excellent cases for holding rolls of papers; and slit into strips, they afford a most durable material for the sails of boats.

From the slight demand for furniture among the natives, the only articles that the forests are called on to supply are agricultural instruments and a few of the ruder machines with which handicrafts are assisted, *plus* a small number of simple bedsteads and stools. Yet, while we have none of the extensive works for the manufacture of matches, caskstaves, wooden shoes and pegs for western crispins, some of the provinces contain industries worthy of note. In the Punjab, the hill people are adepts at rude but not ungraceful wood-carving, all of it being done with a simple adze having a curved edge. Every little "nag," "devi," or hill temple nestling under the shade of those old clumps of cedars from which superstition or the dread of fairies and genii has averted the axe, may be seen covered with carvings, and the houses have sometimes carved ceilings. There is a splendid specimen of wood carving in the temple of Dungri forest on the Upper Beas. The wood is cedar blackened with age, and as hard almost as stone. Local tradition asserts that the goddess, jealous of the beauty of the work, deprived the carver of his right hand lest he should produce a second work for a rival temple; unfortunately the carver did make a second somewhere else with his left hand, but his art cost him his life at the hands of the outraged deity! In the larger towns of the plains, carved lattices and borders are often observed, but chiefly in old houses; the use of such ornamentation seems to be on the decline. At Simla is a local manufacture of carved furniture and picture frames, for which purposes the "shisham", "kakar," the beautiful "zebra-wood" and "toon" are mostly used. The hill mulberry is also employed in smaller works, having a fine yellow coloured wood. The workshops of Madhopore, and those of the railways at Lahore and Umritsur, have recently greatly improved and encouraged the arts of carving and furniture-making. In the Montgomery district, at Pakpattan in Lahore (Chunian), and in the Derajat, turned wood articles are made from the shisham and the karil. In Hyderabad, the poplar is used for this work. The articles made are round boxes, cups, vases, walking-sticks, and small articles; when finished they are lacquered with mottled colouring. Small semi-circular and fine-toothed combs are largely made from the box and olive-woods; they are used by Sikhs who wear their hair unshorn, for fixing it in a knot, and by all classes for toilet purposes. Blocks for printing calicoes, made of hard shisham wood, are manufactured in Mooltan and elsewhere. Baskets are largely made from the "pilchi" that springs up spontaneously on the sand plots of river beds as soon as the water subsides. In the North-Western Provinces, a great deal of furniture is made, after the European pattern, at Bareilly; much of it being mango-wood, lacquered black and ornamented with patterns in gold leaf. At Saharunpore, small wares, such as platters, carved frames, card trays, spoons and forks, bread boards, &c., are made of the white wood of *Wrightea Mollissima*, which is so soft that besides carving, it will take a stamp or impressed pattern when previously moistened for the purpose; some pretty specimens may be met with, but nothing at all approaching the Swiss work. In Oudh no special manufacture is reported; wood-carving is not noticed except in the houses of large cities; and wooden shoes or clogs, used only by Hindoos, are locally manufactured. Still hollowed canoes are made from sal, while agricultural implements, cart-wheels, platters, and dishes are made very much as in the North-Western Provinces. The Central Provinces and Berar, like Bengal and Assam, seem to be quite destitute of any forest industries worth recording; the usual manufacture of agricultural implements, carts and cart-wheels, and domestic utensils, is all that can be noted. Captain Doveton, the Conservator, says that only articles required in peasant life are made, and a little furniture for Europeans. The one luxury in furniture among the better class of natives is to have the legs of their charpoys, or four-legged cots, carved and ornamented. The houses are sometimes adorned with carved posts. The only other manufactures to be noted are small "*hookas*" carved out of black-wood, and combs. In Bombay the most noted manufactures are the carved black-wood furniture and the sandal-wood-boxes, as well as the inlaid ware. The latter is made by taking fine sticks or shreds of coloured woods with wires of metal and forming them into groups with the aid of wax. A fine section is then cut off, and the circular or other shaped slice is fixed with cement into the place cut out to receive it. This work can only be carried on at seasons when the temperature enables the wax to remain firm and hold the groups of coloured wood together, so that a thin slice can be cut off. The carving is deep, clear, and skilfully done, the instruments used being extremely simple and primitive. The sandal-wood obtained for this purpose comes partly from Kanara, but mostly from the province of Mysore. The ebony used is chiefly brought from the Malabar coast, that of Kanara being too small for the purpose. Some inlaid work is done in both woods, but unlike the high character of the beautiful Kutch and Sind work. The European designs are generally taken from regular home publications; and the native from the several deities, with strange and grotesque-looking

animals, birds, and vipers to be seen on the carvings of the many temples; the imagination, as regards the various positions and conglomeration in groups, being highly drawn upon. At Gokak and some of the adjoining towns belonging to the Belgaum Collectorate, the imitation fruit and vegetables are of a high order. These are mostly made of the *Bombax Malabaricum* and other soft woods, and the price of a good set varies from 25 to 50 rupees.

Madras possesses a vast number of beautiful woods, such as satin-wood and ebony, and with reference to Mysore and Coorg, Captain Van Someren writes: "In the Nugger division, there are in the taluks of Soral and Sagar a few men who carve very beautifully in sandal-wood. The material used of course precludes any very large articles being made. These men carve chiefly stricks, rulers, work-boxes, dressing-cases, album covers, and such things. They copy with minute accuracy, and I have seen capital reproductions on album covers of scenes from 'Jorrocks's Hunt,' and of the *illustrations in* Dr. Cleghorn's 'Gardens and Forests of Southern India.'" The industry is one practised by but a few men, and is apparently not progressive. In British Burma wooden dishes and platters are everywhere made, as well as agricultural implements and carts; the wheels of the latter are chiefly solid and made in one slab, or in three pieces, of wild mango or padouk. But wood-carving in teak is the speciality of Burma. Every monastery and shrine that is built of wood, as so many of them are, is beautifully and elaborately carved. The most exquisite specimens may be seen. A fine drawing and a minute description of the chief monastery at Ava, the capital of the last Burman dynasty, will be found *in* Yule's "Mission to Ava, 1855." Nothing can exceed the grace and boldness with which arabesques, leaves, and flowers are combined with the forms of birds, mythical beasts, dragons, and monsters of half-human shape. Under European training, the workmen have learnt to carve furniture; and magnificent tables, buffets, brackets, frames, and small wares of the most original designs may now be obtained. Henzada and Moulmein are the chief seats of the manufacture. Boat-making is a prominent forest manufacture of Burma. The boats are made of all sizes from the small canoe that is used for local traffic along the river banks, or for crossing at ferries, to the huge, 500-basket boat that may be seen, beautifully carved, gliding down the Irrawaddy under huge sails,—one of the most picturesque objects that strikes the tourist on that interesting river. The smaller canoes are similarly hollowed out from trees of *Nauclea sp.* and *Lagerstræmia*. For the large ones the *Hopea* or "Thingan" is in demand. A fine tree is cut, and is first partially hollowed out in the forest by a kind of pointed axe or pick, which is fixed with a swivel on the handle, so as to strike sideways and with a scooping action. When partly hollowed, wedges of wood are forced in to keep the sides from closing together. The hull is then dragged out of the forests. On reaching the river bank, the wood is well wetted, and small fires are placed against the moist sides, so as to make the wood soft and elastic. The inside is then carefully cut out, larger and larger wedges or bars being introduced till the desired size and shape are attained. The ends are then shaped off into graceful points; the bow is long with beautiful hollow lines; the stem rises high above the water, ending in a point also; a few side planks are built up in continuation of the solid sides, and the boat is ready. At the stem a high platform in the form of a huge chair, often beautifully carved, is erected for the steersman, and a little carved piece is fixed some distance from the point of the bow. A bamboo awning with thatch or mat roof is erected in the midst. Unfinished boats fetch, if of small size, Rs. 200 or Rs. 300 each, and large ones Rs. 800 and Rs. 900.

JAPANESE SUPERSTITION.

YOUNG Japan, like Young Bengal, sneers at everything native, but notwithstanding the great reforms that have been, and are being, achieved in the Land of the Rising Sun, the majority of the people are still orthodox and cling lovingly to the old faiths and old traditions of their unenlightened forefathers. There is no surer test whereby a nation may be judged than by the extent of its belief in the supernatural, in charms, incantations and the ancient amulet. In pure Shintooism there is little room for superstition, but the Boodhist priesthood foster with all their might those gross follies and false ideas which form the very basis of their being. Considering that more than half the population of Japan look to Goutama for salvation, it is not to be wondered at, then, that the most pushing nation in the East regards what cannot be understood with reverence akin to awe.

Fortune-telling is in high favour. One species termed *Omanai-sangi*, is practised with six pieces of hard wood marked in a prescribed manner; then with fifty-one pieces of bamboo, like knitting-needles, of which one is laid down. The incantation is recited, the fifty are divided at random into two lots, one for each hand, these are then counted out into lots of eight each, and the odd ones left determine the order in which the sticks are to be placed. This is repeated twice, and the third time the standing needles (*medoji*) are counted out six at a time. The means by which the solution is ultimately arrived at is extremely complicated. If a person about to visit a sick friend or intent on another business, determines that the first word he hears, accidentally, of conversation between any strangers he meets coming towards him in the direction in which he is going, are to be omens of the friend's recovery or death, or of the success of the business, this method is called *tsujiioura*. Another kind of *tsujii-oura* is to have mottoes rolled up in pastry, in little bags of comfits, sugared peas or such sweet stuff, not unlike our style of bon-bon and cracker mottoes. Girls try to divine the future by dropping a long hair pin from their head into the matting, and counting from the end of the pin, yes or no, yes—no, alternately, like Goethe's Margaret, as she pulls the leaves of a rose. In building houses the lucky plan is to have the door to the south-east, the fire-proof store-room on the north-east, the closets on the south-west, and the kitchen alongside the store-room. There are, of course, plans by which the necessity for this may be explained away when it is not convenient that the house should be thus built. The best position for the *kamidana* (shelf for the gods),

the household Buddhist altar, where to place a temple to Inari Sama, on what day to send a bride home, when to set out on a journey, and so on, all have special rules to be observed, so that ill-fortune may be avoided and success and prosperity ensured.

Launcelot Gobbo's "line of life" also finds its counterpart in Japan. A box containing a hundred slips of bamboo, all numbered, is well shaken, and from a small hole in one end, a single slip is shaken out. The number on this corresponds with the number of a paper on which the drawer's fate is written, often, it must be confessed, in the most ambiguous language. Spirit-rapping in Japan has usually been practised by women. Their stock in-trade consists of a small box (supposed to contain some mystery only known to the craft) of somewhat less than a foot square. The medium has also a small bow made of soft wood called *adzusa*, the string of which she twangs incessantly on the box, and a small cup of water placed in front of her, which is at the same time splashed out towards the inquirer. If the person to be interviewed is living, a small stick is used, and if a departed friend is to be summoned, a leaf from a grave-yard offering, called *shikimi*, is employed to splash the water out of the cup. The only question asked by the medium is whether the inquirer wishes to raise the dead or the living. Then after a half prayer-half incantation, the spirit begins to speak through the medium. The mediums may be recognized by their invariably carrying, while out of doors, a small bundle of a peculiar shape, and also a light bark hat either on the head or in the hand. Prayers for health or success in one's plans, for good fortune and so on, by the Boodhist priest of some shrine or temple, are still common, and innumerable as to form, place and occasion. Amulets are in great request. A writer in the *Japan Mail* states that the most common amongst numerous others which swell the bundle to the dimensions of a good old-fashioned lady's bustle are the *Kannon*, to give ability and good fortune through life; the *Gazo*, to bestow the gift of children and enable parents to rear them; the *Suii Tengu*, to save people from drowning and other harm; the figure of *Nichiren* and of *Rôbôdaishi*, to carry one to paradise; *Sei sh ko*, for good luck; *Benten*, for the gift of beauty, accomplishment and attractiveness; *No se no Kuro fuda*, to protect you from the wiles of the *kitsune* (fox); *Chiriu Gongen*—of San Shin—to protect you from snakes, the greatest aversion of the Japanese women; *Aizen*, to cause children to be loveable, and a host of others, local or selected for some special gift or power. Girls when very young have several usually of these suspended from the girdle in a small square pouch.

Ghost-stories are particularly sought after and listened to with rapt attention. The best-known is that of Kohada Kohejie, an actor of the last century. "His wife was unfaithful to him and she and her lover wished to be rid of her husband. The lover took advantage of Kohada being on a tour in a provincial town, murdered him and returned to Yedo, to discover, however, that the ghost of his victim had preceded him; the ultimate consequence of Kohada haunting the guilty couple being, of course, the discovery of the crime. An older tale than the foregoing is told of Oiewa, the

wife of Tameya Iyemon of Yotzaya. Iyemon fell in love with his neighbour's daughter who was as beautiful as she was frail and criminal. By administering a potion which destroys beauty, and makes wives repulsive to their husbands, she contrived to disfigure Oiewa. Iyemon then treated his wife harshly and neglected her entirely now that she had ceased to attract and charm him. She bore him a child, but, after its birth, she became a maniac and destroyed it by biting its throat and died raving mad. Her ghost haunted the guilty pair, and killed the girl in the same way as Oiewa had killed her own child. Sakura mura no Sogo (Sogo of the village of Sakura [cherries] in the province of Shimosa) is a tale well told elsewhere, of a farmer devoting himself for the good of his neighbours, and, by presenting a petition to the highest authorities asking protection against the injustice of his lord, incurring the death of himself and his family. His ghost haunted the *damio* until he died a maniac. Stories are told of women returning to this vale of woe to nurse the little ones they have unwillingly left behind. If lovers are parted, and, while apart, are faithful, the one who dies first visits the remaining faithful one. If a man passes at night the grave of some girl he has loved, and thinks of her, even though she had not reciprocated his affection, he is followed out of the grave-yard by a beautiful woman carrying a lantern. He recognizes her as his lost love, and she visits him every night afterwards in secret, until discovered by any third person. Any other living being than her lover can only see in her a ghastly skeleton, and the gifts or ornaments presented by her lover are afterwards found upon her tomb."

Gnomes, ghouls, and goblins are as numerous in Japan as in all other countries where there are children to be frightened into quietness and obedience. *Mikoshi niudo* is an immense bald-headed monster that lolls out his tongue, looking down over tall folding screens. *Kakureza to* is a blind man with a staff who comes to carry bad people off to Hades. *Shitotsume kozo* is a one-eyed ghoul wearing a large hat, carrying in the hand a small sieve containing a ball of fire, the sight of which strikes terror into the beholder. *Gambari niudo* is a ghoul that only appears on the new year's eve. A hairy hand is thrust forward, and if this can be seized and cut off it will bring wealth to the possessor. *Oubume*, is a female spectre met with on river and canal banks and roads through marches, carrying a child. If met, she asks the traveller to favour her by holding the child for a few moments while she is absent. But after long and patient waiting the child becomes heavier and heavier, until it can be carried no longer, and then drops from the arms, a ponderous boulder which no man could lift. The fox is closely connected with Japanese fables and superstition. "Foxes are supposed to steal away the senses of people, and to play practical jokes on them by no means amusing to their victims. For instance; to make them believe that a field of buck-wheat in flower is a river, and get them to strip and wade through it under that impression. A young gentleman on a dreary wet day met a beautiful lady without an umbrella. Struck with her charms, he offered his own, and plied her ear with compliments. But he observed that her elegant robes were not in the slightest degree either damp or soiled, and were more suited to a fashionable assembly than to a walk on such a day. With a sudden effort he gathered himself together, and, with a prayer, drew his sword and made a fierce cut at the beauty. He then ran home and brought some followers to the spot, only to find a fine female fox badly wounded. While relating his story, he was asked how he know that it was a fox, and he then told how he remarked the unsoiled robes, and became certain that the fox was trying to tempt him, when he saved himself by a huge effort. He subsequently made a pilgrimage and many votive offerings to protect him from further attempts of the family of the deceased."

Similar stories about the pranks of badgers, cats, and otters are told and implicitly relied upon, as they will be till the Japanese obtain a higher form of faith than any they now possess.

INTER-PROVINCIAL FINANCE.

Not long since Mr. Martin Wood read a paper on this interesting subject, before the Bombay Branch of the East India Association, in the hall of the Framjee Cowasjee Institute. As the lecturer's object was to show the relative position of Bombay and Bengal, a few extracts embodying his views may be useful at a time when no small amount of attention is being bestowed on financial matters. Mr. Wood is of opinion that the term "decentralization of finance" is applicable only to the expenditure side of provincial budgets, and to so much of the income side as is derived from the revenue made over with the charges, and also any tax that may be levied to make up the deficit. He says "When we come to consider the bulk of the revenue allotted to the provincials, about five millions, and the source whence it arises, it is seen that the term 'decentralisation' does not apply at all. The sum in question is simply a grant from the central exchequer and out of the revenues which have first been collected by virtue of central authority and lodged in the central treasury. It is on this side, in what is indeed the basis of the system, that we see its weakness; and it is because of this essentially central origin as well as of the virtually rigid limitation of the so-called 'provincial' funds that the experiment, as it is called, threatens to break down in Western India. It is in the inequitable allocation of the funds and in the unfair stinting of this (the Bombay) presidency that friction arises and by which discontent is caused; but we contend that this unfairness is almost inseparable from the circumstance that the bulk of the funds assigned have no connection whatever with the province or presidency to which they are allotted, and the amount bestowed has no relation to the revenue productiveness or otherwise of the administrations and people to whom it is granted. Home politicians have constantly to be reminded that India is not homogeneous; but this very significant proposition is constantly being forgotten by the Supreme Government itself, and never more conspicuously so than in framing the scheme and allocating the allotments under the so-called decentralisation resolution of December 1870. Perhaps the common-place excuse might be permitted, that it seemed the best that could be done under the circumstances; but the fact remains that in this avowedly great administrative change—what I should speak of as the beginning of a new era in self-dependent provincial administration—we have an instance of, the merest empiricism and rule-of-thumb arrangement."

In another passage Mr. Wood continues, "As the Government of India proceeded by rule-of-thumb in making these allotments we shall have to adopt a somewhat similar method in testing Bombay's share—that is, we can in the first instance only take for comparison the assignment to some other division, and we propose to take the grant to Bengal as a standard. Were we not obliged to follow the lines of the existing empirical system, it would not be difficult to show that if decentralisation, or provincial financial autonomy, were based on first principles it would commence on the revenue side of the account, where, as we have seen, it has now no place at all. For my own part I contend that as the land revenue has always been the basis of Indian finance, so it is the resource on which provincial finance should be chiefly based; for, except tolls and similar strictly local imposts, there is no portion of the public revenue which is so distinctly the appanage of the people amongst whom it is raised as is the land assessment. The only true basis, then, for any equitable system of inter-provincial finance, the initial step of the whole scheme, should be the assignment of a certain proportion of that universal and everywhere approved source of public revenue—it being levied, as now, under the name and authority of the Supreme Government. It seems to me that from one-fourth to one-third of the net amount raised in each presidency and province should be assigned to the local Executive authorities for provincial services within the area where the said revenue is produced. It will be seen at a glance that to proceed on this principle would make havoc of the present clumsy scheme; but if the principle is a sound one, its recognition and gradual application could scarcely fail to commend itself to all concerned. If we are not mistaken, its working out would do much towards modifying certain long standing inequalities presented by the varying proportions in which the Supreme Government draws its revenue from the several presidencies of India."

Mr. Wood in comparing the financial position of Bengal and Bombay has adopted the plan of dealing with net collections instead of with gross totals. Proceeding on that principle, he observes that "the total net estimated revenue in Bengal in 1873-74 was £12,203,500 and in Bombay £7,878,006." "The year 1873-74 appears to have been an unusually poor one for the opium proceeds of that presidency, or else Sir Richard Temple, wishing to signalise his last year of finance by a big surplus, had 'hedged' as much as possible in his estimates. However, we will be more than just to Bengal, and therefore I have added to her net estimated total for 1873-74 the difference between the net opium revenue for that year and the larger yield of 1872-73. But, whilst benevolent to Bengal, we must not be unjust to Bombay; therefore, we have deducted from the large sum entered in the account as Bombay's "charges on realisation of land revenue" the quarter million (see p. 17 Yellow Book 1872-73 £259,027) or so of "alie-

nations," which is no more a charge on collecting our land revenue than is the cost of the ex-King of Oudh's establishment at Garden Reach a part of the administration charges of that now British province. Let us now preceed to arrange our figures, not of speech, but of arithmetical comparison—

Revenue (net) collected in Bengal* ...		£12,877,056
Deduct Opium* ...	£3 587,200	
Customs ...	925,300	
Salt ...	2,612.500	
		£7,125,000
Bengal's true provincial contribution ..		5,752,056
Add Bengal's share of total-national revenue from three items on the basis of population being one-third ...		£4,814,533
Opium	£6,326,000	
Customs	2,440,300	
Salt ...	5,677 422	
	£14,443,700	
Bengal's true revenue ...		£10,566,589
Revenue (net) collected in Bombay ...		7,878,000
Deduct Opium ...	£2,738,900	
Customs ...	644,200	
Salt ...	691,300	
		4,074,400
		3,803,600
Add Bombay's share, being 1-12th of the income from three items as above ...		1,203,840
Bombay's true revenue		£5,007,440

(* As adjusted for allowance on opium.)

These figures might at first sight seem to show the proportion in which each presidency can claim its share in the provincial allotment—for, whereas Bengal, with 64 millions, or four times the population of Bombay, contributes little more than twice as much total net revenue to the central exchequer than is yielded by the latter presidency with its 16 millions, the former total represents only about R1-9 per head of the population, while the latter is equal to R 3-2 per head. Thus the allotment to the Bombay Government on behalf of its people ought to be twice what it is if the allotment under the rule-of-thumb system to the eastern presidency is a fair basis of comparison—that is, Bombay ought to have a grant of £1,974,800 instead of £987,400 as in the year under reference."

"Having, therefore, impartially allotted the imperial income, we must now proceed to debit each presidency with its share of the general burden of debt, of military charges, public works (paid out of revenue), railway guarantees, and other imperial expenditure, which is incurred equally for the benefit of all the provinces of British India. In ascertaining what is the amount of this general burden we exclude all the costs of collection as in the items of revenue already dealt with; we exclude the outlay from borrowed funds technically described as 'expenditure extraordinary;' we also deduct the refunds or payment under the head of 'army' amounting to nearly one million, and the direct returns from irrigation and other public works which last, it is deplorable to observe, amount to little over half a million. The net sum of general charge thus shown in the accounts before us, that is, the estimates for 1873-74, is about £40,870,000. Proceeding, then, on the basis of the population of Bengal being one-third of all the Governor-General's contributories, it is plain that for imperial charges Bengal ought to contribute £13,623,330. But we have shown, that Bengal's yield to the central exchequer when liberally reckoned is really only £10,556,589, thus showing a deficit of £3,066,744. But that does not show all Bengal owes to the central treasury, for we must remember she has given to her under the head of these provincial allotments £1,239,800, and for public works ordinary £166,700 besides the lion's share of expenditure from loan funds. Altogether Bengal's deficit in the year under notice would, reckoned in this way, amount to £4.473,240."

"Let us now turn to Bombay. Proceeding on the same basis, and taking the Bombay (with Scinde) population at 16 millions, or one-twelfth of British India, we find that her debit on account of general imperial charges is £3,405,830; but, as we have shown, her true revenue, her undoubted contribution to the central exchequer is £5,007,440, there is at once a surplus, or, let us describe it correctly, an inequitable surcharge on Western India of £1,601,607. This suffices to cover both the provincial allotment which Bombay receives £987,400 and the public works ordinary grant £409,400, which in the year under notice happens to be three times that of the current one to Bengal. After these debits there is still a surplus unjustly wrung from Bombay of £204,807. These conclusions are thus set out in plain tabular form; but in order to be more exact we will, in this complete statement, deduct from the aggregate net imperial expenditure the public works grants (out of revenue) and the aggregate grant of allotment for provincial services. The figures will then stand thus;

	£
Total net imperial expenditure to be shared	33,415,730
Bengal's debit to the central treasury	11,138,577
Bengal's true revenue (net) ...	10,556,590
Deficiency	581,987
Add Public Work grant ...	166,700
„ Provincial allotment ...	1,239,800
Bengal's (net) deficit made up by Bombay and other provinces of India	1,988,487
Bombay's debit to net imperial expenditure	2,784,644
Bombay's true revenue	5,007,440
Surplus yielded by Bombay ...	£2,222,796
Deduct Provincial allotment ...	987,400
„ Public Works grant ...	409,400
	1,496,800
Bombay's surplus after all ...	725,925
Add Bengal's total deficiency or extra grant	1,988,487
Bombay's position being worse than Bengal's by	£2,714,483

Thus at the lowest computation it is plain that the revenue producers of Western India stand in a more onerous position towards the Government of India than those of Bengal by $4\frac{3}{4}$ millions per annum. And it must be remembered we have taken the trouble to deal only with net revenue and charges; but to the taxpayer or ryot the costs of collection are very real indeed. The last anna which go into the State coffers pinches him more than the first. If there is any error of principle in our method of comparison, let it be shown; but whichever way we turn, confirmation arises that our conclusions are essentially correct—either Bombay is paying too much to the central exchequer and getting too little in return, or Bengal is paying far too little and is getting more than its due in return."

Mr. John Hector, of the Bank of Bengal, who has recently written a pamphlet on the financial question, tells his readers:—

"The other provinces of India have to "make up for the deficiencies of Bengal, and "it must be admitted that they accept the "position more resignedly than might be ex-"pected, considering that it is through no "inability to pay more, that Bengal now "contributes so little as compared with them. "This indifference, or silent resignation, or "whatever it may be termed, is much to be "regretted, for if the other provinces were "to take the matter up with any degree of "unanimity, and represent the injustice to "them, the effect would be to force a solution "of the difficulty, and to strengthen the hands "of the Government of India in carrying out "any measure which might be adopted for "that end."

Again Mr. Hector says

"No class benefitted more by the suppression of the Mutiny than the landholders of "Bengal, yet, while the public debt and "consequent burden on the revenues were "nearly doubled by that event, the land-"holders pay no more now than they did a "century ago. They pay no fair share of "the cost of the large standing army which "India requires, and, as already stated, they "have contributed nothing for the Public "Works which Government has carried out "and is carrying out for the improvement of "agriculture and commerce and for the pre-"vention of famines."

Mr. Wood comments as follows on the views set forth in this pamphlet. "As Mr. Hector pertinently remarks 'it is through no inability to pay more that Bengal now contributes so little as compared with' the other provinces of India; and all through this comparison the standard of relative productiveness as between Western Indian and the Bengal Presidency must be borne in mind. We estimated that standard as five to one, and we invite, or, if you will, challenge refutation on this interesting point of financial and agricultural statistics. We do not know whether the 'indifference or silent resignation' with which Bombay and, in only somewhat less degree, other provinces of India go on, decade after decade, in enduring this unequal burden thrust on them by Bengal's permanent deficiency, will be much longer maintained. There is in India an immense fund of dumb endurance on one side and stolid or optimist indifference on the other. And this reminds us that as a concomitant of that startling inequality between the contributions of Bengal and Bombay to the central treasury, there is in Bengal a still more painful contrast within that presidency itself. There we see, that, notwithstanding the very moderate, not to say inadequate fiscal burden borne by that presidency, the masses of the people, the tillers of the soil, are, as a whole, sunk in most degrading and hopeless poverty."

Mr. Wood thus concluded his lecture: "It might seem that something should here be said with regard to the recent expenditure from the central treasury of six millions sterling in order to relieve the famine of one of those provinces; but from this side of India rises no complaint because of that unexampled sacrifice of the nation's funds to keep the people alive. Notwithstanding the long-standing and continuous fiscal injustice and financial deprivation which Western India has suffered, there was everywhere in the presidency willingness to see the funds drawn by the central treasury from our

revenues placed without stint at the disposal of the Viceroy for famine relief. But I will mention how the subject was spoken of in an interrogatory form by one of the most experienced and trusted financial officers of the Government of India—he said, 'What would have been thought of this expenditure on Behar if so many millions had been directly levied from the other provinces of India at the time?' No doubt such forced benevolence would have been resented and resisted as stoutly as ever was the Maratha *chouth* north of the Vindyas. The modern devices of loans and huge cash balances serve to disguise and distribute the pressure; but the enforced contribution, which year by year the other provinces of India have to furnish for the shortcomings of Bengal, causes an undue strain on their fiscal capabilities, and constitutes an injustice and anomaly which will have to be combated and removed when some statesman of genius and originality arises to deal with these pressing Indian problems for the solution of which the empire groans, and in waiting for which the people are heart-sick."

We have quoted largely Mr. Martin Wood's own words, fearing to spoil the effect of them by any attempt at a summary. In our opinion he has done good service by calling attention to an evil of great magnitude, viz. the inequality of taxation as between province and province; but we are inclined to think the mischief does not end there. There are great discrepancies in taxation between one part and another of the same presidency, for instance Malabar is in a comfortable position as compared with Coromandel. This is not right, and the existence of such a state of things can only result from ignorance on the part of the people.

THE RUBATTINO COMPANY.

A correspondent on whose judgment we can rely has been good enough to write giving the result of his experiences in connection with the Rubattino Italian Mail Steamers that are now running between Genoa and Bombay. The Company have 24 fine vessels, eight of which, viz. the *Arabia*, *Asia*, *India*, *Persia*, *Batavia*, *Sumatra*, *Assiria*, and *Australia*, constitute the *Indian* Line. The remainder belong to the Mediterranean service. The ships working to Bombay pass through the Canal, and the regular monthly departures are from Genoa on the 9th and 24th and from Naples on the 12th and 27th, for India, and from Bombay on the 1st and 15th. All the steamers are English built, and are about 2500 tons burden. The average passage from Naples to Bombay is performed in a little over eighteen days. A first class ticket costs £50, and includes wine and beer. The Company allow passengers to stop at intermediate ports without forfeiting the right to avail themselves of a passage. In this way it is possible to visit Naples, Rome, Florence, Milan and Genoa. The distance from Naples to Rome by railway is 7 hours, and from Rome to Florence 10 hours. From Genoa to London the railway journey can be performed in 42 hours. The first class saloons are in the middle of each vessel and in front of the engines, so that pitching, and noise, and disagreeable smells are got rid of to a great extent. The Ladies' Cabins are particularly well placed. The managing agent for India is Mr. Charles Grondona of Bombay. Our correspondent assures us that all the arrangements by this Line are exceedingly comfortable, and that the servants are most attentive and obliging. All the food is wholesome and good, and the pastry is made with butter; fresh bread is baked on board daily; the wines are Italian and sound; and in many other respects the Rubattino Line is an excellent one to travel by. We are glad to make public our correspondent's eulogiums, not only because we can rely upon him, but because we have corroborative testimony from other friends.

THE HOOGHLY BRIDGE.

We have much pleasure in placing before our readers a translation, with which we have been favoured, of one of the Bengali poems written on the occasion of the public opening of the Hooghly Bridge.

This is Truly a Bridge.
WHAT THEY SAID THEY HAVE DONE.
COMPOSED AND COMPILED
BY
AGHORA CHUNDRA DAS GUPTA,
CALCUTTA.
Gnaynolas Press, No. 19.
The 1281st year of the era called the sala.
Price One Anna.

This is Truly a Bridge.
WHAT THEY SAID THEY HAVE DONE.

SONG.

Mode Jhinjhit. Tala (a) Kaoali.

O! Come here if thou wouldst see a bridge wonderful, . . .
Very wonderful indeed.
O! How splendid! My fair companion!
Language cannot depict the excellence of the workmanship—Oh! what shall I say of this?
When the eye gazes on the mechanism of the bridge it is rivetted on it, forgetting to wink.
Come along O! youthful fair one; what art thou musing on?
Many, many matrons go out to see it both by day and night—some even ten times a day.
The foot-paths are broad and befit the spacious main road, garries and palkees are passing on without intermission.
Under the bridge the passages are very fine, and the openings are so fastened with chains as to be immoveable.
Boats are moving on with sails unfurled; so dress thy hair my dear friend! and come along—we shall walk on foot with ease—thou will see there, how much traffic is carried on, and how many vagrant women wearing their fine embroidered clothes are crossing the river of the gods without payment of fare.
O fair one! listen to Aughora Chandra (*b*) and cross over the river. Thou mayst see a stair-case to the high heavens built one of these days. The time is not far distant—a move towards this, forsooth, has already been made by aeronauts.

Payar or Bengali heroic measure.

How wonderful it is in this iron-age—O for Joy!!
O for Joy!! methinks the golden age is returned.
Or the bygone silver age is come back again when the lord of the Raghus laid a bridge over the sea.
A bridge over the Ganges is a wonder
This news has filled me with a feeling of admiration
May he who has built this bridge live long and may I die with the evils which would shorten his life.
I return him a hundred thanks; his learning, his intelligence, his skill, his resources and everything relating to him are wonderful.
Methinks he is not a man, but the incarnation of a god.
Or Narayana himself in the shape of a human being has appeared amongst us to protect us from evils.
Otherwise who could erect a bridge over this river of the gods—the saviour of the three worlds and the purifier of the sinful. That sacred river whose waves swept away the Airabata, the elephant of India, and whose waters washed away the sins of king Sagora's race, secured salvation to King Sandasa, and shewed Muni, the boatman, the way to heaven.
O how did the grand child of Sagora suffer at his tender age to bring down this sacred river from heaven.
That sacred river whose waters, the five-headed god Siva caught in a rapture into his clotted hair outspread to receive them.
That river which has run into a hundred channels to fulfil the wishes of the devout, which is as blessed as all the holy places put together and which washes away the three kinds of evils.(*c*)
To span such a sacred river with a bridge is not an easy thing; for who will believe that a stone can float over the surface of water except when the great Rama built a mountain bridge over the sea to destroy Rabana with all his race as is described in the Ramayana.
The blessings of Rama's reign we now enjoy, and our rulers seek for our welfare in every respect.
Who else are so solicitous of others' good, and take so much pains in such earnestness, and at so much risks of life for others' sake?
We are mere human beings, and resemble brutes in thinking always of gratifying our appetites and securing our own interests.
We do not seek for fame and fail to see the advantages of it.
We are in a maze of errors and devoid of every virtue—the very models of worthlessness.
Let us, O brethren! leave this country and plunge ourselves into the English channel so as to be able to breathe the atmosphere of England.
But there are some here known as Bengali sahebs who have inhaled the English atmosphere, and learned to wear coats, to put their fingers(*d*) into their mouths, to dress their hair after the Albert fashion, and dine at the Wilson's hotel as they please.
From their mouth nothing is to be heard save "eat," "meat," "sit," "&c.," in their pockets watches with chains sparkle, they walk with sticks in hand and wearing boots made by Chinamen. They walk with their breasts up-raised as if they were the grandsons of a great man. Well, very well! that looks very good!! their time is gliding on in imitation of the Sahebs.

The bridge is described.

Now brother! it is all right, all the difficulties in crossing the river are gone: we shall have no more to wait for boatmen; all struggle, tumult and hurry are gone, as the bridge will remain open both day and night. The rumour which was afloat has come to pass, and I have seen it with my own eyes. It is built at the place called the Howrahghat. It is a noble structure. I do not know what talented man is the author of this design.
At the sight of it, Biswakarma, the architect of the gods, would be struck dumb, and feeling ashamed and aggrieved would take to flight.
If the moon would look at its arching shape she would do the penance of Chandrayana (*e*). O how splendid it is. The Bridge floating on the bosom of the Ganges looks like a flash of lightning in a cloud. The bridge resembles a crown, and becomes the greatness and beauty of mother Ganges.
At the entrance there are three arches in the shape of a rainbow fastened with iron bars, and upon them there is a sort of cornice of bright blue hue.
A few paces on, one might take his stand and have a full view of the river with all its charms.
There are railings on both sides which surpass in grandeur the rails of a railway line. At regular intervals there are lamp-posts shaped so exquisitely as to throw Baikuntha, the abode of Bisnu, into the shade.

(*a*) Tala—Keeping time—a scale of musical periods.
(*b*) The author's name.

(*c*) The evils are—(1) what arises from our bodily and mental derangement; (2) what arises from external objects; (3) what is caused by the gods.
(*d*) According to the orthodox Hindoos, this is considered not only improper but also impure. When this is done the fingers should be immediately washed with pure water.
(*e*) The penance called Chandrayana is considered as expiatory of all sins. As the moon is surpassed by the bridge she must have committed some sin, or else she would have remained still unrivalled

At the borders of the bridge there are foot-paths as exactly straight as all the ways and opinions of the English are. My imagination is at fault to form an idea of the regularity and fitness of the main road in the middle. Nay, if the god Brahma by whose four mouths Vedic hymns are chaunted, should come down, even he would remain mute.

What more will not happen next? We shall first hear it from report, and then verify the same by our ocular proof.

Perhaps there will be gas-light to expel the shades of night.

Perhaps there will be pipe-water for the use of those living on the other side of the river, who will have refined water supplied at their doors by pipes, and drink deep both by day and night.

Perhaps there will be a drain to place the towns on both sides of the river on an equal footing.

Perhaps there will be a connecting railway line—a task hardly difficult to those who have constructed a bridge over the Soan. Then there will be *opened a telegraphic line for transmitting messages.* A railway line will be laid in the city connecting Sealdah with Howrah, and both men and women will travel with ease.

I shall tell you of another curiosity: at the several passages under the bridge, boats with their masts up-raised glide smoothly on, but when a ship is to pass, planks are drawn back by a machine, and *lo!* there is a large opening formed to let them pass, and *it* is closed up as soon as the vessel is out.

What more can I say of the bridge? Pen and ink fail to write it, and I think that the task can be accomplished only by a machine.

Now the poor are relieved and will save their pice; but the boatmen's trade is gone, and they must betake themselves to tilling.

They will no longer be away from their homes, and their wives who have almost stripped their hands (*f*) of ornaments, in doubt that their husbands may have been drowned in the Ganges, will receive them back with delight.

Seeing that the bridge is opened so seasonably at the commencement of the dassara holiday, all are in a hurry to return to their homes.

Crowds of passengers on foot, in garries and palkees, are passing continually, and dusts have been raised up all round like volumes of smoke.

The gathering of Spectators.

O listen to what I would say to my heart's content about the throngs of Spectators.

Lo! people of every description are thronging to feast their eyes—Englishmen and Frenchmen with chaprasis at their heels come in chariots and buggies. Kabulies, Africans, Panjabis, Kasmiris and Chinamen without number, and Up-Country men, Uriyas, Moguls and Mahomedans with sweeping beards and shaven heads are seen. Many a Jew with his wife is hastening. What immense number of Bengalis is coming in various ways—I cannot tell.

Many a young man and damsel are resorting to the spot. Women putting on fine clothes and ornaments, tying their hair in nice braids, pass on both sides. Lo! the fair Ganada is come with Birahini, Mohini, Kamini, Rangini and Manoranjini; owing to their absence Mechabazar is in a gloom. The loving Swarna leaves her house at Sonagachi, and hastens to the spot. Those fair ones, the stars of Sovabazaar, are also seen. In their front is Apa tying tastefully her hair in a braid and wearing a damasked dress; then comes Amrita decorating her neck with a necklace uttering words as sweet as nectar. She is accompanied by Nichu and others.

We also mark many from Lallbazaar. Lo! Swarna is passing resembling an elephant in her gait, followed by Kadambini, Tarangini, Berajmohini, Kamini, Khanta the gentle and Gaya of the Brahmana caste. Then Degambari goes wearing a fine blue dress and chewing a betel which has made her moon-like face scarlet.

Then come Syama an unrivalled beauty, Saroda, Gouri the proud, Panchu, Pantu and Tara resembling the moon and stars sparkling in their full radiance.

In this way they all pass in crowds. I am unable to say any more and failing to see my way to a full description. I feel aggrieved at heart, and cannot protract the scene any more.

Now Aghorachundra calls on you, O fair ones! all say Hari! Hari! and pray that the English may continue to rule this land of Bharata.

SONG.

Mode Jhinjhit, Tala Kaoali.

O father (*g*) I bow down at the feet of the English: I bow down to them who have supplied the long felt desideratum by constructing a spacious bridge over the Ganges, that we may cross it with ease.

O ruler of the universe! deign to ordain that there may be no pretenders to dispute the sovereignty of the English again. None has ever witnessed the construction of such a bridge. We may now walk over to the other side of the river with eyes closed on rainy and stormy days. They say that in England there is a tunnel under the waters of the Thames, and over them a bridge of wonderful mechanism.

Come Padi, come Sodi, and listen to the descriptions of the bridge. They shall be so interesting that you will not be able to go away waving your waists without hearing them out. Nor is there this bridge alone, sings Aghora Chundra, but there is another bridge over the Soan extending over two miles together, upon which trains pass without intermission.

f Native women, that is those who are Hindoos, cast off *their* ornaments at the death of their husbands.

g This exclamation expresses surprise.

EPITOME OF NEWS.

Bengal and Calcutta.

— The Maharaja of Bulrampore has been appointed a member of the Council of the Governor-General.

— No rain has fallen during the week except in Assam and the Chittagong division of Bengal, where the usual spring falls have set in.

— The young Maharaja of Kooch Behar is shortly to be sent to England to complete his education at one of the universities.

— Two Premchund Roychund studentships will be allotted next year, one of which is tenable for four years only.

— The ryots of Bikrampore are said to have formed a solemn league to the effect that they will maintain perpetual hostility against the Zemindars.

— Some districts in Bengal, such as Hooghly, Nuddea, and the 24-Pergunnahs, are suffering from scarcity of water.

— The Governor-General in Council has placed to the credit of the Government of Bengal a further sum of £250,000 on account of expenditure on famine relief works.

— Mr. A. Phillips, Barrister-at-Law, is to officiate as Standing Counsel for the Presidency of Fort William in Bengal during the absence of Mr. J. Pitt Kennedy.

— Two companies of the 4th Native Infantry from Bhagulpore have been ordered to march to Nya Dumka, where they will remain until the present excitement amongst the Sontals has subsided.

— The Governor-General has been pleased to appoint the Hon'ble Arthur Hobhouse, to be Vice-Chancellor of the University of Calcutta in succession to the Hon'ble E. C. Bayley.

— Lord Napier of Magdala with staff, left Calcutta on Sunday on an inspectional tour to the North-Western Provinces, the Punjab and Oudh. He is expected to arrive at Simla by the middle of May.

— Lord Northbrook has issued a circular to the several local Governments asking them to show reasons why Government should be called upon to defray the petty expenses of the Churches in India.

— The total number of deaths in Calcutta during the week ending on the 6th March was 303 against 248 of the previous week. The mortality from small-pox and cholera is increasing.

— A reward of Rs. 500 has been offered by the Assam Government for the recapture of a Madras native doctor called Kemble Francis, *alias* Kasim Ali, who escaped from the Dibrugurh Jail, where he was lying under sentence of death for murder.

— The *Sahachar* makes two suggestions for putting a stop to the oppressions of the zemindars. First, division of the zemindaries into small holdings, and second, submission to the collector annually the papers known as the Jama wasil Baki papers.

— It was decided at the last meeting of the Brahmo Missionary Conference that no missionary should conduct service or perform the usual nuptial ceremonies at the marriage of a public woman, though he might assist by all means in his power in the reclamation of fallen women should they seek his help.

— We are informed that the Viceroy has refused to decide upon the *fracas* which occurred lately between Lieutenant Hoyes and the son of Jung Bahadoor at the Howrah Railway station. The Nepalese had his lip cut and lost several of his teeth; and he appears to have richly deserved the pummeling he received.

— Neither receipts nor charges on account of Education in Bengal during 1874-75 show any material change from last year's figures. The receipts are £47,180 against £46,880, and the expenditure is £261,401 against £254,712. The cost of education buildings will be provided for in the Public Works Budget.

— The Deputy Commissioner's tour in the Darjeeling district has resulted in the discovery of a portion of the 20,000 acres, or thereabouts, of Government land which had been missing for some time in the district. A Bhootea was found to have been drawing rent for some years from land to which he had no title whatever.

— The Meer Munshee of the Foreign Office, and another native, Sham Churn Chatterjea, charged with offering illegal gratification to Dr. Moir of Alipore, have been discharged. The Magistrate remarked that "no legal offence had been absolutely disclosed. He would, therefore, discharge the defendants, though, at the same time their conduct was more than open to suspicion."

— Complaints are made by the native merchants and traders, especially of the Eastern districts, regarding the present condition of the circular canals, which appear to have of late completely silted up. Although two steam dredgers have been continually employed, and are constantly at work, in both the old and the new cut canals, yet the beds are rapidly silting up.

— At the commencement of the year 1873-74 the amount of Government Paper Currency circulation was 1113·5 lakhs; it rose to 1208·7 lakhs in the month of September, and stood at 925 lakhs at the close of the year. The fall of 284 lakhs which occurred in the latter half of the year, so far as it was not due to the ordinary harvest demand for silver, is to be ascribed to the diminution of the cash balances in connection with the efforts of the Government to provide food and employment for the people of the northern and western districts of Bengal threatened with famine from the failure of their ordinary crops.

— The Naga Expedition had collected 20 days supplies at Bormithon on the 10th instant. The Force should have reached Borbansang village on Friday, the 13th. Sanna, the offending village, is one march from Borbansang. Difficulty is found in ascertaining what villages were actually engaged in the massacre. The weather is unfavourable; but the health of the force continues good. Latter intelligence states that Sanna has been captured without fighting. The Chief is a prisoner in our hands. He admits the guilt of five of his people, who are to be given up with the guns and other loot taken on the occasion of Lieutenant Holcombe's massacre.

— A deputation of merchants waited on the Viceroy at Government House, before his Excellency's departure to Delhi, in connection with the Hooghly Bridge tariff. The Viceroy, in reply to the deputation, is reported to have said that he had conferred with the Lieutenant Governor of Bengal on the subject, and agreed with Sir Richard Temple that sufficient time had not elapsed for the full development of the traffic.

or for altering the tariff rates agreed upon, after much discussion and consideration by the Legislature. It was the desire of the Government of India to have the bridge free from tolls altogether; but as the local authorities had considered it advisable to put in force Sections 3 and 4 of the Act, they (the Government of India) were not prepared to recommend any change at present, but would watch closely the working of the Act, as it was quite apparent that certain anomalies did exist, which it would be well to rectify.

— There are three varieties of *dhaos*, each being about 30 to 32 inches long, including blade, the latter being about 7 inches long by 4 inches at the widest part. No. 1 has a convex cutting edge and straight back, with square top 4 inches across. N. 2, a convex cutting edge, concave back, the top cut off diagonally, bringing the point in line with the handle. No. 3, a convex cutting edge, rounded top, deep depression in back, and rounded projecting point, used as a lever. The handle in each case is about 25 inches long, and generally decorated with goat's hair dyed in various colours. After six years' residence on the Naga frontier, a correspondent of the *Englishman* can conscientiously say he never yet saw a Naga without his dhao; it is his second self, and without it he could not build his rude hut, procure his firewood, or his food. With it, occasionally a spear, and always a pipe, he is prepared to travel, trade, or fight.

— The following *jeu d'esprit* appears in the *Indian Mirror*: To employ an oriental figure, Calcutta has become dark owing to the departure of that big sun from the horizon, the Viceroy. In the presence of the latter, society retains a virtuous appearance which is very agreeable. Now that he has turned his back upon us, people have a tempting opportunity before them. The newspapers have an opportunity of growing radical and republican, and the public amusements of expelling that stiffness which hitherto belonged to them. Scandal may display her filthy tongue unrestrained and uncondemned. Judges may snore more conveniently and barristers quarrel more freely. Rich Hindus, relieved from the tedious routine of evening parties, receptions and reunions, may do any thing at *Natches* and *tamashas*. Educated natives may take breath and get rid for a time of their hypocrisy. Mr. Hogg may go on extorting the last pice from the ratepayer. The Magistrates of Calcutta may pass all sorts of decisions, undismayed and unrestricted. The Justices may quarrel in any manner and in any attitude they like. For a while the public writers will not be called upon to flatter the Government in its presence. In the meanwhile, in the heat and oppression of a nasty atmosphere, the mosquitos may go on in their blessed work of singing and stinging. There is time for all—time enough till the return of the Viceroy, when our fellow-citizens may again behave like good boys and put on their well-conserved masks.

— Writers who have described the peasantry of Orissa, speak of them as strongly attached to the institutions of their forefathers and averse to any change of their old customs. Friendly critics term them conservative; unfriendly observers stigmatize them as bigoted. Compared with the corresponding classes in Bengal districts, they are said to be ignorant and uneducated, and to care little about improving their position or maintaining their rights. It is alleged that they show little readiness to seek protection from the law, and that they display no power of combined resistance to any oppressions that may be exercised upon them. A passive acquiescence in long-standing abuses, and a reluctance to admit changes, even where changes are manifestly improvements, were considered to be the characteristics of the people. If, however, this description fairly represented the Ooriya ryot of even a few years ago, it appears certain that it is gradually ceasing to apply to him. He may still be inferior to the Bengali in intelligence, but he is not so timid and helpless as he was formerly said to be, not so wedded to obsolete traditions, nor so indifferent to improvement or reform. The Commissioner of Orissa, who has administered the province for several years, and is intimately acquainted with the condition of the people, bears testimony to this change in very forcible and noteworthy language. In his last annual report, submitted in August 1874, the Commissioner writes as follows regarding the Cuttack district:— "Among both landed proprietors and peasants there is a decided tendency towards a better state of affairs, and better knowledge of their respective rights and duties is fast gaining ground. Taking the country generally, I can state from personal observation and the result of many years' local experience, that there is a marked and material improvement in the general condition of the population. There is more knowledge and education among the masses; more trade and money in circulation; more employment at high wages for the laborer; more moving to and fro in the country; less stagnation, and decided tendency to enlightenment and progress. There are more markets, more shops, and a brisk and growing export and import trade: and these items indicate undoubted general improvement in the people's condition with which we ought to be satisfied."

North India.

— Mr. Lepel Griffin will, on his return from leave, be appointed Resident in Kuppoorthulla.

— The opening of the State Railway to Wuzeerabad has been postponed.

— Raja Rampul Sing of Pertaubghur, a talookdar of Oudh, left for England by the last mail, accompanied by his Ranees.

— The Lieutenant-Governor of the Punjab has unveiled a portrait of Lord Mayo in the Delhi Institute.

— In the case of Captain Humphrey *versus* the Scinde Punjab and Delhi Railway, plaintiff has been awarded Rs. 12,000 damages and costs.

— An officer, a Captain in the 2nd Battalion 9th Regiment, at Rawal Pindi, is under arrest on a charge of insubordination.

— The reception of the Viceroy at Delhi was very enthusiastic. The natives made every demonstration of loyalty and respect.

— A monkey recently robbed the commissioner's office at Lucknow of a considerable number of stamps. The delinquent was discovered with his loot on the roof of a house.

— Mr. Molesworth has condemned all the masonry works on the Neemuch line, and has ordered a fresh survey to be made of part of the line, by which a shorter route will be made.

— A prospectus has been published for the formation of another tea company in the Kangra Valley, to be called "The Shahpore Tea Company, Limited," with a capital of £15,000.

— The *Lucknow Times* states that a native woman, 34 years of age, lately sued a boy between ten and eleven years of age in the local Court at Lukhimpore for maintenance, on the ground that he was her husband, and the father of her children. The woman was committed for trial for perjury.

— All villages in which the proportion of female children to male children on a proclaimed population of not less than 25 children, is less than 25 per cent., are to be called "specially guilty" and will be entered in a separate register (B), called the "Private register of proclaimed families in specially guilty villages." This register will not be open to inspection except by the officers of the district.

— *On Guard* for March shows that the total number enrolled now in the Soldiers' Total Abstinence Associations is 6,317, a gain of about a thousand in two months. Lucknow has the largest number of Total Abstainers, 744 being counted in five Societies. Agra comes next with three Societies and 535 members. One of these Societies, that of the 59th Regiment, at present heads the list with 412.

— The *Times of India* hears of a curious occurrence having taken place at Indore last week. Lieutenant Stewart, 68th Light Infantry, was to be married to a daughter of Mr. Peter Hewetts, at the Indore Church, by the Rev. Mr. Hacon, but when the bridal party went to the church with their friends, Mr. Hacon was absent, and, when sent for, refused to attend. The parties have since left for Khundwah, to be married there, whilst Mr. Hacon's conduct is to be brought to the notice of the Bishop.

— A few days ago the Darjeeling mail was stopped and robbed on the road near Titalya. A correspondent of the *Delhi Gazette* writes that on the night of the 4th instant, the mail cart between Nynee Tal and Moradabad was robbed, the horses clubbed, and the driver and those accompanying him left for dead, in a part of the territory of the Nawab of Rampore. Two nights after, a horse belonging to one of the Dak Companies was cut out of its traces, and found next morning some six miles away; the gharry fortunately had no occupant.

— The following is a copy of a letter sent by Government to Mons. Pachino, to prevent him crossing the frontier. Sir,—Under instructions from the Government of India, I am directed by the Honorable the Lieutenant Governor to inform you that you cannot be permitted to proceed on your contemplated journey from British India to Tashkend. Accordingly, the Commissioners of the Peshawur and Derajat Divisions have been instructed to take measures, under the Punjab Frontier Regulation No. 8 of the 18th December 1873, to prevent your passing out of British territory, and his Highness the Maharaja of Jummoo and Kashmeer has been requested to prevent your proceeding through his territories.

— Mr. Elliot Macnaghten, of the Civil Service, Commissioner of Excise and Stamps, committed suicide on the evening of the 18th by shooting himself. Temporary insanity was proved beyond doubt to have been the cause. Deceased spent Thursday, it appears, in making preparations connected with a trip home; he learned on that day that, through the kind exertions of the Lieutenant-Governor, he would soon be freed, most likely, from all pecuniary liabilities connected with the embezzlements in his office, and all his affairs seemed to have been prosperously arranged. He even adjusted his last pay certificate at the Accountant-General's Office, and remained there till nearly 4 o'clock. Then he went home, withdrew to his bath-room, and shot himself through the heart with a revolver.

— The following news is given by an arrival from Ghuznee:—"When Sirdar Mohamed Ayoob Khan saw that Herat affairs had reached a crisis, he played a nice trick to deceive Moostoufee Habeeboolla and Sipah Salar Hoosein Allee Khan. He first showed favour towards General Daood Shah and having consulted with him, wrote a letter to Moostoufee Habeeboolla Khan and the Sipah Salar telling them that he was quite prepared to have matters amicably settled, and that he would take them to Herat if they would come out to receive him. The Sirdar also said in his letter that if they gave their word that they would not take him prisoner, he would make over Herat to them. The Amir's representatives, that is, the Moostoufee and the Sipah Salar, agreed to the proposal, and fixed the day and time to accomplish the design. Moostoufee Habeeboolla Khan and Sipah Salar Hoosain Allee Khan, accompanied by fifty sowars, left their camp at the appointed time to receive the Sirdar, who had also completed his arrangements to surprise both chiefs. Sirdar Ayoob Khan ordered his eight hundred sowars to conceal themselves in different ambushes and to appear at a given signal. The Sirdar with fifty sowars went out to meet the Amir's chiefs. The Sirdar met the Moostoufee and the Sipah Salar about two miles from their camp, and after mutual compliments had been passed and the matter discussed, Sirdar Ayoob Khan gave the signal, when the eight hundred sowars appeared and ordered them to imprison both the chiefs of the Amir. When they were imprisoned, some skirmishes took place and a number of men were killed and wounded. Sirdar Ayoob Khan conferred [illegible]

Daood Shah for the success of his schemes and showed him all sorts of favor."

Bombay.

— Five carriage accidents occurred on Saturday and Sunday last in the streets of Bombay.

— The Brahmins of Poona still continue to offer up sacrifices on behalf of the Gaekwar.

— Lieutenant-Colonel Penn, R. A., has been placed under arrest by Major Phipps, Commanding the Artillery at Aden.

— Messrs. Lattey and Hart have written to the London papers denying Dr. Kenealy's statement that he was to have been retained for the Gaekwar if he had not been disbarred.

— Sir Richard Couch, Sir R. Meade, and Mr. Melville, arrived at Bombay on the 19th by special train from Baroda. The Commission will meet at the Secretariat to draw up the report to the Viceroy.

— *Mr. Blanchard, late sub-editor of the Times of India*, has filed a suit against the proprietors for 'breach of contract and wrongful dismissal.' The case comes on next month.

— There are 278 children boarding in the Bombay Education Society's schools. Of these 171 are on the *free* list. Only 3 are paid for in full by their friends. Soldiers' children, supported by Government, number 43.

—The 7th and 9th N. I. regiments, for Bombay, have already been supplied with Sniders; and it is said that orders have already been issued for the distribution of that arm among the 5th, 6th, and 14th regiments.

— Mr. Henry Lennon has obtained a decree from the Bombay High Court for the dissolution of his marriage with his late wife Emma Sophia Lennon, also known as Beebee Fatima, on account of her having committed adultery with a Pathan named Mir Ahmed Khan.

— There is no news of interest from Yemen; but the Hashid tribes are still opposing the Turks and refuse to make their submission to the Ottoman Porte. It is said both sides are preparing to renew their struggle near Khamer, and that the Turkish troops are not so confident as they were against the Hashid, from whom they have sustained serious reverses.

— Mr. Serjeant Ballantine arrived in India on the 18th ultimo and left on the 22nd instant. His stay in India will, therefore, have amounted to only 32 days: and his absence from London to within 70 days. There was a great crowd of natives at the Apollo Bunder to see him off. He was presented with an address and Sanskrit verses, and was accompanied on board the steamer by a large number of people.

— The *Indu Prakash* recently called upon Sir Dinkur Rao to remember that he was a Brahmin. How this was to help him to fulfil the duties undertaken as a member of the Baroda Commission is not very obvious. A writer in the *Dnyanodaya* explains it by a reference to the privileges of Brahmins as set forth in Hindoo books. Munoo lays down this principle of action: "When the result of true testimony would be loss of life to Shoodra, Vaishya, or Kshatriya, the false testimony is better than true."

— H. M. S. *Kwangtung*, while in search of a missing boat containing the captain and eighteen men from the S. S. *Hongkong*, called at Maculla. There appeared to be a cessation in the hostilities between the Nakeeb and the Zemadar of Shuhar. Several large war dhows were at anchor at Maculla full of men. A new port has been built on the sea-face of the town, and the Nakeeb would appear to be on the defensive. He assured Captain Elton that he was quite able to hold his own against Shuhar, and, he added, his frontier was safe.

— The Bombay Cotton Spinning Mills stand in some respects on nearly the same ground as the Calcutta Jute Mills; the similarity is easily traceable. But the Bombay mills do not, says the *Gazette*, look to Australia for a market, but to markets much nearer home after the demand in India has been satisfied. Their home markets, compared with those for jute, are immensely more extensive, and the exportation of their manufactures to the East Coast of Africa, the Coasts of the Arabian Sea and the Persian Gulf will not be hindered by enormous freights or unreciprocated trade.

— With reference to the telegram from Aden, reporting that her Majesty's ships *Nassau* and *Rifleman*, with part of the crew of the *London*, had bombarded and taken possession of "Fort Monbazique," it is to be hoped that the fortress so named will not be confounded with Mozambique, which, as all the world knows, belongs to the Portuguese. From the statement that follows this announcement—namely, that "Mombazi" had been handed over to the Sultan of Zanzibar—there can be no doubt that the place indicated is the Island of Mombasa, situated about 150 miles to the north of Zanzibar, where there is a strong fort originally built by the Portuguese when they held most of the stations on the east coast of Africa. The unruly Mazrui' Arabs who occupy the places have frequently set the rulers of Zanzibar at defiance, and appear to have done the same very recently. The co-operation of the British to restore the fort and island to the Sultan is an act of courtesy which his Highness's loyal execution of the late treaty for the suppression of the slave traffic by sea richly deserved at our hands.

— The *Hong Kong*, lately wrecked in the Red Sea, sailed from London for China on the 23rd January last, with a general cargo and seven passengers. Nothing unusual occurred on the voyage, until the morning of the 23rd ultimo, when at about 5 a. m. she struck upon a sunken reef, four or five miles off the island of Ab-del-Kon in the Red Sea. Captain Cunley assisted the lady passenger with her five children into the starboard quarter boat, which was in charge of the chief officer. She had in her Mr. Frank Murphy, chief officer; Mrs. Walton, her five children; Edward Pitman, the chief steward; Mr. Phelps, third steward; Wm. Phelps, fourth engineer, Jas. Stag, butcher; and Stockington, chief cook. This boat, however, unfortunately got entangled in some of the ship's tackling, and was dragged down with the sinking vessel. Every effort was made to save Mrs. Walton and her five children, especially by the captain, who, when picked up, was in a most exhausted condition. Had it not been for the excellent discipline observed it is hard to say how many more would have perished, for it was only between eight and ten minutes after striking that the gurgling waves closed over the ill-fated vessel. Happily, after suffering great privation, all reached Aden in safety.

— A remarkable case has come before the Gurgaum Police Court. The plaintiffs were two European women, named Amelia Couch and Caroline Hand, who recently arrived in this country, accompanied by two Pathans to whom they had been married in Australia. The following statement presents the main facts of the case: Declaration made by Amelia Couch before Mr. Francis Gibbons, City Magistrate of the first class at Kurrachee, on the 13th inst. "I am 24 years of age and am a Christian. I was born in Falmouth Harbour, and believe that I am married to a Mussulman named Hajee Mherban, a Pathan. I am not otherwise married. I was last in Australia, to which place I emigrated in 1864, from which time until sometime back, I remained in service there. I have no relations in Australia, but I have three brothers in England named John, Richard, and Robert; one of them is in Falmouth and the others are in Sheerness; they are men-of-war sailors. I have not heard from them for the last twelve months. I left Australia in the mail steamer about five weeks ago in company with Caroline Hand and the two Pathans, to one of whom, I believe, I am married, and with whom I am now living. I made the acquaintance of this Mussulman about a fortnight before we left Adelaide, Australia. He asked me to go with him to his country, and I said that I would. We were then married. No ceremony was performed, but we went to the Scotch Church at North Terrace, and a certificate, which I produce, was given to us by a man professing to be a Christian Minister, but who is unknown to me. On learning that Hajee Mherban's country—Candahar—is not in British territory I do not wish to go there to live with him, although he has treated me very well, and paid my passage from Adelaide. I therefore wish to be sent back to Adelaide, but not to my friends at home. I have no money, and no property except some clothes and a ring." Upon reading over their depositions, the Magistrate said that he doubted whether the Vagrancy Act was intended to apply to females, but as the first class Magistrate at Kurrachee had already declared the women to be vagrants, it was not for him to question the legality of his order; and he would, therefore, under clause II. of Sec. 7 of the Vagrancy Act remand the parties to the charge of the Commissioner of Police with a request that every assistance might be rendered them in obtaining employment in this city, but that if suitable employment could not be found, then, as there was no accommodation for females in the Government Workhouse, that Government might be addressed on the subject of their deportation to Australia or Europe, as was done in the case of Emily Jane Reynolds, who was sent down to Bombay in 1873 by the authorities at Allahabad, and subsequently provided with a passage to Europe at the expense of the Government.

Madras.

— Small as Pondicherry is, it boasts of a Town Hall, which is said to be an ornament to the place.

— Government has permitted Mr. Powell, Director of Public Instruction, to receive a farewell address.

— The salary of the Commissioner of the Nilgiris has been reduced from two thousand to twelve hundred rupees per mensem.

— Professor Duncan, of the Presidency College, has been elected University Registrar by an overwhelming majority.

— The case of Gordon *vs.* Thom, in which a schoolboy charged his master with assault, has been dismissed with Rs. 146 costs.

— It is reported that Government labels to the value of Rs. 10,000 have been made away with from one of the Bangalore Division Cutchery Treasuries.

— Government has sanctioned an expenditure of Rs. 17,000 for supplying and repairing furniture, &c., for the use of the Government House at Madras and Guindy Park.

— Great exertions are being made by the railway officials to get the line to Madura finished by the middle of next month, before the annual feast there, which attracts a large number of pilgrims from all parts of Madras.

— The Lady Directresses of the Civil Female Orphan Asylum at a late meeting resolved that the cooking should, in future, be done by the girls of the Institution, without the assistance of a hired cook.

— Mr. Croom, of tiger-armour notoriety, is at present in Nellore, one of the principal objects of his visit being, it is believed, the presence of a man-eating tiger, now infesting the Redayagori Taluk, on which he is about to try an experiment with his armour, and on whose skin hangs a reward of Rs. 100.

— The Acting Head Assistant Collector of Salem, in informing the Collector of that district of the occurrence of an earthquake in Tripatore on the 13th instant, at about 10 A. M., wrote:—"It resembled the sudden and consecutive explosions of two cannons at intervals of five seconds underfoot, and was followed by a long roll and two lesser shocks at intervals of about five minutes. The direction of the motion cannot be accurately ascertained, but the first two explosions as I felt them were of tremendous force, and seemed to be acting vertically from the interior towards the surface. No damage ensued."

Feudatory.

— Travancore has had no rain since December.

— More arrests are to be made at Baroda when Mr. Souter returns there. There are numbers of cases against the Gaekwar's officers to be gone into.

—It is stated that Raja Raghbir Singh, a brief account of whose case appeared in our columns last week, is about to institute civil and criminal proceedings against his persecutors.

—The Maharaja of Travancore has at last returned to his capital after having been longer away from the country than any previous ruler of the State.

—The Maharaja of Kashmeer is expected to leave Jummoo early in April for Simla to have an interview with Lord Northbrook. He will be accompanied by his youngest son, his Dewan, and one or two other officials.

—A grand challenge pigeon-shooting match took place at Baroda on the 18th instant—the 9th Regiment Native Infantry against the world. Dr. Boustead won the sweep, killing all his birds, and the 9th Regiment won the match by six birds.

—Mr. G. L. Nursinga Row has come forward to bear the whole cost of converting the back water at Vizagapatam into a harbour. A railway of 65 miles in length is proposed in the direction of Raipore, the cost of which is estimated at thirty-two lakhs, and the Maharaja of Vizianagram offers to put down fourteen lakhs and pay six more in three years. The object of the line is to prevent the annihilation of the trade with the Central Provinces on the opening of the line from Nagpore to Raipore.

—The *Bicharuk*, a new Anglo-vernacular weekly, suggests that in all fairness a Commission ought to assemble to investigate the conduct of Col. Phayre during his incumbency as Resident at Baroda. We assume, says the editor, that the Gaekwar attempted to poison Col. Phayre, but the question is what amount of persecution must have driven a chief of the rank of the Gaekwar to commit himself to such a deed. Is it not a matter of intolerable annoyance that the princes and chiefs of India should be the victims of harassment at the hands of such comparatively inferior British officers as the Residents?

—According to the *Times of India*, the suspension of the Gaekwar has led to an unexpected rent difficulty. "The ryots of the district of Curry Patten seem to have a clear notion of 'technical objections.' They have refused to pay their tax or dues, because they say there is no Maharajah, and, until Mulhar Rao is restored, or a new Maharajah appointed, they maintain that no payments would be legal. The subahdar of the district has been sent for, and he arrived in Baroda on Saturday. He is a clever, intelligent man, and owes his present position to the influence of General Sir Richard Meade. He is unable, however, it is said, to influence the ryots in this district."

—The Rajpootana Rajas regale themselves with a drink of irresistible strength. The liquid is compounded with spices of the strongest flavour, into which strange insects and vegetables are introduced to give the decoction "body." For instance, the Arabian lizard is a highly esteemed ingredient, while a product called *samundur ke naryal*, or ocean cocoanut, is an equally valued representative of the vegetable world. The principal objects in the preparation of this potable fire are extreme strength and extreme spiciness, and the demand for these qualities is the desire to be rapidly intoxicated. The strongest sort of the liquor is known in Marwar as the Jodhpore brew, and is supposed to be the correct tipple for the royal family and leading nobles of the province.

—*The Times*, writing about the trial of the Gaekwar, says: The arraignment of his Highness the Gaekwar Mulharao before a Commission appointed to sit at Baroda by the Viceroy of India will probably be recorded in history as among the most remarkable of State trials. It is strange enough to have the details of a cross-examination by Serjeant Ballantine telegraphed to us from Hindostan; but when we come to consider whom it is he is defending, and before what a tribunal, the event appears unique in the judicial annals of British India, and, perhaps, of the world. The Viceroy of India, acting in the name and by the supreme authority of the Empress-Queen Victoria, has delegated to a Commission the right to inquire into the guilt of the accused Prince—not to pronounce a sentence or even to give a conclusive verdict. That supreme exercise of power is reserved for England, as the victor and successor of the Mogul Empire. The paramount power in India, as it is vested in the Queen and exercised by her Viceroy, does not derive its force and essence from legislation or from treaties or from any form of social or national compact. It rests ultimately on the right of the stronger, the indisputable claim of the conqueror to enjoy his conquests undisturbed, and to insist upon the preservation of peace and decency among his weaker neighbours.

Burma and the East.

—It is proposed to establish a sanitarium near Tounghoo.

—A Chinese convict has been strangled with his own pig-tail in the Rangoon Jail.

—Great excitement prevails in Rangoon in consequence of the dispute between Burma and the British Government. Trade is partly paralysed.

—A European constable of Rangoon has accidentally shot the proprietor of a local hotel, while engaged in talking with him.

—A child has been found floating in the Salween river, in a covered earthen pot, by the master of a vessel lying in the stream.

—Major Richardson and the 6th Battery of the 5th Brigade Royal Artillery with Colonel Watts, Headquarters, and two hundred men of the 39th Madras Native Infantry left Rangoon for Tounghoo on Sunday.

—Sir Douglas Forsyth, backed by a Madras European Regiment, is about to proceed to the Court of Mandalay, with a view to bringing the king of Burma to his senses about the long-pending boundary question.

—Some of the sepoys of the 15th Madras Native Infantry, who lately went from Madras to Moulmain, were found in possession of 2,500 tolas of ganja and 450 tolas of opium, all of which was seized by the Superintendent of the Preventive Service. The dhobi had his irons stuffed; some had their boots full and one his mattress padded with the drug.

—We read that an Embassy from the King of Burma to the Emperor of China had proceeded along the route followed by Colonel Browne's expedition only a few days before the latter were attacked, and as Mr. Margary had shortly before passed along the same route in safety, it is suggested that the Burmese may have had something to do in exciting the Chinese to attack the expedition.

—Mrs. Dean, the wife of a Baptist missionary in Siam, has forwarded a petition, signed by most of the European ladies at Bangkok, praying for the abrogation of the law which allows a man to pawn his wife and children into slavery in payment of a debt contracted by opium-smoking or gambling. It has been favourably received by the young King, and this unnatural privilege will probably be taken from the Siamese gentry.

—The *Rangoon Gazette* remarks:—"It is fair to ask those who would be the apologists of His Burmese Majesty, why it was that the King positively and persistently refused his consent to Colonel Browne's party proceeding from Mandalay along the Thainee route? Why did he shut the party up to the one route through which his own embassy was to pass in advance of them? Why did not that embassy take another route, or go with or after the English party? Why was the King so sulky and displeased when he heard of Mr. Margary's success? It will greatly confirm our suspicions if we find that between Margary's first visit to Manwyne where he was so well received, and his second, when he was treacherously murdered, the Burmese embassy had passed through that town."

—Mr. N. de Maclay, the Russian traveller, returned to Johore Bahru on the last day of January from an interesting excursion into the interior of Johore, undertaken with the object of learning something of the wild races inhabiting the jungle,—the Jakuns, Oran Rajet, and Oran Utan. As these races always withdraw deeper into the interior, seeking shelter in the forests and mountains, on the approach of strangers, Mr. de Maclay had to extend his explorations into places never yet visited by Europeans, and rarely even by the Malays. His travels occupied fifty days, sometimes by boat, but he performed the greater part of the journey on foot. Leaving Johore Bahru, Mr. Maclay went to the Muar river, up which he proceeded as far as Pallon, whence he made a visit to the Oran Rajet. Thence he pushed his way onward to Badon Kraton, and Djekati (in the district of Rumpen), and from there across over Tenan and Bicko (Batu Pahat) to Leba, Pongut, and Lundan, the settlements of the Oran Utan, and thence down the river Rahan to Indau. This was a trip right across the territory of Johore, in accomplishing which Mr. de Maclay had to travel on foot for thirty days. From Indau he returned overland to the Johore river, and reached Johore Bahru yesterday, where he is being most hospitably entertained as the guest of H. H. the Maharajah. Mr. Maclay's travels were very much facilitated through the kindness of the Maharajah who gave him circular letters to all the chiefs in his territory, by which the transport of his luggage was greatly facilitated, and he was enabled to obtain occasional supplies of provisions. Considering that the rainy season is not yet over, and that he was obliged to spend many days and nights in a flooded jungle, Mr. de Maclay has returned in good health, having only a slight fever. The results of this excursion have so far encouraged him, that as soon as he is fully recovered, he intends resuming his researches in the interior of the Peninsula, starting from Pahang, and proceeding across the country to Malacca and Quedah.

Asia.

—The Ameer of Cabul contemplates sending Yakoob Khan into British territory.

—The Chiefs at Herat report that the Government property and war-material have not been plundered, but left in good order.

—The Ameer of Cabul has issued instructions to endeavour to persuade Ayoob Khan, who has fled to Meshed, to return.

—Mr. R. B. Shaw returned to Yarkund at the beginning of January, after a very friendly visit to the Ameer who was about to proceed on a tour of inspection to Aksu.

—The Toorkomans are said to be pleased with the Governor of Tashkend for permitting them to enlist in the Russian Army. It is stated that the Russians are collecting stores, in view of attacking Yarkund.

—Mr. Russell has an excellent house or set of quarters in the main Bazar of Yarkund. It is formed of a large courtyard, and surrounded by rooms for the followers with brick walls, and apartments have been specially built on the roof for Mr. Russell and his Assistant.

—For the first time since the port of Newchwang was opened, a foreigner has been robbed on the highway. This was a Belgian Catholic Missionary, who was bound from Mongolia, for medical advice. When some forty miles to the North East of Yingtzu, Mynheer Metman was surrounded by what he and his servants mistook for Imperial soldiers, but who unfortunately turned out to be brigands, for they appropriated the missionary's saddle pony with all gear, his gun, pistol, and all portable articles, even his clothing and that of his domestics. From feelings of pity they returned to him a skin coat, and his snuff box, one of the sympathising robbers remarking that a man could no more do without his snuff than without opium.

—The new sovereign of China, the son of the Prince of Chun, the adopted child of the Empresses Dowager, is only four years of age; and he will not for fifteen years to come assume the personal control of the Empire. During all this time, the Empresses Dowager will, as during the twelve years' minority of Tung-che, act as regents; and being females they will as heretofore not grant audiences to the foreign ministers. The death of Tung-che has again opened a gulf between the Envoys of foreign governments and the Court of Peking. Fifteen years will be required before it will be possible for the foreign M[illegible] to

hold of the palace to have audiences of the Ruler of China. This policy at the same time unfortunately likewise tends to keep asunder the people of China from foreign nations.

— The news which has reached us by telegram of the destruction of the newly-constructed line of telegraph from Foochow to the Amoy affords another instance of the use which the Chinese Government is in the habit of making of local mobs. On the first news of the landing of the Japanese troops in Formosa the Vicoroy of Fuhkion engaged the Great Northern Telegraph Company to construct an overland line from the Amoo anchorage to his Yamên at Foochow Foo. At first the work went gaily on, and encountered no sort of opposition from the people. But at an unfortunate moment the Russian Minister of Peking heard of it, and thereupon claimed on behalf of his Government his right of making a line from Peking to Kiachta by virtue of a former agreement by which the Chinese Government had promised to sanction the construction of this line in the case of any similar concession being granted to any other treaty Power. This gave rise to numerous negotiations, and meanwhile the work was brought to a standstill, but before any decision had been arrived at the Danish Minister, General Raasloff, arrived at the capital prepared to support the cause of the Great Northern Telegraph Company. And so good an advocate did he prove that a few weeks ago we were informed by a Shanghai telegram, dated February 16, that General Raasloff had obtained from the Chinese Government recognition and protection for the line. This put the Peking authorities in a dilemma. They were obliged to accede to the equitable claims of the Danish Envoy, but by so doing they laid themselves open to the demands of the Russian Minister. Out of this difficulty there was only one way. Let the mob be called in, and in the name of outraged Feng-shui let them put an effectual stop to the work of the troublesome foreigners. It was done, and we now learn that the line "has been destroyed by persons hostile to the construction of telegraphs."

— The following details of the Persian army are taken from the official Army List for 1291, the present year of the Hejireh: — I. Regular Army.—1. Seventy-six battalions of infantry, commanded by 40 generals, 56 colonels, and 140 majors, and divided in ten army corps, called tuman. The 1st army corps has eleven battalions, the 2nd and 3rd have each nine battalions, the 4th and 5th each eight battalions, the 6th and 7th each seven, and the 8th, 9th, and 10th each five battalions. The 10th army corps is very small, containing three small battalions of soldiers, one of boys (this is the special battalion of the Naibus-Sultaneh, the Shah's youngest son), and one of engineers (Each battalion is supposed to contain 800 men; some do contain this number, most do not). The infantry, if all the battalions were complete, would number 60,800 men; it would be surprising indeed if 30,000 could take the field to-morrow. Many battalions only exist in a half-complete, half-disbanded state; their soldiers receive no pay, and work as field labourers, bricklayers, butchers, &c; their officers are on a sort of half-pay, and comparatively poorer than their men. Some battalions do not exist at all, except on paper, and these phantom battalions are somewhat numerous. 2. Artillery.—The Army List regarding this branch of the army speaks only of 9 generals, 16 colonels, and 45 majors. There are about 1,000 artillerymen. Of the actual number of guns in Persia it is difficult to speak, but 50 or 60 only are in a fit state to take the field. The others have no horses or have broken wheels, or are otherwise immovable; they are only useful for firing salvoes on great holidays or for show outside the palaces of the governors of different towns. 3. Camel Artillery.—This part of the army is totally useless; it is only for tamasha; it is fortunately not very numerous. Its armament consists of about 1-inch bore swivel guns, fixed on the saddles of the camels. II. Irregular Army.—1. Thirty-eight squadrons, varying from 50 to 500 men, of cavalry, with 189 officers of different ranks. 2. Five battalions of infantry, or, in reality, "gunbearers" (tofangchis), with 39 officers. III. Guards.—These are put down at 50,000; this figure is absurd. The total of the army—regular, irregular, and guards—is in the army List enumerated at 200,000; 80,000 would be nearer the mark. From all the pay the Government takes a tax of 20 per cent.

Literary.

— Another new weekly paper, called the *Burmah Guardian*, has been started at Rangoon.

— A Paris theatre has reproduced an old melodrama which gives us some episodes of the Indian mutiny in a thoroughly Gallic costume. The gallant Lieutenant Willoughby is raised to the rank of a Major. The other English characters are Sir Wattson and William Woods, and the audience is also treated to a Fakir, a Rajah, Sepoys, and the persecution and miraculous escape of Monsieur, Madame, and Mdle. David, who, after a series of terrible adventures and hair-breadth escapes, find themselves at Delhi when that city falls once more into the power of the British, thanks to the gallant conduct of a French Naval Brigade, which, after storming the walls and capturing the place, hands it over to the English Commander. How the French tars got up to Delhi, and whether they got there by forced marches from Pondicherry, is a mystery we would fain not attempt to unravel. Suffice it to say that the Union Jack and the Tricolour wave nightly in friendly emulation on the boards of the Chatelet, and that there are Frenchmen who do not hesitate to believe that Delhi really was stormed by their blue-jackets.

— At a late meeting of the Asiatic Society a paper was read, by the Rev. J. Long, 'On Eastern Proverbs, and their Utilization for Oriental Research.' After pointing out the political value at the present time of the Government of India being acquainted with the feelings and opinions of the masses, the paper referred to Eastern proverbs as the key to much of the social life of the people, and especially of the women shut up in zenanas. They were often like ancient coins, opening out a vista into the inner life, and guiding us where history failed. The lecturer then pointed out the importance, in the present transition state of the Eastern mind, of collecting, interpreting, and publishing all relating to the proverbs of the East, in relation especially to ethnological and sociological questions; and the facilities presented in India for carrying out this plan through the Asiatic Societies, the directors of public instruction, and other agencies. References were made to the progress in Russia regarding proverbs, and an outline of the needs of proverbial research was given from the Russian work of Snegrief. The archaisms of proverbs might, in Mr. Long's opinion, throw light on the connexion between the Dravidian and Turanian languages, on the affinities of the aborigines of India, or the connexion between the Prakrit and Sanskrit languages. The rising vernacular literatures of India were marked by the freer use made of the illustrations by proverbs, and in teaching and preaching to natives they supplied a store of most valuable illustrations to make Scripture truths more accessible to the masses. Illustrations were given by quotations from Bengalee, Teloogoo, and Russian proverbs.

— We take the following specimens of the wedding songs of the Munda Kolhs from the *Indian Antiquary*:

Conversation between husband and wife about growing old.

O thou, in grass-covered hut,
In the wood-house, my mate,
Like the flower thou art dried up,
Like the red flower thou art faded:
Is it from the earth's heat, my mate,
Or from the heaven's glow,
That thou like the flower art dried,
That my mate like the red flower is faded?

The husband's answer.

It comes not from the earth's heat,
It comes not from the heaven's glow;—
Time goes on, my mate,
Age is dr[illegible]ear;
Tim[illegible] mate,
[illegible]tpath;
[illegible]ompanion,
As on a broad highway.
As in a dull, damp upland, O mate,
Have we become dull, O mate;
As in a confused waste valley, O companion,
Have we become confused;
You are dull and I am dull, O mate,
We are both alike dull;
You are confused and I am confused, O mate,
We are both alike confused.

Alternate song at the wedding between bride and bridegroom.

(Chiefly sung by the person who brings in the bride.)

Bride.—Come in, lad, come in
To the *kuda*-tree's low shade,
To the fruit-tree's deep recess
Go in, lad, go in.

Bridegroom.—I will go in, I will go in,
Though I have not much gold,
For the *kuda*-tree's low shade.
For the fruit-tree's deep recess.

Bride.—Is not the price of the wedding-money there?
Then, my lad, go not about, loving, piping;
If thou hast not much money,
Then, my lad, my lad, go not about piping with your teeth:
Then say not to me "Come here,"
Then say not to me "Go with (me);"
My hair-top is loosed,
My upper covering is unbound.
Wilt thou care for me like the falcons.
Thou who sayest to me, "Come to me"?
Wilt thou provide for me like the great falcons,
Thou who sayest to me "Go with me"?

Bridegroom.—A village is there, and land is also there, my dearie;
Wilt thou carry it away rolling it up like a mat?
A village is there, and land is also there,
Wilt thou carry it away like wood on thy back?
(The meaning is, Don't be so covetous.)
Thy mother's and father's house was like the possessor's of the village (*dicku*),—
Like water are they dried up;
Thy uncles and cousins were like the wise men (*sadu*),—
They are extinguished like fire.
Thy father and mother are overgrown with thorns,
Thy relations are covered with stones:
Ah, weeping comes over me—
They are grown over with thorns;
Sorrow rises up in my soul—
They are covered over with stones.

Ecclesiastical.

— The Rev. Mr. Fordyce, of the Anglo-Indian Union, has returned to India.

— The Annual English Confirmation for Calcutta took place on Thursday, the 18th. Two hundred and seven presented themselves, the males being a hundred and three, and the females a hundred and four.

— On Sunday week last, a lad of the name of Cundasawmy Modali was baptized by the Rev. Mr. Burgess, of the Wesleyan Mission Institution, Royapettah. Within the last fifteen months, eleven youths have been admitted by baptism into the Christian Church from the Royapettah Institution.

— A religious print, published in Bombay, expresses the opinion that the telegraph has verily been given to the world for the special purpose of making known the overthrow of Satan's power in the hearts of men! It is to be feared that the receipts from this source of revenue will be small for some time to come.

— Archbishop Steins, in deference to the strongly expressed opinion of his medical advisers that residence in Calcutta this hot season will be positively dangerous to him, will leave for Europe on Sunday. The Very Rev. Fr. Vanderstuyft, S. J. will probably administer the business of the Vicariate in the Archbishop's absence.

TELEGRAMS.

THURSDAY, MARCH 18TH.

The Homeward Mails, *via* Brindisi, which left Calcutta on 19th February, were delivered yesterday.

In the House of Commons last night, Mr. Disraeli, replying to Mr. Wait, said that our Minister at Pekin had been instructed to request that a strict investigation be made into the murder of Mr. Margary at Manwyne. Mr. Disraeli will make a further communication to the House when Mr. Wade's report has been received.

In the Commons, Lord Hamilton, in reply to a question, stated that the Indian Government were fully aware of the strategical importance of Herat

and Merve, and of their duty to insure security on the frontier.

After a debate in committee upon the bill to amend the law for regimental exchanges, the first clause was adopted after various amendments had been rejected, including a proposal to fix £500 as the maximum sum that might be paid.

The Marquis D'Andiffret has been elected President of the National Assembly.

A Consistory was held yesterday. Six new Cardinals, including Archbishop Manning, and ten Bishops, were created.

Obituary—Field-Marshal Sir William Gomm.

The Regimental Exchange's Bill has passed the Committee of the Commons after an excited debate in which Mr. Gladstone took part. All amendments were rejected by strict party votes.

FRIDAY, 19TH.

M. Dufaure favours the dissolution of the Assembly in the autumn.

The Czar visits Ems on the 18th May.

Germany and Italy are exchanging views relative to the next Papal election.

Mr. Charles Lennox Peel succeeds Sir A. Helps.

Messrs. Siordet and Company of 59 Mark Lane have failed with the liabilities estimated at £300,000.

SATURDAY, 20TH.

The Emperor of Germany will probably visit Italy in May.

Cabrera has recognized Don Alfonso.

The Regimental Exchanges Bill has passed the third reading in House of Commons.

The National Assembly adjourns until May 20th. Nothing settled about dissolution.

The Prussian Chamber has resolved on disendowing Bishops who refuse to acknowledge the supremacy of the State over Papal authority.

The Bishop of Munster has been imprisoned. Mr. Richard Garth Q. C. has been Knighted.

MONDAY, 22ND.

The Inter-University Boat Race was won by Oxford defeating Cambridge by four lengths.

The Prince of Wales contemplates a visit to India next cool season.

The Marquis of Salisbury has introduced a Bill to consolidate the Statutes of Indian Legislation.

The House of Lords has adjourned until 8th April.

In consequence of the death of Sir Hope Grant, Sir Archibald Little has been gazetted Colonel of the 9th Lancers, and General Custance Colonel of the 11th Hussars.

The Grand National has been won by Pathfinder.

Mr. John Mitchell, the lately elected M. P. for Tipperary, is dead.

TUESDAY, 23RD.

The Prince of Wales will visit India next November, accompanied by Sir Bartle Frere.

The Emperor of Austria will visit Victor Emmanuel at Venice on April 5th.

It is rumoured that the French loan of 48 millions

It is rumoured that ght out for conversion of francs will be shortly brou of the debt due to the Norgan loan and the redemption the Bank of France.

WEDNESDAY, 24TH.

The Homeward Mails, *via* Brindisi, which left Calcutta on 26th ultimo, were delivered yesterday.

The English press anticipate much benefit to India from the visit of the Prince of Wales.

General Sir Charles Yorke is appointed Constable of the Tower.

A general lockout is threatened of the cotton spinners of North East Lancashire.

Obituary—Comte Jarnac, the French Ambassador to London.

MARRIAGES.

February 23. By the Rev. T. J. Rocke, at Littleham-cum-Exmouth Church, Mr. ROBERT GORDON, of the Public Works Department, India, M. Inst. C.E., to Gertrude Mary, youngest daughter of Captain ARTHUR BROOKING, of the late H. E. I. Corps Service, The Mount Kingswear, South Devon.

March 18. At the Cathedral, Calcutta, by the Rev. Edgar Jacob, M. A., Mr. T. PERCY, eldest son of the late Mr. THOMAS FOX, of 11, York Gate, Regent's Park, to Emily Magdalena, daughter of Mr. F. BEAUFORT, Civil Service.

18. At Christ's Church, Jubbulpore, (C. P.), by the Rev. Thomas David Gray, assisted by the Rev. Elias Champion, Mr. CHARLES GAYFORD, of Hoshungabad, (C. P.), Missionary F. F. M. A., to Harriet Jemima, eldest surviving daughter of Mr. LEWIS MENDES, of Calcutta.

BIRTHS.

February 23. At 24, Oakfield Terrace, Hillhead, Glasgow, the wife of Mr. CHARLES H. BARCLAY, of a daughter.

24. On board the P. and O. Company's S. *Mongolia*, between Aden and Galle, the wife of Mr. G. H. P. EVANS, of a daughter.

March 9. At Cuttack, the wife of Mr. WILLIAM MACPHERSON, Civil Service, of a daughter.

16. At Calcutta, the wife of Mr. B. E. FRENCH, J. A. G.'s Office, of a son.

At Dinapore, the wife of Mr. G. J. M. MANUK, of a daughter.

At Jeypore, Rajpootana, the wife of the late Rev. GAVIN MARTIN, M. A., Missionary, Nusseerabad, of a son.

17. At No. 6, Victoria Terrace, the wife of Mr. E. J. STANLEY, of a son.

19. At Calcutta, the wife of Mr. GEORGE EDWARD CORNELIUS, of a son.

DEATHS.

February 9. At Albert Dock House, Liverpool, Augustus James, infant son of Mr. JAMES R. POMEROY, aged 12 months and 18 days.

March 16. At Beawr, William Williamson, the infant son of the Rev. W. and Mrs. SHOOLBRED, of the Rajpootana Mission, aged 6 months and 22 days.

17. At Serampore, of Bronchitis, Malcolm, the infant son of Mr. ALEXANDER STEWART, deeply regretted.

19. At Chitpore, Lancelot Walter Foster, youngest son of Mr. CHARLES FOSTER CHADBURN, of Cholera, aged 7 months and 20 days.

LETTERS TO THE EDITOR.

SIR,—I am sorry to inform you, that this place (Dibrugur) is in a terrible position as regards theft. More than 6 or 8 houses have been robbed during the last February only—among the owners a P. W.'s Overseer has lost the whole of his ornaments worth Rs. 4,000. I am sorry to say that no clue of any kind has yet been found, nor can we believe that the Police care or try for a clue. We are sure to see what is called *Dakaiti* very soon much more largely practised.

It is to be hoped that the Inspector General of Police and the Chief Commissioner will kindly take notice of these matters.

Your obediently,
A RESIDENT.

Dibrugur, 6th March, 1875.

PREVENTION IS BETTER THAN CURE.

SIR,—The hot weather has already set in, and it is indispensably necessary for the authorities of this station to take immediate measures to keep Cholera at bay; the first step to be taken is to guard the water supply of this, as well as all the Military Stations, from pollution, and thus to exclude at least one element of danger. It has been proved beyond the shadow of a doubt, by eminent physicians of every civilized country, that water is the channel of conveyance of contagion. The obvious corollary is that water for human consumption should not only be obtained from the best accessible source, but that it should be secured on its way to the consumer against the possibility of receiving contamination from sick persons. Suitable measures are the covering in of wells and the substitution of proper vessels for the objectionable mashaks. The wells here as also as in every part of India are all open mouthed, and unprovided with the simplest appliances for raising water. They are crowded all day long by dirty cook boys, syces and women who use their own ropes and chatties to draw and carry water.

The chatties are constantly washed at the well, and any foul matter adhering to the outside of them, would be pretty certain to find its way into the well water. So long as our wells are exposed to innumerable chances of pollution, so long will they remain one efficient channel of cholera in our midst. The matter is of the simplest kind; it only needs to be fully understood and might save tens of thousands of lives. Perhaps it will not be out of the way to add a caution to all soldiers by no means to drink the juice of the toddy tree from filthy pots full of insects and poisonous flies, and no coolie female should be allowed to work inside the barracks.

Hoping these practical hints may attract the attention of those who have the power of remedying the evils complained of by

I am,
Your humble servant,
A BOX WALLAH.

Cantonment. Dinapore, 19th March, 1875.

RELIEFS FOR 1875-76.

By Order,
FRED. ROBERTS, *Colonel.*
Offg. Quarter Master General.

THE TRIAL AT BARODA.

Serjeant Ballantine's speech for the defence was marked with great power, considerable eloquence, and no small amount of wit, which sometimes seduced even the President of the Commission into a smile.

Before opening the defence the following letter from the Gaekwar to his counsel was read to the Commission :—

My Honoured and Valued Friend—His Excellency the Viceroy, having declared his intention of giving me an opportunity of clearing myself from the grave suspicion which he was induced to consider attached to me in consequence of the alleged attempt to poison Colonel Phayre, the Resident at my Court. I now, out of respect, for His Excellency the Viceroy, and from a desire to clear myself before him and before the world at large, of those suspicions, make the following statement :—

I never had, nor have I now, any personal enmity towards Colonel Phayre. It is true that I and my ministers were convinced that, owing to the position taken up by Colonel Phayre during his residency, it would be impossible satisfactorily to carry out the reforms I had instituted and was endeavouring to complete, in defereace to the authoritative advice conveyed to me in the *khureeta* of the 25th July, 1874, consequent upon the report of the Commission of 1873. Acting on this conviction, and after a long and anxious deliberation with my ministers, Messrs. Dadabhoy Nowrojee, Bala Mungesh Wagle, Hormusjee Ardasir Wadia, Kazi Shahabudeen, and others, I caused the *khureeta* of the 2nd November, 1874, to be despatched to His Excellency the Governor-General, through

Colonel Phayre, and, notwithstanding his remonstrances, feeling assured that when the true state of affairs was placed before His Excellency the Viceroy, my appeal would be successful. This conviction was shared by all my ministers, and was strengthened by our knowledge of the severe censure which had been passed on Colonel Phayre by the Bombay Government. The removal of Colonel Phayre on the 25th November, 1874, shows that our judgment was not erroneous. Thus, neither personal nor political motives existed to induce me to attempt the crime with which I am charged, and I solemnly declare that never personally, or through any agent, procured or asked the procurement of any poison whatsoever, for the purpose of attempting the life of Colonel Phayre; that I never personally or through any agent directed any such attempt to be made; and I declare that the whole of the evidence of the ayah Ameena, of Rowjee, Nursoo and Damodur Trimbuck on this point is absolutely untrue. I declare that I never personally directed any of the Residency servants to act as spies on the Resident, or report to me what was going on at the Residency, nor did I ever offer or cause to be paid any money to them for such purposes. I say nothing as to the presents that may, perhaps, have been made to servants of the Residency on festive occasions, such as marriage and the like. Information on trifling matters going on both at the Residency or at my own Palace may have been mutually communicated, but I did not personally hold any intercourse with those servants for this purpose; nor am I personally cognizant of any payments for the same having been made; nor did I authorise any measures by which secrets of the Residency should be conveyed to me. I present myself before this Commission fearlessly. I put implicit faith in the justice of those appointed by my honoured and valued friend the Viceroy. I am willing to answer any questions they may deem it right to put to me, and again solemnly deny the foul charge, my enemies have instigated against me."

The learned serjeant, early in his address, made these remarks about the

INDIAN POLICE.

I find that the police are dealt with in different books conected with the law of this country, evidently upon the foundation of great doubts arising as to their testimony. I believe I am right in saying that with uncertain jurisdictions—I do not go into details of such jurisdictions—that a confession made to a policeman is not receivable in a court of justice in any instances whatever, unless there is some other person to corroborate it. So an uncorroborated confession of a person to a policeman would not be received. A confession to a policeman, as I understand, would not be received at all. There are some provisions in other Acts of Parliament (I believe, I am speaking correctly upon the subject) by which policemen are forbidden to accompany witnesses to a court of justice. It seems that the legislature and the courts are fearful of the influences that the police are likely to have upon these witnesses. Laws of that kind do not apply here. As far as I see, there is no law whatever governing the police or what they do. As far as I can see, they are entitled to do anything. They appear to me to have unlimited power; there does not seem to be any Judge, any Magistrate, who can control them—what a policeman chooses to do, he does; and, in the present case, I do not know how many—but a vast number of witnesses—have been detained in custody for the purpose, as they say, of investigating this charge. Now, such an unlimited power undoubtedly creates—and it is necessary that it should create—a very great amount of terrorism—and you know no man can call his house or his person his own when a policeman is able at any moment to take him into custody and held him whenever he chooses for any time he pleases, and there is no remedy in any way—no Magistrate can interfere or does interfere, and he has no power whatever, either to obtain redress at the time, or compensation afterwards. It is the law, I presume, of the land. It is unquestionably the practice at Baroda. We have seen it in numerous instances, and we have seen the mode in which the police have acted with regard to different persons whose evidence was given in this case. In many instances I shall have to dwell upon facts connected with the police. But there is one general observation which appears pertinent to this case, and I shall be glad to fix it upon the minds of the members of the Commission—it appears to me to be a most monstrous thing and calculated to lead to the gravest injustice—I believe that I shall shew in the present case that it has led to the gravest injustice—that a police officer should not only be the person getting up the case, doing all he can to bring it home to the person who is suspected of the charge, but that he also should have the power of taking the depositions, and that those depositions should be capable of being used against a person upon the subsequent enquiry or trial, whatever it may be. Human nature is not less so because it inhabits the mind of a police constable, and a man who is hunting something down, he gets a keen desire to catch it—and sometimes if he cannot get at it by fair means, he will go a little out of the way, and obtain it by foul. It is not right that that which is a judicial document, and intended to govern judicial minds, should be the act of a person who has a strong, a naturally strong, partizan feeling in the matter under discussion; and I think I shall be enabled to shew that this observation that I have made is singularly pertinent in the present case upon referring to some of the depositions that have been taken; and I cannot help saying—and I shall give my reasons hereafter for making the assertion—that these depositions are not warranted by what took place, that they have been unfairly obtained, and that in many instances they do not represent in reality what was said, and that, in point of fact, they do not in any way whatever convey the truth as was intended even in the mass of falsehoods, because these depositions contained that which the witnesses themselves did not intend that they alone represent.

COLONEL PHAYRE AND HIS BOIL.

I have no wish to say a word more than I am absolutely obliged to do that can possibly hurt the feelings of Colonel Phayre, who, I have no doubt, is a thoroughly upright and honourable man and a gallant and distinguished officer; but I venture to think that Colonel Phayre was entirely unfit for the position he held—an extremely delicate one—and he was known by the Gaekwar to have met with a reprimand of a most serious kind, not involving, but on the other hand, conceding his honour and integrity, but dwelling upon his want of tact and judgment in the management of delicate affairs. I think I am not putting it unfairly. He said, and no doubt truely, that a subsequent Governor cleared him from this imputation. This gives me no dissatisfaction, but, on the contrary, I never wished to use that document as charging Colonel Phayre as deserving of the censure passed upon him. I used it simply as one of those documents acting upon the mind of the Gaekwar is that Colonel Phayre was scarcely the person to occupy the position he did, and that eventually he would be removed upon a complaint being made. Colonel Phayre most imprudently associated himself with a person or a number of persons who were not friendly to the Gaekwar. Bhow Poonikur was a specimen of the lot. They say they got no money; but they got patronage, which was probably very much more valuable to all these men, to whom Colonel Phayre seems entirely to have lent himself. From mixing with these men Colonel Phayre comes to the conclusion that Bhow Poonikur—God only knows how he comes to the conclusion—is or was an honourable man. We know not upon what grounds he came to that conclusion, but he made a right-hand man of him who had been so active against the Gaekwar. Then Colonel Phayre has a great notion of redeeming a persecuted people. He is the saviour to whom the people looked and made entreaties to. When he drove out he was met by persons who petitioned him, and he was a ready listener to all their complaints. Such demonstrations are not ungratifying to the vanity of some people, but are little proof of the truth of the complaint, knowing as they did that his ears were open to any complaints that might be uttered against the Gaekwar, ready enough to give ear to such congenial food to his imagination, and to listen to those who would make assertions which he would readily accept. I have already alluded to what must have been the feeling of the Gaekwar when he saw Colonel Phayre in daily, almost hourly, communication with Bhow Poonikur; how he was absolutely in his hand; and how absolutely impossible therefore it was for reforms to take place. Was there no difficulty in the way of accomplishing that which the Viceroy had considered would take a period of two years or a year and a half to effect, but he was to be thwarted that way? Colonel Phayre also seems to have been labouring under the idea that he should be poisoned. Where he got it from, Heaven knows; but one can very well understand that persons like Bhow Poonikur, who talked about bazaar gossip, impregnated a mind like Colonel Phayre's with notions of that character. Then we have a circumstance that also occurred which I shall have to speak of afterwards. Somewhere about September or October Colonel Phayre had a boil on his forehead. This boil will not be altogether unimportant in the case. I think a good deal turns upon it. There is a curious episode connected with it, and if anything can be humorous in this case, this forms one. There is no doubt whatever he had a boil. He had the attendance of a distinguished medical practitioner to take care of this boil. Where he got the idea into his head, and how he got it there, nobody knows, unless he had read over Dhmodhur Punt's evidence and recalled matters to his mind, and then came to a sudden conclusion, because he does not apear at that time to have made any observations on the subject. He complains at that time of having been sick, not liking his pummeloe juice. Dr. Seward was not asked upon the subject. I know collodion was mentioned, but Dr. Seward would hardly apply collodion to an open boil. If he did apply collodion it fully accounts for the feelings he described; but it is clear that he intended to convey that something was done to the blister put on which he describes. My learned friend corrects me, and therefore the observation does not apply. I did not remember that he used any thing else, and I did not remember what was said by one other witness, what was to be put on the place. My friend mentioned this, and it is to support the testimony of Rowjee that he put certain powders into his pummeloe juice. A peculiar matter is that Colonel Phayre drank his bad pummeloe juice without complaining. It occurs to me that the best tempered man in the world on drinking bad pummeloe juice would say, "What on earth is the matter with this?" but Colonel Phayre seems to have behaved in a most Christian spirit and said nothing about it. He simply did not drink, and this occurs on three successive days, with no complaint, no alteration, no enquiry, I think you will agree with me that that conduct is of a kind which can hardly be accounted for. He says so, however, and I accept his statement as such; but I did not accept it as being what actually took place, and I cannot help thinking he has been poring over the evidence of the other witnesses; and that he is inclined to attach to that an importance which has only been created by the assertions of other people. Of course, I may be wrong on that point, but it appears to me to be extremely probable. Let us look at it whilst we are considering it with Rowjees. If his account is true, he really took out all the arsenic from the parcel he had received and deposited it in another parcel, and practically only used the diamond dust. Practically he only used that which, supposing it to be admitted is a perfectly innocent matter, and can cause no pain nor annoyance. It certainly does look as if fancy had worked upon his mind, and that he had recollected feelings which he never experienced, by reading depositions that an attempt had been made to poison him. Then, my Lord, we go on to the subsequent period, the 6th, 7th, and 9th of November. On the 6th and 7th the same incidents occurred. The same symptoms that he had experienced in September and October, and again experienced on the 6th and 7th November, the very same that were afterwards experienced on the 9th. To say the least of it, this is extremely peculiar, because, according to the evidence of Rowjee, he had not put the poison in upon the 6th and 7th, and therefore Colonel Phayre found he had these symptoms upon those days, after he had supposed that poison had been administered upon these particular days. The pummeloe juice was bad again; he tasted it on successive days, and was not able to drink it all, and again he was perfectly submissive, made no complaint, not till the 9th of November did it strike his attention that poison had been administered. Now, my Lord, these I confess are matters that I am unable to fathom. At one time it occurred to my mind—I do not say it occurs to it now—but it did occur to it, and to the minds of others, and I wish to offer it as an argument to you, and that is that there was no substantial, real intention to poison the Colonel. I shall have to address many observations in which that point will be an important one to consider. It occurred to me as very strange that persons having such complete access to poison, having also complete access to Colonel Phayre, with a perfect knowledge of his habits, with an opportunity with them—it occurred to me as extremely strange that for a long time no attempt should be successful, and in reality no serious inconvenience arising from what was said to be repeated attempts to poison him. That was a matter which it was impossible to lose sight of in a case like this, presenting such extraordinary circumstances and so many impossibilities. But when we come to the ultimate act, the description of it greatly puzzled me, and puzzles me to this moment. Colonel Phayre was very resolute in saying that the sediment at the bottom of the glass was a dark sediment. The other witnesses all spoke of light-grey powders, and if that which was analysed, and if the analytical tests have been correct, and if we are rightly informed upon the subject, beyond all question the powder analysed did not in any way answer the description given of it by Colonel Phayre. The tumbler had been put down, and after it had been put down, and after it had remained for, if I recollect the evidence rightly, about half an hour, he threw it away and then was attracted by the appearance of the contents at the bottom. Now, you will remember what Dr. Seward said upon that subject. I received his evidence upon a number of points, and I assured him that it was not my intention to offer him the least offence, but directly I spoke about the colour of the powder in the glass, he got out of temper and proposed to keep me here till Doomsday. It seemed to me perfectly clear that it was a puzzle to him which he could not make out, for the powder which Colonel Phayre saw was dark, while that seen by Dr. Seward was light. I do not mean to say that eyesight of people does not deceive them occasionally, so that that which is light may appear to them dark and *vice versâ*. I have heard that such cases sometimes occur in regard to colours, but, to say the least, it is unusual, and the fact remains that between Dr. Seward and Col. Phayre there is a direct and altogether irreconcilable difference. Now, the powder—at all events, if it was the powder that really remained, for I confess that I cannot understand the difference of the colour I have alluded to—was sent away for analysis, I shall be obliged, when comparing what Rowjee and Nursoo and one or two of the other witnesses said, to refer again to the circumstances that took place on the morning of the 9th. In the meantime, however, I pass away from that. In analysing the powder, Dr. Seward applied a test which is not always carried out with success. And from Dr. Grey's evidence, I do not understand that the arsenic was really reproduced by either himself or Dr. Seward, although they both refer to the discovery of a metallic ring. There is no doubt that this metallic ring indicates arsenic, but it is not an absolute proof; and I know that in cases of arsenic poisoning tried at home, the scientific men employed have generally brought out the arsenic itself in its pristine form and not relied merely upon the appearance of this metallic ring. With regard to the diamond dust, it is entirely idle

to say that any whatever has been found. It is pure nonsense to say so. There are some sparkling elements and something that scratches glass, but to say that it is diamond dust is utterly beyond any possibility of proof. It cannot be proved. It is the purest guess-work imaginable to speak of the presence of diamond dust, and to accept scientific disclosures upon such a subject is the merest trash which I do not think will have any weight upon the minds of the members of this Commission. Of arsenic there is a certain amount of proof, supposing that the powder sent for analysis was the identical powder which was in Colonel Phayre's glass at the time he showed it to Dr. Seward, and I am well aware of a positive declaration by Colonel Phayre that the glass could not have been touched, or the contents added to, before he gave it to Dr. Seward. But I do not think that positive declaration will go far, because there were a number of people about who had the fullest opportunity of touching the glass if they wished to do so; and his positive declaration may have been due to his preconceived idea, that he had been poisoned. In making these observations, I am not propounding a theory which I undertake to prove or substantiate; I am only remarking upon the peculiarity of the evidence in this part of this case and the reflections it gives rise to, and the difficulties presented by those matters to which I have taken the liberty of calling your attention.

Damoodhur Punt.

I will now proceed to consider the case of Damodhur Punt— a man who, as I have said before, is the *fons et origo* of the entire case, because, although examined at a much later date than the other witnesses, he is the person from whom everything is supposed to have originated and to have been the immediate agent of the Gaekwar; and, therefore, a man whose evidence we are bound to consider with a great deal of care, and to ascertain whether it is evidence upon which you can rest. I am speaking to men as I would wish to be spoken to. I desire, in this case, to introduce no violent expressions. I desire to use no words but those which are justified by their being argumentative. I believe conscientiously that if I can convey the thoughts and impression that are upon my own mind; to the tribunal I have now the honor of addressing, the safety of the Gaekwar is perfectly clear, and that it will be felt that it is perfectly impossible for a tribunal in a civilized country, upon such evidence, to pronounce a verdict adverse—I won't say merely to the Gaekwar—but I say that they could not pronounce a verdict against the lowest person in the land, if the evidence is such as is produced against a person who, if he falls under it, loses his character, crown, and all that is dear to him; and, as I said before, loses it under circumstances which, I cannot help thinking, would not be fatal to the humblest in the land. My Lord, before entering with the minuteness which I must do into Damodhur Punt's evidence, I must refer to the mode in which he was given into custody as corroborative of the general observations that I have made on the subject of the police. It appears that he was taken into custody on the same day as the Gaekwar, and, instead of being brought before any magistrate, instead of being confronted with his accusers and having the matter investigated fairly and properly, the first thing that is done is to put him under a sepoy's guard; under that guard he remains for seventeen days. The words "being under guard" do not seem to be very terrible, but with the thoughts that must follow it, and with the feelings that must attend it, I think I have not improperly described it as that not of confinement but as amounting to torture. He himself says, "I made the statement for the purpose of getting free from that guard." That is his own perfectly candid statement upon the subject, and, probably, whatever doubt he may have raised by his evidence, you will not feel much hesitation in believing that he was speaking the truth. Upon that he was handed over to the care of the police. He knows, at this time, the evidence of both Nursoo and Rowjee. This he admits himself. If he had denied it, it is palpable that he must have known it, because Rowjee and Nursoo were being examined, and had been examined, when he was at liberty, and it was natural that he should be interested in knowing what they had stated, and he must have known that that charge was one against the Gaekwar, and that it was a charge of poisoning by arsenic and diamond dust. He, therefore, has to arrange something or another in which arsenic and diamond dust are mixed up. But, in addition to that, there is a shadowy account of a bottle; and he therefore must introduce a bottle into his statement; and although he is the first person who is brought into this case by the evidence.—that is, the first person who supplies this bottle, in point of fact he only gave it after what was expected of him. He knew perfectly that diamond dust and arsenic must be the means by which the Gaekwar should be accused. These were matters with which he was perfectly well acquainted, and with which he was ready to deal under the circumstances that he himself describes. Now what these circumstances are, are worthy of your consideration. They have been eloquently detailed by himself, and I need do no more than call your attention to them. The position of this honorable witness is,—"If you convict the Gaekwar, you shall get off; if he gets off, you shall be punished." That is his own account, his own proposition. He is then granted a conditional pardon. "Succeed in what the police have told you to be what they require and you will get off, otherwise you must bear the consequences of your own admission. Liberty, possibly a grant of land, Heaven only knows how perjury of this kind is ultimately rewarded, might be given to him; but, on the other hand, he would not only not get liberty, but I don't know exactly what the punishment is for having committed perjury or having attempted to commit murder in this country, he would probably be very much more severely punished for not doing what the police expect of him than he would be for the crimes that he has undoubtedly committed. I don't know whether I have ever met before with an instance in which a witness has come forward and made such a direct avowal, and stands before you with a halter round his neck which is to be used or not according to the evidence that he gives. Still, there are marvellous instances in this world in which, notwithstanding so painful a position, a man will sacrifice everything to the truth, but I don't think the warmest admirer of Damodhur Punt would be inclined to think that he would be disposed to make any such sacrifice. He is a clever man—the cleverest amongst the witnesses that have been produced, as far as my judgment has been able to go—an eminently cunning man, who gives his evidence with very considerable volubility—but I could not help thinking that there was an appearance about his countenance as if even he felt a sense of shame while he was uttering what I shall demonstrate to be a perjury for he made statements which have been materially altered. My Lord, this will make it necessary for me to examine this evidence in relation not only to its consistency with itself, but also in relation to other matters; that is what I propose to do at some considerable length; and I venture to think that when I have done this, and called your attention to the evidence of other witnesses who were also called to support this case—Hemchund and other witnesses—I think I shall show you not only that he has deliberately falsified a number of statements in this matter, but also that the police have been most active and have made much of a great deal of the evidence which has been produced before you. I, my Lord, particularly refer to the evidence given by Hemchund,—evidence that was manifestly extremely suspicious, as you were of opinion when you allowed him to be cross-examined upon his statements; but evidence which I am now in a position to consider, and I think shall point out, with such material matters connected with it, that I think it will have a very formidable effect upon the conclusion of this case. I think—unless I am very wrong indeed in the conclusions that I have arrived at—I shall show in this case police manipulation, beyond all question, of a most daring and outrageous kind. Of course, I can only judge that of my own humble ability, and I can only submit such reasons as have affected my own mind. I can only hope that they will also affect yours. I shall lay them before you, and I hope in relation to this and other matters I shall appeal to your reason as I should wish to be appealed to by those who endeavoured to convince me upon any particular point. The first matter to which I call your attention is the position of the man Damodhur Punt. Permit me to describe it, as it occurs to my own mind. I do not think it will be a fancy sketch at all. He is the Secretary and trusted servant of His Highness the Gaekwar; he is a man likely to have His Highness's confidence, I admit, and so far they may be enabled to state part of his story as probable. But his position, as he describes it himself, is one of a man whose accounts are rotten to the very core—false entries in all his books—false representations as to what payments have been made for—and, in point of fact, he places himself in a position, that if he had been charged by the Gaekwar, or upon the suggestion of Colonel Phayre, which was extremely likely to be the case, with embezzlement and fraud, he would have had no earthly answer to those charges, his books would have told their own story, the falsifications would have been perfectly apparent, the evidence given by the Brahmin and other people would have shown his entries to be utterly untrue; and, supposing there was no charge against the Gaekwar, I think he, Damodhur Punt, might have howled himself deaf before anybody would have believed that these falsifications had been made at the Gaekwar's direction. Supposing the charge had been made against him—what answer could he have made? How on earth could he in any way whatever have rescued himself from the certainty of being convicted as a fraudulent servant? My Lord, I asked some questions and pressed them to him, and I don't think they were impertinent or unworthy of consideration. I pointed out to him what his position was, and he admitted that which I am now arguing—he admitted that he had no means of answering, no means whatever of rescuing himself from the imputation; and the suggestion that was patent upon that I now venture to make to you,—is it at all likely that he would have become the instrument of the Gaekwar for the purpose of falsifying books, which falsification admitted his own dishonesty, and to which falsification— if he himself were accused, and the Gaekwar chose to be a party to the accusations, he could not have had any earthly answer? And upon that point, it is proved that there is not a scrap of writing in the Gaekwar's hand—not an act done in the presence of an independent witness by the Gaekwar, from the beginning to the end of this case (but more particularly I am referring now to the falsification of those accounts)—by which Damodhur Punt might have exculpated himself from the charge of embezzlement and fraud. Having disposed of Damodur Punt's position in relation to the account, now let me ask you to follow me in the history of what he is alleged to have done. At page 112 in the short-hand writers' notes in the *Bombay Gazette*—and it will save my reading many extracts that I might otherwise do, and I think enable you to follow such parts of the argument as are worthy of my attention, if you would allow me to refer you to the short-hand writers' reports in the matters which I may place before you—your Lordship will find the commencement of this extremely singular transaction. It commences with the order of the Gaekwar for the arsenic from the Fouzdaree, regarding which it is alleged that the Gaekwar stated to him that it was for the itch, and that he himself worded it that it was for a horse; and his further evidence is—"I took the order to the Fouzdar, but was unable to procure the arsenic." Now, I beg the attention of the members of the Commission to that. He wrote the order, and was unable to obtain the arsenic—that is his story. That is a falsehood—a deliberate falsehood. He begins by telling that which is entirely and absolutely untrue; he could have obtained that arsenic without any difficulty. The Fouzdar was called by my learned friend, and his evidence will be found in page 156 of the short-hand writers' notes. The Fouzdar says that the order was in all respects complete, and that there was nothing whatever to prevent Damodhur Punt from obtaining the arsenic from the Fouzdaree. As the superstructure is built upon this, the whole of it must tumble to the ground with the falsity of that allegation. It will be broken to pieces by other means, but that alone is sufficient to destroy it. But that, my Lord, is not the only feature to which I think it right to call your attention in this order for arsenic. This was an order upon which the Gaekwar's name appeared; the Gaekwar endorsed it. Therefore, as far as we can gather, unless he was a lunatic, he actually puts his own name upon an order for arsenic, which, according to Damodhur Punt, is to be used for the purpose of poisoning the Resident. There is another view that may be taken of this, and that depends upon the view that hereafter you will take of Damodhur Punt. Damodhur Punt may be a mere instrument of the police, and knowing that he is perfectly safe if he assists them in obtaining a particular object, he may have invented the whole of this matter. But there is another view that may be taken —Damodhur Punt may have had some object of his own in obtaining the arsenic. Look at what his position was at this time. Colonel Phayre was beyond all question using every means in his power to sift the proceedings at the Palace; and, sooner or later, it must have been apparent to Damodhur Punt that his defalcations and frauds would be discovered. That idea must have been apparent. Nothing could have been more perilous to Damodhur Punt than an investigation of his accounts and in all probability other servants of the Gaekwar might be reasonably supposed to be under the same apprehension. I have already pointed out what such an enquiry would have led to; and if an enquiry had been made against him, there is no doubt his position would have been sufficiently perilous. He was in disgrace admittedly at the Residency; the Gaekwar was never able to take him there; he was not admitted within the walls of the Residency. Under these circumstances, Damodhur Punt knew that he was a marked man. He had a motive: the Gaekwar had none. Upon his statement that he could not get the arsenic at the Fouzdaree, he is directed to go to Nooroodin Borah, and get it there. Now, here, we have another curious interlude or episode in this very remarkable case, and here we have again an exemplar of police management and police arrangement. We have a good view of the liberty of the subject—whether they are respectable tradesmen or not—when the police chose to interfere with it. He gives a long account of going to Nooroodin Borah. I can quite understand why he has fixed upon Nooroodin Borah to tell a parcel of fables. He expected Nooroodin would endorse them. Nooroodin Borah, as will be remembered by Colonel Meade, was one of the complainants against the Gaekwar upon the Commission. He complained of having been fined five thousand rupees unjustly, and he also complained of a relative of his having been flogged. He was, and is, and might be well esteemed to be a bitter enemy of the Gaekwar. One can very well understand why it is that Damodhur Punt should have selected him as being the person to whom he applied for arsenic. It occurred to him, as it has occurred probably to men of little minds generally, that this man would naturally be only too glad to obtain vengeance. This is a man who is no friend of ours, but he seems, at the same time, to be an honest man. And how has he been treated because he refused to come up to what the police demanded of him? As confirmation of Damodhur Punt's statement, he is kept in custody, and has been kept in custody, for months. According to Akbar Ali, I believe, he has been remitted to prison, because they could not get anything whatever out of him, and Akbar Ali, with a smile the very reverse of benevolent, intimated, in passing, that there was something or another in reserve for him that he would not at all like.

Now, I think the next portion of his evidence, having dealt with the arsenic, it will be desirable to deal with, will be the evidence as to what he calls the "physician's stuff." I have before me the evidence

given before Mr. Souter; and part of it I will take the liberty to read. It will save me considerable amount of description, for I think the description he gives himself is as good and graphic as any I can attempt:—"At the same time, namely when the Resident had the open wound," that I presume to allude to the boil upon Colonel Phayre's forehead, "the big physician's younger brother brought a bottle of poision made up by the physician, but as there were many of us present, he did not give it that time, and he may also have wanted something for it. In the evening one day, when Colonel Phayre had the boil on his forehead, the Maharaja told me to get some blister flies to send to the younger brother of the big physician. He told me to send through the Fouzdaree and have the Wagries sent to catch some flies and taken to the physician. I told Narayenrao Wakusker, who is in the Foujdaree, accordingly. The next morning the Maharaja told Hariba, in my presence, that the physician's younger brother wanted some snakes to make medicine. The snakeman came to me two or three days after, saying he had the snakes that had been ordered, and I told him to take them to Hariba and take his order before going with them to the physician. Narayenrao brought the blister flies taken by the Wagries and shewed them to me, and the next day Goojaba, a servant of Nana Khanwelkur, came and shewed me some blister flies of the same kind, and I told him to take them to the physician's brother and submit them for his approval. About the same time the Maharaja told me that the physician's younger brother wanted the urine of a black horse; and I gave orders to Bappajee, the kamdar of the Khas Paga, to take some urine accordingly to the physician's brother." Now, I dont know what state of darkness this country may be in, but certainly this story reminds one much more of some Eastern tale of a former time than it does of anything that could have occurred in the nineteenth century. At the same time, upon that subject you are very much more competent to form an opinion from your own knowledge of what may be the superstitions of the natives possibly than I am myself, and I won't profess to offer any argument upon the subject, but leave you to judge of the probability of it. But passing away from that, I call your attention to what is done with it, and how it is used. I may as well, however, mention here that I think my learned friend began to get a little ashamed of this particular part of the case. I don't think that these plaster flies at all suited with his keen and acute intellect. I think he had a sort of notion that he was going a little too far; but inasmuch as they were down upon this evidence Mr. Souter, my learned friend fairly and properly enough proved the whole thing from Damodhur Punt's mouth; but my learned friend could not go any further. I expected—indeed we were promised—the presence of the snake-man. We should have had an opportunity of learning by what process he is able to extract the poison. We should also have had some valuable information upon the subject of blister flies and their effect upon human beings, and with regard to the article that was particularly desired by the Maharaja for the purpose of poisoning his enemy, some account of its properties might have been given by the gentleman who was deputed to obtain it, and who appears to have obtained it. But my learned friend does not appear to have called any of those sages for the purpose of giving us any information upon the subject, and as far as I can gather these wonderful extracts were made into a white liquid and disposed of in a manner to which I will now call your attention —"The Maharaja wanted the stuff, but did not want to give what the man demanded" (that, I think, is rather improbable, and considering that Damodhur Punt had nothing to do but finger whatever amount of money he pleased belonging to his master, probably you will agree with me that it is not very likely to be true) "so suggested to Nana Khanvelkur"—(who has not been called, and I don't know who the gentleman is) "to get some of the contents of the bottle, and a day or two after, about 9 o'clock at night, Goojaba came to me with the bottle which the physician had made, and told me that he had taken it to the Maharaja, and that he had been ordered to bring it to me, and that I was to take some out of the bottle, and keep it till the next day, and then give it to Salam. I poured some out of the physician's bottle into a small bottle of mine, which had held attar and gave the other bottle back to Goojaba, and the next day Salam came to my house at 9 o'clock, and I gave him the bottle to take to Rowjee to poison the sahib. This I understood perfectly, though I did not tell Salam to give it to Rowjee." So that we have now the contents of the bottle which were to be applied to the unfortunate Colonel Phayre. We know how it was made, the elements of which it was compounded. I shall have to follow that bottle through a variety of stages. It is almost a comical episode in this otherwise extremely serious case. But we trace it now from its source and it will not escape your attention, and I beg that you will keep in your recollection the account that Damodhur Punt gives of it, because you will find that when we are considering Rowjee's evidence that that account is extremely material. He says the first bottle brought was about this length (pointing to the fore-finger). He did not use any other term, but put up his finger; represented that the first bottle was about a finger's length, and that the bottle that he put it into was about half a finger's length. You will find that in the evidence—I believe I am quoting it quite correctly—because it is extremely important. It will be one of the means by which the falsehood of Rowjee's story will be developed. He tells us further that it was in an attar bottle. Now, I did not ask any particulars as to attar bottles. But I believe it is perfectly well known what they are—they are bottles in which there is a very thick coating of glass and capable of holding a very small quantity of attar. Probably the space to hold liquid is almost infinitesimal, and when you consider an otto-of-rose bottle of about the size of half your finger, you will agree with me that it is not calculated to hold any amount of liquid. But according to all accounts, this is the famous bottle which ultimately met with such adventures, and came under such very learned cognizance. This is the bottle given to Rowjee, and the bottle that I shall presently follow through its very eventful history. I have dealt with the arsenic, and I have dealt with the physician's stuff, as I shall perhaps in the future call it whenever I have the necessity to allude to it. I have now to come to the supposed obtaining of diamond dust. Now, I venture to believe that there was never such nonsense in the world talked as diamond dust being accredited as a poison. I have looked into books of considerable authority such as Taylor, and Beck, and others, and I cannot find the slightest trace, except in a work with which I was not acquainted until I came here, where it has been quoted on the subject. At the same time, for aught I know, there may be a belief that diamond dust is a poison when a book of any kind, whether an authority or not, asserts that it is. As far as I can understand, if it is spoken of as being an article thoroughly well known, one would imagine that it would be the residuum that comes from diamonds after they were filed or cut. However, they are shown to you as being the results of diamonds themselves being pounded, and it is supposed that diamonds were procured for the purpose of pounding them into diamond dust and using them in the way that is suggested for the poisoning of Colonel Phayre. It is quite odd that of two or three witnesses who have been asked upon the subject—goldsmiths, Nanajee Vithul and others—every one of them declared that he had never heard of diamond dust in his life—never heard of diamonds being pounded. We all know it is a very valuable article, and would imagine that the notion of its being a poison would have been discovered effectually long ago. However, I will accept the assertion made by my learned friend upon the foundation of the work that he referred to—Dr. Chever's work. I will accept it that there is a superstition of that kind which I will class with the superstitions about the snakes and the flies and other articles. There may be such a superstition, I cannot tell. But diamond dust never came out of Damodhur's place.

Every paper in the Gaekwar's possession was seized by the officers and there is no genuine document whatever found by which the Gaekwar can personally be implicated in of the transactions. I used the term personally implicated for the purpose of distinguishing between the statement Damodhur Punt has put forward as the confirmation of his own statement, and supposing it to be true it amounts to nothing more in contradistinction to what I say ought to exist for the purpose of confirming a villain of this description, namely such confirmation as brings the accused by word or by deed; by act only letter into connection with the transactions. But it is pretended except in one most remarkable document to which I shall presently call your attention, that the Gaekwar was cognizant in any way whatever with any of the transactions that Damodhur Punt was carrying on. And all the papers ransacked, searched and investigated with every minuteness show there is not a single corroborative proof connecting him with the actions of Damodhur Punt. There are other things that are very well worthy of your attention, and these again I used as being the strongest evidence that this case is a got up case against the Gaekwar. I submit what I am about to say to you with great confidence —it depends upon no words, it depends upon dates and upon the construction, that the Commission will put upon those acts. It does appear to me to be a most singular and remarkable thing, and I think that it must have struck the members of the Commission at the time that the matters were being investigated as being singularly remarkable, and that is the story of the obliteration of particular parts of these journals. It strikes me as being all important. The mode in which it is used or suggested by the prosecution, is that these were obliterations of certain words—certain names. That connected Damodhur Punt with the transactions in question. Well, I have had an opportunity of looking at the dates of these obliterations, and I believe I am right in saying, if I am wrong my learned friend will hereafter correct me. The dates of three of the papers so obliterated are June 8, July 2nd, and September the 6th—these are dates which the Commission will be quite aware, during which time it is not pretended that any of these transactions took place—and therefore the supposed obliteration could have been for no earthly purpose as regards Salim because there was nothing whatever to conceal at that time, and according to the case of Damodhur Punt, nothing whatever occurred at that time. It is a much later date. There is one obliteration as late as the 13th October, that may have been an obliteration for something or another occurring to some of these parties—but with regard to the other three obliterations, they are at dates during which it is not pretended by any witness whatever that anything at *all* had occurred. Then, my lord, there is another curious feature in this case. Damodhur Punt did not obliterate them himself he says, but that he told an office clerk to obliterate them, and he vouches the same of the Clerk so employed. That name is vouched by my learned friend and pledged in confirmation of the story. He is called and absolutely denies the fact—he says there is not a word of truth in it. Bulwuntrao is his name. It is very true that we have a statement of Mr. Souter, one in which he admitted it on one occasion. I am corrected by my learned friend, that has not been said, I thought that in his examination by Mr. Souter he had so stated. However, he may now says the whole thing is a falsehood and an utter fabrication, he says "I never did anything of the kind." I do not know that any human being would have blotted it there except for the purpose of attracting attention. I don't believe this was ever done by Damodhur Punt, certainly it was not done as he said it was. It is within the range of probability, or of common sense and common experience that Damodhur Punt for the purpose of concealment would have made these obliterations that must have attracted the attention of the very first person who looked at them. I am told, I do not know whether correctly or not, that some of the natives of India are not unskilful hands at obliteration, and that they are not generally signalised by large splotches of ink that must attract everybody's attention that looks at them. I can scarcely with gravity deal with such an assertion. It seems to me to carry on the face of it absurdity —the statement of a comparatively unreasoning mind which only looks at one object, which object it wants to carry out, and cannot grasp at the same time the folly and absurdity that surrounds an assertion of this character. I ask whether any rational or intelligible answer was given to the questions that I put and repeated over and over again, why, if there were any entries that you wanted to conceal in the journal, did you not throw them behind the fire or tear them up? If he had had time to do the one thing, he would have had time to do the other—but it is manufactured—it is a part of this foul case—it is shortsighted—it is ignorant—it is what no man of ordinary intelligence would practise, because it carries its answer upon its very face, but it is very probable that those who made these statements never imagining that this case would be tried before a Commission like the present, but by somebody or other without some reasoning power that would swallow all the absurdities he chose to utter; that must have been his idea passing through his wretched brain, that thing answers itself, and answers itself in a way that is most important for the men whose nonsense I have been endeavouring to demonstrate; it shows that evidence of a grossly flagrant kind has been manufactured, and it will cause this Commission to look with the greatest care and apprehension upon every portion of this case with which these manufacturers have had to do.

THE BOTTLE EPISODE.

I have, my Lord, dealt with Damodhur Punt, considering him to have been the origin of the whole matter, although as a matter of fact he was last called here. There are other two witnesses—Nursoo and Rowjee—whose evidence is of course of considerable importance. With regard to Rowjee, I do not propose at this moment to go through the details of his evidence, because I wish to follow one or two episodes of this case which I think are illustrative of the whole, and, I think had better be followed to their source. I have already alluded to the story about the bottle. We have got a bottle about the size of Rowjee's finger —an utter-of-roses bottle—which holds so little. It has not been pretended that there has been any change whatever in the bottle, but yet in Rowjee's hands it increased considerably in size. I propose very shortly to follow the history of this bottle. The Commission may remember that in the course of my observations, without pretending to put forward any direct proposition of any kind whatever, I expressed a doubt that has permeated through my mind as to whether the servants of Colonel Phayre had in point of fact any intention to poison. I have dealt with Damodhur Punt and delivered him over to your mercies. Deal with him as you please, or consider him the villain he pretends to be when he did in point of fact intend to murder Colonel Phayre; but I cannot bring my mind quite to the realization of the idea that Colonel Phayre's servants were concerned in any such deliberate design. I do not say they were not, but I cannot bring my mind to think that they were. It is extremely important to follow the history of this bottle, and Rowjee's statements upon it. Well, this attar bottle gets into his hands. The period when it does so is extremely doubtful. He himself puts it at about the 9th November, but I am told that he received possession of it at a much earlier period than I supposed. At all events he gets it earlier than October. As I have said before, it becomes extremely enlarged after it gets into his possession, and then the question is as to the uses he has to put it to. He understood that it was to be put into Colonel Phayre's bath that it was given to him for that purpose, and that there was powder in it. According to Damodhur Punt, we have heard what the stuff was compounded of. According to him, also, we have the size of the bottle. We then have a description of what Rowjee did with it. He puts it

between his drawers, or some other peculiar place, and it produces a boil upon his stomach. It occurs to him then that if he puts it into the bath or uses it against Colonel Phayre it might injure the sahib. The bottle was intended to poison him, or destroy him in some way or other; but Rowjee is seized with a fit which, it is extremely difficult to understand. At all events, directly it produces a boil upon his own stomach, he is determined that he will not use it, and accordingly throws the contents away. I believe I am correctly stating the extraordinary evidence Rowjee has given. He, however, keeps the bottle, which is subsequently, according to his account, mixed up with arsenic, or whatever the materials may be, to poison Colonel Phayre upon the 9th November. He is told to mix these things in a bottle, shake them up, and put them in a glass from which Colonel Phayre was in the habit of drinking sherbet. The first observation that occurs is, how could a quantity of arsenic or any other poison be shaken up in a bottle of half-a-finger length? It is not pretended that there is any other bottle than this, which has been traced from the evidence of Damodhur Punt. Of course, probably the whole story of the bottle is a fabrication, and that Damodhur and Rowjee contradict each other upon the size of the bottle because one did not know what the other had said about it. But I think the whole thing is an absolute piece of absurdity. A mixture of arsenic, poison, and water could not be shaken in it. If you consider that the story about the bottle has broken down, another link in the story is done away with. I will ask my learned friend what he means to say upon this bottle episode. He cannot urge that there were two bottles. If so, what became of the attar bottle? Does he mean to say that Rowjee procured another? If so, what becomes of Rowjee's statement that he obtained that identical bottle from Damodhur Punt? I would also ask this Commission what view they take of Rowjee's evidence about not using this bottle, which, it is said, was handed over to him for the purpose of injuring Colonel Phayre in some way or another. Do you accept his explanation that he was afraid he would hurt the sahib? Is it not pertinent to the observations I made on Saturday that it is quite possible that Damodhur Punt intended to commit murder, but Colonel Phayre's servants did not? I shall be very glad if the Commission come to this conclusion, because—although these people are perjurers and scoundrels, they are not of the deep die they have described themselves to be. If that is the case I may as well call your attention to the time when it is said Rowjee received this bottle. He says that he received it about the time that Colonel Phayre had this boil—that is to say, some very considerable time before he received the first supply of arsenic. He vouches that Nursoo was present at the time he received the bottle, and I call your attention to this, as it contains one of the important contradictions of the case. Nursoo corroborates him as to the receipt of the bottle, but fixes the time as at the very last interview—that is, three or four days before the poisoning took place. It ought not to be lost sight of either that in his deposition before Mr. Souter Rowjee never mentioned the bottle at all. The bottle is only mentioned after Damodhur Punt has made his statement upon the subject.

The President mentioned that, according to his recollection, there was a discrepancy between Rowjee and Nursoo as to the time the bottle was given.

The Advocate-General said that Rowjee had mentioned the small bottle in his deposition, for he said, "I used to shake it up in a small bottle and then pour it."

Serjeant Ballantine—But he never says a word about a bottle being given to him full of poison, or (in the way that is now suggested) a bottle coming from Damodhur Punt at all. He says he has got a bottle, but never speaks of another bottle of poison. Rowjee himself affirms the fact that the bottle he saw used was the bottle he obtaind from the Mabaraja under the circumstances I have described. I wish to impress upon the Commission that in the first place the bottle described by Damodhur Punt is an impossible bottle to have been used in the way described: in the next place Rowjee never mentioned he received a bottle containing poison when he was before Mr. Souter; again, the bottle he used for the alleged poison he describes in a perfectly different way and of a different class, while he does not pretend to say that the bottles were two different kinds. Perhaps really that bottle contained some of the magic elements described by Damodhur Punt, because it appears to me utterly incredible, notwithstanding the great scientific opinion we have heard expressed upon the subject, that a bottle sealed up in the way it was could produce a boil upon a man, supposing some of the contents exuded from it. If a person manipulated his stomach with arsenic he might have caused a boil, but that the mere accidental exuding of a small quantity of arsenic from a bottle of that description should cause a boil is beyond my comprehension. My learned friend had evidently a lingering belief in the story, and called up Dr. Gray for the purpose of supporting his idea. Dr. Gray, during the process of examining Rowjee's boil, looked very grave, and came back to the witness-box with his scientific opinion. It was put to him whether, in his judgment, such appearances he saw might have been produced by what Rowjee had described. Fortunately none of us had an opportunity of judging what these appearances were. Dr. Gray gravely told us that a little of this liquid exuding from the bottle might have produced the boil. After that, who on earth can say that it might not? This reminds me a good deal of how a very eminent man in our profession, whom your Lordship doubtless remembers, and who, I have no hesitation in saying, was the greatest advocate I have ever seen in my life and the best lawyer, was deluded by a scientific opinion into a suggestion that a person who had eaten an apple might have been poisoned because there was an apple pip in it! He was called, "Apple pip" ever afterwards, and, in the same way. I think Dr. Gray's name will always be associated with a boil upon the stomach of this Hindoo. The way science was shocked by such a piece of absurdity was rather surprising I was taken in by Dr. Gray because there was a solemnity about his appearance that led me to hope I would be able to say that there was at least one witness in this case thoroughly respectable; but I thought of Apple Pip, and there was an end of the belief, and an end of the bottle. It is something too absurd. By the way, the contents of this bottle were never put to Dr. Gray, or probably he might have found out that there was something in them deleterious and calculated to produce boils upon the stomach. If this were an ordinary case one would be inclined to pass it over with a mere smile; but to think that the man who is the principal perpetrator here should be guilty of such a piece of folly and be the man upon whose evidence a prince has been practically deposed from his throne, makes that which I believe would, otherwise be a laughing-stock a matter of deep gravity and one worthy of the gravest contemplation. I cannot help thinking that before such a man was allowed to have such an effect, his evidence ought to have been analysed by big and honest men. I pass away from the bottle; I wish it farewell. It is an absurdity at once ridiculous and painful as being part of a procedure like this.

The Belt Episode.

I now come to another part in which Rowjee is also an actor. I mean the powders Damodhur Punt is supposed to have sent to Salim or to Yeshwuntrao. They are subsequently supposed to have been delivered in the presence of the Gaekwar through a variety of formalities, and at last they came into the hands of Rowjee. I think I had better call you attention to the account Rowjee gives of these powders when he is examined for the first time before Mr. Souter:—"Salim and Yeshwuntrao immediately began to persuade us by saying that if we would only carry out the Maharaja's wishes we should not be required to serve any longer, as he would make a handsome life provision for us and our families; that we should have 'assamies' bestowed upon us, and should in addition receive a lakh of rupees each as soon as the work was done—meaning as soon as the Resident's death took place. We consented to do the job, and the Maharaja then said that the article to be administered would be given to us by Yeshwuntrao and Salim. A few days after this the jemadar gave me two powders, and told me that equal parts of each should be administered for two or three days, and in such quantity as to consume the whole in that time. This had also been carefully explained to me by Yeshwuntrao and Salim in the presence of the Mahraja. I did not commence to administer the powders for two or three days, as no avourable opportunity presented itself for so doing. It was decided at our consultation with the Maharaja that the poison should be administered in 'sherbet,' which Colonel Phayre was in the habit of taking every morning on return from his walk. Accordingly I put the powders into the 'sherbet' two or three times whenever I found no person in the room or about to see me." In another part he goes on to say that the packet of powder which the jemedar had given him he made into small doses, as directed. Now, the statement that he has made here is not that he used the papers as directed, not that he made them into three packets, not that he administered them in that way, and not that one of the three packets was found in his belt; but what he says is, that he found the two powders of different colours, and "my own notion was that the white powder was the most dangerous, and therefore I only put a small portion of the white powder into all three packets which I made up, and the remainder, consisting of all white powder, I put into my belt." Now, which of these stories is true? They are in direct opposition. As far as I understand the evidence, the powders were mixed up at the time he got them up and were not two powders, one of white and the other of gray. That is the story told by Damodhur Punt, and that is how he represents it to Mr. Souter. I am wrong, it seems, in supposing that the powders were mixed up already, and I am much obliged to my friend for correcting me. But Rowjee distinctly says to Mr. Souter that he mixes them up as directed, and his statement before this Commission was quite different. How are these stories reconcilable? Then we come to the question—why should he not have followed his direction? What did he know about the difference of the powders? Then again they were meant to poison Colonel Phayre and why should he have kept back what he supposed to be the most deleterious? The whole thing is unintelligible in connection with the subsequent story of the belt. If his story before Mr. Souter was true the parcel found in his belt would have contained two powders, and not merely arsenic. I venture to think that taking these stories together you have a congeries of improbabilities out of which it is impossible to see day-light. There is no doubt, however, that that arsenic in the belt was extremely useful for other purposes. Mr. Souter was not present at the finding of the damaged papers belonging to Damodhur Punt, and at the discovery of the arsenic he was not present. In fact, he never seems to be present at the finding. There was a universal cry after Rowjee to destroy the poison and leave no trace whatever, but curiously enough his mind seems to have got into a haze about the arsenic, and it entirely escaped his recollection. But Akbar Ali's intelligence overcomes many difficulties, and prehaps Providence assisted him on this occasion. Akbar says to Mr. Souter that he would not wonder if some powder were left in the belt, and Mr. Souter says, "You'd better look to the belt," and he has such confidence in Akbar that he permits him to depart to fetch the belt. It occurs to me to ask, however, why didn't Mr. Souter accompany Akbar? Akbar had made a most valuable suggestion. That belt ought to be put in a menagerie—I mean a museum—and that Akbar Ali should be put in the museum. That belt is a wonderful belt. It will go down to posterity. When Akbar feels the parcel in the belt, as if his Providence had told him there was arsenic in it, he immediately sends for Mr. Souter, and Mr. Souter says, "God bless me, why this is arsenic." I cannot help thinking that here was a matter in which Mr. Souter deliberately left a man whom he knew to be utterly unscrupulous to manage the belt, and relied upon something coming out of it, and sure enough something did come out of it. The discovery of this arsenic can only be considered Providential—if it can be supposed for a moment that Providence had anything whatever to do with Akbar Ali. I have shown that as far as Damodhur Punt is concerned he got no arsenic and no diamond dust; I have shown that Rowjee's account of the belt is absurd even to comicality, and I have shown that with regard to the bottle he never mentioned it until the bottle had been mentioned by Damodhur Punt; that with regard to the powders, he says he used them in one way and then swears he used them in a totally different way, and then produces a paper of pure arsenic which is found in the belt under improbable circumstances—all this is a story which rational beings would be compelled to look on without doubt, to use no stronger expression; but when the story is told by such a man as Akbar Ali, it carries falsehood upon it, and I charge, before this Commission and before the world, that in that belt was placed by Akbar Ali the powder which was ultimately found, and directly that was done he called Mr. Souter as a comparatively respectable person to vouch to the facts of its being found. I shall now conclude my observations to-day by call-attention to the intrinsic evidence of Rowjee's falsehood. Undoubtedly Pedro is a respectable witness; upon his character no stain attaches; but he is a Portuguese by birth, and I am told that it is extremely unlikely that any Hindoo would make an accomplice of a Portuguese. Pedro gave his evidence where he could not be tempered with—before a gentleman named Edginton, who, I am told bears as high a character as any man in India. Pedro says he received money upon a particular day, but with regard to all the interview imputed to him by Rowjee, Pedro pledges his solemn oath that Rowjee's statement is entirely and absolutely false. The Commission can determine, without any observations on my part, whether they can find Pedro guilty of accepting poison with the view of poisoning a master with whom he had been a servant twenty-five years without any earthly motive, because so far as I can see no motive whatever is suggested for the treachery of Pedro. I think I can point to other intrinsic evidence of the falsehood of Rowjee. The conversations which Pedro is said by Rowjee to have had with the Maharaja are singularly alike, both in spirit and in word to conversations which Rowjee reports to have had with the Maharaja himself. The inference is obvious. What other conclusion can you come to than that Rowjee's story is a base and weak fabrication?

The Conclusion.

We have circumstances deposed to by Dr. Seward which are somewhat sacred. He says he took a great interest in the ayah. Why he should do so passes my comprehension. No doubt there may have been something very attractive and fascinating in the ayah, but when she was here the other day I do not think that that fascination interested anybody who had a good opportunity of seeing her. He knew she had been in the habit of going to the Palace, but that would not interest him. What was the mystery? She was under good medical treatment, but he went to see her, never communicating with the gentleman who was the medical attendant at that hospital, simply because he says he knew that gentleman. At all events, he went to see the ayah, and then, you know, upon her striking and eloquent countenance, he discovered those marks that indicated that she was moved; and Dr. Seward's medical experience led him to discover in those emotions not physical pain, but the agony of her conscience; and so, to solace her, he induced her to unburden her mind to him, probably assuring her that if she would only relieve her mind she would at the same time relieve her stomach. There was one period at which a more efficient remedy was applied in the shape of a blister but on this occasion she relieved her conscience as a kind of emetic. In con-

sequence of what she said the relief seemed to be thoroughly sufficient both for mind and body. Dr. Souter—Mr. Souter I mean, although one might call him doctor upon this occasion—was sent for by Dr. Seward to administer to her, and while Dr. Seward looked after the body, probably the other was engaged to look after her soul. I can well understand Dr. Seward saying to his colleague, "She is under my care, and taking the interest in her that I do and wishing to see her well, I think it is right you should have this interview with her while her soul is troubled. That interview is held and the result of her unburdening her conscience is this. Serjeant Ballantine reads as follows from the ayah's statement:—"On the occasion of my being taken before the Maharaja the third time during the Ramzan, the Maharaja asked me, after other questions, whether it would not be possible to administer something by which the Resident could be brought round to his (the Maharaja's) will. The Gaekwar spoke in cautious and hidden language, but I understood him to be throwing out a feeler to ascertain whether I would consent to administer poison to my master, Colonel Phayre." Now I ask my Lord Chief Justice, whether ever in the course of his experience or his reading he ever found such a sentence. This common woman, this ayah, is made to say "I understood him to be throwing but a feeler." Now did that ever come out of the mouth of an ayah? Then she says, alluding to the administering of poison to her master Colonel Phayre, "he spoke in cautious and hidden language." Really the ayahs of this country beat the nursery maids in ours. Then she says she indignantly refused and objected. (Just fancy the ayah refusing) and told the Maharaja that if he attempted anything of the *sort he* would get into trouble. Now I really do ask the members of this Commission whether so grotesque a falsehood was ever attempted to be bolstered upon reasonable men. Then this moral and highly educated ayah says, "I said it would be better that lakhs of people should die—than that the support of lakhs should come by his death." And to this wretched stupid old woman, who had no power on earth to administer poison and no chance of doing anything else but chattering everything said to her as soon as she got into the bazar, it is supposed that the Maharaja, who must have an amount of decent intellect, is supposed to have spoken to her in this way and made her an accomplice when it would appear he had made other arrangements with other people. I hope that when the Commission comes to consider some of her answers they will remember that she admitted at last her statement had no foundation and that never from the beginning to the end was any suggestion whatever made to her except that she should use a charm on the Resident in favour of the Maharaja, and that nothing whatever justified her in supposing that the Maharaja had contemplated poison. There is another passage which it is my duty to call your attention. The ayah was asked "Did Mr. Souter ask you if you knew anything about the poisoning?" Now just fancy beginning with a woman like that, and suggesting poisoning and what she was wanted to say. Now, look at the answer this woman gives upon the spur of the moment. "Yes, they threatenend me and said that if anything of the kind was said I should say it." "I told all I knew." So here you have in the first instance Mr. Souter putting directly in her mind the notion, and then you have Akbar Ally threatening her about the poison. In fact her story is one mass of absurdities from beginning to end. I have examined those statements and I have also considered whether it was possible there was any means to answer the case, and I have found that there is not a single instance in which there is not a single witness worthy of any attention as being present at any of the proceedings. My learned friend asked a witness—and unless he had done so I would never have made any allusion to the subject, whether or not there had been any access on the part of my client to Salim and Yeshwuntrao. I presume that the object of that question was to suggest that Salim and Yeshwuntrao were witnesses to be called on the part of the Maharaja, but in the first place the Maharaja in no respect whatever recognizes any of these proceedings. He cannot tell and his advisers are unable to suggest to any certainty whether these men are or are not accomplices with Damodhur Punt, they may be so or they may not be, they are people connected intimately with Damodhur Punt according to Punt's own statement. They are persons who have gained a livelihood like Dhamodhur Punt by embozzling their employer. But moreover from the time of this enquiry down to the present moment they have been in the hands of, and are now in the hands of the Police. My learned friend has not hesitated to call tainted witnesses here, they have called no other. Why should they not have presented Salim. He is not a greater scoundrel than Dhamodhur Punt. Why should they have not brought forward Yeshwuntrao, he is not a greater villain than Rowjee. They might have called all these which would lead me to suppose and there is nothing in the conduct of this case that they might have been called if they could have been found to confirm a single question. But I say unfeignedly I could never have learnt what I have done as to the Police in the present case even if these men had been men of a better cast than I believe them to be, and even if these had been anything whatever that the Maharaja was called upon by evidence from respectable sources to give an answer to, I should have felt the utmost unwillingness and the utmost doubt upon the subject regarding the calling of Yeshwuntrao and Salim. They would have come out of a custody from which nothing could be safe, and unless they could have proved some facts of which the Gaekwar was cognizant, I should have felt the deepest hesitation in putting these men into the witness-box. It is not for me to make out a case on behalf of the Gaekwar, I believe now that these men have lent themselves to proceedings utterly unjustifiable if the story of the different witnesses be true but these proceedings the Gaekwar knows nothing about. No independent nor honest witness has implicated the Gaekwar in any way, and I will not put into the witness box men who have been in the hands of the police up to this time and who may probably have been implicated in that what may have been an attempt by one set of persons although not carried out by another. My Lord, whether I am right in that course or not, I need not say my judgment has been left perfectly free and unbiassed, and it is upon my judgment that I act upon this occasion. I decline absolutely to put forward these people. I refer back to the evidence given and submit to this court that the evidence is utterly unsatisfactory and that the charge made against the Gaekwar entirely falls to the ground. My Lords, it is really with a deep sense of gratitude that I thank you for the attention that has been paid to the arguments I have humbly and probably insufficiently pressed before you—arguments that may be fallacious, but which I have earnestly and in the belief they are worthy of consideration pressed upon your attention. My Lord, you have given, I am sure, and will give, the fullest effect to them. I have felt the weight of this case and the deep responsibility cast upon me. No case probably has ever excited more general attention—that will be watched with more jealous care—that will be canvassed by more critical minds. It is, probably, the very first example that I know of, in which a man in the position of the Gaekwar charged with an offence of this character, or indeed with any offence at all, has been put upon his trial. We know well the history of India furnishes many examples of it, how the Viceroy has frequently with a high hand taken upon himself the supposed necessary correction of those who have acted contrary to that which is just, or the view which the Viceroy has taken on himself to think is correct. But on the present occasion His Excellency the Viceroy has felt it right when there is a grave accusation against a great prince in the kingdom that that accusation should be sifted. He has seen upon paper, probably sufficient grounds for an enquiry, and he has instituted that enquiry—the first I say that has ever existed in this country and by which English law and English justice are called upon to assist in an inquiry connected with a charge against an Indian prince. My lord, to me, at all events, that is a profound satisfaction, for whilst admitting and feeling deeply my own incompetency—and in that I am not talking from any false feeling of modesty, because I believe there is hardly a counsel in the land who would not have the same sense upon this matter, and probably justly so, for it requires indeed a great grasp of mind, great power, and one would have been glad if one could have brought to bear upon the subject great eloquence. I have only been able to bring to the subject calm reasoning and such as I wished and calculated would have an effect upon the judgment and minds of the Commission. Again, my Lords, I thank you for the attention you have paid me—I implore you not to consider that what I have said is all that can or might be said upon the part of the unhappy prince. I implore you to look into the minutes of the evidence. I believe in that minute will be found matters upon which I have not relied, but which have strong bearing to show that the Gaekwar is entirely innocent of this charge. Cast from his throne, exhibited to his people under circumstances of degradation, not one man scarcely dare, while the investigation is going on, to come forward and say a word in his favour—he has solemnly declared his own innocence, and I as his counsel have referred to the evidence given here, and solemnly ask the tribunal which has to try him by equal judgment and justice of English laws, to say that the veriest pickpocket ever charged with an offence could not have been found guilty upon the evidence by which it is sought to deprive a sovereign prince of his throne.

MR. SCOBLE'S ADDRESS.

(By Telegraph.)

BARODA, *March 16th.*

Mr. Scoble first made an eloquent defence of the characters of the police individually and generally, and then went over the evidence, showing clearly that the Gaekwar had been tampering with the Residency servants, because Damodhur Punt could have had no object in paying for information in the way the Gaekwar did. He also demonstrated that it undoubtedly was arsenic in Colonel Phayre's tumbler on the 9th of November, and said the scientific evidence on that point was incontrovertible.

Mr. Scoble's address was very good and temperate. He ridiculed the idea that the practices of European Courts could be compared with those of Native Courts, and showed it was quite possible the Gaekwar could have hobnobbed with the Residency menials. The proceedings will probably terminate to-morrow.

The Gaekwar was present during the day.

March 17th.

Mr. Scoble continued his address all day. It is a masterly resume of the evidence. He made a strong point by alluding to the episode of the belt, and by dwelling on the fact that the arsenic found in it had been spoken to by Dr. Gray as identical in physical characteristics with the arsenic found in the sediment. He referred to discrepancies in the evidence of witnesses as characteristic of natives, who give general statements instead of observing the accuracy generally found in European witnesses. If the case had been got up, the police evidence would have hung together perfectly, whereas here the differences in minor details are an argument for the truth of the story against the Maharaja.

He vindicated Bhow Poonakur from the insinuations cast upon him by Serjeant Ballantine without any grounds whatever, and denied that Colonel Phayre was under the power of Poonakur or any native. He (Colonel Phayre) listened fairly to all.

Mr. Scoble showed, with reference to the order upon the Fouzdaree for arsenic and the refusal of the Fouzdar to give it without distinct orders from the Maharaja, how natural it was that the Gaekwar should seek to procure arsenic elsewhere rather than permit his name to appear in the Fouzdaree records. He argued against Hemchund's statement in the witness-box and showed that his previous statement was confirmed by other witnesses in the palace.

He contended that there was not a tittle of evidence to show Damodhur Punt's accounts were rotten, and ridiculed the idea that Damodhur Punt could have been afraid of an investigation of his accounts by Colonel Phayre when Colonel Phayre could have no business to examine the palace private accounts.

March 18th.

To-day this eventful trial, after running course for nearly a month, came to an end. That the laborious enquiry was beginning to tell severely on those engaged in the trial is undoubted. That the work was beginning to thin the ranks of the Commission is apparent from the fact that neither Scindia nor Sir Dinkur Rao was able to appear this, the last, day of the inquiry.

The Advocate-General's speech was masterly. As on the two previous days he went over the statements made against the credibility of material witnesses for the prosecution, and it is not too much to say proved there was every reason to believe these witnesses had in the main been speaking the truth in the witness-box. Nursoo's evidence he commented on at full length, quoting Sir. L. Pelly's description of how Nursoo was compelled to remain apart for a time before he committed himself to making a statement upon the serious matters he had said he was concerned in, and how the man made his confession notwithstanding the hope pardon was denied him; how, for very shame at being seen by the old servants of the Residency in which he had been for many years a servant, he attempted to commit suicide, Mr. Scoble also recalled the solemn and searching adjuration addressed to the unhappy man by Sir Dinkur Rao at the close of his evidence before the Commission. All these circumstances he alluded to as proving beyond a doubt that Nursoo was no liar when he told the tale that implicated the Gaekwar.

The Advocate-General dissected Futteychund's evidence, and gave a full and complete explanation of how that person mutilated his books in order to conceal transactions in diamonds with the Gaekwar. Hemchund's conduct was described as that of an eager perjurer, to whom access had been obtained by some of the indiscreet friends of His Highness.

The Advocate-General also defended the conduct of the Police in taking the statements of witnesses. Baroda was no regulation province where a magistrate was available when required by the Police, and it would have been indelicate to ask Sir L. Pelly, who was in daily political communication with the Gaekwar, to take an active part in the investigations carried on. He denied that the Police inflicted tortures upon any of the witnesses. There was not a scrap of evidence to show any torture had been inflicted, and, if any witnesses did feel torture, it must have been that which arose from a guilty conscience in consequence of their participation in serious crimes.

The Advocate-General concluded an eloquent and closely reasoned address in the following few impressive sentences:—"There is, therefore, no testimony to oppose that which has been marshalled against the Gaekwar, and, unless the Commission should reject altogether the evidence that has been so marshalled as utterly unworthy of credit, I apprehend there can be no doubt whatever, but that it will be the painful duty of your Lordships to find the four charges against His Highness amply proved. I have no necessity to make an appeal to your Lordship in regard to the view you should take in the matter. It is not my province, nor would it become me to do so, such are not my instructions. I will only say this, that, if there is anything in the argument I have offered for your considerations upon the evidence recorded, and if there is any truth in the evidence so recorded, then there is no room for sympathy with His Highness. The persecuted Prince to whom my learned friend referred so frequently disappears, and the Commission can only look upon him as a criminal worthy of con-

dign punishment. I do not think I can make any further observations upon the case than those offered to you, as calmly, I trust, and as dispassionately as it is my duty to do. There are many smaller points I have not introduced in my remarks, but I deemed it right to address myself only to the more important parts of the evidence, although I am aware that the consideration of these smaller points might help to show that the story told by the witnesses is true, and that the theory put forward upon the part of the defence is totally unsustainable. I thank this Commission most sincerely for the patient and courteous attention with which they have listened to what I have said in my address to them, and I pray God your deliberations may be conducted to a righteous conclusion."

The Commission then rose at one o'clock, without any remarks passing between the Bench and the Bar.

THE ELEPHANT PROCESSION AT DELHI.

[*Pioneer's Correspondent.*]

Delhi, 17*th March*.

Whoever might have risen to more importance afterwards, there can be no doubt that Colonel Black, Military Secretary to the Punjab Government, was the hero of the dim hours between four and six A. M. It was he who brought our gallant allies on the field, and lined, the road that leads from the Lahore Gate, past the cavalry lines, up and along the Ridge, with the zouaves of Bhawalpur, the light chasseurs of Patiala, and the lancerhussars of Jheend. These gallant soldiers were certainly in their places betimes for it was fully five hours before they had to present arms to the Viceroy. About half-past five the European troops were under arms, and at a quarter to seven the Queen's Road running between the Gardens and E. I. Railway was full of hussars, artillery, and elephants. There was a drizzling rain at dawn, and a few minutes before seven a pelting shower threatened to desolate the bright bonnets and gay uniforms. It cleared up, however, before much harm was done, and we had reason to thank it for laying the dust and cooling the air. The railway station was somewhat meagrely decorated with long cords of small flags stretching from one tower to another; and the Institute was joined to the clock-tower by a similar kite-tail of streamers. At different points along the route triumphal arches of flags and evergreens were thrown across the road; and the natives showed their loyalty and good feeling by hanging our bright-colored cloths, little ornaments, and in some cases pictures from their windows and roofs. All business was suspended, and each shop-door and housetop had its little group of patient spectators, in the whitest linen, waiting to see what the great preparations would bring forth. Already the entire route was cleared, and save an occasional carriage driving to the Institute or Jumma Musjid, or an impatient and excited spectator who fluttered across to what he considered a point of greater advantage, the scared course was not violated. At the Institute a platform was arranged for spectators; but the great theatre was the Jumma Musjid. A prodigious crowd had assembled at the foot of this building, and the noble flights of stairs on the eastern and southern sides were spread with bright and clean cloth and covered with a brilliant crowd of native gentlemen. A clear path was left, however, for Europeans, for whom the arcades and cupolas had been reserved through the courtesy of the mosque authorities. From the eastern arcade a splendid view was obtained of the route along the Lothian Road and the direct approach to the Musjid. The great open space stretching to the walls of the fort was dotted with groups, of elephants, horsemen, and active spectators, who moved about from place to place to lose nothing of the pageant. The road itself was lined with police, who easily kept in check a dense but orderly crowd.

We, inside the mosque, with the restlessness of our race, migrated impatiently from gallery to gallery; at one moment thinking the corner towers commanded a better view, at another trying the cloisters on the south and north. By half-past seven, however, we had all settled down in our places, with the ladies arranged on chairs and camp stools in front of the eastern arcade. The morning sun shining the gay throng caused it to blossom in bright parasols, intermingled with the large white sun flower of domestic life. Half-past seven was elevated to the first rank in the programme as the supreme moment when the train should arrive; but half-past seven came and went unhonored; and watches were unpocketed and compared on all sides with looks of heightened expectation. But Delhi had not very long to wait, for about twenty minutes to eight a low rumbling noise announced that the train was crossing the iron bridge, and in a few minutes more the guns at the fort thundered out a royal salute. This was the very *articulus* of expectation. People craned their necks in breathless eagerness to see what was known to be far out of sight. Your correspondent even, who should have risen in such matters superior to the fickle and profane multitude, felt himself constrained by an electric sympathy to penetrate with his eagle eye that considerable portion of the city which separated him from the incipient solemnity. In a few minutes two of the Viceroy's carriages, each drawn by four horses and escorted by a few troopers of the Body-Guard, drove up to the corner of the Lothian and Musjid Road, where Miss Baring and her guests could enjoy not only an excellent view of the procession, but the hardly less interesting spectacle of the splendid crowd that surrounded and covered the grandest Mahomedan temple in the world. Through the crowd that lined the Lothian Road we could now see a body of horsemen moving, and presently the van of the procession turned the corner and came into full view. It must be placed upon record that Mr. S. Smith, of the Police, headed the grand cavalcade, followed by Captain Grant, D. A. Q. M. G. of the camp. A squadron of the XV. Hussars, led by the commanding officer, a battery of Horse Artillery and a squadron of the 4th Bengal Cavalry in scarlet, now filled the road as far as we could see. A finer little body of troops it would be hard to find, so perfectly equipped, so excellently mounted. Here occurs a little hiatus, after which the Body-Guard, with their lances held obliquely over their horses, march past. Their uniform is sumptuous, and their horses of a high class; but to make soldiers there seems to be something wanting. The equipment and general appearance of the officers, however, is conspicuously perfect, courtly, and soldierlike. The elephants following one another at long intervals loom in view. This being essentially a Punjab celebration, the chiefs of that province follow their feudal lords of the Punjab and India in advance of their brother princes of Rajpootana. I have already communicated to you the order of procession, and it will be unnecessary to describe here each elephant and its burden, but I shall take those which struck me as most remarkable. Slowly the huge animals approch us. Each step is taken with the calmest deliberation; and as they pick straws off the road with their trunks, or whisk off a fly with an impatient snuffle, they appear completely indifferent to the important part they are playing in the vast ceremonial and to the gorgeous trappings that almost conceal their bodies. At last they draw near; and the tremendous lord of elephants that bears our Viceroy is seen turning the corner rendered conspicuous by his huge dimensions, and distinguished from all others by the silver handled *chowrie* carried by his mahout and the great umbrella spread over his rider. No one else is permitted to display these emblems of royalty; only one umbrella is unfurled, only one yak's tail flicks away the presumptuous fly. As the Viceroy approaches, the crowd bends with one accord, and every right hand is slowly raised to the forehead; but not a whisper is heard, no shout, no cheer. Silence is the grand conception of respect formed by the Asiatic. His Excellency appears gratified by the unequivocal expression of loyalty, and with uplifted hand, in oriental style, he returns the salutation of the multitude. As the Jumma Musjid is reached and all hats are raised, His Excellency, who wears political uniform, with the star and collar of his order, repeatedly bows acknowledgment. We have now a close view of the big elephant and his magnificent housings. A great cloth deeply wrought with gold nearly reaches the ground on either side, and falls in a pear-shaped projection gracefully over the monster's forehead. The howdah is of wood, covered with plates of solid silver, and lined with purple velvet; and a glided crown and cushion rest upon what on carriages is known as the splashboard. A tiny elephant walks close behind carrying the ladder; he is the page of the lordly Mammoth. Sir Henry Davies follows on a well-caparisoned elephant, but the natives, in accordance with their laws of etiquette, make no salaams.

At a distance of thirty paces the elephants begin to come two abreast. The first two bear the Maharajah of Patiala and Mr. Aitchison. The solid silver howdah and gorgeous cloth-of-gold trappings of the former attract great attention, and although the vast concourse of natives make no sign, they are evidently greatly moved by the magnificence of one of their most popular princes. His Highness wears his collar and star as a Grand Knight Commander. The Nawab of Bahawulpur, a fine youngster of fourteen, accompanied by a Judge of the High Court, comes next, and naturally excites great interest among the Mahomedans as the only considerable prince of their creed who takes part in the solemnity. Colonel Blair-Reid soon follows with a tiny prince of eight years old—the Rajah of Chamba—in his howdah. The little fellow is highly delighted with the fun, and seems much pleased with himself. Between the Punjab and Rajpootana chiefs there is an interval of some fifty paces. Mr. Lyall with his subordinate politicals leads the Rajpoot procession. The first prince is he of Bhurtpore, whose elephant, though small, was perhaps the most gorgeously caparisoned of any. He was covered with a coat-of-armour formed of silver plates that loudly jingled as he moved. It was extremely magnificent, and must have been of extraordinary value. Behind Bhurtpore came a third boy-chief, the Maharao Rajah of Ulwar. These were succeeded by small Nawabs and Rajahs, with their Divisional Commissioners, by merely titular nobles, and finally by the elephants of the attendants of the various big men. More cavalry and artillery followed, and the procession closed with a body of camel men belonging to the Viceroy's household. It took fully an hour for the whole cavalcade to pass. There was now a rush for the carriages, and *viâ* the Lothian, Queen's Roads, and the Cabul Gate every one crowded to the Meri Bastion to see the march past. The Viceroy, with the Lieutenant-Governor on his right hand, drew up on one side, while the elephants moved slowly by in single file, some of them saluting with their trunks. Before this ceremony was over the cavalry and artillery trotted off to camp, there to await His Excellency's arrival. When the last elephant had enfiladed past, Lord Northbrook got into his carriage with two of his staff, and followed by a *char-a-bancs* containing the remainder of his party, drove away to camp with only a small escort of the Body Guard. The road was lined with the troops of the feudatory chiefs, and as the carriages drove along, the National Anthem was played by military bands stationed at short intervals. The road over the ridge was the one chosen, and the viceregal party was soon within sight of the camp. On entering the main street a field battery, that went on ahead, fired a royal salute, the Viceroy's standard was unfurled, and the band of the Rifle Brigade played the National Anthem. Thus ended a grand and significant solemnity.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. *Bell*, Berkeley, for the above named Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted. —I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

DESIGNS FOR CANNING COLLEGE LUCKNOW.

COMPETITIVE designs are invited for the proposed Canning College at Lucknow, estimated to cost one lac and twenty thousand Rupees, including out-offices. The building, including Verandahs, will cover about 23,000 feet, to be distributed as detailed below :—

	Including walls.	S. feet.
Examination Hall, ...	100 × 60 =	6,000
Eight class rooms	160 × 60 =	9,600
European Professors, ...	25 × 30 =	750
Principal	25 × 30 =	750
Native Professors	25 × 30 =	750
Bath rooms	10 × 30 =	300
Office	25 × 30 =	750
Library	60 × 30 =	1,800
Graduates' room	25 × 30 =	750
Total ...		21,450
Add for Verandahs &c. ...		1,550
Grand total, Superficial feet,		23,000

The building will be erected contiguous to the Kaisur Bagh buildings, and the character of the design must be in general keeping with the architectural features of these buildings.

A premium of Rs. 2,500 will be paid to the successful competitor in one sum on the submission of the general drawings—plans, elevations and sections with specification and approximate Estimate, together with the working and detailed drawings.

The plan of the site, photographs of the adjacent buildings, and other particulars will be available for intending competitors on application at the office of the Superintending Engineer, Public Works Department, Oudh. Each design will bear a distinguishing mark, device or motto, and the same, with name and address of each competitor in a separate sealed cover, will be forwarded to the address of the Superintending Engineer, Public Works Department, Oudh, Lucknow, with the designs, which will be received up to 1st June 1875, and to no later date.

Specially adapted for up-country districts, as all breakage of chimney is avoided, and the light given much greater than that of any other burner, same size wick. Photographs and Books containing over 500 designs upon application. Indents must be sent through an English house or covered by drafts 60 d/s.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

Billiard Table Manufacturers,

BY APPOINTMENT

To His Excellency the Viceroy and Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction, that an Amateur can put it together in half an hour, without the assistance of an Electrician. The Battery will last for months, without being refilled, and when it needs to be renewed can be done at any time, for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co., are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work, and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this Country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

Plate Glass Mirrors,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

Ever imported into this Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—An opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturer's prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burma, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured and are the only ones appreciated in the places enumerated.

(213)

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London,) to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868 :—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *Communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE.—*See Lancet, Dec.* 31. 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera :—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient.

From DR. THOMAS SANDIFORD, Passage West Cork :—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland :—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta :—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle :—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE: that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*; July 13, 1864.

Sold in Bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

(447) Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street, Bloomsbury, London.

THE ORIGINAL HARDWARE ESTABLISHMENT OF INDIA.

T. E. THOMSON & CO.,

9, ESPLANADE ROW,
CALCUTTA.

IMPORTERS OF CORN CRUSHERS.

No. 1—Corn Crusher.

For kibbling peas, beans, oats, Indian corn &c.,—with diagonally machine-fluted and case-hardened rollers. A simplified feature in this mill is the employment of a setting screw on the back of the feeder—a slight turn being all that is required to increase or diminish the supply on the working rollers, which are so formed as to have both a cutting and a crushing action; and by the new application of feeding can be regulated to suit the strength of a boy, and will kibble a bushel in ten minutes. Size of rollers, 7 inches by 3½ inches, Rs. 125.

No. 2—Corn Crusher.

Is upon the same principle as the foregoing, and is recommended for any of the above purposes, being both speedy and effective in its operations. Size of rollers, 9 inches by 4 inches, Rs. 155.

No. 3—Corn Crusher.

Is admirably adapted for power, being mounted on a strong iron frame which imparts steadiness to its operations, while the great strength of machinery, which is most accurately fitted with parallel adjustment, can instantaneously be regulated by two hand-screws in front to crush to any degree of fineness. This mill can be driven with a 16-inch pulley at 200 revolutions per minute, without danger to the working parts. Size of rollers, 11 inches by 6½ inches, Rs. 255.

Extra rollers for the above.

No 1, 2, 3.

Rs. 30-0 36-0, 88-0 per pair.

Hand Roller Mill.

This is a small corn crusher, and well suited for persons keeping one or two horses; it may be fixed on a bench or stool, or upon a box made for the purpose, in which it can be packed. This addition makes it so easy of transport as to recommend it particularly for the use of Officers in the Army. Price, with box, Rs. 90.

☞ *Ten per Cent. Discount for Cash. Feby.* 1874.

The great Eastern Remedy
for all
Diseases of the Skin,

such as HERPES, SCABIES, ECZEMA, SCURVY, RUPIA, PUSTULAR ERUPTIONS, ACNE, RINGWORM, LICHEN SCALDHEAD, SCALY ERUPTIONS, LEPRA, ELEPHANTIASIS, FRECKLES, SYPHALITIC ERUPTIONS, BOILS, BLANES, PIMPLES, BLOTCHES. FOUL ULCERS, CANCER, INDOLENT TUMOURS, CANCEROUS TUMOURS, &c. &c. — is

Dr. E. J. Lazarus

ESSENCE OF NEEM.

Full directions accompany each bottle.
Beware of Spurious Imitations.

Prepared only by MESSRS. E. J. LAZARUS & Co., at the MEDICAL HALL, BENARES, from the orginal receipt of EDWARD JOHN LAZARUS, M. D. and sold by them and by all Medicine Venders at 4 Rupees each bottle.

COOLING, REFRESHING & INVIGORATING

Are the effects of

ROWLANDS' KALYDOR

On the face and skin of all exposed to the scorching Sun, and suffering from prickly heat, sunburn, freckles, and cutaneous eruptions for which it is a complete cure.

ROWLANDS' MACASSAR OIL

Prevents the hair falling off or turning grey, eradicates scurf and dandriff, strengthens weak hair and makes it beautifully soft, pliable and glossy.

ROWLANDS' ODONTO

Whitens and preserves the teeth, prevents and arrests *their decay, strengthens the gums and gives a pleasing fragrance to the breath.*

ROWLANDS' ESSENCE OF TYRE

Produces immediately a perfect change in red or grey hair, whiskers and eyebrows, to a glossy and permanent brown or black, which colour neither washing or perspiration will remove. GREAT CARE must be taken to ask for Rowlands' Articles at 20, Hatton Garden, London, and to see that their signature, A. ROWLAND & SONS, is in RED ink on the wrapper of each, no others being genuine. Sold by all chemists, perfumers, druggists, and at all Bazaars throughout India.

(135)

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, King William Street, London.

Insurances effected with or without participation in profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, Esq., East Indian Railway Co.
WILLIAM THOMAS BERNERS, Esq., of Messrs. Ashburner & Co.
GEORGE MILLER, Esq., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, Esq., Barrister-at-Law.
JOHN MATHESON LYALL, Esq., of Messrs. Lyall, Rennie & Co.

ASSURERS under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed,* whilst the assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past eleven years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium,* the sum allotted for Bonuses this year being £34,065.

Medical Adviser:

DR. T. EDMONSTON CHARLES, 10, Harrington Street.

Hour of attendance—10 A.M.

Capital	...	£500,000-0-0.

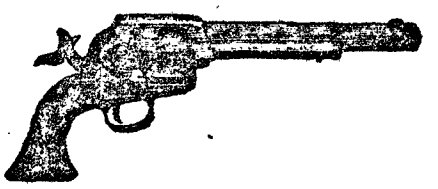
(463)



COLT'S NEW GOVERNMENT ARMY REVOLVER,

as recently adopted for the United States Cavalry, takes the ·450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

COLT'S LARGE BORE BREECH-LOADING DERINGER,

for the waistcoat pocket, shoots hard and straight.

COLT'S DERINGER REVOLVER,

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

LEA & PERRINS'

CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS

TO BE

THE ONLY GOOD SAUCE.

CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

ASK FOR LEA & PERRINS' SAUCE,

and to see that their names are upon the *wrapper, labels, stopper*, and *bottle*.

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged, L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for **LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.**

[illegible] BISSONAUTH LAW & CO.,

Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

"It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal's ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard that it may be added that the Company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman at the Annual Meeting, 7th August, 1874.*

Terms of Proposal, Tables of Rates, &c., forwarded on application to

(295)

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½-lb. and 1-lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, AND 170, PICCADILLY.

Works—EUSTON ROAD and CAMDEN TOWN.

INTEGRITATEM
EMTORIBVS TVENTI
REX. D
MDCCCXLVIII.

PRESENTED BY THE KING OF THE NETHERLANDS

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

GOLD MEDAL OF MERIT

LEOPOLD I ROI DES BELGES

PRESENTED BY THE KING OF THE BELGIANS

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHEBY,
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. DE JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

General Debility and Emaciation.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, Esq., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility, I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed. I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents, the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and, from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who, in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., Esq., *District Medical Officer at Bury St. Edmund's*, writes:—

"In giving my opinion of DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now, when I feel 'out of condition,' I take it, and like it. unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

The Wasting Diseases of Infancy and Childhood.

In those severe disorders, *Infantile Wasting and Rickets*, from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hope of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary transition to a state of normal health.

THOMAS HUNT, Esq., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin*, writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold **ONLY** in bottles sealed with a metallic capsule impressed with his stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD, and Co. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD, and Co., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

☞ All communications on business or otherwise, should be addressed to the Editor.

PRINTED and published at the Serampore Press by GOPAL CHUNDRA GUNGOPADHYA, for the Proprietors, every Thursday morning. Price 2 Rs. monthly or 20 Rs. a year paid in advance *without postage* which is Rs. 1-10 per annum. Subscriptions are received in *Madras* by Messrs. ARBUTHNOT and Co.; and in *London* by Mr. G[illegible]

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

CALCUTTA: SATURDAY, 24TH APRIL, 1875.

ADVERTISEMENTS.

BRITISH INDIA STEAM NAVIGATION COMPANY LIMITED.

THE following are the movements of the Company's Steamers during April and May 1875:—

From Calcutta For Chittagong, Akyab and Kyouk Phyoo 3rd, 17th and 31st May.

„ Akyab and Rangoon 26th April, 10th and 22nd May.

„ Rangoon and Moulmein 26th April, 10th and 22nd May.

„ Singapore calling at Rangoon Moulmein Penang and Malacca. 3rd, 17th and 31st May.

„ Chittagong, Akyab, Kyouk Phyoo, Sandoway, Bassein, Rangoon, Moulmein, Tavoy, Mergui, Pakeham, Kopah, Junkseylon, Penang, Malacca, and Singapore, 10th May.

„ Port Blair and Camorta, 19th May.

„ Bombay, calling at False Point, Gopalpore, Bimlipatam, Vizagapatam, Coconada, Madras, Pondicherry, Negapatam, Galle, Colombo, Tuticorin, Alleppey, Cochin, Beypore, Calicut, Tellicherry, Cannanore, Mangalore, and Carwar, 29th April, 6th, 13th, 20th and 27th May.

Receiving Cargo for Kurrachee, Guader, Muscat, Bundar Abbas, Linga, Bushire, Fao, Bussorah, and Baghdad, to be transshipped at Bombay to Steamer leaving for the Persian Gulf, immediately after arrival of Steamer from Calcutta. Baghdad cargo transferred at Bussorah to Steamers of the Euphrates and Tigris Steam Navigation Company—or other Steamer.

From Calcutta, for London, on or about 26th April.

„ Madras, for Rangoon, calling at Masulipatam, Coconada, Vizagapatam Bimlipatam, returning to Madras, *vid* same ports, 28th April 12th and 24th May.

„ Bombay, for Kurrachee only 26th April, 3rd, 10th, 24th, and 31st May.

„ Kurrachee, Guadar, Muscat, Bunder Abbas, Linga, Bushire, Fao and Bussorah, receiving Cargo for Baghdad, 23rd and 30th April, 7th, 14th, 21st and 28th May.

„ Calcutta calling at same ports as the Steamers from Calcutta, 24th April, 1st, 8th, 15th, 20th and 27th May.

„ Aden, for Zanzibar, 21st May.

„ Zanzibar, for Aden, 8th May.

Ditto. „ Moyotte and Nossi Bi 7th May.
Arriving at Zanzibar on the return trip 24 hours before the departure of the Steamer for Aden.

Pekin, W. Woolcotts	..	3,777	600	April	26th Southampton.
Avoca, J. H. Torbock	..	1,481	250	May	3rd Suez, &c.
Mirzapore, A. Parish	..	3,763	600	„	10th Southampton.
Baroda, W. Fentiman	..	1,874	400	„	17th Suez, &c.
Khiva, C. G. Perrins	..	2,609	450	„	24th Southampton.
Geelong, C. Fraser	..	1,584	250	„	31st Suez, &c.

Passengers are booked to Malta, Gibraltar, and Southampton by every mail. The Southampton Steamers proceed to that port direct, but by the alternate steamers passengers change vessels at Suez.

Passengers to Brindisi, Ancona, and Venice, are carried by every Steamer, but proceed by Rail from Suez to Alexandria.

The China Mail Steamers will leave Bombay on 3rd, 17th and 31st May.

The Australian Mail Steamers will leave Bombay on the 1st and 29th May.

GEORGE F. HENRY,
Superintendent.

Bombay, 19th March, 1875.

Austro-Hungarian Lloyd's Steam Navigation Co.

REGULAR LINE OF STEAMERS BETWEEN BOMBAY AND TRIESTE VIA SUEZ CANAL.

THE COMPANY dispatch during the fair Season (*November to June*) regularly every fortnight, a steamer from Bombay to Trieste, which leave on the 5th and 20th of every month. From June to November one steamer every month will be despatched on the 20th.

These steamers have either only one class of Cabin accommodation, or first and second class, and the rates of passage-money vary accordingly.

During the passenger season large passenger steamers are usually employed with excellent accommodation for first and second class passengers.

RATES OF PASSAGE FOR STEAMERS WITH ONE CLASS ONLY.

	Cabin.	Deck with food.
To Trieste	£40	£19-0
To Port Said	£30	£14-6
To Suez	£28	£13-7

RATES OF PASSAGE FOR STEAMERS WITH 1ST AND 2ND CLASS.

	1st Class.	2nd Class.	Deck.
To Trieste	£45 0	£35 0	£19-0
„ Port Said	£33 6	£23 0	£14-6
„ Suez	£32 8	£22 0	£13-7

Children under 3 years of age, FREE; above 3 and under 10 years, HALF FARE. The passage-money includes free conveyance of 3 cwts. luggage for 1st class and 200 lbs. for 2nd class Passengers, and a liberal table (*exclusive* of wines and liquors, which can be purchased on board at moderate prices).

OVERLAND ROUTE TO AND FROM INDIA, CHINA, JAPAN, AND AUSTRALIA.

Information of the Company's Service on the direct weekly line between TRIESTE AND ALEXANDRIA,

In conjunction with the Peninsular and Oriental Company's Service between Suez and the East, and *vice versa*.

The Austrian Lloyd's Steamers leave Trieste for Alexandria every Friday at midnight, and will reach their destination in about 5 days, inclusive of a stoppage from 4 to 6 hours at Corfu. The return voyage from Alexandria takes place immediately after the arrival of the Indian Mails from Suez, falling due every Sunday. In case of delay the departure of the steamer will be postponed.

RATES OF PASSAGE-MONEY BETWEEN ALEXANDRIA, CORFU, AND TRIESTE.

FROM ALEXANDRIA TO	1st Class.	2nd Class.	3rd Class.
	£ s.	£ s.	£ s.
Corfu	8 0	5 18	3 0
Trieste	12 0	9 0	6 0

Reduced Fares from Alexandria to Trieste for Families of not less than three adult persons travelling together.

1st Class, Rs. 100 each; 2nd Class, Rs. 75 each.

These rates include berth, a liberal table (exclusive of liquor) and fees.

Baggage allowed—1st Class, 200 lbs.; 2nd Class, 130 lbs. English weight.

Overweight, 10*s.* per cwt.

For further particulars apply to A. C. GUMPERT, Manager

Bombay, 28, Bombay Green, opposite the Custom House,
16th November 1874.

Steam Communication with the Malabar Coast, Ceylon, Madras and Calcutta.

THE British India Steam Navigation Company (Limited), UNDER CONTRACT WITH GOVERNMENT, despatch steamers as above with Mails, Passengers and Cargo, every fourteen days.

This route is the most expeditious and economical for passengers for the Neilgherry district, Bangalore and Madras, who can land at Calicut for Beypore, and proceed from thence by rail.

Passengers for Calcutta can take the same route, picking up the steamer at Madras.

W. NICOL & Co.,
Agents.

Bombay, 1875.

STEAM COMMUNICATION WITH KURRACHEE.

THE British India Steam Navigation Company (Limited) UNDER MAIL CONTRACT WITH GOVERNMENT, and in connection with the weekly service from England, despatch a steamer to Kurrachee every Monday at noon.

W. NICOL & Co.,
Agents.

Bombay, 1875.

Steam Communication with the Persian Gulf, via Kurrachee.

Interchanging Cargo and Passengers at Bussorah, to and from Baghdad, with the Euphrates and Tigris Steam Navigation Company.

THE British India Steam Navigation Company (Limited), UNDER MAIL CONTRACT WITH GOVERNMENT, will despatch a steamer every 14 days to the PERSIAN GULF, touching at KURRACHEE, GUADUR, MUSCAT, BUNDER ABBAS, LING, BUSHIRE, FAO, MAHOMERAH, and BUSSORAH.

W. NICOL & Co.,
Agents.

Bombay, 1875.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policyholders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 40 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly, at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds	...	... **£ 971,942 10 10**
Annual Income	...	... **£ 169,497 15 8**

Claims promptly adjusted on proof of Death.

Total of Claims Paid Since 1834, £ 2,070,348 17 1

Copies of the last Report, Proposal Papers, &c., on application to the Society's Sub-Agents in the principal Mofussil Stations or to

GISBORNE & CO.,
Agents and Secretaries,
40, STRAND, CALCUTTA.

[LIFE BUSINESS ONLY TRANSACTED.]

STANDARD LIFE OFFICE.

ESTABLISHED 1825.

DURING THE YEAR 1873,

THE amount of NEW ASSURANCES effected, (£1,218,619-3s) is the largest sum ever transacted by THE STANDARD COMPANY in any one year, and has seldom been exceeded by any British Office.

PROGRESS OF THE COMPANY'S BUSINESS.

DURING THE PRESENT QUINQUENNIUM (1870 to 1873.)

Year.	New Policies Issued.	Invested Funds.
1871	£1,041,097 5 0	£ 4,266,075 4 7
1872	£1,190,453 10 0	£ 4,411,657 16 8
1873	**£1,218,619 3 0**	**£4,580,667 16 9**

TH CLAIMS by death, paid during the past eight years, have amounted to upwards of Three Million Pounds Sterling, averaging more than £1,000 *a day for eight years.* At the same time, the REVENUE has reached the large annual sum of £724,000, and the invested Funds amount to £ 4,580,667-16-9.

PREMIUMS MODERATE, and may be limited to a fixed number of payments, and paid in Monthly instalments if desired.

STANDARD LIFE OFFICE, 15, Hare Street; *Calcutta, 15th June* 1874.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

THE "Indian" is a Life Office only, and its Funds are therefore free from the Risks attaching to Fire and Marine business.

INDIAN LIFE ASSURANCE COMPANY, LIMITED.

COMBINING LIFE ASSURANCE AND PENSIONS.

Funds *entirely* in GOVERNMENT SECURITIES AND REMAIN IN INDIA. Policy-holders can appoint an Auditor.

Established 1869

ON NEW, SOUND AND POPULAR PRINCIPLES.

(Preliminary expenses including Establishment of 44 Agencies Rs. 2,066 only instead of Rs. 50,000 and upwards!)

REGISTERED UNDER ACT X. OF 1866.

Capital Rs. 500,000 Fully Subscribed.

Paid-up Rs. 100,000 only (to leave a large surplus to Policy-holders) as advised by the Actuary, J. Hill Williams, Esq., Vice-President, Institute of Actuaries, London.

HEAD OFFICE: MEERUT.

BRANCH OFFICE: BOMBAY.

Advantages of Assuring with this Company.

(1) ECONOMICAL MANAGEMENT. (2)* ENTIRE DIRECTION IN INDIA (3) NO AMALGAMATION. (4) FUNDS in Government Securities only. (5) REDUCTION OF PREMIUMS. (6) POLICY-HOLDERS entitled to appoint an Auditor. (7) REDUCTION TO ENGLISH RATES, from date of leaving any port in India, Ceylon or China. The first Company which granted this complete concession. (8) NO RESTRICTION ON TRAVEL. (9) INDIAN RATES of Premium charged while in India. English Rates on leaving for Europe. Assurers who do not contemplate spending a *life time* in India or other tropical climates, will find that the rates of this Company compare *favourably* with *enhanced English Rates.* They have the advantage of *consistency*, as it is *proved beyond doubt* (by the various Civil and Military Funds) that English Life is of less value in India than in Europe. (10) ASSURANCES EFFECTED on lives of EUROPEANS, EURASIANS, PARSEES, AND HINDOOS. (11) CLAIMS PAID three months after satisfactory proof of death. (12) POLICIES for the whole term of life. Short terms of years certain, or payable during life time. ENDOWMENT ASSURANCES combine the advantages of Personal and Family Provisions. They are made payable to the assured themselves on attaining a specified age, or to the representatives at death should that happen sooner. A PROMISSORY NOTE GRANTED for every PREMIUM PAID. (13) HALF CREDIT SYSTEM. (14) NON-FORFEITABLE POLICIES BY LIMITED NUMBER OF PAYMENTS. Should payment of premium not be continued, a paid-up Policy in the form of a Negotiable Promissory Note payable to bearer is given for every Premium paid, which Promissory Note cannot lapse, and is payable on the death of the assured or may be converted into cash during his life time to the extent of 30 *or* 40 per cent. of the premium after 1st or 2nd years paid, without forfeiting the balance of the sum assured. Thus, the assured receives full value for his money for although he can only withdraw 30 or 40 per cent. of the amount of his premiums paid, he receives value for the remainder by being assured. In this way he has full control of his money, the Premiums paid becoming to him equal to a current banking account withdrawable at will. (15) LIBERAL SURRENDER VALUES. (16) SUMS PAID under Promissory Notes exempt from all charges. (17) PREMIUMS are payable monthly, quarterly, half-yearly, yearly, in five, ten, fifteen or twenty payments, or on the half credit system. (18) LAPSED POLICIES may be revived at any time on production of approved Medical Certificates and payment of arrears of Premium, with interest (19) LOANS ON POLICIES. (20) EXCHANGE OF POLICIES by the substitution of Lives. (21) PENSION BRANCH. *The Rates are more favourable than those of any similar Fund in India.*

THE TWO GRAND INDUCEMENTS TO POLICY-HOLDERS
MUST ALWAYS BE
Unquestionable Security; and as large Profits as the System of Life Assurance admits.

Forms of Proposal, Tables of Rates, and any further information may be obtained on application to the Company's Agents, or to

D. LANCASTER, *F. I. A.*,

THE REGISTRATION AND STAMP MANUAL.

CONTAINING

THE INDIAN REGISTRATION ACT, 1871;

WITH Abstracts of Decided Cases and Notes on Procedure; Table of Fees; Revised Rules framed under the Act for Bengal; Rules for Transliteration; List of Districts, Sub-districts, and Thanahs, List of Districts, and Sub-districts, N.-W. P.; Circulars on Rural Offices, &c. Also the GENERAL STAMP ACT, 1869, with Abstracts of all Notifications of the Government of India relating to Stamps and with a full Index to the whole. By T. F. BIGNOLD. ESQ., B.A., *Officiating Inspector-General of Registration, Bengal.*—THOS. S. SMITH, *CITY PRESS*, 12, Bentinck Street, Calcutta. Price, Rs. 7: with packing and postage, Rs. 7-8, Interleaved copies, Rs. 8, and by post Rs. 9.

OPINIONS OF THE PRESS:—This is the last Christmas Book we have received, though not very like the general run of Christmas literature. It will be, however, a welcome New Year's gift to the now very numerous body of Registrars and Sub-Registrars. It contains, firstly, the Registration Act, with clear and intelligible small-print summary of the several judicial decisions affecting each section, placed after the section to which they refer; then the Table of Fees; and the Rules drawn up by the Inspector-General and sanctioned by Government. This includes the Transliteration Rules promulgated by the University under the title of "A Key to Professor H. H. Wilson's System of Transliteration." It is followed by a list of the Districts and Sub-districts, with the thanahs contained in each. Then follows the Stamp Act, with its Schedules; and the whole is completed by a carefully compiled *Index* to the entire contents. A good index is a great *desideratum*, and, as Mr. Bignold observes, two indexes in one book are a great nuisance, so he has combined the entries relating to the Registration Act and Rules and those relating to the Stamp Act into one index, which is both handy and complete.

DENTISTRY.

MESSRS. CORFIELD & Co.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages:—

First.—Extreme lightness, being completely self-supporting.
Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.
Thirdly.—Absolute immunity from pain.
Fourthly.—Nature so closely imitated, that detection becomes an impossibility.
Parties residing in Calcutta and the Suburbs attended at their own residences if desired.
Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.
Artificial Teeth repaired and returned by following post.

MESSRS. CLAYTON AND SHUTTLEWORTH'S

IMPROVED OUTSIDE CYLINDER PORTABLE STEAM ENGINES,

WITH AND WITHOUT REVERSING GEAR.

In these Engines the Cylinders and all the working parts are on the outside or top of the Boiler, and can be seen and got at by the person in charge at a moment's notice. This is very important, as avoiding serious accidents and preventing an accumulation of dirt to which the housed Engines are always liable.

Each Engine is fitted with a second Safety Valve (under lock and key), also a Steam Pressure Gauge and Signal Whistle without any additional charge.

A waterproof cover of ample dimensions for covering up and excluding the Engine from weather or dirt, Firing Tools, Oil-can, a complete set of wrenches, screw, hammer, and spare gauge glasses are sent with every Engine free of extra charge.

Our stock consists of 6, 8, 10, and 12 Horse-power, Portable Steam Engines.

The above are all fitted with Extra large Fire-Boxes, so that any description of Fuel may be used in getting and keeping up Steam, and each Engine has an extra driving Pully Wheel.

NOTE.—The above is the *nominal power* only. The *actual* power given out by each Engine is much greater than that stated.

*** *Illustrated Priced Catalogues free by post on application.*

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

CALCUTTA : SATURDAY, 24TH APRIL, 1875.

OURSELVES.

We do not conceal from ourselves the difficulty of the task we have undertaken, in our attempt to bring the fine old Serampore paper, with the associations that cluster round it, into something like harmony with the present times. The *Friend* has been a distinctively religious paper, and this of course is our difficulty. Our best plan, we think, will be to conceal nothing from our readers, but to tell them honestly how we ourselves regard the position. There is no memory then connected with India, that moves us so deeply as the story of Carey, Ward, and Marshman, and their Serampore home. The work that these men did, is to ourselves at once the grandest and most important episode in the history of our connection with the country. Cast out by their own countrymen as evil-doers, and refused even a landing-place in British territory, these men nevertheless represented the one element in the nation, that was destined to save its rule from being a calamity to both countries. The people of India are little aware how much they owe to the small and despised body of Englishmen, who sent out these three worthies, not without many prayers, for the conversion of India to the faith of Christ. They were the solitary few of the nation, in whom the imagined wealth of India excited no cupidity. Their one thought was the enrichment of India with the Gospel, and for this they were willing themselves to become poor, and even to lay down their lives. Hated by the rich and powerful East India interest, for their abhorrence of the spirit that marked its rule, and regarded as fanatics by the leading Statesmen and Churchmen of the time, the nation owes to these men every unselfish and Christian feature of our administration. They were the one saving element that came into the country with us, and the little leaven has gone far to leaven the whole lump.

It is popularly supposed that the *Friend of India* dates from 1835 only, but this is an error. The paper had been in existence as an unpretending quarterly for many years, when Mr. Marshman launched it as a weekly journal on the press, and never was a title more fairly won, or more nobly borne, than that of the *Friend of India* in those early days. But the day of missionary triumph at last dawned ; and missionary influences came to pervade all the counsels of the Government. With this triumph, a change stole insensibly over the views that were reflected at Serampore. Before even the now venerable Marshman had left the editorial chair, the paper had begun to reflect—under a refined and specious form—a phase of the national selfishness. The ten years of Lord Dalhousie's rule, brilliant as they were in administrative power, have left a blot upon our rule that will never be effaced. The professed zeal of the Government for the education and conversion of the people was allowed to cloak the real covetousness of its proceedings, while a tacit alliance unhappily sprang up between the *Friend* and the Government. That Mr. Marshman was blind to the true character of many of Lord Dalhousie's acts is certain, for he remains so in part to this day. The hypocrisy of the pretences upon which the State was everywhere confiscating the possessions of the people and their princes, was discerned clearly enough by the country, but Serampore was unable to the last to perceive it. The time it was thought had come when "The word of the Lord was to have free course, to run, "and be glorified." The native States were the last barrier to the Gospel, and were now happily coming down, one after another. It was not the overflowing treasury of Oudh that made us desire that kingdom for our own, nor was it that we wanted the Berars, or Nagpore, or Jhansi, or Tanjore to replenish our coffers, but that we felt an indignant pity for the people, and that a sense of duty required us to save the princely families that ruled them, from the temptations that beset idleness and wealth.

When the Nemesis of all this came in the Mutiny, the paper was positively demanding the "annexation" of China, in missionary interests. It was thus that the *Friend* so largely alienated from itself the sympathies of the people. The brilliant writing that marked the journal was full of the "strange fire" that had been kindled on the altar where the Divine charity had gone out. The people were to be converted by force : caste was to be ignored in all the jails of the country, and punishments to be equalized by being all made capital. The Government was to reserve every appointment in the public service for native Christians, and we know not what other strange counsels were urged upon the State, with all the epigrammatic force and brilliancy for which the paper was distinguished.

The title of the journal became almost an irony in the ears of the people. Was *this* their Friend ; with all sympathy for them dead, and the red-hot spirit of a crusader's zeal, burning fiercely in its room ? The journal unfortunately continued to be animated with this spirit when the Indigo quarrel broke out in Bengal, between the people on the one hand, and the planters and zemindars on the other, and to men's amazement and distress it took part with the latter. Thus the missionary, after having been betrayed into supporting the policy of annexation, was now made to appear as the apologist of a vicious and cruel system that even "the World" looked upon with misgivings and aversion. And the people asked again was *this* their Friend ; the spokesman of the Grants, the Thorntons, and the Wilberforces : the child of Carey, Ward, Marshman, and Thomas ? The simple truth is that there was nothing left to link the paper with the past but a strong missionary zeal. When five years ago, the journal passed into the hands of Mr. Routledge another change took place. A man of sterling honesty and full of kindly feeling towards the people, he unfortunately looked coldly on missionary enterprise altogether ; and it was a deplorable mistake that he was ever asked to assume charge of a journal, so completely out of harmony as he was with its traditions.

What then, it may be asked, do we propose to do with the journal ourselves ? In a word, we mean that it should once more become emphatically the *Friend* of India. The two great principles of the Serampore mission we take to have been simply these : a sympathizing, unselfish interest in the people ; and a strong desire to see them Christian. No man can usefully edit any English journal in India, who does not sympathize with the people ; and certainly no man should attempt to conduct a journal with traditions such as those of the *Friend*, who is not convinced of the truth of Christianity and desirous to see its people partakers of its faith.

We believe with Serampore that the Bible is the very word of God, but we see more clearly than the missionary does that it has a human as well as Divine element in it. It is the failure to recognize this, that places so many earnest Christian men to day in hopeless antagonism with their times. The period is not distant, when men will discern more generally, the important conclusions that flow from an honest recognition of the fact, that the Bible was written, neither for our instruction in the past or future events of history, nor to teach us the facts of natural science or philosophy, but simply to make known to us, God's ways of dealing with men. Where this is lost sight of, and men will regard the Bible as teaching history, or science, or the events of coming time, the perversion of it is

complete. The Book is unique in its nature, and history, and structure, but what men have to learn in our day is that it is as really human as Divine. It is the refusal to recognize this fact, and the conclusions that flow from it, that repel so many sincere men from Christianity. We think that we honor the Divine word, by insisting upon the verbal inspiration of its human and therefore fallible text, while the greatest sticklers for this dogma too commonly fail to discern at all the voice that speaks through Moses and the Prophets, the Psalmist and the Evangelists in one and the same tone, with one and the same message through fifteen hundred years. We note with reverence that as the Saviour Himself the incarnate Word of God was both human and Divine by a union we can never understand so as to discern where the human ends and the Divine begins, so is it with the Scriptures. And the great conflict between science and religion will last, until the human element in the Bible is distinctly discerned. No more complete perversion of its pages could be witnessed than a Dr. Cumming insisting that the Book was written to make him and his followers know the events of the next ten or a hundred years ; or than the narrow Evangelical who insists that Genesis was written to instruct us in the actual processes of the Creation. That the story is human, every honest man is forced to allow ; but is there therefore no Divine voice speaking to us from out the text ? We believe there is. "Through faith we understand that the "worlds were framed by the word of God, so that things "which are seen were not made of things which do appear." *That* is the Divine message to the listening ear : the revelation of a Creator in opposition to Science falsely so called with all that flows therefrom. The hope of holding fast the letter of Scripture as inspired, must be let go ; and in this important matter we can but reflect the views of the *Indian Observer*. A simple and courageous determination to welcome the truth as it discloses itself, is what Christian men as a body are sadly deficient in. We *fear* to let go the ancient landmarks lest we should land we know not where : and so we cannot recognize honestly that the letter of the Scripture is fallible, lest our faith therein should not survive the shock. We sympathize with minds in this position, but it is untenable, and the next generation will we believe, be more happy than our own.

The distinctively religious character of the *Friend of India* will, we trust, be a sufficient apology for this long statement and the existence of some public curiosity as to how we purposed blending together two journals apparently so opposed to each other on this vital subject. The new journal will not be a religious paper in any sense, but it will have a strong sympathy with the missionary body as the truest friends of the people. We shall represent no one section of the Church, but extend freely our sympathies to all, and seek to avoid widening the breaches that unhappily exist therein. Earnest and single-minded workers for the good of the people, whether we quite agree with their methods or not, may count upon the full sympathy of the new *Friend of India*. We need make no profession as to our attitude towards the people themselves ; they will gather it sufficiently from what we have now written.

NOTICE.

THE Editor hopes that he will soon find himself surrounded by a staff that will reduce his own part in the conduct of the journal very largely to that of "editing" it, in the proper sense of the word. It was one of the constant errors of Serampore, that the attempt was made to make the paper the reflection of a single mind only. The powers of the man must be rare indeed who can hope to succeed in such an enterprise ; and we certainly do not contemplate it ourselves. A regular honorarium will be paid to *all* contributors, but we are anxious rather to secure the co-operation of a small staff, who will write steadily for the journal. Remittances should be addressed to Messrs. Nicholls and Co., Old Court House Street, and communications to the Editor and Manager to No. 3, Chowringhee.

BHAMO AND BEYOND.

THE concurrence of two such events as the murder of Lieutenant Holcombe among the Nagas and the murder of Mr. Margary on the Kakhyen hills, is certainly a most disastrous prelude to the year of grace 1875. Both present certain salient points of resemblance ; there was the same carelessness in diplomatic preliminaries, the same reckless trust in jealous and treacherous savages, and the same deplorable result. The causes of the former tragedy are neither complex nor recondite, and the insult to our suzerainty will be speedly avenged by burning a few villages ; but the motive and reasons of the Kakhyen catastrophe are by no means so transparent, and it would be difficult to exaggerate the magnitude of the consequences that may possibly result.

We have good grounds for formally accusing the King of Burma of secretly prompting and directing the late attack on our peaceful mission. At the same time we cannot but allow that the anomalous policy we have pursued, by turns servilely compliant, and arrogantly peremptory, must have irritated the descendant of Alompra beyond endurance, and may well explain any extent of sympathy or complicity with our enemies. It is sufficiently notorious that the king's consent to the treaty of 1867 was only obtained through the British envoy secretly guaranteeing the free importation of munitions of war through our territories into the king's dominions. The Indian Government, while it accepted all the advantages conferred by the treaty, refused its sanction to this private compact, and made the king for ever distrustful of British honor and generosity. His suspicions were subsequently confirmed by the establishment of a political agency at Bhamo in 1869. Major Sladen, the Resident at Mandalay, had made himself obnoxious to the king, chiefly no doubt from a fearless advocacy of this very scheme. The local Government adopted the ingenious plan of removing the projector, and then straightway carrying out the project. To understand, however, the exact position of affairs, it will be necessary to revert to the year 1868, the year following the treaty, of General Fytche's administration.

On the 13th of January, Major Sladen started with his expedition from Mandalay, to explore the trade-routes between China and Burmah. He reached Bhamo on the 21st, and from this point was only about 220 miles distant from Talifoo, his destination. Here, however, his party were detained on various frivolous pretexts till the 26th of February, and it was here that he began to realize what the king's promises of assistance were actually worth. On the 2nd of March they reached Ponlyne, 30 miles distant from Bhamo : on the 6th, Ponsee ten miles beyond. Here they were compelled to stop till the 11th of May, or more than two months, exposed to every species of insult and extortion, and it was only through the intervention of the Panthay Governor at Momien, who sent envoys to escort them onward, that they were able to continue their march. With this assistance the journey was easy ; they reached Santafu on the 14th, Myncla on the 16th, where they stopped six days for further news : Nantin on the 24th, and finally Momien on the 27th. Here Major Sladen and his companions stayed as guests of the Governor till the 13th of July, when finding there was no prospect of being able to proceed further without the certainty of encountering armed opposition from the Chinese, who had already attacked the party, they returned leisurely by a different route, and arrived at Bhamo on the 5th of September.

There is one point which Major Sladen makes clear throughout his narrative, viz. that the greater part, if not the whole, of the difficulties and delays he experienced were owing to the covert opposition of the monarch at Ava. Both the Ponsee and Ponlyne Tgaubwas were acknowledged feudatories of Mandalay, and a Burman escort in two days would have carried the party safely to Manwyne, or even far as Nantin, as their most formidable opponent, the Chinese guerilla, Lees-hee-ta-hee, was himself a voluntary vassal of the king. This escort was, however, refused, and every impediment thrown in the way of the advance of the expedition. The actual influence of the Avan Government was shown by the journey of Mr. Gordon to Myncla. He was sent to take Capt. William's place as engineer

while the party were residing at Momien. The king having nothing further to hope or fear, gave genuine orders that he should be assisted, and he was enabled to traverse the whole distance up to Myncla, where he met the returning mission, without the least impediment or the faintest shadow of opposition.

It was manifest to Major Sladen on his arrival at Mandalay that, without real aid from the king, any English attempt at exploration was doomed before hand to failure. This, aid for various reasons, he knew it was useless to expect, and he accordingly proposed the immediate establishment of a British agency at Bhamo, for the avowed purpose of "counterbalancing and counteracting the sinister influences" exerted against us by the Court at Ava. Despite General Fytche's strenuous co-operation, the Government of India were somewhat reluctant to consent, and especially dwelt on the difficulty of obtaining "a person versed in the language and customs of the country, and at the same time possessed of a certain amount of ability and of much tact and powers of conciliation." It alluded also to the danger he would be exposed to, in the event of any public agitation, and solemnly called on the Chief Commissioner to pause before insisting on the scheme. However, both the danger and difficulty of selection were made light of, and Captain Strover, the First Assistant Political Agent proceeded to Bhamo at the end of November, 1869. It is on the events of these three years, viz. the Treaty of 1867, the expedition of 1868, and the establishment of Captain Strover in 1869 that the late Chief Commissioner would probably choose to stake his political reputation. There can be no doubt that the king regarded each as both an affront and a defeat, and resented them with all the force of vindictive rancour that a petty eastern despot is capable of. It remains for us to determine their ultimate international worth. We have already explained how the king's adhesion was gained to the treaty. Its provisions are now systematically disregarded by both contracting parties, and its value is probably equivalent to the amount of stationery and sealing wax expended on the original compact. It is curious to notice that both the latter proposals were at first peremptorily rejected by the higher authorities. In a letter dated the 18th of July, 1867, Sir William Muir, the Foreign Secretary, wrote that "it did not suit the convenience of the Government of India to furnish a second party of explorers (a direct route from Rangoon to the Chinese frontier being already under inquiry), and moreover that His Excellency in Council could hardly conceive any step which, under present circumstances, could be more imprudent than for British merchants to settle in Bhamo, or a British official to be stationed there for any purpose." How these judicious scruples were overcome, it would be tedious to explain. General Fytche dwelt prominently on the prospect of our being forestalled by the French, who had despatched a survey party from Saigon; and further represented that the moment was most opportune for the undertaking as the Panthay independence was finally established. The requisite sanction being obtained, there were two courses open to the Local Government; the first to confine their exploration to the routes which lay under the direct control of the Shan and Kakhyen States, all more or less tributaries to Ava, and avoid all communication with the revolted Mahomedans; the second to co-operate heartily with the latter, lending them in return the full force of British influence and assistance. At first General Fytche seemed inclined to adopt the former alternative, and restrict the limits of the expedition to the Shan town of Sanda or Santifoo. Finally, however, he instructed Major Sladen to proceed, if possible, to Talifoo, the very heart of the Panthay insurrection. This, as we have seen, he failed to achieve, having been compelled to return from Momein, a city 90 miles short of the gaol indicated. The utter extermination of the Panthays five years later shows there was no ground for the Chief Commissioner's assertion as to the final organisation of the Mussulman power. The obvious consequence is that the occasion was most unfavourable for English enterprise. We were thrusting ourselves into a swarm of wasps at a time when our motives were sure to be misinterpreted, where we had no power to retaliate, and whence we were sure to emerge with more or less discredit. All we effected by our endeavours was to provoke Chinese hostility and suspicion by our intercourse with an insurgent force, and pave the way for the disastrous results that have followed our second attempt in this direction. Nor can the agency at Bhamo be pronounced to have attained a greater share of success. The whole arrangement is one unprecedented in Indian annals. The occupier of the appointment is nothing more nor less than an accredited spy, a spy moreover without influence, without authority, nearly entirely isolated from European intercourse, and feeling himself an object of hatred and suspicion to all around. The climate is miserable, the country "is one low-lying alluvium," and to crown all, the intense consciousness of the folly and futility of his position which recent events have so amply demonstrated, must render the Assistant Political Agent at Bhamo about the least enviable officer throughout our Indian dominions.

SIR G. COUPER ON *ESPRIT DE CORPS*.

We publish in another column a letter recently circulated by Mr. Sparks, the Secretary to the Chief Commissioner of Oudh, to all officers in the Oudh Commission. The document bears date the 8th March, and was therefore written after Sir George Couper's recent visit to Calcutta and interview with Lord Northbrook, and immediately before he was succeeded by the Honorable John Inglis. The circular has been already published in the *Pioneer*, but our contemporary in criticising it at first fell into the error of supposing Mr. Inglis instead of Sir G. Couper to be the author. We are surprised that internal evidence as well as the date, did not suggest the authorship. The circular gives rise to reflections of various kinds. In the first place, we think it is not correct to state that there does exist any general impression outside Oudh that discussions and discord are rife among officers of the Oudh Commission, nor is it correct to infer that such an impression, if it did exist, was due to the criticisms of the press on the Oudh Administration. No doubt much ill-will has been felt, and has manifested itself in various ways in connexion with the events which occurred in Oudh last year and which brought the names of a few Oudh officials prominently before the public. Official opinion on the subject both of the libel suits and of the famine policy of the Oudh Government, was divided into two hostile camps. But this state of things must be considered to have been purely exceptional and temporary. Setting aside these matters, there is no reason to suppose that there has been discord among the officers of the Oudh Commission; nor are we aware that the assertion has ever been made by our brethren of the press. It certainly has not been made by ourselves. We have no doubt that the officers of the Oudh Commission, to quote Sir G. Couper's words, "are as a rule well-affected towards each other." The statement, however, immediately preceding this one, in which Sir G. Couper maintains that his officers "generally are loyal and "well-disposed towards the administration, under which they "are serving," can we think only be admitted to be true subject to some qualifications. We should be sorry to make remarks calculated to give pain, but we are obliged to state our opinion that in printing and circulating officially a statement to this effect, Sir G. Couper has challenged criticism of his administration on its weakest side. Sir G. Couper, when Judicial Commissioner, well maintained the dignity of his high office, exercised careful supervision over the subordinate Courts, and earned the reputation of being a judge clear-headed, impartial, and endowed with legal acumen. As a Chief Commissioner he has had many difficulties to contend with. Having been throughout all his service either in the Secretariat or on the Judicial Bench, he had had no experience of district work; and the successful administrator of an Indian province is generally a man who in his youth successfully administered a district. Great and difficult problems arose for his solution, and his warmest admirers can hardly maintain that they have been successfully solved. Sir G. Couper brought both zeal and ability to the task of dealing with these questions, but he lacked experience, and unfortunate idiosyncrasies of manner and temper and judgment have prevented him from availing

himself, as he might have done, of the ability and experience of his subordinates. Three Secretaries, Mr. Harington, Colonel Forlong and Mr. Redfern, successively retired from appointments that necessitated personal intercourse with Sir G. Couper. A fourth officer, Mr. McMinn, placed under orders of the Secretariat for the purpose of compiling the gazetteer, was only prevented from resigning his appointment, by Dr. Hunter being specially deputed to Lucknow to visit the Chief Commissioner and throw oil on the troubled waters. In two instances, those of Lieutenant-Colonel Ouseley and Major Hewett, the Government of India, have come to a conclusion diametrically opposed to that of Sir G. Couper as to the qualifications of his subordinates. He questioned the competency of these two officers to hold charge of districts, and even to remain in civil employ, with the only result that after their cases had been referred to the Government of India they were appointed to officiate as Deputy Commissioners. In a third case, Mr. Gibson, an officer of whom all Sir G. Couper's predecessors had entertained the very highest opinion, was subjected to supersession for two years, and not allowed to have charge of a district; and we presume it was only from a doubt of how far any continuance of the punishment would meet with the approval of the Government of India, that Sir G. Couper recently restored Mr. Gibson to a Deputy Commissionership. Surgeon Heffernan recently incurred the displeasure and censure of the Chief Commissioner, with the result that after the case had been well considered by the Government of India, the censure was pronounced to be undeserved. To a similar reason may be ascribed the speedy restoration of Mr. McMinn to the place in the Commission from which he had been just before deposed. In the case of Mr. Williams, Sir G. Couper actually took the extraordinary step of recommending the trial by a public commission of an officer who had incurred his displeasure, but the Government of India acquitted that officer of the charges brought against him, without even calling upon him for a defence of his conduct, and protected him from further prosecution by transferring him from the province. Another officer, Mr. A. Walker, C.S., deservedly incurred censure by an act of insubordination, but the extreme severity of the punishment inflicted, degradation of ten steps in the commission, equivalent to the loss of four years' service, merely resulted in eliciting undeserved sympathy for the officer so punished. Other instances of a similar but less glaring kind, might be mentioned, but their enumeration would be invidious. The various squabbles between Sir G. Couper and his subordinates, have caused an amount of friction in the administration of the affairs of the province which has become as notorious as it has been injurious to the public interests. Under these circumstances, the open assertion by Sir G. Couper of the loyalty towards himself and of the *esprit de corps* of officers serving under him is calculated to excite surprise and criticism, even perhaps to provoke the reply that if such feelings still exist, they have managed to maintain life in spite of the fact that Sir G. Couper's administration has done much to quench them. *Qui s'excuse s'accuse.* General Barrow and previous Chief Commissioners of Oudh, never found it necessary to assert officially and publicly the existence among their subordinates of a spirit of loyalty towards themselves. We are sure that the public will agree with us that the recent criticisms of the press on Sir G. Couper's administration, can have done nothing to affect the loyalty of the Oudh officers or their kindly feelings toward each other, and that any want of such loyalty that may exist is due solely to the faults of that administration.

But we do not so much object to Sir G. Couper's defence of himself and assertion of the *esprit de corps* of Oudh officers, as we do to the appeal to them which he founds upon his asserted confidence in the existence of such feelings. Under the guise of a request to loyal officers not to reply to attacks on themselves or his administration in the press, the letter is really an expression of the writer's abhorrence for all communications whatever between officials and the press. We could hardly have expected to receive such singularly opportune confirmation of the views which we but recently expressed, when we asserted that the Oudh system of Government tended to produce an intellectual servility, amounting to the stifling of independent opinion, and a morbid vanity and thin-skinned sensitiveness that shrinks from all honest criticism. *Esprit de corps*, the animating spirit of a corporate body, which prompts it to rank its own interests and etiquette above those of the public at large, is after all only an honourable sort of vanity, lacking disinterestedness and large-mindedness. *Esprit de corps* has probably done more harm in the world than good. In the army, it tends to make the interests of a regiment superior to those of an army, and those of an army to those of a nation. In the Bar for the some reason it has perpetuated abuses opposed to the public weal. While it does some good, by tending to maintain a high standard of honour and etiquette, it also does more harm by making the corporate body in which it exists, impervious to all public considerations and all outside criticism. Indian history will furnish repeated instances in which the *esprit de corps* of the Civil Service has lent its influence to the support of jobbery and nepotism. We trust, however, that most officers of the Indian services have a higher standard of right and wrong by which to judge of their own actions, than this somewhat petty and vain sentiment; we trust that they always remember that they are ultimately the servants of the Queen and the people of England, just as much as their own immediate superiors in the province in which they may happen to be serving; and that their first and highest duty is to do the best they can, undeterred by hope of favour or fear of censure, for the interests of the people whom they have been appointed to govern, and by the sweat of whose brow their salaries are paid. We regret that the Governor of any Indian province should have so far forgotten his own dignity and the duty of his subordinates, as to endeavour to deter them by an appeal to the petty interests and etiquettes of a common service, from the temperate exposure of abuses, or the fair discussion of great political questions.

LOUISE LATEAU.

DURING the last five years, remarkable statements have been made from time to time in Roman Catholic newspapers and books, respecting a young woman named Louise Lateau, living at Bois d'Haine, a village about twenty-five miles to the south of Brussels. It has been frequently asserted that since the early part of the year 1868, she has borne on her hands and feet and side the stigmas of our Lord's Passion; that from these stigmas blood flows freely on the Friday of every successive week, while at the same time around her head there is developed a coronet of bleeding points representing the crown of thorns. It has been furthermore said that every Friday, for several hours together, she is wrapt in an ecstacy, during which she becomes completely insensible to all material objects, and wholly absorbed in the contemplation of the Divine Passion, the various scenes of which are vividly present to her mind, as in a vision. It is well-known that similar assertions are recorded respecting many Roman Catholic devotees in past times, the most noteworthy instance being that of St. Francis of Assisi, the founder of the Order of Franciscans. Admirers of St. Francis not within the pale of the Roman Catholic Church—and there are many—have scarcely known how to receive the story of his stigmatisation; and have been inclined to suggest that the strange marks were the result of wounds inflicted by the saint himself, that so he might literally in the words of St. Paul "bear in his body the marks of the Lord Jesus." The attention of scientific men has, however, been called to the case of Louise Lateau; and two in particular have entered into the most careful enquiries. Professor Lefebre, of the University of Louvain, where he holds the chair of pathology and therapeutics, has watched and examined the case most minutely. He has given the result of his observations to the world in a book, which is spoken of as containing statements of a very astonishing character. Professor Rohling of the University of Münster, has also issued a pamphlet, in which he too confesses his inability to do other than admit the reality of the appearances he has examined into. The recent publication of a work by Dr. Carpenter, on the "Principles of Mental Physiology" affords abundant evidence that its learned writer, though he has not visited the Ecstatica of Bois d'Haine, has given to her alleged stigmatisation, and to all similar instances recorded in the annals of devoteeism, the most thoughtful enquiry. The result of his investigation is to establish the reality of such stigmatisations as physical phenomena, but to deprive them

of all supernatural character. He considers them to be the result of "unconscio is cerebration." The mind, he asserts, can think unconsciously. It can recollect unconsciously. It can compare and produce results, without our taking conscious note of the process. By means of this principle of unconscious cerebration, he explains the phenomena of somnambulism, dreaming, insanity, delirium, and those mesmeric or biologised conditions in which people are made to believe and do whatever they are told, but of which they retain no recollection when they are restored to themselves again. The same principle is at work too not only in such instances as these, but incessantly, and under normal conditions. It is at work whenever a lost word or thought for which we have been vainly searching, suddenly presents itself long after we have abandoned the search as fruitless; whenever a lesson read over in the evening is found imprinted on the memory in the morning; whenever a train of thought confusedly present to us as we drop asleep, stands out in clear and orderly sequence when we awake. In all these cases Dr. Carpenter asserts the brain has evidently been at work without our knowledge, and we take no heed of its pains till it fixes our attention by offering us the desired results. He furthermore asserts that, when the Will is weak or temporarily suspended, a dominant idea may get such possession of the sensorium—the seat of consciousness—as to be actually able to produce whatever sensations it pleases. In this way he believes it is, that Ecstaticas such as Louise Lateau, by intense brooding on the Passion, have actually produced "the appearance of wounds on the hands and feet, on the forehead and side from which blood has periodically flowed." In confirmation of this view he quotes an instance of a lady who saw a heavy window sash fall on her child's hand, cutting off three of the fingers, and was so affected by it that the three corresponding fingers on her own hand were discovered by the surgeon who was summoned, to be swollen and inflamed and needing surgical treatment. Dr. Carpenter's book appears very opportunely, at a time when the case of Louise Lateau is being brought prominently forward, and the supernatural character of the stigmatisation is being alleged as confirmatory of the many supernatural claims put forth by the Roman Catholic Church.

INDIA SEEN FROM THE BOULEVARDS.

Anglo-Indians not seldom complain and that with reason, that our countrymen at home take small, if any, interest in India and its people, and their ways and bye ways, and that when, as in the case of special correspondents of newspapers, they have to describe the country and its manners and customs they make ludicrous blunders in the process. We fear it will be long ere our countrymen take the intelligent interest in these matters that we could wish to see them take, but in the meantime it may afford a melancholy consolation to note the efforts of the Intelligent Foreigner to comprehend and pourtray the ways of India, its natives and its masters; melancholy because it is afforded not by one of our nation but by an alien, not by one of us to whom is confided the glorious mission of, &c., &c., &c., but by a Frenchman, in whom such a deep interest as all of us ought to take in the welfare of this great and magnificent dependency, is not to be looked for.

Let us mention then, without further preface, that that ingenious writer M. Alfred Assolant is now writing a *feuilléton* in the *Siècle*, one of the characters in which has resided in India, and favours us with a brief narrative of his adventures in that country. We need hardly say that M. Assolant has made himself master of that portion of his subject as well as of all the rest, and that he writes with the accuracy and insight which are so well-known a characteristic of the French *litterateur* when dealing with foreign topics. As our readers would no doubt like to know as much as possible of the travelled and observant Frenchman, whom M. Assolant causes to relate his adventures for our amusement and instruction, we will begin by the description of him given by one of the other characters in the *feuilléton* which, we may remark in passing, is called "Léa, Histoire Joyeuse," and of which its author remarks in a head note at starting, "Dans l'histoire qu' on va lire, on trouvera de quoi lire et de quoi pleurer." Here is our adventurer then—

"Le général Toinet Buchamor, ancièn colonel des dragons de la grade impériale de Napoléon I., ancien conspirateur sous Louis XVIII, ancien pacha de Mehemet Ali, ancien gouverneur de la province de Kouen Lun, frontière du desert de Cobi, ancien pair de France sous Louis Philippe, presentement senateur du second Empire, et millionaire."

All this, we see, is besides his Indian experience, so that the reader may count upon hearing the results of the observations of India taken by a person who at all events had enjoyed ample opportunities of being a skilled observer. This cosmopolitan old gentleman (he made his first campaign in 1801 and tells his story in 1855) lived in a house of somewhat original appearance, a sort of outward and visible sign of his past wandering life.

"C'était une construction bizarre dans le goût oriental, Gothique, Indien, Byzantin, Tartare, Grec, Néo-Grec, Italien—de l'ordre composite; enfin, le proprietaire ayant beaucoup voyagé, avait voulu retrouver là tout ce qu'il avait rencontré de beau et de commode dans ses voyages. On y voyait des tourelles, des minarets, des colonnes, des dômes, des fenêtres en ogives, des jéts d'eau, des méurtrières des clochetons, des mâchicoulis et tout ce que peut rêvér un architecte en delire a qui un millionaire a mis la bride sur le cou."

Catholic in taste in the matter of architecture, the owner of this remarkable mansion was equally so in literature, for in the library of his desirable residence,

"brillaient en lettres d'or les noms les plus célèbres de la littérature Française, Anglaise, Italienne, Espagnole, Latine, Grecque, Persane, et surtout Indienne."

He does not seem to have favoured the writers of Germany Perhaps as "Indian" literature is rather wide, he found that it took up too much of his time to allow him to devote his attention to that of the Fatherland. Perhaps, again, the fact that the recent Franco-German War took place before M.Assolant described the general's library had something to do with the omission. However, let us get on and hear him tell his story. Having charged the English infantry nine times at Waterloo, he retires after the unfortunate issue of that battle into the service of Mehemet Ali. There he gets on swimmingly for a while at Cairo, but at last is unlucky enough to have a dispute with the Pasha's *dufterdar*. "C'est le caissier," we are told "du Pacha on connue on dit en Europe, le ministre des finances." The Pasha being absent from Cairo, this official gives himself airs and is dilatory in paying the Frenchman his salary, whereupon our friend, knocking down a secretary who tries to bar his way, forces his way into the house of the impolite *dufterdar*,

"qui justement fumait sa pipe et regardait une jolie fille occupée à bourrer sa pipe, pendant qu'une autre fille, pas très jolie mais grasse comme une caille en automne, chantait pour le charmer des airs persans à porter le diable en terre."

At sight of the excited Frenchman, the women scream and strike attitudes, and the old gentleman so unexpectedly interrupted in his soothing and agreeable occupation fires a pistol at Buchamor, but missing him and killing a retainer behind him, leaves him master of the situation in the most probable manner in the world. Of course he also sees the necessity of paying him his due and lets him depart in peace. However he is a treacherous old person and Buchamor is shot at like an Irish landlord while riding out a few days afterwards, and is then warned by a friend that the *dufterdar* has sent a "confidential report" against him to the Pasha, in consequence of which he will be arrested if he does not make himself scarce. He does make himself scarce therefore, and proceeds to Bombay *viâ* Syria and Suez. and thence by an English vessel down the Red Sea. On board this vessel he meets with "un brave et bon garcon, Sir John Hawkins, Anglais colonel du 3rd regiment de cipayes." They find that they had met in the Peninsula and at Waterloo, and they begin comparing notes. Hawkins in reply to Buchamor's enquiry whether all is well with him now, replies in English "Well, very well, all right." They proceed to drink for old friendship's or rather old enmity's sake, and on Buchamor's proposing "the ladies"

"Hawkins poussa un profond soupir, et me dit: 'Colonel Buchamor, je boirai volontiers, pour vous faire plaisir, à la santé de toutes les dames de ce vaste univers, mais non à celle de lady Arabella Cockerill, précédemment Miss Arabella Fox, de Fox House, dans le Comté de Somerset."

A delicately put query from Buchamor elicits the information that the young lady described with such legal exactness had jilted Hawkins. They had clearly at one time loved each other fondly, if we may judge from Hawkins' touching reminiscence of those happy days, the life-like glimpse he gives us of a truly English courtship.

Elle me disait tous les soirs dans le parc du feu son père: *Hawkins my dear love*, en regardant coucher le soleil, et montrait le blanc d'opale de ses yeux bleus. Moi je répondais comme c'est l'usage, *Arabella, sweet creature!*"

But these delicious if slightly monotonous interviews were not to last for ever. One day the lovers had a tiff, Hawkins went off to the wars, and when he returned he found his Arabella "mariée avec Sir George Cockerill," a rich person of very mature age. Arrived at Bombay, Hawkins parts with our adventurer, with the injunction "si jamais vous avez besoin de quelque chose, disposez de moi, Sir John Hawkins, colonel du 3 regiment des cipayee, en garnison à Bombay." Buchamor goes to King George's Hotel, where the company at dinner are all in evening dress, and with his Egyptian uniform and fez,

" j'avais l'air d'un gentleman s'il on veut, mais d'un gentleman exotique et excentrique. Aussi personne ne me dit un mot, pas même ma plus proche voisine, la femme du Major Curraghan, à qui j'offris vainement du sel, du poivre, du gigot, du paté, de la moutarde, du curry, du claret et dú sherry. Elle accepta tout sans m'accorder un regard."

From this instructive but painful passage we may learn two things,—first, that in those days our countrymen appear not to have kept *khidmutgars* to hand the various delicacies mentioned, not even the *curry* of their native land, and secondly that the manners of their ladies as exemplified by the fair Mrs. Curraghan, seem to have been susceptible of improvement. No doubt they would have been the better for a few more Frenchmen to teach them behaviour. Anyhow let us be thankful that we have improved since then, at least in Calcutta. At dinner the gallant Curraghan and another warrior of the highly professional name of "le Capitaine Stronghold" start the subject of " l'histoire tragique de la bégune de Tchanadar." Presently we have an explanation of th mysterious term *bégune*, which at first sight looks like the name of those useful Indian vegetables known to the honest Anglo-Indian not too nice about his pronunciation as " banguns." However, it appears that " une begune en Indoustain ca vént dire une princesse.' Colonel Curraghan goes on to relate that " la bégune s'appelle Satarah , c'est à dire la *belle des belles*." She is the ruler of the State of Tchanadar at some considerable distance from Bombay, and her " premier ministre un drôle homme Yarkand" had had her husband murdered and now proposed to marry her. This *drôle* had won over the Tchanadar army, and in fine the *bégune* having escaped somehow or other from her facetious suitor—how, we are not informed—" est arrivée ce matin à Bombay, suppliante, à la tête de cinq ou six cents cavaliers armés de fusils a mèche, et demande justice au Gouverneur, Sir John Crùshpather." This singularly named statesman was naturally " très embarrassé." On the one side there was the pretty *bégune*, but on the other the order of the Governor-General to be on his guard against a sudden rising of the natives in Bengal, and to keep aloof from Hindoo quarrels. Moreover, the astute Yarkand had promised to double the Tchanadar tribute to the Hon'ble East India Company.

After dinner Buchamor left to himself, goes out for a walk in the "*Zoological Garden*, qui est le jardin des plantes de Bombay," and then begins to meditate on his rather uncertain prospects. All of a sudden, he sees coming along " un cortège magnifique" which consisted of

"une trentaine de braves gens à mine de coquins, armés de sabres et de fusils à mèche, et derrière eux, un éléphant de quatorze pieds de haut, et de grosseur proportionnee, sur le dos duquel, dans une litiere était assise, les jambes croisées, la plus belle fille de l'Orient. . . . j'en fus d'abord si ebloui que je demeurai quelque secondes immobile á la contempler : ce qu'elle souffrit d'ailleurs avec beaucoup de bonne grace, car les femmes d'Orient ne sont pas prudes avec les étrangers, excepté bien entendu en présence de leurs maris, et celle ci n'avait pas besoin de faire de façons, etant veuve et princesse."

Here we recognise at once the fidelity to facts of the gifted novelist. There is one curious circumstance, however, which perhaps admits of explanation, and the explanation of which we should like to see. This *bégune* had previously been described by the gallant Buchamor as " une princesse de dix-sept ans dont les *yeux bleus* auraient induit les anges en tentation." Are not blue eyes a rather strange feature in a native belle? We ask merely for information.

Well, this interesting pair continued gazing at each other, the susceptible Frenchman not knowing what to say, when the difficulty of opening a conversation was removed in a most unexpected manner. The *bégune*'s elephant was standing in front of a tiger's cage. The tiger thought proper to spring to the front of the cage and growl. The elephant promptly resented this uncourteous behaviour by pulling out one of the bars of the cage with his trunk, whereupon out tripped the tiger, and the *trentaine de braves gens à mine de coquins* were all out of sight in a twinkling, leaving their matchlocks behind them. The widow of course " invoquait Brahma et Wichnou," and the tiger made preparations for an attack on the elephant from the rear. In these circumstances what more natural than for Buchamor to snatch up one of the guns and deal the tiger with the butt end of it, as we all should have done, a single blow, which stretched him on his back on the ground, quite convenient for the elephant to finish him off by trampling him under foot, and ripping him up with his tusks? The elephant having satisfactorily accomplished this part of the performance, Satarah of course signs to Buchamor to get up beside her, which he does. The courtship which followed was short and simple. She didn't know French, and he did not know Hindustanee, but

" elle tourna vers moi ses beaux yeux pleins d'ombre et de lumiére, et ne me dit qu'un mot : *sing*, qui signifie lion. Puis elle me fit signe de m'asseoir, les jambes *croisées*, en face d'elle et me donna sa main à baiser."

Strange as it may appear, this brief ceremony was sufficient to marry them, for

"la verite c'est qu'elle etait de la religion de Brahma plus aucienne la plus poétique et peut être la plus belle et la plus humaine du monde entier, et que dans les religions primitives, la parole de la femme suffit à l'homme, et la parole de l'homme à la femme. Satarah m'avait appelé'son lion' c'etait une declaration. J'avais repondu en lui baisant la main ; c'en etait une autre. Qu'est ce qui peut empêcher deux êtres humains qui sont libres de tout lieu et qui s'aiment de s'épouser tout de suite et pour l' éternité?"

Charming sentiment! And no doubt at that time and in that part of India there were no such things as suttees, and Hindoo widows used to go about in this delightful manner ready to marry the first tiger-felling Frenchman they could pick up. What a pity that such a sweet simplicity of manners should have disappeared with the pagoda tree!

After this, the reader will be prepared to hear that Buchamor expelled that *drôle* Yarkand from Tchanadar with the greatest ease, becoming himself " prince souverain de Tchanadar (en payant bien entendu aux Auglaise tribut accontumé)" This must have been a welcome relief to the perplexed Crushpather, especially as no objections seem to have been made by Government to a Frenchman's ruling a native State. Buchamor and his wife lived for three years like a pair of lovers, when one day seeing Buchamor take their child out of the arms of her ayah, " une jolie fille nommee Vita," " la Begum," as she is now called, became furiously jealous, made a scene, and insisted that he should stab either her or the ayah. There is a tremendous row of course, and at last Buchamor thinks he has succeeded in pacifying the Begum, so far as to induce her to commute Vita's sentence to banishment. Next morning, however, going out for a ride, he sees her head stuck on a pike at the palace gate. On this he insists on leaving the place, and the Begum finding she cannot persuade him to stay, stabs herself before him. Hereupon " mon ami Hawkins " turns up

"Charge par le gouverneur de Bombay de s'assurer que la mort de la Begum ne porterait aucune atteinte aux traites, et que le successeur payerait le tribut accoutumé."

Hawkins advises him to take his departure from the East, as he is pretty sure to come to grief if he stays there.

"Je suivis son conseil ; je revins en France avec une vingtaine de millions qne la pauvre chére Begum laissait en heritage a sa fille, outre des diamants, auprés desquels ceux de la couronne de France pâliraient. Au cap de Bonne-Esperance ma pauvre petite fille, trop jeune encore pour supporter la traversée mournt dans mes bras Les enfants de race Européenne et Indienne mêlées vivènt d'ailleurs rarement."

With this last piece of true and useful information, we may take our leave of M. Assolant, grateful that he has devoted his genius to giving so accurate and striking a sketch of life in India in the not very distant past, while we regret that the more prosaic conditions under which we now live seldom supply opportunities of advancement such as that taken advantage of by the brave Buchamor.

THE LAND REVENUE LAW OF THE N.-W. P.

With notes by C. H. T. Crosthwaite, R. J. Crosthwaite, B. A., *and D. M. Smeaton,* M. A., *members of the Bengal Civil Service.*

THIS annotated edition of the North-Western Provinces' Revenue Act of 1873, edited by Messrs. Crosthwaite and Smeaton, which has just appeared, will be found of great assistance to revenue officers. The notes mainly consist of extracts from Mr. Thomason's Directions to Collectors and Settlement Officers, modified so as to accord with the present state of things. The recent circulars of the Board of Revenue have also been collected, and printed in a convenient form. A short time ago, we commented on the Board's rules respecting the payment of instalments of rent, and showed their thoroughly impractical character. We observe that the editors of the book before us concur in regarding those rules as absurd, and further point out that they are illegal. Their note is as follows —" The local Government has power under Section 211, Act XVIII " of 1873 (Rent Act) to make rules as to the dates on which instal- " ments of rent shall be paid, but not as to the amounts or number of " such instalments. Under *this Act*, no power whatever is given to " the Government or any one else to regulate the instalments of rent, " or the dates of payment of such instalments. These rules, therefore, " have no legal force. If they had, such interference as they contem- " plate with the existing arrangements in the case of every individual " tenant could not be carried out." Mr. C. Crosthwaite is now acting as Secretary to the Board of Revenue and sees clearly how unworkable are his predecessor's rules, though theoretically perfect, and we hope that during his tenure of office he may not be induced to sacrifice common sense to admiration for symmetry of form. The note on the provisions relating to sales of estates for arrears

of land revenue, contains some interesting remarks. It is pointed out that though the process is seldom ostensibly used, numerous private sales are indirectly forced on proprietors by fear of it, and that few Gazettes appear without an advertisement of the sale of the rights and interests of some pattidar at the suit of the lambardar, nine-tenths of which sales are virtually for arrears. Messrs. Crosthwaite and Smeaton urge with much force that the sooner the power of selling for arrears is taken from the revenue authorities, the better. They say that "the advocates for its retention "urge as "their chief argument that it is never used." "If so, why retain it?" "The truth, however, is that indirectly it is much used. More than "anything else it prevents a case of over-assessment from coming to "light before it is too late to prevent the ruin of the proprietors; "and such cases must occur in every district, settlement officers "being fallible like other mortals, and more than other mortals "the object of every kind of deception and fraud that can be "practised on them."

The argument thus stated by officers of so much experience in settlement work is of great weight. The suppression of the sale process would cause no serious loss or inconvenience, and all parties are agreed that except in very rare cases, the process is to be avoided.

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

LONDON, MARCH 26TH, 1875.

PARLIAMENT has gone out of town to do penance in the country. In lieu of a Carnival Ball and the *Galop Infernal*, our legislative representatives had a warm discussion on the state of Ireland, enlivened by a scene in which the actors were Major O'Gorman and Mr. Disraeli. The subject under discussion was the peace preservation bill, intended to relax the most stringent clauses in the late coercive measures which were nearly equivalen to declaring some portions of that unhappy island in a state of siege. The Home Rulers, of course, were opposed to any kind of exceptional legislation, and insisted that if it were judged necessary to pass such a bill for Ireland, it should be extended also to England and Scotland. It was easy enough to show that acts of violence are disgracefully frequent in these two countries, but the real point at issue was carefully kept out of sight. Atrocities in England and Scotland are the acts of individuals usually instigated by a sudden impulse, and are certainly not approved of by any respectable members of the working classes. In Ireland, however, it is very different. There, "an agrarian outrage" may be the deed of only one person, but it is connived at and protected by his neighbours, who make common cause with the cowardly ruffian and think all the better of him for his bloodthirstiness. When such a clever well-educated man as Mr. Sullivan can have the audacity to talk of "the shackles and chains" imposed upon "a highly susceptible race," by an English majority, and to denounce a lenient measure as of an "atrocious and desperate character which took away the liberties of Ireland," it is not surprising that an ignorant and fanatical peasantry should imagine themselves oppressed, contemned, and humiliated. As to Major O'Gorman's rudeness, his friends plead for him the equivocal excuse that he had dined rather well than wisely, and that he is essentially a humorist; as if the House of Commons were the place for indulgence in "humours" especially during a grave and earnest debate. Mr. Disraeli had just commenced with the remark—"This is a measure of necessity, framed in a spirit of conciliation:" when the Major shouted in a stentorian tone "No.!" The Prime Minister good naturedly observed—"If that is to be taken as a reply, the honorable gentleman will not be entitled, according to the rules of this House, to take any further part in this debate." Thereupon much hilarity, which was redoubled when the gigantic Major sprang to his feet and with outstretched arms, his hat in hand, shouted aloud—"Why, I have not spoken a wor-r-r-d." He then left his seat below the gangway, and bowing reverentially to the Speaker, walked up the house to the lower end of the Opposition Bench, when he turned aside and took his seat on a back bench exactly facing Mr. Disraeli. The House once more breathed freely, for many feared that the gallant member was about to commit himself in an egregious and unpardonable manner. He contented himself, however, with ever and anon bellowing out "Hear! Hear?" and for a little while succeeded in disconcerting even the imperturbable "Caucasian." Rapidly recovering his presence of mind, Mr. Disraeli went on without heeding these unseemly interruptions, until the Major at one time shouted "Oh!" as though he questioned the Speaker's veracity. Then he said with mingled sternness and dignity—"It is not likely that I should make a statement unless I believed it to be true"—whereupon again up sprang the Major and making an elaborate bow, protested in the richest of brogues that he was sure he would not. After that Mr. Disraeli sailed along with a fair breeze, and pleasantly alluded to the nonsense that had been written about the speech he made at the Guildhall—to which Mr. Butt had casually referred—wherein he had asserted that the working classes of England inherit popular and personal privileges which other nations do not enjoy. That was still his opinion, but a most stupid, some think a malignant, interpretation was made of those words, and a story went about that in consequence of using those words a representation was made to Her Majesty's Government, and that "I made an apology to a Minister who believed that he was referred to. There is not the slightest truth of any kind in the statement that was made that any allusion or remonstrance direct or indirect, public or private, by male or female (laughter), was ever made to me or to any member of Her Majesty's Government upon that subject. (Great cheers.) When that erroneous charge was made that I had alluded to the conduct of Prince Bismarck, of whom I was thinking then as little as I am now thinking of Rory O'More (laughter), I thought it idle to answer the remarks in the newspapers, for I never envy them their sport with public men; but when after a few days had passed, I found that one or two journals were gravely announcing that the peace of Europe was endangered by such remarks, I thought the matter had become ridiculously grave, and I asked a friend of mine to put in a paragraph in the papers, for which I have never been even thanked either by Prince Bismarck or by anybody else. (Laughter.)" A little later in his speech Mr. Disraeli ridiculed in his happiest manner the wilfully incredulous individuals who affect to question the existence of Ribbonism in Ireland. "There was once," he said, "a member of this House, one of its greatest ornaments, who sat opposite this box, or an identical one and, indeed, occupied the place which I now unworthily fill. That was Mr. Canning. In his time, besides the discovery of a new world, dry champagne was invented. (Laughter.) Hearing everybody talk of dry champagne, Mr. Canning had a great desire to taste it, and Charles Ellis, afterwards Lord Seaford, got up a little dinner, care being taken that there should be some dry champagne. Mr. Canning took a glass, and, after drinking and thinking for a moment, exclaimed, "The man who says he likes dry champagne will say anything." (Laughter.) Now, I do not want to enter into a controversy with any of my hon. friends opposite who doubt the existence of Ribandism; but this I will say, that the man who maintains that Ribandism does not exist, is a man who—ought to drink dry champagne. (Loud laughter and cheers.) The second reading was easily carried, after that, by a majority of 264 to 69, and the Irish news into day's papers fully justifies that conclusion.

There will be no diminution of taxation this year, though there may possibly be some re-adjustment of burdens. The absence of a deficit is all that can now be expected, and the Budget will therefore be reduced to a mere balance sheet of the year's receipts and disbursements. I fear that this result will tend to weaken the already waning popularity of Mr. Disraeli's administration. Vigorous in promises, the Conservatives have shown themselves signally weak in performance. We have now reached Good Friday and the Easter Recess, with almost nothing to show as the fruits of the present session, and with very little prospect of there being much to add to these hereafter. The obstructive clique in the Upper House is too powerful in a negative sense to be borne down by a Cabinet not at peace within itself. Stagnation is the inevitable consequence of such compromises as the Prime Minister is compelled to accept in order to keep his colleagues together, and the nation is in no humour to be forced to stand still because the Duke of Buccleuch, the Marquis of Salisbury, and Mr. Gathorne Hardy do not care to move on. An "ugly rush" may one day be looked for, when down will go all such puny barriers to progress as quickly as the Old Hyde Park railings.

Baron Reuter is nothing short of a nuisance so far as newspaper correspondents are concerned. In my last letter I mentioned the projected visit of the Prince and Princess of Wales to Bombay, the Upper Provinces and Calcutta. My information was two days in advance of the announcement in the *Times*, but long before my letter can reach you, H. R. Highness's excursion—for it has been determined that the Prince alone shall be permitted to go—will have been already placed in every possible point of view, and every conceivable moral ingeniously extracted. The prospect of such an interesting tour is said to have greatly exhilarated the Prince,

and every newspaper in the country has indulged in the platitudes such an incident would naturally suggest. The choice of a Cicerone and travelling companion is certainly unexceptionable, for very few men are as well versed as Sir Bartle Frere in the ancient legends of both Hindoos and Mahomedans. As for the wonderful advantages the Coming K.—is to derive from the truly "grand tour," we may be allowed to indulge in a certain degree of scepticism. In the case of an absolute monarch a personal knowledge of his future dominions and their varied populations would no doubt be highly serviceable, but it is less easy to see how the Chief of a Constitutional State, whose administration is conducted by a Parliament responsible only to public opinion—that is, to the electors—can either benefit or injure his Eastern possessions by any initiative he may wish to take. Those who pretend to see further into a millstone than their neighbours, have a long tale to tell as to how the Prince, fretting under the subordinate position he is compelled to hold, and chafed by his exclusion from all share in the active duties of Government, had resolved to make his importance felt by absenting himself for at least one whole year, taking with him his charming consort. This purpose is said to have been so warmly opposed by the Queen and also by the Ministry of the day that H. R. H. was recently constrained to alter his plans, and content himself with a flying visit to the Caves of Elephanta, the Kutub and Jumma Musjeed at Delhi, the Taj Mehal at Agra, the Well at Cawnpore, the historic palaces of Lucknow, the temples of Benares, and the shams of Calcutta. A pleasant trip and a happy return is what we all desire for the good-natured Prince, who, if he can only contrive to live long enough, may one day, by the Grace of God and the accident of his birth, become King of Great Britain and Ireland, and Defender of a Faith that has well nigh evaporated.

A considerable and decidedly wholesome sensation has been created by a lecture delivered by Mr. Froude on the condition of the Cape Colony and its several branches. Never before has such a clear searching light been thrown upon our relations with the native chiefs, whose savage and populous hordes hem in the Dutch and English colonists on every side but the one that is vexed by raging storms and mountain billows. Are we again to hear the plaintive cry—"The barbarians drive us to the sea—the sea drives us back upon the barbarians?" Conquest is out of the question and colonization is too slow a process to enable the scattered squatters to hold their own for any length of time against the fierce warlike tribes by whom they are surrounded, and on whose territories they are continually encroaching. What then is to be done? No English Ministry would dare to send out a sufficient military force to dispossess the savages of the lands that rightfully belong to them. The mere suggestion of such a crime would rouse the nation to a pitch of indignation that no Cabinet could affront. We are told by the Press that we have only to act with justice and moderation to win the esteem of our formidable neighbours. But how can the local Governments exercise a restraining influence over selfish, hotheaded adventurers, prowling and "prospecting" along and across the frontiers? They cannot disown them and leave them to the consequences of their evil actions, because the majority of the colonists would be sure to make common cause with these disturbers of the peace. We see how warmly they approve of the cruel wrong done to Langalibale, and judge from that how little dependence can be placed upon their sense of "justice and moderation." It is a difficult, delicate, and painful problem, but one that presses for solution. A national, aye, an imperial, benefactor will be the man who shall guide us through this tangled maze without loss of national honour and without prejudice to the national character.

Suppose we send Messrs. Moody and Sankey to the Cape. They are not successful in London, beyond exciting a momentary curiosity, and can be dispensed with at a moment's notice without prejudice to our religious and moral sentiments. Exeter Hall, indeed, continues to fill pretty well, but comparatively few go a second time to hear the American "Evangelists," whose strong point is their self-assurance. Neither the eloquence of the one nor the melody of the other rises above the average level, and in small unimpassioned assemblies the only effect they would produce would be a feeling of disgust at their vulgarity and of impatience under their common-place declamation. Mr. Moody besides is losing temper and is upbraiding the Londoners for being less excitable than the Scotch, and so remaining sluggish and apathetic no matter how loud he may raise his voice, or how often his associate may strike the harmonium. Oddly enough, a Baptist Minister, a Mr. Varley, is "reciprocating" in the United States, and is just now engaged in calling American sinners to repentance, with about the same success that attends the pious Yankees who have undertaken our conversion. It is the old story of the prophet being without honour in his own country, for it seems that Messrs. Moody and Sankey are as extensively unknown in America as Mr. Varley was in this country. Another religious, and certainly more curious phenomenon is the pilgrimage of some five score and more Baptists to Rome, in the blind hope of totally immersing the Pope and his followers. A few years since these well-intentioned creatures would have been very summarily dealt with—as it is faithful Catholics can only protest against this latest profanation of the Holy City by clambering up the Santa Scala on their knees.

The latest charge brought against Prince Bismarck is that of setting up a Pagan deity which he calls the State. To this idol, all Germans are expected to bow down with implicit reverence. His opposition to the Papacy is ascribed less to political reasons than to religious infidelity. This absurd accusation was pronounced one day last week in the German chamber of deputies by Herr von Gerlach, an octogenarian who commenced life as a Liberal and is closing it as an Ultramontane. Though an orthodox Lutheran this old gentleman, like many others with whom an almost obsolete Conservatism is the Alpha and Omega of public life, has east in his lot with the Papists and shares their hatred for the champion of religious liberty. His attack, however, was singularly inopportune, for it was made at a moment when his hearers were still thrilling under a strong emotion in favour of the Chancellor of the Empire. Herr von Sybel, the celebrated Professor of History at Bonn, had just sat down after a telling speech against papal arrogance and aggressiveness. Towards the conclusion of his very able argument the Professor cited some passages from a Catholic novel entitled *Die Reichsfeinde*, or the Enemies of the Empire, the plot of which is supposed to the laid in the reign of Diocletian. The chief incidents relate to the "persecution" of the Christians, at the instigation of the Prime Minister, one Marcus, a man six feet high, and whose name was commonly abbreviated to Mark. Though triumphant for a time, this wicked Minister dies miserably, being drowned in a bag, whereupon the Emperor repents him of his cruelties and endeavours to make amends for his previous errors. Just as the Professor sat down, the Prince entered the chamber, when by a sudden impulse all the Liberals sprang to their feet and greeted him with a ringing cheer in which they were joined by the Strangers' gallery. While the Prince was laughing at the explanation given to him by his friends of the accidental cause of this outburst of enthusiasm, Herr von Gerlach began his silly charge of paganism, and brought down upon himself and his Romanist friends a crushing reply. The Prince reminded the foolish old man that they had formerly served their sovereign together under the old Prussian motto "With God for King and Country," but now his ancient colleague seemed unable to reconcile his duty to God with his allegiance to the King. For his own part, he felt that he was serving his God, his King and his Country, while he was engaged in withstanding the intrigues of Rome and in upholding national independence in religious thought and action. There was no question, however, as to whether God or the King should first be served. The real point at issue was whether Germany should be subject to the King or the Pope. Such speeches as that just delivered by Herr von Gerlach were intended not so much for the actual audience as to mislead the ignorant multitude outside the House. The Ultramontanes were probably justified in asserting that the new law would not seriously affect them, for the Pope and the Jesuits commanded resources large enough to enable them to dispense with the insignificant amount of which they had been deprived. The Government knew at the time that in that respect they could not do much, but nevertheless they had felt it to be their duty to protest against Papal usurpation and to warn the country that its freedom was in danger. This speech has made a remarkable sensation, and has been commented upon by the foreign press with not less passion than in Germany itself. Among Protestants there is naturally a consensus of approval, nor do the Liberals in Catholic countries withhold their applause, while the Romanist journalists anathematise the Prince by book, bell, and candle.

The defection of General Cabrera has filled the Carlists with dismay. His withdrawal from the cause of the Pretender has caused a mighty breach, and everybody now suspects his neighbour. It is, indeed, time that this mischievous movement should be put down, and that the restless population of the disaffected districts should return to peaceful pursuits before they become irretrievably addicted to a life of idleness and violence. Every Spanish mountaineer is at heart a brigand, and this lengthened episode of mediœval unrest is doing much to develop that tendency.

AGRICULTURE IN EUROPE.

FROM OUR OWN CORRESPONDENT.

PARIS, MARCH 20.

THE selection and preparation of food for cattle is a matter of growing interest daily in Europe. At Berlin, "loaves" for live stock are sold, and are composed of different species of grain according to the domestic animal to be nourished or fattened. The "bread" for horses is a compound of oats, rye, maize, and beans; and besides analysis, experience attests the value of this food. The same bread is manufactured for pigs, less the oats, and all is subject to official supervision. Since several years dogs have had biscuits specially fabricated for their use. It is a true adage, "that it is not what one eats that nourishes, but what one digests," hence the value of those processes which aid in the digestion of aliments. Professor Colin, of the Alfort Veterinary College, has stated as the result of his experiments, that he did not find chopped hay or bruised oats digested better than these substances in their natural state. But a horse does not utilise so perfectly its food as an ox or a ruminant animal. Some agriculturists demand that since pigs thrive so rapidly on a cooked dietary, the same care ought to be bestowed on the preparation of food for cattle. In the latter case, fermenting can take the place of cooking, by mixing cut hay, straw, roots, &c., in a vat, and pouring thereupon boiling water. The mass after some hours will emit an odour like sourkrout, and be highly relished by the animals. The mass is warm, and thus economises the natural heat of the body in the work of digestion, and the woody tissue of the aliments is softened in advance equal to a residence of some hours in the digestive tubes, while exacting less of the juices of the stomach. At the end of the winter season, horses, it is well-known, are liable to deranged stomachs, owing to the prolonged and large demand of a continued dry regimen on the digestive juices. Professor Sanson of the Grignon Agricultural College, assures French farmers, that the surest, cheapest, and most economical plan to secure a supply of phosphoric acid and nitrogen for their fields, is not to purchase these valuable fertilisers in the form of commercial manures, but in that of the various kinds of oil cake. He has already shown that except in the case of horses, wheat, barley, and oats, ought not to be employed in the formation of wool, milk, and meat. In the case of adult animals—where the skeleton is formed,—analysis of their excretions proves that phosphoric acid is not retained in the system, and in the case of growing animals, according to H. Weiske, only 65 per cent. of the phosphoric acid in the food is appropriated by the economy; consequently, in both cases the phosphate of potash, so assimilable by plants, passes into the manure, and by purchasing oil cakes, the nitrogen and phosphoric acid they contain are secured almost for nothing, while the animal appropriates their fattening ingredients. An establishment in the vicinity of Paris, which manufactures yeast from barley, rye and maize, sells the malt residue to cattle rearers at the rate of fr.1 per 22 gallons. M. Grandeau has analysed the food, and asserts three gallons of it to be equal to one pound of meadow hay.

The same gentleman has also analysed maize cut green and preserved in trenches for winter feeding: this operation now becoming so general in dry, maize-growing regions, concentrates the elements of nutrition by the fermentation and diminution of the mass, and it seems this fermentation takes place, first at the expense of the sugar in the plant, which sugar itself ultimately aids in converting the starch and cellular substance into sugar, and later into alcohol, while increasing the fatty and nitrogenous elements. In the progressing plan of preserving green maize in air-tight trenches, there is nothing new to record, save that the trenches are now made in masonry instead of being excavated in a field; that the maize is chopped along with straw—one part of the latter to five of the former, and well trodden down. The giant or Caragua maize is that generally preferred. An ox consumes about one-tenth of its weight of this preserve daily. It is essential to have the trench about two yards wide, the same in depth—the sides to be vertical according to some as admitting of a more equal pressure; the length will depend on the quantity of fodder to be stored; exclude air and water; and after transporting for consumption the quantity necessary for the day, hermetically close the opening. Maize being considered an exhausting crop, the land receives 25 tons of farmyard manure per acre in autumn, and a top dressing of 3 cwts. of a mixture of superphosphate and sulphate of ammonia in spring; the maize succeeding winter rye. In parts of Bavaria, a mixture of tares, peas, and maize is also preserved in trenches, and where maize alone is cultivated, the cattle receive two or four pounds of oil-cake daily with their rations, maize being regarded as poor in nitrogen.

What progressive agriculture most requires is, facts well observed and recorded with precision: it is thus that such a plain unvarnished tale, as that of M. Béhagues' plan of farming deserves to be welcomed so as to encourage others to publish the history of their operations. M. Béhague is one of the leading gentleman farmers of France; his estate comprises 4,800 acres; of which 217 are in grass, 1,164 in cultivation, the remainder under wood, ponds, and lawns. He has erected his castle, purchased half of his estate, accumulated the two-thirds of his immense fortune out of landed profits, and considers nothing as profit that is not represented at the end of the year by hard cash. He keeps one set of books like a retailer, and another wherein is recorded the history of the "matters" of the farm, as manure, fodder, &c., and which serves him as a guide. The soil is anything but rich, it is gravelly, thin, and cold, but ever tending by cultivation to greater fertility. His workmen—some 50, have each a cottage on the estate; there are two tile fields, a lime kiln and sawing machines. His sales of wood, either in planks or for burning, yield him a net profit of fr. 17 per acre, and the pines by their resin, somewhat less: his ponds being well stocked with fish, are also a source of revenue, but wood and lambs are the two pirates of his farming. After years of experiments, he gave up rearing merinos for their wool, finding the price of meat to be more lucrative; he succeeded in obtaining a rumunerative race of sheep by crossing a *Berrichon* ewe with a Southdown ram, and his practice consists in breeding and fattening off lambs, the issue of these crossings when 8 or 10 months old, and selling them at some fr.40 each; he thus disposes of 1,000 lambs per annum. The ewes are also fattened and sold after their third lambing. The arable portion of the estate nourishes about 170 lbs. of live stock per acre. M. Béhague does not regard this stock as a necessary evil, but as a source of certain profit.

M. Meénier draws the attention of farmers to the fact, based on his own experience, that they can effect a great economy in the use of chemical manures, by always applying them in the form of an impalpable powder. The chemical action of a manure, its power of assimilation by the plant, increases in proportion to the surface in contact, the more a mineral substance is then pulverised, the the greater will consequently become that surface. In Brittany the peasants confer much benefit on their land by strewing thereon the powder of portions of rock specially crushed.

The purchasers of horses for the French army always endeavour to obtain a first look at the animal when he is tranquil and in the stable; noting if the animal supports itself equally well on all its legs, and if one seems to yield, to specially examine it; attention is then directed to the largeness of the pupil of the eye, which ought to be more dilated when in the stable than when exposed to full light. After the animal has been led out of the stable, the eye ought to be again examined to observe if the pupil has contracted, if not, the sight is feeble; others to test the power of vision, feign to strike the forehead with the hand. If the hollow over the eyes be profound and the temples grey, old age is to be concluded; wounds about the temple suggest attacks of staggers, and when the end of the nose presents circular scars, it may be concluded the horse has been twitched with a cord to ensure his quietness while being shod, or having had to submit to some painful operation.

M. Leinbourg, Veterinary Surgeon and Inspector of the *Abattoir* at Brussels, draws attention to the difficulty too frequently encountered for the perfect separation of butter in the process of churning. This difficulty presents many anomalies, and which are attributed to a chemical alteration in the milk, to the existence of decomposing principles, and the health of the cows. As a cow is estimated to yield from 12 to 15 quarts of milk daily, representing a pound of butter, a prolonged difficulty in connection with a large dairy thus becomes serious. Some go to seek the cause, where only the effect is perceptible, and blame the vessels or the atmosphere. M. Leinbourg has no hesitation in attributing the cause of this non-separation of the butter in churning to the feeble health of the cow, to the poverty of the animal's blood, although the animal presents all the same all the external appearances of health. The cow is a machine for producing milk, and the organism can be deranged by excessive or prolonged milking, or continuous breeding; the digestion is performed imperfectly, the blood is not enriched, and hence the animal becomes weak. Connected with this subject is the remark, that cows badly fed during the winter reflect this treatment by a diminished supply of milk during the summer, and in addition, suffer most when passing from a dry to a green dietary. An ill-fed animal draws upon its system for the elements of its milk, and when

supplied with generous food, first fortifies its economy before yielding the expected increase of milk.

The preservation of sugar beet occupies much attention ; 120 lbs. of beet yield 22 of sugar or from 5 to 10 per cent. But this percentage can fall to 3 or 4, when the beet has been three or four months stored in pits, hence the importance of preserving the roots so as to lessen this diminution. The beet ought never to be lifted till perfectly ripe ; to act otherwise induces a fermentation which changes the sugar from a crystalline to an uncrystalline state. In the unripe beet, also, there exist acids which favor fermentation. It is recommended to lift the roots without bruising them, and to stack them leaves on but turned outwards in small heaps ; allow them to remain in this state till the death of the leaves, when these can be cut off and the roots placed in trenches, covering with straw, which is a bad conductor of heat. The root thus achieves its ripening by allowing the leaves to remain ; the sap thickens by the evaporation of the water at the leaves and roots, and the latter dry, like preserved grapes but without altering.

M. Tellier has produced the model of his "butcher ship," for the preservation by his process of artificial cold, and the transport of meat from Australia and South America. All that now remains is to *apply* his invention. The engine room is very abaft in the vessel, and the cold-producing machinery is behind this room ; the remainder of the ship is divided into compartments all fitted up with stalls, wherein the joints are suspended with facilities for examining the meat throughout the passage. The idea is being tried of introducing caoutchouc in the harness of draught animals so as to augment the strength of the cattle, on the principle that a weight attached to a spring can be raised more readily than if lifted without it, or like the elastic union of a railway train.

OCCASIONAL NOTES.

THE majority of impartial and intelligent Englishmen in India, however much they may differ as to the wisdom of the steps taken by Government, certainly hold that the restoration of the Gaekwar would be a calamity and a blow to the political *status* of the Paramount Power, which wants strengthening instead of weakening. It is asserted that the Secretary of State has withdrawn his opposition to Lord Northbrook's views in the case, and that the deposition of the Gaekwar has been decided on and will be announced almost immediately.

IT is announced that Mr. Ballard at last retires from Travancore. What no reasons of State were strong enough to accomplish, Mr. Ballard's own personal interests have carried. A week or two ago we said concerning the Baroda trial, that there was something more in the attitude of the people towards it, than a sense of the political degradation of their country. No one can have watched the trial with care, without seeing that in the eyes of the people, it has simply been a duel between Colonel Phayre and the Gaekwar. And of course the people wish the former worsted. Travancore is avenged at Baroda. It is idle to deny that we have treated the Princes of India badly, by imposing upon them as Residents men who were personally distasteful and obnoxious to them. The entire country knows that Travancore, that good and amiable Prince, has been tyrannized over for years by the Resident we have insisted on keeping at his Court. There is no man in the Government who dares plead ignorance of the fact. But what are Travancore's wishes, what his sufferings, what public quiet, what a nation's sympathies, to Mr. Ballard's 4,000 rupees a month?

THE scarcity which has been prevailing during the last two or three years in the highlands which form the Eastern outskirts of the Toungoo District of British Burmah appears now to be reaching its climax. It is due to no climatic causes, but to a vast inroad of rats that periodically ravage the hills on the occasion of the bamboo flowering and seeding, a phenomenon which occurs about once in every 40 years. The vermin then propagate in immense numbers, and devour the cereals like a swarm of locusts. The distressed region is the stronghold both of the American and Catholic Missions, who call for assistance on behalf of their afflicted converts. It should be borne in mind that a large majority of the Karens pay no taxes to Government, and Sir Arthur Phayre, when Chief Commissioner, gave express orders that they should be interfered with as little as possible, and that conciliatory measures alone should be adopted in the event of any complication. One result is that the land is a *terra incognita* to the Police and that a considerable amount of disorder has prevailed there. The Local Administration appear to have left affairs entirely in the hands of the district officer who, rightly or wrongly, was of opinion that the Karens should be made to work for their food. Besides employing a large amount in Municipal labour he has caused several miles of good road to be constructed on the hills, which will be extremely useful in the event of any sanitarium for troops being formed in that neighbourhood. The Divisional Commissioner in a recent visit to Toungoo was of opinion that Government aid had best be supplemented by private subscription, and a local committee which he convened before his departure has published the appeal which appears on another page, We would wish to point out, however, in the event of further government assistance being furnished, that an uniform system of relief should be agreed upon by both classes of distributors, as in the event of the churches determining to grant gratuitous aid it will be useless for Government to exact any work, for it will simply result in the whole of the Karens resorting to the charity of the missions.

OUR contemporaries are mistaken we think in attributing the strong articles in *The Times* on the Baroda business, to Mr. James Routledge, the late Special Commissioner of that journal in India during the famine period. It may be remembered by many that a gentleman well known on the Indian Press for the last two decades, was a few months ago treated in a peculiar manner by the Viceroy, when Sir George Campbell desired to strengthen his Legislative Council. It is Dr. Smith, we believe, who contributes all articles to *The Times* on the feudatory affairs of Hindostan.

IN the discussion that has been going on at home as to the morality or legality of Lord Dudley's attempt to recover his wife's jewels, by the offer of a reward and "No questions asked," the papers curiously enough seem to have overlooked the wide difference there is between condoning a robbery when you have the means of proving it, and an engagement to forego a prosecution you have no means of instituting. Were the thief in custody, and Lord Dudley negotiating with him to condone the robbery, the case would be very different. What is it but "condonation," when the State offers a pardon to accomplices, and even a money reward if they will reveal the principals. Society has failed Lord Dudley. Its arrangements to protect him from robbery in the first instance, miscarried; and its subsequent efforts to find the thief and get the property back, have miscarried also. If Society had caught the thief, it would have a right to say to Lord Dudley, "you shall not condone the crime simply to get your jewels back, for it is necessary to make this man an example." But it has not caught the thief, and it is a question of legal casuistry therefore, whether there is any wrong in Lord Dudley's course.

THE public, we may hope, has now heard the last of the Oudh libel suits. Sir G. Couper's displeasure against the officer who dared to impugn the correctness of decisions given by the Oudh Courts, and to comment in strong language on what he considered to be a great failure of justice, culminated in a request to the Government of India that Mr. Williams should be tried by a public Commission under Act 37 of 1850, for having needlessly and wrongfully aspersed the characters of some of his brother officers. The request was made in last November, immediately after the decision of the Court which dismissed the libel suits brought by the talukdars, on the ground that whether Mr. Williams' allegations were correct or not, he had acted in the most perfect good faith, and had had ample grounds for coming to the conclusions to which he did come. The Government of India waited to see if the talukdars would appeal from the decision of the Court, which they did not ; and thus some delay was occasioned ; more perhaps by differences of opinion among the Government itself, as to how far they could properly go in supporting a too zealous subordinate against the wrath of a local Government. Eventually the Government of India acquitted Mr. Williams of the charges brought against him by the Oudh Government, and refused, without calling on Mr. Williams for any defence, to sanction Sir G. Couper's recommendation, Mr. Williams has

been sharply censured for his want of judgment and intemperate language, and he is to be transferred from Oudh to the North-West Provinces, the Government of which will be required to furnish a satisfactory report on Mr. Williams' conduct before he can be entrusted with any independent charge. As promotion is much better just now in Oudh than in the N.-W. P., Mr. Williams is in reality severely punished for his exuberance of zeal.

"THE Lady resembling the goddess of loveliness and prosperity"—as the name of the ex-concubine and present spouse of the Gaekwar may be poetically translated, Laxmeebai being one of the prettiest of all the names borne by Indian ladies—is sadly exercising the minds of curious journalists at home. One journal calls the wife of Mulharao "Luxmibhaee," a second "Luchmibhaee," a third Lakshmibhai" and a fourth, striving after proper pronunciation rather than elegance, "Lutchmebye."

MESSRS. MOODY and Sankey's religious services are so differently described, that it is impossible in India to form a satisfactory opinion as to their true value. Thus the *Times* declares them to be exactly adapted to that unfortunately large section of our population which is living what is little better than a mere animal existence, and requires to be stirred up "by the use of language and illustrations lowered to the "level of its undeveloped intelligence and coarse perceptions," while the *Saturday Review* denies that the services attract this class at all; and that Mr. Moody does not apparently even seek to attract it. What follows is most unpleasant, and if true is fatal to all belief in these services. Mr. Moody has, we are assured, "his reserved seats, with a quiet back way, for carriage company, carefully railed off lest it should be supposed that lords and ladies have come to be converted in physical contact with the multitude, or indeed are more than spectators at the latest sensation entertainment—the salvation of the lower orders. The disappointment of the select circle may be conceived when they find themselves confronted, not by the wretched people whom they expected to behold in the agonized contortions of sudden conversion, but by smug, self-satisfied, middle-class respectability, smirkingly confident of its own spiritual security, well up in hymns, and anxious to take part in a ceremony which is flattering to its own vanity and self-sufficiency, and which is to have the effect of converting quite another sort of people. In fact, the only class to which, by any license, the appeals of the ranter could be legitimately addressed, is just that which is conspicuous by its absence." The *Saturday Review* is not a satisfactory authority on a subject like this, and we doubt the exact truthfulness of its account of these strange services.

A few weeks ago a highly interesting "Council" of the trans-frontier Mro and Khyn tribes was held on the banks of the Mee river. Here many of the Khyn Chiefs met together with their old foes the Mros, and the pipe of peace was smoked and the war hatchet buried. A mutual interchange of captives was made, and over the sacred body of a bullock the whilom foes unanimously agreed to preserve quiet for the future, and abstain from keeping our eastern frontier in a state of chronic excitement and war.

NOTHING could be more unsatisfactory, we think, than the relations of the present Government of the country with the press. There is nothing manly or honourable in those relations, while they tend to degrade the press without promoting the interests of good Government in the least. Instead of openly establishing a *Moniteur*, or avowed official organ, to which there could be no possible objection, a system of what is expressively but coarsely called "nobbling the press" is resorted to. The independence of journal after journal is assailed with the bribe of early and exclusive intelligence, and though no particular harm or wrong is intended thereby, it is easy to see how fatal such a system must be in the long run, to anything like a very high character in the newspapers seduced by it. It is a real debauchery of the press, that takes place under such a system. We can see no objection, we say, to the Government having an avowed organ of its own, and many advantages in the establishment of such a paper; while a journal that is really "nobbled" in the present mode, is an imposture and a public wrong. Either let the Government establish a *Moniteur*, or let it place every respectable journal in the country on precisely the same footing as to news.

SOME importance appears to be attached in Europe to the fact that the Pope in his Encyclical of the 2nd ultimo, accepts and sanctions the explanations put forth by the German Episcopate about the beginning of February, as its collective declaration of the true meaning of papal Infallibility. The whole of their utterance appears to be comprehended in one sentence:

"As the Vatican Council has announced clearly and unmistakeably, and as the nature of the case declares, the Papal infallibility has reference simply to a property of the supreme teaching office of the Pope, and this extends precisely over the same territory as the infallible teaching office of the Church in general, and is confined to the contents of Holy Scripture and tradition, as well as to the dogmatic decrees already promulgated by the teaching office of the Church."

We fail to see that this declaration really narrows the reach of the prerogative asserted by the dogma.

THE *Revue des Deux Mondes* has been comparing the staple contents of English journals with those of the Continental papers, and draws attention to the very undue proportion of space devoted to the details of crime in the former. The criticism is just, and the *Indo-European Correspondence* says it applies also to the daily press of India, for the prominence given therein to police cases of a morbid or prurient nature.

IT is easy to see that the Supreme Government will be heavily reflected upon in England, for the resolution to prosecute the Gaekwar on such evidence as was produced at the trial. Only the strongest *primâ facie* case, says the *Examiner*, "could justify the action that the Government of India have taken, and if there be any better evidence to produce—as surely there must be—than that of the ayah, it is difficult to understand why it has not been already produced." Unsatisfactory, moreover, as the evidence was even in its entirety, Damodhur Punt's confession was not in the hands of the Government until a fortnight after the proclamation bringing the Prince to trial.

That a well considered Insolvency Law would be one of the most important reforms we could introduce into the Mofussil, has been urged upon the Government of India for the last fifteen or twenty years, and it is most discouraging to those who have the welfare of the people at heart, that plain necessities of this order should be indefinitely postponed to matters of far less consequence to the people, if indeed of any consequence at all. Mr. Hobhouse has at last taken the matter in hand, and proposes to incorporate a Mofussil Insolvency Law in the amended Code of Civil Procedure. "The fact is," remarks Mr. Hobhouse, "that there is no insolvent law applicable to the dwellers in the Mofussil, and it is intended to give the Courts in the Mofussil somewhat larger powers and clearer directions so as to enable them to work out the remedy which apparently was contemplated by the framers of the Code of 1859." May we suggest to Mr. Hobhouse that he should do the work thoroughly while he is about it. The most experienced officers of the country know well how desirable is complete legislation on the subject.

IT is very easy for Englishmen to be indignant with the Prussian Chancellor for what they call his attack upon the independence of Belgium for the excesses of its Ultramontane press; but few Englishmen have any conception of the danger to which the German Empire is exposed on both sides: in Silesia and on the Rhine: by the machinations and resentment of the Ultramontane party. A recent writer upon Belgium, points out that the State is almost wholly in the

hands of this party; while the means of action which the priests have at their disposal are nearly invincible. "There is first the pulpit, transformed into a tribune of political propagandism. From this the clergyman fulminates incessant attacks on the men of the liberal party and their principles; he depicts them as worthless because without faith, without morality, ready to shut up or burn the churches, and to massacre the clergy, as did their predecessors, the monsters of the French Revolution. As the elections approach, none but political sermons are preached. If a tavern or a café in a village, ventures to receive a journal not approved by the clergy, it is marked as a bad house and loses both customers and character. The effect of this interdict is terrible; not a soul in the village dare resist the anathema. The apprehension of being denounced from the pulpit fills everybody with dread, and breeds a readiness to absolute submission. The confessional is an agency of still greater power. By threatening to refuse absolution, the priest holds the faithful completely in his power, and there is nothing which he may not require. He refuses it today to those who subscribe to liberal newspapers, although such journals make it a rule never to touch on religious questions." Now all this is familiar enough to Prussia, and it is necessary to bear it in mind. Ultramontanism is as truly a political power as Bismarck himself, and it is steadily urging the Latin nations upon a war against the German Empire. In similar circumstances, Englishmen would be apt, we think, to shew some resentment of the German order.

THE Russian Press appears to be much exercised by the failure of the system of trial by jury introduced by the present Emperor in 1864, and the judges are said to be not much better qualified for their duties than the juries." Acquittals of avowed criminals, and convictions of innocent people, happen every day. As to the advocates, few possess any real knowledge of the law; most of them are mere agents, and many act for both sides?" This last achievement is not altogether unknown, if report speak truly, in the High Court of Calcutta.

THE Home papers are unanimous in the view they take of the approaching visit of the Prince of Wales. They seem to think that while the surface of affairs in India is calm, there is something in the air that indicates possible storms and that efforts should be made to imbue the people with feelings of loyalty and affection to the Royal House of England. It is at the Prince's express desire, we are told, that he will be accompanied by Sir Bartle Frere. Major-General Probyn, C.B., V.C., and Dr. Fayrer will also be of the party; and we hear Mr. Routledge.

POETRY.

MARTIAL.—EPIGRAM.

V. 47.

Nunquam se cœnasse domi Philo jurat: et hoc est
Non cœnat, quoties nemo vocavit eum.

Translation.

Philo is courted so at Rome,
He swears he never dines at home.
Yes; if no friend invite him out,
The wretch is forced to go without.

CORRESPONDENCE.

DISESTABLISHMENT AND DISSENT.

To the Editor of the Friend of India.

SIR,—In connexion with the Disestablishment movement recently set on foot in Calcutta some of your contemporaries have drawn a contrast between the numbers of worshippers attending State-paid churches and of those attending what it is customary to call voluntary ones; and this contrast has been drawn with the view of shewing that if the voluntary churches (which though numerically the strongest are pecuniarily the weakest) are able to support out of their own funds their own ecclesiastical machinery, much more should the State-paid ones be expected to do the same.

Now, such a contrast if applied to our ecclesiastical organization in England will stand; but to my own mind it is perfectly astounding that any man acquainted with the facts could be so oblivious as the writers and speakers referred to appear to be. May I be permitted to ask them through your columns, what proportion of the cost involved in the erection of the various dissenting places of worship in Calcutta was met by the voluntary contributions of their respected worshippers (past or present), and what proportion was met out of the funds of Missionary Societies raised in the British Isles? And still more urgently would I ask whether many of the ministers of these voluntary churches are not supported from the funds raised by Missionary Societies at home (that is, in England or in America)?

Both these enquiries (but especially the latter) apply also to *all the dissenting organizations in the various Stations throughout India.*

It seems to me that to raise money in Exeter-Hall with the avowed purpose of sending men to India (and other parts of the world) to carry the blessed news of God's love to the 'poor benighted heathen,' and then to apply the money raised to the endowment of the ministry of the various dissenting bodies in our Indian Stations is what we must first wash our hands clean from before our attacks on the State-paid churches can have proper moral force.

It may shorten controversy if I mention that I am a staunch supporter of the present movement for ecclesiastical Disestablishment; but if that movement is to meet with the Divine approval we must resort to arguments of a better type than the one to which I demur,—better expunge with all possible speed the blots that mar our own system first.

FAIR PLAY.

JUDICIAL FOSSILS IN OUDH, AND THE LIBEL SUITS.

To the Editor of the Friend of India.

SIR,—In your article entitled "Judicial Fossils in Oudh" the following sentence occurs:—

"In one of the libel suits recently filed by Mr. Williams, B.C.S., and "to which Mr. Williams made a preliminary objection, nine issues were "framed by the Court as arising out of the preliminary objection, and "yet the Court solemnly recorded that it would first dispose of the "nine issues and then of the objection. No wonder, therefore, that "Mr. Williams should petition the Judicial Commissioner for the trial of "his important suit in another Court and that his petition should have "been granted."

In Mr. Williams' letter, published in your issue of the 10th instant, he writes as follows:—

"The inference that the writer evidently intends his readers to "draw is, that the Civil Judge was considered unfit to try the suit, "and that the transfer was ordered on that account. I therefore "beg to state that my petition asking for transfer expressly stated "my confidence in the Judge, and that the transfer of the cases was "ordered by the Judicial Commissioner on grounds which con-"veyed no reflection whatever on the Judge."

I happen to have before me at present the petition of Mr. Williams, dated the 6th of May 1874, in which he prays for a transfer of his case from the Court of the Civil Judge, Lucknow, to that of the Deputy Commissioner of the place, or to any other Court, and I think it is only fair to you and to the writer of the article on Judicial Fossils in Oudh, to quote from them three pertinent paragraphs.

In paragraph 7, Mr. Williams writes—

"That on the 28th of April, the defendant attended in Court for that "purpose (*i. e.*, to file a written statement), but on his arrival in Court "and before he had filed the written statement of his defence, he was "informed that the Court had fixed nine preliminary issues to decide "upon the admissibility of the copy filed by plaintiffs, and a copy of the "Court's proceeding fixing those issues is herewith annexed."

In paragraph 15 of the same petition, Mr. Williams says—

"Your petitioner could easily show that the course of procedure "adopted by the Court will, in several ways, seriously hamper and preju-"dice him in his defence of suits for enormous sums of money, and in "which the issues will affect his character as a Government officer."

And in paragraph 18, Mr. Williams concludes with the following:—

"Therefore, although your petitioner has the most perfect confi-"dence in the desire of the officer presiding in the Court to do most "absolute justice between plaintiff and himself, *yet as an error of* "procedure has in his opinion occurred which may have a disastrous "effect on the defendant's conduct of his defence * * * * "Your petitioner prays"—here follows the request for transfer.

On this the Judicial Commissioner passed the following order, dated the 8th of May.

"Mr. Thomas makes no objection to the transfer of this case, and "as in my opinion Mr. Williams *has shown good cause why the case* "*should* be transferred, I direct its transfer to the Court of Mr. King, "Deputy Commissioner of Faizabad."

I leave you and your readers now to judge whether the transfer of Rajah Furzund Ally Khan's suit was ordered "on grounds which "conveyed (as Mr. Williams says) no reflection whatever on the "Judge." To my mind both the *post hoc* and the *propter hoc* are very evident from both Mr. Williams' petition and the Judicial Commissioner's order. Mr. Williams complains of the serious prejudice to his cause by the procedure of the Civil Judge, and the Judicial Commissioner considers that in his opinion Mr. Williams' complaint is a good one.

Mr. Williams' belief in the desire of the Civil Judge to do him justice, was no doubt sincere. I can scarcely blame him for "hedging" and protecting himself against the contingency of his petition being rejected, but the article you published never questioned the "desire to do justice" on the part of the Judicial Fossils in Oudh. It simply commented on the procedure of one Court, and if this procedure had not been erratic and eccentric, where was the occasion for Mr. Williams' petition?

There is nothing on the whole record as to what was said by the Judicial Commissioner in Court to the effect "that it was not "considered expedient to have the suits tried in Lucknow." That may or may not have been said. I have, however, a lawyer's weakness for evidence, and until I have such evidence I shall decline to accept the statement.—Yours, &c.

LUCKNOW, 14th April, 1875. } COUNSEL FOR RAJAH FURZUND ALLY KHAN.

Note.—The matter was hardly worth this long explanation, perhaps.—ED. *F. of I.*

THE OUDH CIRCULAR.

(*Copy.*)

SIR,—The Chief Commissioner is aware that there is a general feeling outside the province that dissensions and discord are rife among the officers of the Oudh Commission.

This impression is of course caused by the attacks on the administration, which have appeared lately in certain newspapers, and to which certain officers have responded, and also by the attacks on individual officers personally, which have been replied to warmly by the persons so assailed, or their friends.

Now, the Chief Commissioner is of opinion that however good the reason may be for the impression which prevails abroad, that impression is unfounded. He believes that the officers of the Commission generally are loyal and well-disposed towards the administration under which they are serving, and that they are, as a rule, well-affected towards each other; in short, that as much *esprit de corps* exists in Oudh as in any other Government or administration.

The Chief Commissioner, therefore, earnestly requests every loyal officer in future not to reply to any article or letter in a newspaper reflecting on the administration generally, or on the officer himself personally in his official capacity, or for any official act.

As regards the administration, he would submit that its vindication may safely be left in his hands; and as regards a personal attack, he would suggest that if an officer feels himself aggrieved, it will be quite sufficient for him to represent the case to the Chief Commissioner for the information, if necessary, of the Government of India, rather than to reply in the paper itself, or in any other paper, which only gives the attack the importance which it is the object of the writer to attain, and which it would fail to achieve if allowed to pass entirely unnoticed. Yours, &c.

H. J. SPARKS.

Lucknow, 8th March, 1875.

OUR LIBRARY TABLE.

The Compounder's Guide.—By Baboo P. C. Chowdry. This is an exceedingly useful publication, and may tend to save a score of lives annually, if native doctors and superintendents of dispensaries will go to the expense of purchasing it. The author has been induced to publish his compilation owing to the want of a sufficiently practical book of reference for compounders. Latin words and phrases relating to medicines, and hitherto a mystery to the majority of the native community, may now no longer remain so, Baboo P. C. Chowdry having given the meanings in simple and easily understood English.

Indian Code of Criminal Procedure.—By Fendall Currie. (John Black & Co.) This is a new and amplified edition of Mr. Currie's well-known work. The several sections of the Code have been practically illustrated from authorised and generally recognized precedents, while the notes in the commentary have been confined to the rulings in force now. All rulings, not superseded, embodied, reversed, or altered by the re-enactments of the Code, Mr. Currie has wisely allowed to "pass into the limbo of troublesome things which may safely be forgotten." The commentary is a special feature of this edition, giving on a settled plan the pith of decisions involving general principles of law, and keeping away from

> "The codeless myriad of precedent,
> The wilderness of single instances."

En Avant.—By Major A. R. D. Mackenzie. (*Pioneer* Press.) This pamphlet comprises a series of essays on native cavalry, mounted infantry, and Indian Army reorganization with reserves. The last essay is by far the most important. The author endeavours to show that military expenditure may be diminished; that the practical strength of the Army may be largely increased through the creation of a numerous and efficient reserve, which would be capable of almost instantaneous assembly, while, at the same time, the number under arms and receiving full pay in times of peace would be diminished; that while the aggregate strength of the Army for use against an enemy would be improved and rendered capable of being more rapidly set in motion, political dangers would be guarded against and reduced to a minimum; that the contentedness of the Army, and the share of efficiency due to that feeling would be assured; that a much better class of recruits would be attracted to the Service; that an *impetus* would be given to the breeding of horses suitable for Native Cavalry Remounts; that a considerably greater number of British officers than at present would be allotted to each regiment and battalion, without imposing additional expense on the State; and that a system of promotion among British officers of Native Troops would be inaugurated, which would be sufficiently rapid to prevent worn-out officers from being placed in regimental command, without unduly advancing inexperienced men.

It is believed that real *esprit de corps* would rapidly spring up and continue under the proposed system, but we could never be sure that such would be the case till experiments had been made. The suggestions of Major Mackenzie, however, are full of good sense, and many appear to promise success.

The Nagpore Water Works.—By Alexander Richardson Binnie (William Clowes and Sons). This *brochure* consists of a reproduction, in an enlarged form, of a lecture delivered before the institution of Civil Engineers. The old works which formed the basis of the Nagpore water project, sanctioned by Government in April 1870, were constructed under the Bhonsla dynasty (Rajahs of Nagpore) about eighty or ninety years ago, principally for the purpose of supplying the palace, and the houses and gardens of a few of the native gentelemen attached to the Court. The site of the reservoir is at a point on the river Nag, which flows through and gives its name to Nagpore. Perhaps the existence of some natural springs at this place may have led to the selection of the site; at any rate, the author states, from personal observation, that even when there was no water in the old reservoir, springs existed in the low ground below the embankment, and provision appears to have been made for securing the water flowing from them when other sources of supply failed. The ancient reservoir was formed by an embankment rather crooked in its alignment, and 856 yards in length across the valley of the Nag. Its average height was 12 feet, the extreme being 20 feet. Its width at the top varied from 40 feet to 60 feet, and the back slope had an inclination of about 1¾ to 1; the inner face was protected by a vertical rubble wall, with projecting semi-circular and octagonal bastions, also of rubble masonry. The reservoir, when full, had an area of 237 acres, and contained 80,000,000 cubic feet. The water was drawn from it through a masonry sluice, the flood waters being discharged over two waste weirs of the aggregate length of 128 feet. The new works consist of a puddle trench through the old embankment, extending at least 3 feet into the rocky floor of the valley. The embankment has been raised and a puddle wall constructed. Inside the reservoir a straining and regulating tower has been built, and a syphon discharge pipe laid from it over the top of the old embankment, and below the level of the newly raised portion with a valve house at the foot of the outer slope. A new waste weir at a level 13 feet 4 inches above those of the old reservoir, and a main pipe 4 miles long and 13 inches diameter, with 10,500 lineal yards of distribution pipes of 12 inches diameter, and downwards, have also been provided. The result is that a reservoir, containing a gross quantity of 257,500,000 cubic feet of water, and an available storage of 240,000,000 cubic feet, or 1,500,000,000 gallons has been formed, the top water area of which is 370 acres It is calculated that, with this amount of storage, a supply of 15 gallons per head per day of twenty-four hours can be maintained even in years of extreme drought.

The Calcutta Review.—April. (Thomas S. Smith.) This issue of the *Review* might well be termed a famine number, for over fifty pages are devoted to two articles on the subject, one being on "Famine and State Duty," an essay displaying considerable research and a large amount of good advice, which, unfortunately, will never be taken; and another entitled "Political Economy and Famine Relief in Bengal," principally made up of lengthy foot-notes extracted bodily from Sir Richard Temple's funeral oration over the events of 1873-4. The second article, on the "International Congress of Orientalists" in London a few months ago, partakes of similar qualities, its author also relying upon extensive extracts, which, however, are useful, because no other journal but the *Calcutta Review* could have devoted so much space to so hackneyed a subject. The paper on Rural Madras is pleasant and chatty, and will perhaps find more readers than any other. Speaking of the condition of the ryot, the writer remarks:

"The ryot is, it must be acknowledged, a thriftless being, but one cannot much wonder at this, when we consider the load of debt by which he is pressed down, and has always to carry about with him as long as he lives. Debt to him is the 'Old Man of the Sea;' and do what he will, he cannot get free from its power. On one side there is cunning and knowledge backed by law, and on the other is ignorance and fear. It is no wonder that the ryots are so miserably poor. It has been recommended that the Government should open a bank to lend money to the ryots on the security of their crops. If something of the kind could be done, it would do more good for the ryot than almost anything else. With a terrible load of debt upon him, all life and energy are crushed out of him. With a bank where he could borrow money and pay off his debts and begin life again, and with an education of some kind, the cultivator would be a different kind of being from what he is at present, and from what he is ever likely to be under the present order of things. The indebtedness of the owners of the land must soon be looked upon as the great problem of the day, and if our rulers wish to prevent the pauperisation of the ryots, steps should be taken at once to bring about a change. The Government and the laws are now playing into the hands of the money-lenders, and one is almost led to ask, on reading the Civil Procedure Code, whether some of these men were not called in to assist in its construction; so much does it favour their designs. Our Mofussil courts are demoralising and impoverishing the many for the sake of a few, and those few forming a class of men who pay little or nothing towards the expenses of the State,'

These remarks have often been expressed before, but they cannot be placed before the public too frequently, since we believe that on this much vexed question of the indebtedness and rack-renting of the ryot will depend the length of our tenure in Hindostan. The "Elements of the Psychology of Cognition" is somewhat abstruse, but valuable all the same, the name of its author, Dr. Robert Jardine, being a sufficient guarantee of its ability. The rest of this issue comprises a slightly dry and eminently antiquarian description of the "Lost River of the Indian Desert;" an examination of the three posthumous essays of John Stuart Mill; and a brief account of the recent history of the Brahma Somaj.

Journal of the Asiatic Society.—April. (Baptist Mission Press). As usual, this highly interesting publication teems with valuable and novel papers. There is one on the Temple of Jaysagar in Upper Assam; another on the Etymology of Local Names in Northern India, and two more relating respectively to a Chittagong copper plate, dated A. D. 1243 and a second inscription of the time of Skanda-Gupta. The temple of Jaysagar situated on the north bank of an immense tank, two and a half miles south of Sibsagar—the ancient Rungpore in Upper Assam—is not remarkable when compared with many similar edifices in Central India, but is of considerable interest from its being probably the most perfect specimen of stone architecture existing in Upper Assam, and having been erected at the time when the Hindoo religion was first firmly established in the country. The occasional earthquakes, the destructive influences of the weather and the pipal tree, combined with the fact that no proper plans of drawings of most of the ancient edifices in Assam have been made, rendered it desirable that some memorial of this temple should be preserved, as its destruction at a not very remote period may be anticipated. The cold weather of 1873-4 having set in, a small camp was formed, the jungle was removed from the edifice as far as practicable, and careful measurements were made of the most interesting parts. The stone body of the temple is covered with very fair specimens of sculpture, the designs and their details being in some instances wonderfully fine and artistic; not an available inch of surface is left undecorated, and the frieze of hunting scenes in the basement is for the most part extremely accurate and life-like. The body of the building, about twenty-two feet high, supporting the dome, is built of sandstone and carries twelve pinnacles; the dome is of bricktiles, covered with stucco, which is ornamented by being divided into an immense number of sunk panels. The bund underneath the temple is composed of large sandstone boulders. These with the stone used in building the temple were probably brought from Sadiya, by boat, and landed opposite Rungpore; for there is a good ancient road leading from the Dikko River at that point to the Jaysagar tank. The sculptured slabs are very neatly let into the wall and with their surrounding frames are mostly crowded with diaper work and minute craved tracery. The building is octagonal, the four sides facing the cardinal points of the compass are each twenty feet broad, the other four sides have recessed angles. At its west end are two entrance rooms; from the centre one seven steps lead down through a fine stone doorway into the grand room of the temple, which is dark and has probably a subterranean chamber, as water may be heard running underneath the floor. This room is twenty-three feet across and devoid of ornament excepting the niches; the stone work, as on the outside, reaches up to the foot of the dome which, being devoid of stone, shews the brickwork to the top, the height appearing immense when viewed by magnesium light, although it cannot exceed fifty feet. All the other buildings are composed of brick tiles, have curved roofs, covered with stucco, generally stone doorways, and in two cases possessing a series of carvings in sandstone let into the walls on the outside of the buildings. Nearly all are more or less damaged by the frequent earthquakes they have withstood.

In the article on the etymology of Local Names in Northern India, Mr. Growse remarks that a more curious illustration of a deliberate resolve to ignore obvious facts for the sake of introducing a startling theory based on some obscure and utterly problematical analogy could scarcely be found than is afforded by Dr. Hunter in his dissertation on non-Aryan languages. In this he refers the familiar local termination *gânw* (which *argumenti gratiâ* he spells *gang* or *gaong*, though never so written in any Indian vernacular) to the Chinese *kiang*, the Tibetan *theong*, the Lepcha *kyong*, &c., &c., and refuses to acknowledge any connexion betwen it and the Sanskrit *gráma*. Yet as certainly as Anglo-Saxon was once the language of England, so was Sanskrit of Upper India; and it seems as reasonable to deny the relationship between *grama* and *ganw* as between the English affix *bury* or *brough* and the Saxon *burgh*. The formation is strictly in accord with the rules laid down by the Prakrit grammarians, centuries before to the word *ganw* had actually come into existence. Thus by Vararuchi's Sutra—*Sarvatra la-va-ram* III, 3—the letter *r* when compounded with another consonant, whether it stands first or last, is always to be elided; as we see in the Hindee *bat* for the Sanskrit *varta*, in *kos* for *krosa*, a measure of distance, and in *pem* for *preman*, love. So *grama* passes into *gama*, and whether this latter from or *ganw* is used depends simply upon the will of the speaker; one man calls the place where he lives Naugama, another calls it Nauganw, in the same way as it is optional to say Edinbro' or Edinborough. For in Hindee as in Sanskrit a nasal can always be inserted at pleasure, according to the memorial line—*Savindukarindukayoh syad abhede na kalpa-nam*: and the distinction between *m* and *v* or *w* has always been very slightly marked: for example, *dhimar* is the recognised literary Hindee form of Sanskrit *dhivar*, and at the present day villagers generally write *Bhamani* for *Bhavani* though the latter form only is admitted in printed books. If speculation is allowed to run riot with regard to the paternity of such a word as *ganw*, every step in the descent of which is capable of the clearest proof, then philology is still a science of the future, and the whole history of language must be rewritten from the very commencement.

INDIAN SUMMARY.

BENGAL.

THE medical relief operations in the Burdwan District have been re-organized from the 1st of April. The Bengal Government has sanctioned for six months at present the scheme of Dr. French, the Civil Surgeon at Burdwan, for reducing the number of epidemic dispensaries in the district from 43 to 29, and to make them partly self-supporting by public subscriptions in the villages in which the dispensaries will be retained. These subscriptions have already been paid in advance for six months, the total amount lodged being Rs. 3,630. The cost of European medicines and medical officers' salaries will be borne by Government.—*Indian Mirror.*

THE *Behar Herald* gives the following particulars regarding the mysterious murder committed in Beheea in Shahabad:—"We have received further particulars about it, from which it appears that it was a case of Indigo riot, which resulted in the death of one man. As usual there are two versions of the story: the one is that the deceased, who was a ryot, was treading out corn, when a Jemadar of the Katteah Indigo Factory in Beheea came with some man, and charged him with not having prepared his land for the cultivation of Indigo. A dispute arose, which ended in the factory people taking away with them some of the cattle belonging to the deceased. The latter followed, and the parties came to blows on the way, when the Jemadar is said to have wounded the man in such a manner that he died shortly after. The Factory people, however, say that the man died from the effects of poison which he had taken with a view to involve them in the consequences of his death. Thus it is the same story over again—the weaker party committing suicide for spite, as if to sacrifice one's life was the easiest thing one could do. But if it be true, it were high time that steps should be taken to enquire into the state of things which could drive men to such desperate and unnatural acts. The case is, we understand, under judicial enquiry, and we will watch the result."

BOMBAY.

THREE Mussulmans have been charged before Mr. Dossabhoy Framjee, at the Fort Police Court, with having assaulted two Parsees. The first complainant, Rustom Seerosha, deposed that on the night in question, at about 10 P. M., he went to a Parsee cook's shop, which is situated in the Null Bazar, and sat down in the verandah. While so engaged, the defendants came up; one of them caught and pulled him down, whereupon the others beat him with sticks. The other complainant, Rustomjee Byramjee, went to the assistance of the witness, and was himself assaulted in consequence. The complainants said that they were unacquainted with the defendants. The offence being proved, his worship directed the prisoners to pay a fine of Rs. 25 each.—*Bombay Gazette.*

AT a special meeting of the Municipal Corporation, held lately, the proposals of the Municipality for the improvement of the water-supply of Bombay were finally adopted. It is well that these discussions are over, as we may suppose them to be; for the enjoyment of the fun was after all principally confined to the bystanders—as Byron says of the battle field,—

"To one who had no friend or brother there"

—and the waste of time was rather hard upon gentlemen who had their own work to do and were not allowed to do it, to say nothing of Bombay beginning to want water and finding herself in danger of very awkward delay. It is quite refreshing to note how modestly the Prince of Wales spoke of his want of technical knowledge when he dined the other day with the Engineers. One would have thought His Royal Highness a nobody, so laudatory was he of the great achievements of these men in a professional field to which he confessed himself a stranger. In Bombay it seems that any one with a pen and knowledge of "the 14th Book of Euclid" thinks himself capable of telling an Engineer "how not to do it." And as Dr. Joynt happily said at the meeting of the Corporation, the fact of knowing nothing about a subject seems the acknowledged qualification to speak upon it.

THE suicide of Major Holland last year was, it will be remembered, the precursor of many others, and the suicide of Mr. O'Brien at the Diocesan School has already been followed by one at the Byculla Schools. In the present instance, however, no blame can be attached in the remotest degree to any one, the cause being an unrequited attachment. The unfortunate victim is a Mr. Phillips, a young man of about three and twenty, the third master of the Byculla Schools. For some time he had been in love with one of the mistresses of the school, but unfortunately for himself his affection was not reciprocated. This had preyed upon his mind, and he had several times complained to Mr. Walters, the head-master of the school, that his life was a misery to him. The latter gentleman had very wisely advised him to try to forget about the young lady, and had recommended him to take up some particular study to distract his attention. Mr. Phillips had followed this advice and had been studying Marathi, intending to go up for the higher examination in June next. On Monday morning last, he sent a chit down to Mr. Walters saying he had passed a very bad night, and asking Mr. Walters to excuse him from attendance at school, which Mr. Walters accordingly did. About half-past twelve Mr. Walters went to see how he was, and found him apparently asleep, but noticed he was unusually pale. He was shortly after shown a letter which deceased had sent to him, and his suspicions being aroused, he went into deceased's room found him insensible, and immediately sent for Dr. Hunter, who did all he could to save him but without avail, as deceased died 24 hours after he had taken the chloral. The suicide was evidently a premeditated one, as he had prepared an account showing how his monetary affairs

stood, and had also destroyed a number of letters, whilst he had left others that he meant to be seen in an exposed condition. A jury of Europeans having been called together, they recorded a verdict of "suicide during temporary insanity," thereby securing to the deceased those funeral rites which were denied to the remains of the late Mr. O'Brien.

MADRAS.

THE *Madras Journal of Education*, with reference to the appointment of a new Director of Public Instruction, says that "the deliberate choice of Government has fallen on one outside of the department, Col. Macdonald, an officer of the Staff Corps, lately Registrar General of Assurances. That the appointment is a slight on the department is, of course, too palpable to need statement. Educational officers have, over and over again, been declared entitled to *every post* in their department; and the appointment to its head of one not in it declares it to be the opinion of Government that no one in it is qualified. This is the plain fact, however it may be glozed over. We can only deplore the condition of the department—or, what Government declares its condition to be. So much for the department. Of Colonel Macdonald we long ago said, when he was appointed to act in the post, that we considered the appointment the best that could have been made. He has a vast deal of heavy work to do; and we have little doubt that he will do it with zeal and ability."

THE Madras Government, or Government House, has delighted to honour the Princess of Tanjore and her husband. Marine Villa has been placed at her disposal, the Governor's band serenades her nightly, and feminine durbars have been held in her honour. All this is, perhaps, as it should be, but it brings into more prominent notice some recent omissions to pay due respect to princely visitors. The Maharaja of Travancore lately visited us. His Highness is a reigning sovereign, and, of course, a person entitled to much more honorable treatment than a merely titular princes can lay claim to. Yet he was permitted to be the guest of a private citizen, and was offered no attentions or honours save those that he was strictly entitled to by the law of custom. This is, politically, a serious blunder. We know that in India, more than any country upon the face of the earth, these matters are deemed important; and we can well imagine the Maharajah comparing with some bitterness the treatment accorded to him, a sovereign prince, and that accorded to a private lady of title. The sympathy of woman for woman is a fine thing, but it should not be allowed to perpetrate political blunders.—*Madras Times.*

THE present hotels in Madras, excluding Black Town, are nine in number. They were formerly private residences, and are held at very high rents; they were not intended for, and are not adapted to, their present use; there is consequently immense waste of space and material, and the accommodation is so limited that some of the proprietors have to squeeze out their profits by feeding their guests on coarse and cheap fare, and by employing menials who have little sense of how to ensure the comforts of the visitors. We ask what would the European invalids, after having journeyed six thousand miles in search of the health and hospitality held out to them by Dr. Druitt, what would they think of the dungeons about twelve feet square, swarming with musquitoes, ill-furnished, badly lighted and ventilated, in which they would find themselves located in some of these hotels; what would they think of the filthy staircases, the abominable bath-rooms, the stinking oil lamps, the dirty table-cloths and the cracked crockery of odds and ends, with which their table is furnished; what would they think of the watery soup, the ill-cooked fish, the gruel or paste in lieu of sauce, the tough flavourless fowl, the stringy insipid mutton, the smoked butter, the rancid ghee, and the other abominations common to some hotels?—*Madras Mail.*

WE were lately informed that the local Government had issued orders to the Division Commissioners to furnish, as early as practicable, a list of employés under them, showing their relationships to other Government servants in the Province, and noting cases in which they hold lands. We now understand from Mysore that the order which never came too soon, was owing to the detection by Mr. Lacy of a gross case of malpractice in which some Brahmins are the chief actors.—*Bangalore Spectator.*

THE Government have passed orders on the letter from Dr. Burnell, reporting on the ancient inscriptions received from the districts of Godavery and South Arcot, and requested that gentleman to supply Government with 36 copies of his work on the *Elements of South Indian Palæography*, lately published, an acquaintance with which will enable public officers who are disposed to collect inscriptions to do so more satisfactorily.

NORTHERN INDIA.

IN the village of Russoolpore, Tahsil Sandila, resided Chota, a Brahmin, with his beloved wife, Belassee. On the 4th instant the husband departed this life, and his faithful spouse determined to follow him to the land of shadows in the manner most acceptable to the gods of the Hindoo race, by offering herself as a *Suttee*. Whether she formed this resolution of her own unbiassed free will cannot now be ascertained; but this much is certain, that her nephew Mukka, and others of her relatives, not only encouraged her in what they considered to be her noble purpose, but exerted themselves to secure the fulfilment of the rite. The village authorities, the lumberdar and puttidar, remonstrated against the deed, but when the relatives of the victim threatened them with the wrath of the offended gods and the curses of the Suttee, they departed to their homes without any further interference. The chowkidar, unable single-handed to prevent the sacrifice, hurried off to report the case to the nearest Thana, which unfortunately was 14 miles away. Meanwhile, after bathing, Belassee arrayed herself in her best dress and bridal ornaments, and the funeral procession set out for the *moshan*, or burning place. In addition to the relatives and friends of the deceased, a number of oilmen, chamars, and even Mahomedans accompanied the corpse, carrying the materials for constructing the sacrificial pyre.. As a sufficient supply of wood could not be obtained quick enough, dried cow-dung was substituted. A large pile of this being heaped up, Belassee was seated on it with the corpse of her husband in her lap, and she was then buried up to the neck among *kunda*, or dried cow-dung. The whole was then covered with bundles of straw, and Mukka, her nephew, handing a light to the *Suttee*, she herself set fire to the pile. The victim is stated to have sat calm and quiet amidst the roaring flames till she died; the pile being reduced to ashes in about three hours.—*Lucknow Times.*

WE have reason to believe that the man who claimed to be Rughbir Sing, the Rajah of Landhoura, has been fully identified at Saharunpore as a low caste Sikh from Kushiarpore. The Government of the North-West seems to have acted with great promptitude and good sense in reference to this matter, At one time we rather feared the development of a regular Tichborne mystery in connexion with the Landhoura case. The credulity of the natives in the Saharunpore district was no doubt stimulated by what they erroneously conceived to be the sympathy of the High Court. A good deal of embarrassing support seemed likely to be available for any civil claim that might have been advanced, supposing the claimant had found backers ready to carry on the war. It thus became important in a high degree that the truth should be aacertained at once. The Government, therefore, undertook an investigation without delay, and as we are now enabled to state, with complete success. The man who professed to be Rughbir Sing has been arrested and tried under a section in the Penal Code, which provides for the punishment of persons who deliberately make false statements in the course of criminal proceedings. The false statemant in his case was, of course, the allegation that he was Rughbir Sing. The present decision, therefore, which convicts him of being another man, puts an extinguisher once for all on any schemes that may have been afloat for an organised attack on the Landhoura estates.—*Pioneer.*

IN a lecture on vaccination, delivered and lately republished by Lala Lachmi Narain, of Bareilly, we have an explanation of the curious fact that *mallies* are always called in by the friends of small-pox patients. It appears that in the good old primitive days of Hindooism small-pox was recognised as a disease resulting from internal heat, to be counteracted in some degree by a diet of cooling vegetable food. When, therefore, a case of small-pox was announced, the first person to find was the *mallie*. In the lapse of time, however, and the growth of a complicated superstition, the original object of the *mallie*'s attendance has been lost sight of, and he now presides at the sick bed by virtue of some mysterious prophylactic power supposed to be *inherent in mallies*. Where once he brought his cooling salads, he now brings only a *locus-pocus* charm. The author of the work we quote from urges on Government the advisability of making vaccination compulsory, founding his appeal on the ground that not only does vaccination *not* concern the religious prejudices of Hindoos, but that it is directly enjoined in the Dharm Shastras. If the native press (by way of variety) would take an interest in any "burning question," it might do much good by finding out whether the Lala's opinions are commonly held by native gentlemen of position.—*Idid.*

IT has been elicited that the management of the Lahore Derby Sweep advertised in some Indian Newspapers is not deserving of public support. This has been obtained through the Police.

WE are sorry to hear from Baroda that five deaths have taken place already among the Europeans in the Baroda Field Force. This is a higher percentage of mortality than occurred in Abyssinia during the same period of time. Indeed, now that the heat in Baroda has become intense, we are afraid that the medical authorities will have an anxious time of it between this and the end of the rains. It should become an earnest matter of inquiry whether the state of affairs in Baroda is such as to necessitate the keeping of any troops at all under canvas at the present time of the year.—*Bombay Gazette.*

A CORRESPONDENT of the *Delhi Gazette*, writing from Simla, and speaking of the visit of the Maharajah of Kashmeer says:—"It will be a happy day for the sanitarium when this potentate betakes himself and his belongings away, for his host of followers are anything but convenient, and are a great drain on the water-supply and the produce bazaars. When they go, they will leave the hill sides in a state such as that depicted by Dr. DeRienzi when he reported on the station."

BURMA.

THE recent murder of Mr. Margary of the Burmo-Chinese Expedition, has caused a very great panic among the Burmese population of Prome; who anticipate that the result will be a war with Upper Burma. Merchants and tradesmen are the most concerned in it, and have commenced selling off their stock with very small profits, simply to get rid of the burden.—*Rangoon Times.*

WE are told that Chinamen are forbidden to leave Mandalay, and that the exportation of goods from that capital is prohibited, and again that most oppressive levies are being raised in all the large towns in Upper Burma. These rumours are doubtless the offspring rather of men's fears and hopes than of their information; but they sufficiently point the lesson, which, in the interest of this province, we most respectfully and earnestly beg to impress upon our rulers. *The country cannot long endure this suspense.* Already, as we and our contemporaries have pointed out—trade is stagnant, business with Upper Burma is *nil*. The godowns of our merchants already suffering from plethora, find no vent, Native dealers fear

to invest, no shipments inland are made. On the contrary, orders go by every steamer for the return of goods despatched months ago —to Myingyan, Mandalay, and Bhamo. The margin of profit before was absurdly small. The goods must be returned at ruinous loss. Worse than this, the harvest for next year is being imperilled. Cultivators fear to sow when they know not who will reap. The consequences will be most disastrous.—*Rangoon Gazette.*

FAILURES amongst the Chinese traders of Rangoon have begun, and as their dealings are largely in up-country produce and in shipments to Upper Burma, it is difficult to say where they will stop. Some Chinese firms are interested to the extent of some lakhs of rupees in piece goods and produce in Upper Burma, where owing to the misunderstandings which have arisen between the two Governments trade is at a stand still.—*Rangoon Mail.*

ECCLESIASTICAL.

THE operations of the S. P. G. Society in the Ahmednuggur districts are still continued and with many of the same unfortunate effects as have been previously noted. But the missionary in charge is able to report, "So far as we can learn, the effect upon the intelligent and leading men in our churches is to awaken a deep aversion to ritualistic dogmas and forms, and greatly to strengthen their attachment to the simple church organization and Scriptural doctrines they first received."

PASTOR KASSAMBHAR of the Sirur church is devoting his leisure time to the translation of the Koran into Marathee, and has already translated more than half of it.

AN interesting account is given of the thorough conversion and baptism of an old watchman of the village of Walwade, together with all his family. The people of Walwade were much stirred up when they found that their watchman had actually become a Christian, and made an effort to have him removed from his post. But the Tahsildar of the district, a Musalman, declared that he had a right to embrace Christianity if he chose to do so, and that the fact that he had done so constituted no ground for his removal from his post.

AT Satara, the Rev. Mr. Winsor, with a view to create greater confidence between the mission and the village people has established a Boy's Industrial Home, to instruct boys from the surrounding villages not only in the common rudiments of education, but in the simple industries of their people. Sixteen boys have been already gathered to start the school, and the enterprise is sustained at present by private funds.

AS showing the extreme diversity of opinion which obtains in London on the mission of Messrs. Moody and Sankey, the following sentences from two of the leading weekly reviews may be placed side by side :—

Spectator.	*Saturday Review.*
Messrs. Moody and Sankey appear to be business like, amiable, at heart modest, and thoroughly sincere men. Mr Moody's preaching is capable of pathos and even tenderness now and then. Mr Sankey's main power is in his solo-singing, which is full of sweetness and genuine tenderness of tone.	Messrs. Moody and Sankey are, no doubt, sincere, religious men, who honestly think that they are doing good. Mr. Moody is a ranter of the most vulgar type. Mr Sankey's singing is something between a howl and a wail, which makes one think of a melodious costermonger crying his cabbages.

MISCELLANEOUS.

SIMLA is gradually resuming its wonted appearance as the summer retreat of irritable old colonels with "grievances," superseded civilians, also with grievances, and a large bouquet of spins. During the past week the possessor of the "Garden of the World" has been enlivening our Capua with a regiment of retainers from Kashmeer, and all the paraphernalia which garnitures an Eastern King. On arrival, His Highness was presented with about half a ton of fruits and sweetmeats.

THE "persecuted prince" remains *in statu quo*; but the decision of his case, if we may trust the daily papers, will be announced in a day or two. The conclusion is that the Gackwar's guilt is held to be fully proved, that his banishment from Baroda is consequently inevitable, but that the State will again be made over to independent native rule. When Sir Lewis Pelly took upon himself to set things straight at Baroda, there were only two thousand rupees in the treasury; his successor, Sir Richard Mead, takes office with an exchequer of fifty lakhs. During the administration of the former eight lakhs were spent on account of the Commission, arrears of military pay, and outstanding debts.

"STRIKES" are coming into fashion even amongst the timid population of India. From Baroda there is news of a somewhat serious uprising on the part of the ryots in a district called Atarsumbha. Five hundred men are said to have been "in arms." From Travancore, also, there is a rumour to the effect that a small body of armed peasantry have caused the despatch of a detachment of the Nair brigade to Paliport.

SPORT is looking up in the north, the first "meet" of the Cawnpore Tent Club having gone off in brilliant style. A magnificent stud of horses put in an appearance and the hunting lasted three days, the Ganges Cup being won by a 13-2 Arab and a soldier-civilian of the Oudh Commission.

IT is probable that the reception given Mr. Anthony Trollope in the Sicily of India has led him to forego his intended visit to the Peninsula. One of the journals published in Colombo has thought well to tell Mr. Trollope what he should, and what he should not, say with reference to the Island and its inhabitants, the planting-portion of whom are indignant at the aspersions cast upon them, and entreat the distinguished novelist, in a multitude of letters, to either write nothing at all or immortalise them as being the most upright, conscientious and patriotic bucolic aristocracy on earth.

A PAINFUL case of *suttee* has occurred during the week at the village of Russulpore in Oudh. Such episodes are happily rare, but there is an epidemic of suicides now prevalent in Bombay, the death of one teacher in the Diocesan Schools having, we regret to say, been followed by the suicide of another school-master attached to the Byculla Institution.

THE Western Capital is in commotion on account of the outbreak of cholera there, at Nassick, and Baroda, where it is a wonder that the pest does not take up its permanent abode. Of all filthy holes in India, Baroda is the worst. In Nassick the disease is epidemic and fears are expressed that the camp at Deolalee will be attacked. Every precaution is being taken, but, unfortunately, the town is now full of excited devotees, drawn thither by the festival of Ram Nowmee. At Tajpore, also, cholera is raging, and from several towns of the North, West come tales of death from the same cause.

MUSSOOREE and the adjacent hills are filling rapidly with dusty travellers from the plains. There the fresh breeze and trees undisfigured by dust, water that needs no icing, and a hundred other charms which the dwellers down below cannot realise, all tend to flood the bungalows with occupants hungry after a glimpse at a snow-scene and mountain solitude.

THE past week has seen the publication of a brief account of what has been done in the Duffla country. The field force was composed of nine hundred Native Infantry, two mountain guns, a detachment of Sappers, and a score of Frontier Police, there being in addition twelve hundred coolies, sixty elephants and eighty-eight boats employed in the transport service. Borpani, which may be regarded as in the enemy's country, was reached on the 10th December, and four days later an advance was made to Herjoolee. By Christmas Day more than half the work had been done, and at the beginning of the new year every captive was surrendered with the exception of two. One of these, strange to say, decided upon remaining with his Duffla master, but the other, a little girl, was only too glad to leave the scene of her captivity. After this hostages were secured, and the headmen promised to behave themselves in future; a promise which they have already broken. The survey party attached to the expedition, have completed about 530 square miles of the hill country, and 1,000 more have been laid down for rough reconnoissance. A large collection of plants, illustrative of the flora, has been obtained, together with a number of birds, insects, and shells.

CABUL affairs are still very complicated. The Ameer has sent a force to Lalpoora, which was occupied after the flight of its Khan; the Michni route between Peshawur and Cabul has been closed by order of the Governor of Jellalabad till there is a prospect of peace. A faction fight is imminent among the Momunds, and in view of this and other disputes, Shere Ali is reorganizing his army, arsenal, and magazines. There is a rumour in the Peshawur Bazaars that Ayoub Khan has re-entered Herat, but we expect he is too wise to have left Meshed.

PUBLIC feeling in Rangoon is regaining its former tone, but that there has been a panic is evident from the large number of firms which have become insolvent since the Karen boundary question arose. Some of the natives are reported to be converting their property into money and disappearing in the jungles. The troops sent from Madras are still in motion, and Her M's. S. *Briton*, lately employed on the Somalie coast, has received orders to proceed to Burmah.

THE Naga Expedition may be regarded as at an end. Many villages have been burnt and the enemy demoralised, the Ninoo tribe suffering most severely. Before the arrival of our troops, the enemy said: "Oh, the sahibs, will come and destroy our villages and perhaps stop one night, and then go away. If we get out all our goods into the jungles the harm they will do us will be very trifling." Quantities of gongs and guns were found in hollow trees, one trunk containing Holcombe's watch, and another the murdered sepoys' cooking utensils and bayonets.

RUGHBEER SING, the Indian Orton, who pretended to be the Rajah of Landhoura, has, we believe, been identified at Saharunpore as a low caste Sikh. Native feeling is in favour of the man, and notwithstanding the facts elicited by Government, will probably continue to be so, as the claimant tells his story in a style to attract the attention and sympathy of his countrymen.

SIR RICHARD TEMPLE'S visit to the head-works of the Soane Canal was marked by his usual energy. He drove sixty miles in an open wagonette, and inspected the works throughout. The schools at Dehree were also visited, and one of the scholars distinguished himself by covering 18 feet 3 inches in a long jump, and by throwing an 18 lb. shot a distance of 43 feet. On the 17th His Honour held a durbar at Behea for the purpose of conferring Sunnuds and Khilluts upon those native gentlemen who exerted themselves during the famine. An address was presented to Sir Richard, who in reply told the assembly that Government would be well satisfied if, in return for the expenditure incurred during the distress, "You foster sentiments of abiding loyalty

to the British name and nation; manage your estates considerately and well; cherish your tenantry; and behave towards your dependents with the same spirit of benevolence as that which the Government evinced towards you last year."

WE understand that Government will in all probability sanction the transfer to Simla of the magnificent set of astronomical instruments now in charge of Colonel Tenant at Roorkee; and also the establishment at the former station of a permanent observatory, under the direction of the gentleman whose observations of the late transit of Venus at Roorkee elicited so much admiration.

FOREIGN SUMMARY.

FRANCE.

MARSHAL MACMAHON has proved that he will not consent to finally break with the partisans of the Prince Imperial, or appoint a Minister of the Interior who is likely to turn them out of the Prefectures. It was known that the Duc d'Audiffret-Pasquier was disposed to weed out Imperialist officials, and that he had even demanded the removal of Bourbaki and Abbatucci from their military commands as a condition of his accepting office. It was determined accordingly to dispense with his services. The Marshal is well disposed towards Prince Louis Napoleon, and the Duchess of Magenta still more so.

THE National Assembly having adjourned till over Easter, at this moment France is profoundly tranquil; and nothing is wanting to herald in auspiciously the holiday.

The commission nominated by the Prefect of the Seine for clearing the ground for the erection of the Church of the Sacred Heart on Montmartre has just fixed the indemnity, amounting to 700,000f., to be paid to the owners and occupiers of the houses which it is found necessary to expropriate for the site, Amongst the latter is the well-known No. 36, Rue des Rosiers, visited by so many English tourists in 1871 and succeeding years, and in the garden surrounding which were shot, or rather murdered, the Generals Lecamte and Clement Thomas. An expiatory church could certainly find no fitter site. The ground about to be cleared, including that on which the sort of lighthouse called the Tour de Solferino stands, will amount to about six acres.

An amusing scene took place the other day at the Café de la Paix, the rendezvous of the Bonapartists, which is situated in the same block as the Grand Hotel. Some few months ago, a Hungarian or Polish pianists, Mdlle. Olga de Janina, arrived in Paris. By way of making herself known, she did not, as *artistes* of a more ordinary stamp would have done, give a concert; but she went about in male attire, gave herself airs, *a la* Lola Montes, and wrote a book in which she gave very minute details of a *liaison* with the Abbé Listz. The book was seized as immoral, which immediately secured a large sale for it, and Mdlle. Olga became a lioness for a few weeks. She advertised a concert a few days ago, and one of her friends, a priest, went to the office of the *Pays* to ask M. Paul de Cassagnac for a puff. He flatly refused, and hinted that M. l'Abbé was compromising the honour of his cloth in undertaking such errands. Back went M. l'Abbe to Mdlle. Olga to complain of the way he had been spoken to and she had been spoken of. Mdle. Olga thereon put on her masculine garb, took down her riding whip, rushed off to the Café de la Paix, went up to Paul de Cassagnac, and challenged him to fight a duel. Well, of course he laughed; whereon the ferocious Olga struck him with her whip across the face, probably with a view to get the Bonapartist champion to "give her satisfaction." Meanwhile the police have prohibited her concert, and it is said that Paul de Cassagnac will bind her over to keep the peace.

THE spy mania still prevails in some parts of France. Bands of gypsies, it seems, are traversing the Loire and the neighbouring Departments, and a local paper gives an evidently highly exaggerated account of their composition and movements. It alleges that Prussian spies have joined the gypsies—men with fair complexions, well-dressed, with a military bearing, tolerably fluent in French, and well posted up in the character and position of the mayors to whom they apply for leave to erect a tent for a day or two.

GERMANY.

THE Emperor of Germany completed his seventy-eighth year on March 22. His Majesty received the congratulations of the family of the Crown Prince and Princess, the other members of the royal family, and the numerous German and foreign princely personages now in Berlin.

The bill for suspending States grants to the Roman Church has been steadily advancing in the Prussian Diet. Its provisions have been made more stringent, and Prince Bismarck must feel that he is the hero, not of a mere ovation, but of a triumph.

The Bishop of Münster was arrested last week by the police, and conveyed by diligence to a prison for a term of fourteen days. This is the third attempt at arrest which had been made, for the police had called at the palace on two successive mornings, but the prelate having timely warning, had left, on the first occasion to visit a friend, and on the second to inspect a distant part of his diocese.

A Berlin telegram to the *Morning Post* says that in consequence of an Ultramontane member of Parliament having read out the text of the Pope's Encyclical in the Chamber, the President declaring himself powerless to prevent it in accordance with the standing orders, the National Liberals are about to propose a resolution modifying the standing orders so as to make the reading out of documents dependent upon the sanction of the President. The despatch adds that the National Liberal party have resolved to break off all intercourse with the Ultramontane members.

Herr von Nathusius, the chief editor of the *Kreuz Zeitung*, has been sentenced to a fine of 600 marks, or a fortnight's imprisonment, for having published an article of an insulting character against the Supreme Ecclesiastical Tribunal.

SPAIN.

THE manner in which the Spanish press is treated by Government daily assumes a more arbitrary character. The authorities prohibited the publication of a Paris telegram announcing Cabrera's manifesto, and the *Iberia* had its circulation suspended throughout Spain for publishing it. All telegrams on reaching Madrid from abroad, even those containing nothing but commercial or personal intelligence, are detained for several hours at the Ministry of the interior.

Cabrera's movement of defection from the Carlists seems a failure He does not appear to have been followed by any considerable numbers. The Legitimist papers contrast Cabrera's present conduct with his refusal in 1839 to recognise the convention concluded between Espartero and Maroto, the Carlist commander. On the former despatching a courier to him with a copy of the treaty, Cabrera tore it in pieces and threatened to shoot the courier if he did not leave within two hours. In a proclamation to his troops Cabrera denounced Maroto as an infamous soldier who had sold his honour for gold, and invoked everlasting opprobrium on Espartero for resorting to such base and dishonourable devices.

General Cabrera has taken up his quarters at Biarritz, where he has organised a veritable and somewhat singular administration. He is surrounded by fifteen or twenty Spanish officers, whose business it is to put themselves in communication with the officers and soldiers of the Carlist army, and to obtain adhesions to the treaty signed by Cabrera, and to the proclamations which he has addressed to the nation and to the army. Every day some members of this staff leave Biarritz and enter Spain, where they seek to accomplish their mission, though naturally running the greatest risks. Cabrera has succeeded in making those who are about him feel that there is only one hope for the salvation of Spain—namely, the cessation of the civil war which is raging in the Peninsula. Don Carlos has formally deprived General Cabrera of all the honours and titles conferred by his predecessors, reserving to himself the right in the event of his capture of "handing him over to the proper tribunal on the charge of rebellion and treason." A despatch from the other side says:—"Cabrera will be received with honours due to the rank of a Field-Marshal."

The Government have demanded the extradition from Germany of Don Alfonso, brother of Don Carlos, on the ground that he committed various acts of felony, such as murder, arson, &c., while in arms against the legitimate Government of his country. Don Alphonso was staying in Bavaria, between which country and Spain an extradition treaty is in full force; but has prevented any possible complication by crossing the River Inn into the secure haven of Austrian territory. No extradition treaty is in existence between Austria and Spain. The Infante, while in Bavaria, asked for an interview with the King of Bavaria, but was refused. He has been more fortunate at Vienna, where, upon his arrival, he immediately sought an audience with the Emperor, which was granted him the same day. Don Alphonso, who is accompanied by a Carlist general, acting as aide-de-camp, resides at the palace of the Duke of Modena, who gave him a hearty welcome. The Infante afterwards proceeded to Frohsdorf on a visit to Count Chambord.

Senor Castelar has resigned his professorship at the Madrid University, owing to the reactionary educational policy of the Government of King Alphonso.

Advices from Madrid, received in Lisbon, state that the Spanish press is being treated with unusual rigour by the new Government. No foreign telegram can be published which has not been examined at the Ministry of the Interior, and no Legitimist papers are allowed to enter Spain.

ITALY.

THE Roman clerical journals report that a "horrible sacrilege" has been accomplished under the very eyes of the deeply-afflicted Vicar of Christ. Rome, they say, has been profaned by a new and enormous scandal, the opening of a Masonic temple. The *Osservatore* suggested that the time when this "abominable act" was being consummated the faithful should make a demonstration by ascending the Scala Santa upon their knees.

THE new Baptist chapel in Rome was opened on March 21 for service. Eleven Italian communicants were present, and 160 Baptists from England and elsewhere. Other denominations were also represented. Addresses were delivered by the Rev. Mr. Wall, Deputy Mazzarella, the Rev. Mr. Edwards, of Torquay, Signor Rossetti, Signor Grassi, &c.:—

"The chapel is situated in the Piazza San Lorenzo. The premises were bought by the Baptists for 12,000*l.*, and were then converted into a place of worship. There are 300 seats. On the left there is an unfinished building, which includes a tract depôt, printing-office, and infant school. The new chapel is called the Apostolic Church of Christ. The pastor is the Rev. James Wall. He has two assistants. Connected with this chapel is that of the Cavalier Paolo Grassi, formerly a canon of Santa Maria Maggiore. The Baptist converts of both churches now take the sacrament together. In the afternoon Dr. Underhill, the secretary of the committee of the Baptist mission, preached a powerful sermon from the 15th chapter of Romans. There was a large congregation of English and Americans."

NOTWITHSTANDING rumours to the contrary, the Pope's health was never better. He has just received 10,000 francs and a letter of affectionate loyalty from the Comte de Chambord. It must cost his Holiness a struggle to forgive that unlucky Prince for throwing away, as he did, his own chances and those of a restoration of the Temporal power together. The Pope implored him to listen to a compromise in the autumn of '73, and probably the Comte de Chambord would have yielded had he understood the temper of the French people. No one was more astonished than he at learning that his last declaration had destroyed his party.

SWITZERLAND.

THE National Counsel, by 74 votes against 25, has decided to adopt no resolution in reference to the appeal presented to it against the order issued by the Government of Berne forbidding priests removed from their benefices from sojourning in the districts of the Jura. It wishes to leave the Federal Council time to examine the question from the point of view of the new Federal Constitution.

TURKEY.

IT is stated by the *Levant Herald* that, instead of the famine in Asia Minor having ceased its ravages in any one district, it appears to have gained in intensity everywhere :—

"In the city of Angora itself, though bread is now sold at a comparatively cheap rate, many of the poor have not the means of purchasing, even at the lowest prices. They sold everything they had last year, and, being without work now, are as dependent on charity as they were in November. One of the reports read at the meeting of the Relief Committee at Constantinople on the 9th stated that in the district of Boghazlian very great suffering prevailed, and some deaths from starvation had occurred. In a village of 200 houses sixty-five persons had died of starvation in a few weeks. One of the inhabitants had taken his wife to a neighbouring village, and sold her for eight measures of wheat, but the buyer ultimately returned her. In another village, containing eighty houses, six persons had recently died of starvation, and the greatest destitution prevailed. There, as elsewhere, no cattle or sheep remained."

WE learn from the Memorial Diplomatique that England and Russia are represented on the mixed Commission sitting at Constantinople to settle the boundary between Turkey and Persia. The English commissioner is Sir Arnold Campbell, Consul-General at Bagdad : the Russian Colonel Zeloni, military attaché to the Embassy at Constantinople. Who are the Persian and Turkish commissioners we are not informed. Nor does it signify. The Turco-Persian Boundary Commission is a very old *partie carrée*, in which the game survives the players. It has been sitting off and on since 1848. It was about that time that by a curious coincidence the Turkish and Persian commissioners quitted the game and the world in one day. The survivors were Count Meuravief and Sir Fenwick Williams, who turned up together again at Kars, when by another curious coincidence—a victory having been obtained over the Russians by General Kmety—the English commander forbade the pursuit, and a few weeks afterwards surrendered the town. This quartette party is so pleasant to some of its members that they will never finish the game. The boundary will never be settled till the Turks and Persians have sense and patriotism enough to settle it by themselves.

AMERICA.

THE announcement that Dr. M'Closkey, the Archbishop of New York, was to be made a cardinal, seems to have been very favourably received in America. The *New York Tribune* says that some persons would, no doubt, be disturbed by the appointment as evidence of designs against the faith, if not the liberties, of the American people. "Most of us, however," it adds, "will be disposed merely to congratulate our fellow-citizen upon the distinction conferred upon him, resting asssured that his red hat will have no appreciable effect upon the destinies of America." The *New York Herald* says that the act of the Pope in making the appointment will be received with universal satisfaction by the American people, "without regard to their faith."

A despatch from Salt Lake City, published in the New York papers, states that, on Feb. 25, Judge M'Kean gave a decision in case of Ann Eliza Young's (the wife of Brigham Young) application for divorce and alimony. He ordered that Ann Eliza was to receive 3,000 dols. attorney's fees, and 500 dols. per month alimony pending the trials the alimony to date from the filing of the complaint, which was about twenty months ago. There was loud applause in the court room after the close of the reading of the decision. Judge M'Kean, has also made an order that within ten days from service Brigham Young shall pay 3,000 dols. attorney's fees, and in twenty-nine days from service 9,500 dols. alimony.

NOW that the Civil Rights Bill has become the law of the land, the hotel-keepers and the theatrical managers, whom it chiefly affects, are declaring with one voice that they cannot obey it, as it would ruin their business if they admitted negroes to sit down with their white guests at table, or to occupy stalls and boxes in the theatres. At present, in some of the theatres, a portion of the "family circle" is set off for the use of the coloured people ; but no others negroes are not admitted to any part of the house, but the new law insists that no discrimination shall be made on account of "colour ;" and it provides very heavy penalties for those who insist on making these discriminations. But it is quite certain that white people will not sit in the same seats, nor eat at the same table, with negroes ; and the managers say they must choose between disobeying the law and having their business ruined.

PERSIA.

A MOST deplorable account of the condition of Persia is given by the *Allgemaine Zeitung*. The revenue, it says, is seven or eight million tomans, or three million pounds ; while the expenditure, including the lavish outlay of the Shah and his numerous harem is five million tomans. A certain sum in gold is yearly deposited in a gigantic vault, where, since the times of the early Kings, chests of gold have been placed and lie unproductive, thus gradually exhausting the wealth of the country. The Shah cannot be induced to spend any of it on railways, canals, or mines :—

"The Provincial Governors are mostly the Shah's relatives, and are devoid of any administrative capacity. Their tenure of office mainly depending on the sum they forward to the central treasury, they are sometimes superseded by men who offer to furnish a larger amount. The object of the Governors, therefore, is to extort as much rent as possible, accumulating all they can for themselves, and bribing the Shah's courtiers in order to secure their good offices for the retention of their posts. Whether the crops are abundant or deficient, the same amount is exacted, in the latter case the possessions of the peasants being confiscated and their fields becoming waste. During the great famine many more persons died from the oppressions of the Governors and officials than from any other cause. The Governor of Rascht, indeed, asked the Sultan to waive the payment of rent, and the request was granted ; but on his fall the Shah revoked his decision and appointed a new Governor, whose exactions drove hundreds of the peasants into Russian territory, where they received land and seed, with provision for their immediate wants. This exodus creating a great sensation, the Shah executed the Governor and reappointed his predecessor. But it was too late. Only the infirm, blind, and lame remained, and this province, once the richest in Persia, exporting large quantities of silk, corn, and cotton to Russia, has not yet recovered from the blow.

Considering the diamonds possessed by the Shah and his wives, he is personally the richest Sovereign in the world, but his country is the poorest which can be found. The 30,000 persons who yearly make a pilgrimage probably expend nine million rupees out of the country, and all imports have to be paid for in cash, so that gold has almost disappeared. On the sum advanced by Baron Reuter to the Shah while in Europe being paid in silver, his agents were unable to exchange it for gold. The water supply is very unequally distributed, and is not economised. Dams and canals would fertilise hundreds of miles of barren soil. The tolls levied on telegrams passing through the Persian portion of the line amount to about 5½ lacs of rupees a year ; but there is no other source of revenue besides the Crown rents. Sadr Azim is believed to be the only man inaccessible to bribes in any form, and has seen enough of Europe to desire reforms. The priests and officials are against him, but popular feeling will soon overcome the opposition of his enemies. The Shah himself appreciates European civilisation, and would readily open his purse to develop the resources of the country. But he knows that his officials would embezzle the money, as happened with silk spinning and other enterprises. He has himself to count the gold deposited in the vaults. Baron Reuter commenced his undertaking in earnest, surveying the railway and beginning the works between Teheran and Rascht. But the Russians are opposed to the scheme, and their intrigues induced the Shah to stop the operations on the plea that some clauses in the contract had not been carried out. Baron Reuter has sustained great losses, and is endeavouring to bring some influence to bear to remove the interdict. He cannot, however, institute a lawsuit against the Shah, and his materials and implements are suffering depreciation, while the English Government, whose protection he vainly solicited at the outset, refuse to interfere. His agents claim the working of two copper mines, discovered a few miles from the summer residence of the English Ambassador, but with little chance of success. Abdul Azim resides near the Shrine of Apir, about twenty miles from Teheran, within whose precincts his movements are free, but to cross the boundary would expose him to the power of his enemies. The Shah occasionally demands the surrender of persons who have fled to such shrines, but compliance is optional with the priests, and force cannot be employed in such cases."

MOROCCO.

A ST BARTHOLOMEW of the Jews appears to be at hand in Morocco. Solitary Jews are murdered by the Arabs without let or hindrance. One assassin, indeed, was fined £20, but this money instead of going to the victim's family was pocketed by the Judge. It is said that an English Consul is endeavouring to protect the Jews, but surely this is a matter within the province of Sir John Hay's duties. England is not, of course, obliged to take up the cause of the Jews throughout the world, but she has constituted herself to a certain extent the champion of civil and religious liberty, and could with very good grace direct proper representations to be made to the Sultan. Sir John Hay is a personal friend of that potentate, and ought not to have much difficulty in convincing him that it is imprudent to drive the only moneyed class out of his dominions.

SELECTIONS.

RUSSIA IN CENTRAL ASIA.

(FROM AN OCCASIONAL CORRESPONDENT.)

ST. PETERSBURG, MARCH 19.

MR. SCHUYLER'S remarkable despatch on Central Asia has naturally created a great sensation here. The public are so unaccustomed to the free criticism of official acts and to expressions of blame against individuals occupying official positions, that a document arraigning the conduct of several officers still forming part of the Administration of Turkistan necessarily produced a very startling effect. With some exceptions, the papers have, however, taken a very calm and sensible view of the question, and in one of them, the *Russian World*, Mr. Schuyler has even found a most zealous supporter, whose valour, however, in this case seems to have outrun his discretion, for he has got himself into hot water with the "censor." The Russian *St. Petersburg Gazette*, which, though not official, is the property of a Government institution, and consequently not an Opposition paper, devotes several leading articles to the despatch, which it criticizes in by no means an unfriendly spirit, pointing out that although it bears the mark of the impression made on the writer by local hostile scandalmongers the information contained in many parts of it is of so much importance as to render it advisable that the Committee framing regulations for the Adminstration of Turkistan should have their special attention directed to it.

This quiet way of looking at the matter, however, did not suit the more ardent *Golos*. It declared the allegations of Mr. Schuyler to be for the most part unauthentic, and referred its readers

for further information to an elaborate article inserted in the same issue having for its author a General Heins. Now the General is a considerable man. As he informs his readers in the article in question, he was appointed a member of the "Committee on the Steppes" in 1865 and in that capacity worked for two years in organizing the administration of the Kirghize country. After that, till 1869, he was Chief of the Chancellery of General Kaufmann, what would be called by us Secretary to the Government of Turkistan. He had, therefore, some right to come before the public as a competent witness, and as he has left Turkistan for more than six years, his testimony could be accepted as an impartial one. This testimony is to the effect that during his whole stay in Turkestan, he had only heard of a single case of misbehaviour on the part of a Government *employe*, and that in that case the said *employe* was duly punished. The General admits that other cases may have happened since though they have not come to his knowledge, but even if they had surely it did not lie in the mouth of an American statesman to say evil things of the Russian treatment of Tartars; he ought to look at home, and criticize the policy of his own countrymen towards the North American Indians.

The *Russian World*, therefore, took the General to task in an article which has brought the ire of the "powers that be" on its head. It denied the General's competence or impartiality in the controversy, accused him of being the author of the obnoxious Regulations for the Kirghize which had been alluded to by Mr. Schuyler, and which had caused bloodshed and other mischief, and called upon the Government to institute a Commission of Inquiry into certain cases of abuse of power, which are given in detail, and the correctness of which it boldly challenges.

The *Moscow Gazette* has also its say on the subject, but it dwells chiefly on Mr. Schuyler's criticism of the military arrangements of the Khiva campaign, showing that it would have been unwise to risk the success of the campaign, and with it the *prestige* of Russia in Central Asia, by sending only the Orenburg column against Khiva, and that if that column virtually took Khiva single-handed, its success was owing in great part to the co-operation of the other columns by the divisions thus created in the forces of the enemy. I confess that the *Moscow Gazette* seems to me to have the best of the argument on this point.

The particular instances of oppression or abuse of power brought forward in the despatch are not denied except in a general way, as, for instance, by General Heins, when he asserts that during his two years he had only heard of one case. How far Mr. Schuyler's information may be authentic he has given us no means to judge, but no one acquainted with the East will think it improbable that such cases must often occur in an isolated country, administered by badly-paid officials of imperfect training. Mr. Schuyler suggests as a remedy better supervision and severe repression; but I cannot help agreeing with some of his critics that the remedy would be the introduction of an adequate scale of pay, so as to induce gentlemen of principle and education to leave their own country and to devote themselves to the interests of their new home. The formation of a "Central Asia Staff Corps" on the model of the Indian Staff Corps, with salaries on the Indian scale, and a system of strict examinations in the Oriental languages, would soon provide a body of efficient and reliable officers, whose administration would have to fear no visits from American diplomatists.

THE OLD HEBREW CANON.

In a farther reply to "Objections to 'Literature and Dogma,'" Mr. Mathew Arnold, whilst discussing the formation of the canon of the New Testament, is led into giving an outline of the history of the Old Testament canon which may interest many readers. In the Hebrew Bible, he says, the Book of Joshua stood at the head of the second instalment—the first being, of course, the law—"the eight books of Prophets' Nebüm, as they were called":—

For prophecy and the prophet were the force and glory of Israel's religion; and the Books of Joshua, Judges, Samuel, and Kings, which we call historical, were at Jerusalem prized chiefly as the records of many a word and deed of prophets anterior to the age of literary prophetic compositions, and went by the name of *earlier Prophets*. Isaiah, Jeremiah, Ezekiel, and the book of the Minor Prophets, were called the four *later Prophets*.

The third instalment of the Bible had the name of Ketubim, translated by Jerome *Hagiographa*, but simply meaning *writings, Scriptures*. There are the "remaining writings" mentioned by the translator of Ecclesiasticus. They were nine in number, and the twenty-two books of the now completed Canon thus answered to the twenty-two letters of the Hebrew Alphabet. At their head was placed the last book of the second formation of authorised Scriptures—"the things of David," the Psalms. This admirable book with its double merits, merit prophetic and religious, and merit poetic and literary, might well serve to usher in and commend a series of mixed character. Early works of the highest poetical value, not hitherto included in the Canon, such as the Book of Job, this series adopted and saved; early works, also, of the highest ethical value, such as the Book of Proverbs. It adopted contemperary works like the Book of Daniel—works which reflected and powerfully engaged, as we can see by the prominence of the Book of Daniel at the Christan era, the feelings of the time. It adopted works like the Book of Ezra, which glorified Jerusalem and deeply interested the Temple-hierarchy, whose sanction made the books canonical. But in gravity and indispensableness for the proper religion of the Old Testament, this late instalment of "the remaining writings," cannot certainly, after we leave the Psalms, in general quite rank with the two earlier instalments of Law and Prophets. Simply to recite the last names in the Hebrew Canon is to mark sufficiently this somewhat lower character of the final gleanings. The last books in the Hebrew Bible are not, as in ours, the Minor Prophets; they are Esther, Daniel, Ezra, Nehemiah, and Chronicles.

During the two centuries between Judas Maccabeus and the fall of Jerusalem, materials for a fourth instalment of Scriptures accumulated. In the deep spiritual agitation of those times, religious books which met the needs of the moment, and which spoke a modern language easy to be read and to be understood, were greatly in request. Particularly was this the case among the Greek Jews, and at a distance from Jerusalem. The hierarchy at Jerusalem had its authorised list; but at Alexandria or in the provinces additional Scriptures were freely read and became popular. The additions to Daniel and Esther, the book of Baruch, the book of Tobit, Wisdom, Ecclesiasticus—all the books which we find in our Apocrypha—were Scriptures of this class. Into the Greek Bible, the Bible for the great world and in the then universal language, they made good their entrance.

. . . . . .

The enlarged Greek Bible was the Bible of Christians, and Greek was the language of Christianity. Rabbinism now deplored the day when the Bible had been translated into Greek. It re-translated it into Greek in an Antit Christian sense; it sternly rejected the Greek editions, it mocked at the ignorant Christians who received them. But the Greek Bible, with all its books, had become dear to Christians, and were by the Christian Church preserved. Learned men, like Origen and St. Jerome, knew well the difference between the books of the Apocrypha and the books of the Hebrew Canon; but this difference was by the mass of Christians unregarded or unknown, and the Latin Bible inevitably reproduced the books of the Greek. The African Synods, at the end of the fourth century, mark the time when the distinction between the Apocrypha and the Hebrew Canon had become so generally obliterated in the West, that the books of both were stamped by the Church as having one and the same canonical authority.

At the Reformation, Protestantism reverted to the Hebrew Canon. But the influence of the Vulgate, and of the Greek Bible, still shows itself in the order of the books. The Greek, and the Vulgate following it, had adopted, in place of the old and significant tripartite division into Law, Prophets, and Writings, a division into prose books and poetical books, the prophets being counted with the latter; and in arranging the books of each class, the order of date was follow. This innovation our Bible's retain; and therefore our Old Testament ends with the last of the poetical books, Malachi, instead of ending with the last of the *Ketubim*, Chronicles.

Professor Huxley contributes a highly interesting and important paper on "Some of the Results of the Expedition of H.M.S. *Challenger*." It seems at least possible that among these may be the elucidation of the origin of the clayey rocks which form so large an element in the earth's composition:—

A hundred years ago the singular insight of Linnæus enabled him to say that "fossils are not the children but the parents of rocks," and the whole effect of the discoveries made since his time has been to compile a larger and larger commentary upon this text. It is, at present, a perfectly tenable hypothesis that all siliceous and calcareous rocks are either directly, or indirectly, derived from material which has, at one time or other, formed part of the organised framework of living organisms. Whether the same generalisation may be extended to aluminous rocks, depends upon the conclusion to be drawn from the facts respecting the red clay areas brought to light by the Challenger. If we accept the view taken by Wyville Thomson and his colleagues—that the red clay is the residuum left after the calcareous matter of the *Globigerinæ* ooze has been dissolved away—then clay is as much a product of life as limestone, and all known derivatives of clay may have formed part of animal bodies.

So long as the *Globigerinæ* actually collected at the surface have not been demonstrated to contain the elements of clay, the Challenger hypothesis, as I may term it, must be accepted with reserve and provisionally, but, at present, I cannot but think that it is more probable than any other suggestion which has been made.

Accepting it provisionally, we arrive at the remarkable result that all the chief known constituents of the crust of the earth may have formed part of living bodies; that they may be the "ash" of protoplasm; that the *rupes saxei* are not only *temporis*, but *vitæ filiæ*; and, consequently, that the time during which life has been active on the globe may be indefinitely greater than the period, the commencement of which is marked by the oldest known rocks, whether fossiliferous or unfossiliferous.—*Contemporary Review*.

COLONEL PHAYRE'S CONDUCT IN SCINDE.

Mr. Robert Phayre writes to the *Times*:—

SIR,—Will you allow me, in justice to my father, Colonel Phayre, to state the following facts in relation to his "conduct in Scinde," upon which he was cross-examined by Serjeant Ballantine? During the time that my father was acting as Political Superintendent and Commandant of the Scinde Frontier the line of policy which he pursued towards the khans or native chiefs of Beloochistan was censured in a resolution of the Government. That censure had reference to the extent of British interference in the internal government of the native States in the case of the subjects being oppressed by their rulers, and also in preventing the Beloochee States from plundering each other. The Government resolution was subsequently revoked, and, if I am rightly informed, one favourable to my father recorded in its stead. The telegrams relating to the trial now pending are necessarily brief, and, therefore, could not be expected to contain the details of the re-examination, in which my father would have an opportunity afforded of vindi-

cating his character and removing the moral slur which appeared to rest on his public conduct.

"F. X.," who also writes to the *Times*, thinks that Mr. Robert Phayre cannot be aware of the following resolution of the Government of Bombay, which (he says) has never been revoked or withdrawn, and in consequence of which Col. Phayre was removed from the office of Political Superintendent and Commandant of the Scinde Frontier, and remained out of civil employ for more than a year :—

No, 1023, May 4, 1872.

No frauds having been shown to have been committed, it only remains to consider Col. Phayre's proceedings in this case, and it is with extreme regret that His Excellency in Council is obliged to record his unqualified condemnation of them. It would seem that Col. Phayre not only instituted the prosecution of these men prematurely before the accounts had been thoroughly sifted, but that he persisted in doing so against the advice of the Commissioner in Scinde to stay proceedings. and after he had been warned by Sir W. Merewhether that the accounts disclosed no fraud.

Throughout this matter His Excellency in Council has no doubt that Col. Phayre believed that great frauds had been committed and that he considered the measures he took were necessary to enable him to unravel a gignatic system of chicanery which he imagined was being carried on to the detriment of the State. But it must be admitted that he has displayed great ignorance of matters with which, as Superintendent of the Frontier Districts, he might have been expected to have some acquaintance ; and that he has been singularly hasty and indiscreet in applying to a criminal tribunal before the accounts which he held to be suspicious had been thoroughly examined by competent persons. Moreover in neglecting the advice and warnings of his immediate superior, the Commissioner in Scinde, and persisting in a course which he knew to be opposed to the views of that officer. he has laid himself open to very great censure. Zeal and honest intentions are not alone sufficient in a public servant ; there must be skill. discretion, and proper subordination ; and in all these points Col. Phayre must be held to have been signally wanting in this instance. The attitude which Col. Phayre has assumed with regard to the Commissioner of Scinde, in connection with Khelat affairs has led to his temporary removal from his appointment at Jacobabad ; and His Excellency in Council, with much regret. is compelled to observe that the facts disclosed by these papers render it expedient that he should not be allowed to resume office as Political Superintendent of the Upper Scinde Frontier.

There can be no doubt (adds the writer) that it was to this resolution that Serjeant Ballantine referred in his cross-examination of Col. Phayre at Baroda.

With respect to the above resolution, "Fair Play" says it is only just to Col. Phayre to inform the public that soon after Sir Philip Woodhouse assumed the Government of the Bombay Presidency the whole matter was re-considered in Council, and in a Government resolution which was passed in February 1873 Col. Phayre was fully exonerated from all blame that had been imputed to him. His views on frontier policy being opposed to those held by the Commissioner in Scinde, it was not thought expedient that he should return to his post on the frontier ; but the Government, as soon as possible, provided for him in a superior appointment as Resident of Baroda.

THE EGYPTIANS AT BERBERA.

(FROM AN OCCASIONAL CORRESPONDENT.)

BERBERA, FEB. 9.

WE arrived here early this morning, and anchored under a salute from the Latif, with manned yards. The sound of the guns raised a million of birds from their various haunts, and these circling in the air, combined with the excitement of the mixed throng on shore, made quite a lively scene ; but the landing of the Pasha, followed by a string of boats, was a still more remarkable sight.

The present happens to be the season of the fairs at Berbera, when the various tribes from the interior assemble here to meet the merchants from Aden and elsewherei who come to purchase their goods and produce. The number of natives resorting hither has considerably increased since the so-called port of Bulhar has been deserted. Bulhar is simply an open roadstead, whereas Berbera is a capacious and safe port. The sandy beach was thronged with thousands of armed Somalis, bristling with spears, and each protected by a neat little shield of rhinoceros hide. These swarthy warriors were kept back on either side of a lane formed by the Arab soldiers. In the midst of them stood the Governor, with the Arab merchants on one side of him and the Somali merchants on the other, all in gay-coloured (mostly scarlet) robes of silk, satin, or more homely stuff. These gentlemen with gaudy turbans stood in military array, and bowed low and gracefully, kissing their hands and touching their foreheads when inclining, in truly Oriental style, to the representative of the Khedive of Egypt, whom they now unanimously acknowledge as their Sovereign.

The guard of honour beat drums and blew fifes, but the sound of the instruments was drowned by the not unmusical chorus of some thousands (about 20) of Somalis, who accompanied the slow movement by a dancing sort of march and shaking of bright-headed spears, with an occasional shout and leap into the air, which spoke well for the condition of lungs and limbs. At the entrance of a large canvas marquee a guard of a Somalis, armed with the native weapons, formed a double line, and not at all a bad-looking set of lithe, wiry fellows they were. The pasha took his seat on a large chair, covered with a handsome carpet, in the centre of the marquee. The Governor (who is the naval officer commanding at the station) and other dignitaries took their places according to rank. The Arab and Somali merchants, who seemed to have arranged their programme beforehand, fell into their places like a company of well-drilled soldiers, the Arabs sitting on divans and the Somalis squatting on the ground. Eastern compliments were exchanged ; war dances were performed with much fierceness. They much resembled the New Zealand war dance, although the absence of firearms made a marked difference between the two performances. After these ceremonies were over, the Pasha visited the Governor's, hut, and was presented with a hot decoction of cinnamon, served in tiny cups. This quite supersedes the coffee so universally used in Egypt and Turkey on such occasions. The next part of the programme was a promenade through the 27 streets composing the so-called town, which consists of a series of mat and mud huts, built or huddled together in a truly marvellous manner. There is ample room to enlarge this camp or town to any extent, either on the long, narrow spit of ground which forms the outer protection of the harbour or inland towads the plain between the mountain and the sea, but doubtless the huts are crowded together as being more easy of defence in case of attack. In the afternoon the merchants waited on the Pasha on board his ship, and a full explanation was given by them of the position of affairs, both commercially and politically—the latter as regards their relations with the tribes of the interior with whom they deal, and the choice of a place for landing and embarking their goods.

The long-existing feuds between the tribes of Eesa Moussa, Owwal Ahmad, and the Yunis have caused the greatest annoyance and hindrance to merchants and travellers, and now that a regular Government is established and the only port—which is Berbera—selected as the head-quarters and capital of this new Egyptian Province, petty jealousies step in and threaten to upset what is apparently a commencement of civilization and prosperity for the Somali country, in which, unfortunately, blood feuds have existed between the numerous tribes from time immemorial.

An incident has just occurred which fully and graphically illustrates this condition of things. The Pasha was landed with his Staff, accompanied by the civil engineers of the Expedition, to visit and thoroughly inspect the source of the fresh-water supply, which it is intended to conduct for some seven miles into the Settlement. The necessary preparations had been made, camels and horses had been provided, when an outbreak suddenly commenced between some of the Eesa Moussa tribe and the Owwal Ahmad and Yunis. A man was brought into head-quarters fatally wounded in the arm and lungs by a lance-thrust. No reason could be assigned for this outrage. Several prisoners were made by the Somali police, supposed to be from the section of the Eesa Moussa who had committed this assault. News at the same time arrived that the whole of the Eesa Moussa tribe were in the immediate neighbourhood of the camp, had driven off a large number of sheep and cattle, and had attacked and wounded several men of the other tribes. Under these circumstances, it was considered unsafe to send the engineer and his assistants to the water source, and the Pasha went with an escort to see what the Eesa Moussa were really doing. It afterwards appeared that all the turmoil had arisen from a dispute between some of the tribesmen regarding the hire of the horses and camels. This had led to lance-thrusts, which will in some cases end fatally. The men caught in the act were sent off as prisoners to the Latif, but in less than an hour the whole of the tribes turned out in war-like array. The Eesa Moussa, who are the terror of the place, drove off all the sheep and cattle belonging to the other tribes and the foreign merchants, and so began a regular Somali war. While riding up to the scene of action the Pasha met *en route* 11 desperately wounded members of the other tribes, among them a woman with a terrible fracture of the skull. By this time the whole of Berbera was under arms, and on the plain to the east of the town some 20,900 men, boys, and women were engaged in what would be called in Ireland a free fight. The Egyptian troops were at once called out, and stopped the advance of the numerous tribesmen opposed to the Eesa Moussa. The latter, although in number ten to one, were really the weaker, having no firearms. After the Egyptian troops had formed between the contending parties, the Pasha rode at full gallop into the ranks of the Eesa Moussa and desired them to put down their arms. This was done. Some 30 or 40 of them were taken prisoners and sent on board the Latif. There were several private fights in the hut town after the return of the troops, and the Pasha was himself struck on the head by a stone thrown by a woman while he was endeavouring to prevent the Yunis and Owwal Ahmad from demolishing the huts and murdering the women and children of the Eesa Moussa.

It took some hours to quell this riot, and no one who has not been in East Africa can imagine the Babel of sounds and the fierce gestures of these unmitigated savages. Orders were then given to the various Sheikhs to come to the Council Tent, and they were then addressed through Sharmaki, son of the late Sultan of Zayla. All spears and daggers were to be given up to Egyptian Governor ; no man of any tribe would be permitted to come within a mile of the town with arms of any sort. At this the Sheikhs murmured, and said they would be all at the mercy of the Eesa Moussa, but the order was repeated, and while the Sheikhs were reasoning with their young men an alarm was given that the Eesa Moussa were off to intercept the caravan which was overdue, and had been delayed in consequence of the hostility of this terror of the desert—the redoubtable Eesa Moussa. A message was, therefore, sent through some of the Sheikhs to tell these ruffians that if so much as a pin was stolen from the caravan or a man hurt, the 40 men of their tribe now prisoners on board the Latif would be at once hanged, and the Egyptian troops with the Yunis and Owwal Ahmad would kill every man of their tribe that could be caught, and destroy their flocks and herds. This threat had the desired effect. At about 4 p.m. a letter came off from Redwan Bey, the Governor of Berbera, to say that the Eesa Moussa had submitted ; they would restore to their owners the plundered sheep and cattle, and would lay down their arms and submit to the Egyptian authorities. Soon after this the tribe began to come into the town by fives and sixes, and the war was over.

February 12.—Landed, and went to see the wounded, who, considering the serious nature of their wounds, were doing wonderfully well. At 2 p. m. we started to visit the source of fresh water. We had an escort of soldiers and 60 Somalis taken from all tribes, in order to prevent jealousy. The source is at a place called Dubar, at the foot of the first range of hills. While on the road we saw numbers of gazelles and deer. We camped near the spring, which issues from the rock in sufficient quantity to supply drinking water and water for general household purposes for at least 20,000 souls, which is the *maximum* number of those who attend the fairs of Berbera. The temperature was 84° Fahrenheit, the water fresh and drinkable, but the taste of lime was very perceptible. The brilliant camp fires, the soldiers, and the swarthy Somalis, with their long spears erect as they sat in semi-circles in divisions of tribes, had a very picturesque effect. We walked a considerable distance in search of deer. At nightfall we were glad to stretch ourselves on our mats, and had it not been for the constant challenge of the sentries round the camp, with their monotonous shout of "*wahèd*" (one), "*etneen*" (two), "*telàtah*" (three), every 15 minutes or so we might have slept well enough, though we were told to expect the lions and other wild animals who come to drink during the night. The footprints of lions and leopards plainly showed that they visited the spot when not inhabited by so numerous a force.

February 13.—Returned to Berbera, and were received with salutes and *feu-de-joie*. News arrived that 50 laden camels belonging to the caravan had arrived and that the rest were expected next day. But one cannot believe anything these people say. They are liars upon principle. A message came from Ainterad to the effect that several of his people had been killed and wounded by the Kurum tribe.

February 14.—Weighed anchor and steamed eastwards. At 1 p. m. anchored at Ainterad. At 2 p. m. landed under a salute and with a guard from the ship. Two guns were fired in our honour. They were buried in the sand, as described by Captain Burton. The cause of the affray seemed very obscure. The injured men (some of whom had been very dangerously wounded) were examined by our doctor and then embarked for treatment, with one of the Sheikhs, whose evidence will be valuable against the Kurum people.

February 15.—Weighed anchor and proceeded to Berbera, which we reached at 10 a. m. There is no news of the caravan's arrival. Arab merchants came on board; also some Somali Sheikhs, but the latter were refused an audience until the safe arrival of the caravan. The order given to disarm the Somalis had only been partially carried out, for the arms had been stored in the huts of the Somali Chiefs and not in the Government magazine.

The roadstead of Bulhar will only be used as an anchorage; no trade is to be allowed there. It seems that the increase in the price of provisions and the diminished supply at Aden are rather due to increased demand at the Arabian Ports than to any impediment proceeding from the Egyptains at Berbera.

The trade at the Yemen ports have wonderfully developed of late, and there are regular lines of Turkish and Egyptain steamers which call at them.

The Arab tribes round Berbera are unmitigated savages, very fierce and warlike, and utterly reckless either of their own life or the life of others. They have a splendid physique and are said to be far more intelligent than the Egyptians. Most of them live entirely on the milk and flesh of their flocks, seldom touching either bread or even water. If order could be established among them, a very valuable trade would soon spring up. There are, even as it now is, large exports of coffee, ivory, indigo brought by caravans from the interior, and especially from Harar and the districts beyond it, which are quite unknown to Europeans. Vast numbers of sheep, goats and cattle are possessed by the Somalis and other tribes, and though the price of the animals has much increased, a sheep may be bought for 3s. The specimens of weapons, and above all of rhinoceros-hide shields brought back are very interesting. It was found that the shields could only be penetrated by an Enfield or Remington rifle ball.

The constitutions and warlike qualities of the Eesa Moussa are admirable. The most severe and even dangerous wounds such as would infallibly kill most Europeans seem to heal on the bodies of these barbarians in a wonderfully short time. Most of the tribes are Moslem, but not very strict believers. The extreme accuracy of Captain Burton's observations is confirmed by this Expedition. Little, if any, slave dealing goes on at Berbera and its neighbourhood. The country is a rich pasture land, gradually rising to high mountains in the interior, and the climate is delicious. Two steamers of the Khedevieh Company will ply between Berbera and Aden, so as to secure to the fortress constant supplies. Without firearms the Somalis are not very formidable, but once possessed of firearms and taught how to use them, they would become very redoubtable enemies.

EXHIBITION OF TAPESTRIES AT MADRID.

THE collection of upwards of 1,000 tapestries of different kinds which exists at the Royal Palace of Madrid may be considered the most important in Europe. The oldest specimens are those which belonged to Ferdinand and Isabella, Philip *le bel*, and the Emperor Charles V.; after these, those of the other Spanish kings of the House of Austria, and the Spanish Bourbons, and ending by those which were copied from the cartoons of Goya and others at the carpet-manufactory founded by Charles III., which still exists at Madrid.

These tapestries are stored away in the vaults of the Palace, and are well preserved, although it is much to be regretted that, instead of being folded, they should not be placed on rollers, for in several instances the creases have damaged the faces. No catalogue exists of them, nor have they ever been described in detail by any author.

During the reign of Queen Isabella it was customary to cover with tapestry the four sides of the gallery of the first floor of the Palace on certain religious festivities of the year, or at the christenings or marriages of the Spanish princes. These were the only occasions on which the public were ever allowed to see the eighty or hundred specimens which were displayed. After the revolution of September, 1868, these periodical exhibitions ceased, or were almost entirely reduced to the few regal ceremonies which took place during the short reign of King Amadeus. A plan was formed to make a museum of tapestries at the Escurial, and a commission was appointed to carry it out, The finest were taken there; but this project was never realized. and the tapestries were safely brought back to Madrid.

Mr. Layard has always shown the greatest interest and desire that these artistic treasures should be known and appreciated by the public. To his exertions we owe this temporary exhibition. Permission has also been granted to Laurent, the photographer, to reproduce the most important specimens.

The tapestries are hung, as on former occasions, on the four sides of the upper gallery, and the finest specimens have been selected. Most of them are woven with gold, and the borders alone give the most interesting details of Gothic and Renaissance ornamentation. Ninety tapestries are exhibited.

The first which command attention on entering the gallery are four silk and gold tapestries, representing the history of the Virgin. They are entirely covered with life-size figures, and the heads are drawn with a delicacy and refinement worthy of the best examples of the Italian pre-Raphaelite school. The dresses are literally covered with gold: it would be difficult to find anything finer. Next to these, there are two which represent the same subject, and three of the history of St. John, but which are more Flemish in character, but very grand. There is a smaller tapestry, which represents the Crucifixion of Our Lord, with the Virgin, and St. John, and flying angels with banderons, which is like a picture by Mantegna; and the border of flowers, angels, and shields, which surrounds it, is of the finest Italian design. Three tapestries representing the Passion of Our Lord must be added to these, for they are similar in character and manufacture to those of the history of the Virgin and St. John. They are fine in effect; but the attitudes of many of the figures are exaggerated and coarse, as is often the case in religious subjects when treated by the later Flemish masters.

Beyond are four tapestries belonging to the set of the seven capital sins, which are of a fine Italian character, and most poetical and grand in treatment,—three belonging to the history of David, which are admirable in colouring, and full of charming details,—four representing the foundation of Rome,—one belonging to the history of Coriolanus, and another to the set of the history of Eneas, and three others of allegorical subjects of the same style, which are certainly as important as any in this collection. In the greater part, the composition is detailed in an admirable manner; very often two or three subjects are included in the same picture. In one of these tapestries, which gives an episode in the history of Eneas, the priest who marries Helen and Paris., and another who kneels before an altar, are dressed in the costume of bishops of the Middle Ages. Of rather less importance are four tapestries of subjects from the life of St. Paul, and others from the history of Cyrus, Pomona, and other mythological subjects. There are six, of a smaller size, taken from subjects of sacred and profane history, and three, which are very fine, and of an Italian design, representing figures holding large geographical spheres, one of which, in which a king and queen stand on each side of a terrestrial globe, traditionally represents Ferdinand and Isabella.

Four large tapestries have been exhibited which are most interesting, on account of the historical subject which they represent, although they contain great defects of drawing and perspective. These are the Conquest of Tunis by the Emperor Charles V. They reproduce the geometrical plans and bird's-eye view of the encampment and battle, and life-size figures of the Emperor, his army, and the Moors. The figure of Barbalunga, who traced these plans, appears in every one of these tapestries. The details of the costumes and architecture are most interesting. There is a copy of these tapestries at the Palace which was made at the manufactory of Madrid, but very inferior to these.

As specimens of tapestries without figures, may be mentioned four admirable Grutteschi, in which flowers, fruits, and animals are delightfully combined; and four small balcony-hangings, *reposteros*, of a fine Raphaelesque design.

Only one of the series of the history of Noah has been exhibited. It is worthy of the highest praise; the figures are larger than life, in the fine Italian manner of Raphael and Michael Angelo. The costumes are richly brocaded with gold, and it is surrounded with a border of scenes from the Deluge; in the upper part, there are shields with quarterings of the arms of Castille, Leon, and Austria.

There are two copies of pictures, by Geronimo Bosch; the figures are minute, and part of the originals are at the Madrid Gallery. They represent the temptations of St. Anthony, and, like all the compositions of this author, so badly represented out of Spain, they are full of extravagances and phantasy.

All the tapestries which I have hitherto briefly mentioned are full of artistic merit; but the most important, for grandeur of composition, are the four tapestries which have been exhibited of the series of the Apocalypse, and four which are called the Virtues and Vices. Each of these magnificent hangings are double the ordinary size, and their composition and design may compete with the finest pictures of this period. Those which represent scenes from the Apocalypse, the designs of which have been attributed

to Mabuse, are expressed in a most admirable manner; and the different visions, the phantastic animals, and other curious details are portrayed in the highest artistic style. Those which represent the virtues and vices are also of the greatest artistic merit. The principal persons of ancient and mediæval history and mythology are reproduced in allegorical groups, and are distinguished by the virtue or vice which characterizes them, Their names are written, in Gothic letters, in old French; and in some of these tapestries, there are scutcheons with the arms of the German Empire. The author of the allegory is represented on one of them; and these tapestries are so important that they alone would furnish matter for a most interesting publication,

Six tapestries are exhibited of the nine which are taken from Raphael's famous cartoons. They certainly belong to the sixteenth century; but the design and colouring are inferior to the originals at the S. K. Museum. They are surrounded on three sides by a fine border, about a yard and a half wide, of a Raphaelesque design. The effect produced by these borders, notwithstanding their great beauty, is not satisfactory, for they take from the importance of the subject. It is probable that another series existed at the Palace, for the tapestries now hung do not appear to correspond to either of the two sets which were first made, one of which is at Rome. The Rev. W. Gunn, in his 'Cartonesia,' mentions that the second set belonged to Henry VIII., and after the death of Charles I., was bought by the Spanish Ambassador, Don Alonso de Cardenas. Swinburne mentions having seen them at Madrid, in 1775, at the palace of the Duke of Alba; and Mr Gunn says, the Duke sold them, in 1830, to Mr. Tupper, the British Consul at Madrid.

T. F. RIANO.

LATEST TELEGRAPHIC NEWS.

15TH.—The Budget returns for the year ending March 31st, show a gross revenue of £75,685,000, as against an expenditure amounting to £75,268,000, leaving a surplus of £417,000. Sir Stafford Northcote proposes a re-adjustment of brewers' licenses, stamps and taxes, thus reducing the surplus by £357,000.

16TH.—IN the House of Commons last night Mr. Disraeli, in replying to Mr. Hankey, said he apprehended the Prince of Wales would not visit India as the Queen's representative. *Obituary* :—Colonel W. A. Middleton. IN the House of Commons yesterday there was an excited and protracted debate on the motion of Mr. Disraeli to reject the petition of Prettywell accusing the Judges on the late Tichborne trial of unfairness, and demanding impeachment. The petition was rejected, Mr. Bright condemned the agitation and tactics of Doctor Kenealy, requesting him to substantiate his changes against the Judges.

17TH.—In the House of Commons Mr. Disraeli has proposed, and the House voted, to annul the motion to summon the printers of the *Times* and *Daily News* to the bar of the House. The debate on Dr. Kenealy's motion *in re* the Tichborne trial was resumed.

Germany has sent a second note to Belgium in which she disclaims interference with the Press.

The Prussian Parliament has voted abrogation of the privileges of the Catholics. The House of Lords have passed the second reading of the substitution for the abandoned Judicature Bill, but have reserved the question of Appellate Jurisdiction until 1876. In the meantime an intermediate Court of Appeal is created.

19TH.—The Emperor of Germany has written a cordial letter to the King of Italy respecting his recent interview with the Emperor of Austria at Venice, expressing a hope that this interview will strengthen the friendship between Austria and Italy. The note from Germany to Belgium states that the present international law is inadequate for mutual protection, and declares that Germany is engaged in remedying defects in the Legislature and suggests that Belgium should do the same.

20TH.—Russia and Austria are agreed to support the policy of Germany as expressed in her note to Belgium. In the House of Lords, Lord Derby replying to Lord Russell, said the note from Germany to Belgium was very friendly, and had been communicated to the other powers, and that while England had not been formally consulted he considered no ground existed for uneasiness.

In the House of Commons Dr. Kenealy's motion on the subject of the Tichborne trial has been fixed by agreement for Friday next. At the Epsom Spring Meeting the "City and Suburban" was won by Dalham—Freeman second, Tam O'Shanter third.

21ST.—A long debate was held in the House of Common on Lord Elcho's motion that the present organisation of the British Army is unsatisfactory and calculated to cause apprehension. Mr. Gathorne Hardy repeated his desire to give Mr. Cardwell's scheme the fullest trial. He was unprepared to take any step to reverse it, but admitted the necessity of thoroughly reorganizing the reserves. He emphatically asserted that Lord Elcho's views were those of a pessimist. The motion was ultimately withdrawn.

Sir George Campbell has been elected for Kirkcaldy by a large majority.

22ND—The Chinese Commissioner of inferior rank has been appointed to investigate the matters concerning the Yunnan expedition, and the murder of Mr. Margary.

Obituary :—General M. Barlow.

21ST.—The Berlin rumour that Russia and Austria had agreed to support the policy of Germany, as expressed in the note to Belgium, is contradicted.

The following military appointments are gazetted:—Colonel J. S. Trevor to be Colonel, Royal Engineers. Brevet promotions :—Major-General Richard Strachey to be Lieutenant-General; Colonel M. K. Kennedy to be Major-General.

M. Wade, British Minister at Pekin, has obtained passports for two English officials to proceed to Yunnan to investigate the circumstances of the murder of Mr. Margary.

BOMBAY, APRIL 23RD.—The Gaekwar was deported yesterday by special train, under a European guard of soldiers, to Allahabad. It is rumoured that he will be imprisoned in Fort Chunar. The Viceroy's proclamation is expected to-day.

LIST OF PASSENGERS.

THE following passengers sailed per S.S. *Peshawar*.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½ lb. and 1 lb. tins, labelled thus :—

The Rangoon Medical Hall.

Colt's New Government Army Revolver

as recently adopted for the United States Cavalry, takes the 450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

Colt's Large Bore Breech-Loading Deringer,

for the waistcoat pocket, shoots hard and straight.

Colt's Deringer Revolver

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

50, 51 & 52, ST. PAUL'S CHURCHYARD, LONDON.

LEA & PERRINS'

CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS

TO BE

The only Good Sauce.

Caution against Fraud.

The success of this most delicious and unrivalled condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

Ask for Lea & Perrins' Sauce.

and to see that their names are upon the *wrapper, labels, stopper,* and *bottle.*

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the name of Lea and Perrin's have been forged, L. and P. give notice that they have furnished their correspondents with power-of-attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.

Wholesale and for Export by the Proprietors, Worcester: Crosse and Blackwell, London, &c.: &c., and by Grocers and Oilmen universally.

To be obtained of

BISSONAUTH LAW & CO.,

Calcutta.

LIFE DEPARTMENT.

The Life Funds are free from any liability to the Fire Department by the Company's Acts 33 and 34 Victoria. Session 1869-70,

Accumulated Funds irrespective of the Paid-up Capital £2,551,589-16-7

Annual Revenue from Premiums and Interest 360,625-18-9

At the last Quinquennial Investigation and Division of Profits for the period ending 31st December 1870, the Surplus Fund divided amounted to £182,274 5 2

The value of the loading reserved for Future Profits and Expenses amounted to £601,554 0 0
Besides which there were reserved for Contingencies, &c. .. 33,925 6 2

Making a Total Reserve of £635,479 6 2

During the five years preceding 1870, the Company transacted the following new business:—

No. of Policies Issued.	Sums Assured.	Premiums.
£4,567.	£4,132,141.	£133,279 16 5.

A Bonus was declared upon the Policies of the Company on the Participating Scale, at the rate of £1 5s. per cent. per annum, which in many instances was equal to £1 19s. per cent. per annum, on the original sum assured, the principle of division being to declare the Bonus not only on the original sum assured, but also on all previous Bonus additions.

THE RATES OF PREMIUM are moderate and generally LOWER than those of other Offices.

REDUCTION TO ENGLISH RATES without Medical Certificate or fresh examination, *from the date of leaving Alexandria, or Port Said for Europe.*

NINE-TENTHS OF THE WHOLE PROFITS in the Life Business are divided amongst the assured in the Participating Scale every five FIVE YEARS.

THE NEXT DIVISION OF PROFITS WILL BE MADE AT 31ST DECEMBER 1875.

All Policies on the Participating Scale opened on or before that date, will share in the Fund then to be divided, which will consist of the Profits made during the previous Five Years.

The following Gentlemen have been appointed, with all the usual powers, as

Local Board of Directors:

F. S. Collis, Esq., Officiating Administrator-General.

CASH PRICES.

LARGE COLORED PHOTOGRAPHS.

Reproductions of some of the best works of popular modern printers, carefully colored by hand in exact imitation of originals. They are handsomely mounted on cardboard, under sunk mounts, and are framed in neat plain gilt moulding. The measurements given are for the actual size of the pictures.

LIGHT AND DRY. Size 17 by 13½ inches. In handsome Frame, 28 by 24 inches. Rs. 60.
A connoisseur visiting his cellar and gazing with appreciative admiration at his half-emptied glass.

A GOOD DRAUGHT. Size 17 by 13½ inches. In handsome Frame, 28 by 24 inches. Rs. 60.
A monk in the wine cellar of the Monastery quaffing heartily of some rare old vintage.

A DROP TOO MUCH. Size 20 by 16 inches. In handsome Frame, 30 by 22½ inches. Rs. 64.
The monk is seated on the ground, sleeping off the effects of the "Good Draught" too often repeated. The Abbot and another monk are regarding him with pious horror.

*** *The set of 3, for Rs.* 168.

NOT RECONCILED YET. Size 19¼ by 14 inches. In handsome Frame, 31 by 24 inches. Rs. 64.
A lovers' quarrel has taken place, and the couple are parting with offended yet wistful looks.

FRANZ BIDDING FAREWELL TO THE BISHOP OF BAMBURGH. Size, 10 by 13⅜ inches. In handsome Frame, 22½ by 18 inches. Rs. 34.
The page is kissing the hand which the stern prelate extends to him, while some lovely women look on, by no means indifferent, to the departure of the handsome youth.

THE EMPEROR CHARLES V. AT TITIAN'S STUDIO. After BECKER. Size 11 by 13½ inches. In handsome Frame, 22½ by 18 inches. Rs. 34.
Charles V. is sitting for his portrait, and the painter having dropped his brush, the Emperor is picking it up, greatly to the dismay of his courtiers.

THE FIRESIDE. Size 14 by 10½ inches. In handsome Frame, 22½ by 18 inches. Rs. 34.
A picture of domestic happiness. In a luxurious apartment, by the fireside, are seated a husband and his beautiful wife: she is reading to him as he takes his ease and his pipe. To the right a kettle is suggestive of a cosy tea by-and-bye.

THE MORNING GREETING. Size, 13 by 10½ inches. In handsome Frame, 22½ by 18 inches. Rs. 34.
A bright happy maiden, with fresh sunny morning face, is opening wide the casement to greet the opening day.

RED RIDING HOOD. Size 11½ by 13 inches. In handsome Frame, 22½ by 18 inches. Rs. 34.
The fair little lassie is represented as she meets the smooth-tongued wolf in the woodland path.

IN THE WOOD. A Study from Nature. By H. P. ROBINSON. Size 11 by 15¼ inches. In handsome Frame, 27 by 21 inches. Rs. 40.
A beautiful view of forest scenery.

SOUTHBOROUGH WOOD, KENT. A Study from Nature. By H. P. ROBINSON. Size 11 by 15¼ inches. In handsome Frame, 27 by 21 inches. Rs. 40.
A companion picture to the preceding, showing the rich and varied coloring of the woods in autumn.

OVER THE SEA. A Study from Nature. By ROBINSON. 22 by 15 inches. In handsome Frame, size 32 by 26 inches. Rs. 50.
A coast scene. Children in the foreground upon a bank covered with ferns and foliage, looking at the sunset across the rippling sea.

MARE AND FOAL. After J. STURGESS. 14½ by 10 inches. In handsome Frame, size 19 by 17 inches. Rs. 26.
A beautiful chestnut mare, with her foal drinking at a pond. A field and farmhouse in the distance.

VENETIAN LADY. After CARL BECKER. 15 by 10 inches. In handsome Frame, size 26 by 32 inches. Rs. 45.

FEMME FELLAH. After LANDELLES. 10 by 16 inches. In handsome Frame, size 26 by 21 inches. Rs. 40.

A WOMAN OF THEBES. After LANDELLES. A companion picture to the preceding. In handsome Frame, size 26 by 21 inches. Rs. 40.

ENVY AND GREEDINESS. Two Pictures, size of each 9 by 7½ inches. In handsome Frames, size 20 by 17 inches. The Pair, Rs. 56.
Two Beautiful Females (a Blonde and Brunette) being tempted by Cupid.

RUSTIC TOILET. Size 9 by 7½. In handsome Frame, size 20 by 17 inches. Rs. 30.
A beautiful Woman in the act of dressing her hair.

MEDITATION. Size 9 by 7½. In handsome Frame, size 20 by 17 inches. Rs. 30.
A Lady standing with her hands folded in deep thought.

CHROMO-LITHOGRAPHS.

Being *fac-similes* of the following popular Works of Great English Artists. The measurements are for the actual size of the Pictures, irrespective of the Card-board on which they are mounted.

REPOSE:—SUMMER EVENING. BIRKET FOSTER. 18 by 12½ inches. Rs. 24.
A charming rural picture. A flock of sheep occupies the foreground; beyond is a meadow, with a group of the rustic children whom Birket Foster never tires of depicting. In the distance is the village and a landscape over which the shades of evening are gathering.

THE PRIMROSE GATHERERS. BIRKET FOSTER. 18 by 10½ inches. Rs. 24.
A group of happy village children gathering the primroses with which the ground is plentifully besprinkled. To the left, a valley slopes down towards the calm summer ocean which fills the distance.

THE RUSTIC BRIDGE. BIRKET FOSTER. 14 by 10 inches. Rs. 18.

GATHERING WATER-LILIES. BIRKET FOSTER. 18 by 8½ inches. Rs. 16.

FLYING THE KITE. BIRKET FOSTER. 15¼ by 10 inches. Rs. 16.
Beautiful studies of country life and scenery.

FEEDING THE DUCKS. BIRKET FOSTER. 7 by 5 inches. Rs. 8.

RUSTIC ANGLERS. BIRKET FOSTER. 7¼ by 5¼ inches. Rs. 8.
A good pair of small pictures. [Rs. 16.

GRACE DARLING. T. BROOKS. 18 by 12½ inches.
Represents the heroic girl speeding across the angry sea on her errand of mercy.

THE PRIDE OF THE RIVER. T. BROOKS. 18 by 12½ inches. Rs. 16.
A companion picture to the preceding, representing a beautiful girl rowing past the ferny and flower-laden banks of the river, and through the haunts of the water-lily.

No. 2095.] CALCUTTA: SATURDAY, 8TH MAY, 1875. [Vol. XLI.

THE GREAT RENT QUESTION.

SIR GEORGE CAMPBELL assured the Government of India, that if we tried to settle any portion of the great rent question we should soon have the whole of it on our hands. His successor has now undertaken to deal with a part of the difficulty, by introducing a bill designed to give to district officers the power to settle, in a summary way, disputes between landlord and tenant which seem likely to endanger the public peace. The danger is that on attempting to support the ricketty old building by props, the result may be that, if it does not come down about our ears at the first touch, the engineers employed on the work will report that it must be taken down and reconstructed. Such at least was Sir George's opinion of the probable consequence of taking action in the matter, and he is no mean judge of such a question. If we are on the eve of legislation on this subject, the most important which can be canvassed in an agricultural country, it would be well to take stock of our position, to enquire into the principle on which the present law is founded, and into the extent to which that principle has in practice been carried out.

Act X. of 1859 may, in one sense, be called a piece of class legislation, for its basis is the division of the ryots into three great classes. To the first, it gave perpetuity of tenure, fixity of rent, the right of alienation, all that the most enthusiastic believer in the utility of peasant proprietors could ask. They are now the real and the absolute owners of the soil, subject to a quit-rent as the zemindars are subject to the State revenue. Next to them, though at a long interval, come the occupancy ryots. These cannot be ejected, and their holdings are hereditary, though not transferable. Their rent can be raised only by their own consent, or on legal proof that the value of their land has increased otherwise than by their own agency. The rear is brought up by the members of the third class, to whom the law gives no name, and whom we may call the pariahs. These have no rights whatever. The zemindar may eject them at will, and no provision has been made to give them the benefit of any local custom which may exist in their favor, or a claim to compensation for the improvements they may have effected on their farms. After having turned a jungle into a garden, they may be ordered to quit it, and the zemindar is not bound to pay them even for the standing crops which they may be forced to leave behind them. It will be seen that the legislators of 1859 adopted each of the three principles which have been advocated with reference to this question, namely the conversion of the tenant into a proprietor subject to a quit-rent, the destruction of all his rights for the benefit of the landlord, and the intermediate course, or golden mean. They introduced them all at the same time, taking care only that they should be applied to different classes.

It is sometimes asked whether these three divisions of ryots were in existence before 1859, or were the arbitrary creation of the Act? We think that the principle of the division itself, points to the answer. That principle was simply the lapse of time, just as in the law of limitation. A ryot who had been less than twelve years in possession of his holding, was put in the pariah class; he who had been for that period on the farm in the occupancy class, unless he had been settled there since 1799, at a uniform rate, when he was elevated to the rank of a peasant proprietor. Now native customs do not draw these hard and fast lines. Whoever heard that when the sun of the last day of the eleventh year is on the horizon, the cultivator who watches its descent is a tenant-at-will, but that when it has set, he is a co-sharer in his holding? Again, Act X. of 1859 has been extended from the borders of Madras to the Himalayas, from our North-East to our North-West frontier; although it is acknowledged that the land tenures it superseded were everywhere different. We may safely say that the three classes thus created were as unknown to local usage as they certainly were to our regulations, and that where they superseded old customs, they effected an agrarian revolution. Some of those degraded to the pariah classes, had previously held a higher rank than those elevated to the position of peasant proprietors; while those jumbled together as occupancy ryots had formerly possessed every variety of privilege.

The effect of the law at the time, depended on the proportion borne by the number of ryots in each class to that of the other two. Had the great majority of ryots belonged to the ranks of the peasant proprietors, Bengal would have become a country cultivated by the actual owners of the soil, and the zemindars whould have been changed into mere rent-chargers. If on the contrary, it had turned out that the pariahs were the most numerous, the land would have become the absolute property of the zemindars. In point of fact it was the second class, that of occupancy ryots, which proved the strongest, and therefore no great advantage was given to either party. There was a great deal of change, manyold privileges were taken away, which were sometimes more and sometimes less valuable than the new ones, but the losses and the gains were so equally balanced that no one can say whether the immediate effect of Act X. of 1859 was more favorable to the landlord or to the tenant.

The future position of the ryots depends however, not on the number in each class in 1859, but on the changes which have been and will be effected by the Act. Now the key to this rent question is to be found in the fact that these changes have been and must continue to be, all in one direction. The number of the pariahs is rapidly increasing, at the expense of the other two classes. This fact is the *pons asinorum* of the rent question, and unless we see this, we can never understand the subject. There are various causes which combine to produce this result. Old ryots die, leaving behind them no heirs able and willing to cultivate their holdings. Others voluntarily resign their farms, which are not saleable. Some give to their landlords in bad seasons contracts by which they are reduced to the rank of pariahs, for the same reason as that which made the Egyptians surrender their lands to Pharaoh. The great rivers of Bengal wash away villages in hundreds, and holdings in tens of thousands, engulfing with the land the rights of its cultivators. It is true that new accretions compensate for this destructive action, but these are all given to pariahs. Whatever the causes are the effect is obvious; the privileged tenures are dying out, and the rapidity with which they are so doing can be inferred from the number of leases for terms of years which are being registered. The Registrar-General congratulates himself on the rapid increase in this department of his business, but properly considered the returns are nothing more than the death-roll of the privileged tenures. These gaps in the ranks are not filled up by the development of the inferior class of holdings into those of a higher order. No length of occupation subsequent to the perpetual settlement can give rights of the first class. It is true that a pariah can become an occupancy ryot by twelve years' uninterrupted tenancy, but only in the absence of an express agreement to the contrary. We need hardly say that the more intelligent zemindars take care that such an agreement shall always be forthcoming. Land is now given to ryots by those who understand the law, only on the condition that they shall never acquire occupancy rights in it. And for this we do not blame the landlords; for if we leave them a power to prevent

the growing-up on their estates of an interest adverse to their own, we cannot wonder if they exercise it.

If the law remains unchanged, the privileged classes of ryots must in time become extinct, and the cultivators become pariahs in a body. The land will be tilled by cottiers having no interest in it, except such as they may derive from the zemindar. The amount of rent will then be decided by competition. The number of competitors in this over-populated and exclusively agricultural country will always be greater than that of holdings, and consequently the competitive rent-rate will be the highest at which the land can be cultivated so as to leave a bare subsistence to the farmer: for if it is lower there will always be hungry outsiders eager to outbid the occupier. The masses must thus sink to a state of dependency and pauperism, while rents rise to the maximum point, and the rent receivers flourish. In periods of scarcity, the ryots must come to the State for support, the rack-rent preventing them from making savings in better times. This undesirable state of things seems to have already come to pass in some of the districts which have been subjected to our rule for the longest period, but there is yet time to save the rest of the country from a similar fate.

WIVES OR CONCUBINES: WHICH?

A NEWSPAPER is nothing if not critical, and the *Saturday Reviewers* in particular would look upon their occupation as gone if they could not shew themselves superior to the authors whom they condescend to notice. And so while admitting the substantial accuracy of Mr. Gladstone's statement that by the Tridentine canon law, marriages not celebrated according to the rule of the church are null and void, the *Reviewers* can see no reasonable cause of complaint in this, so long as it is distinctly understood that the rules of the Council apply to those only who acknowledge its authority. "It is no hardship for Roman Catholics to be required to follow the directions of their own Church in contracting the sacrament of matrimony, and if they deliberately neglect the conditions of valid marriage which she has laid down, they may fairly be presumed to be playing fast and loose with the matter, and cannot be surprised if they are taken at their word. But it is a very different affair when it is attempted to subject Protestant or mixed marriages to a rule with which the contracting parties may be unwilling in the one case, and are unable in the other, to comply."

But this is the very gravamen of the wrong, that Rome assumes jurisdiction over marriage, not only in her own communion, but outside it. She declares marriages which are as valid before God and man as any within her own communion, to be null and void, and to be neither more nor less than "filthy concubinage" (*sozzo concubinato*) and she claims the right of practically treating them as such. She says they are no marriages, that divorce is not needed for the separation of the parties, that they are bound to separate as living in sin, and that the children of such marriages being the fruit of illicit intercourse are illegitimate. She is afraid to say this either in England or France, but she says it in Germany and in every country in which the Tridentine decrees have been made the law of the Church. It is nothing but her weakness and fear of the civil power that prevent her proclaiming every Protestant marriage contracted in our own country, null and void. It is a profound mistake to regard this dispute as Englishmen in the mass do as simply a question of religion. It is a question of civil life, fraught with momentous issues in Germany and in other lands. The Gordon case which the *Saturday Reviewers* themselves describe as "monstrous" shows the deadly character of the pretensions, at the root of which Gladstone is laying the axe, and which the German Chancellor, with the full approval of the mass of the people, is determined to destroy. The Gordon case is this:— In 1843, Gordon who is a British subject married the daughter of a merchant residing at Rio de Janeiro. Both parties were Protestants, and the marriage was celebrated by an English clergyman in the Ambassador's house. They lived together for a quarter of a century as man and wife down to 1868, but Gordon, who had meantime become a convert, proceeded to marry a Baroness von Beulwitz, of his adopted faith, in a Roman Catholic church at Manchester, and the next year a child of this second marriage was born. His first wife now appealed to the courts at Edinburgh for restitution of conjugal rights, when her husband fully admitted the alleged facts, but pleaded the law of his Church in defence of his conduct. The *Times* records the case as follows:—

"The defendant is a Roman Catholic, and the Baroness von Beulwitz is also a Roman Catholic. The defendant took *the advice of the most learned of the clergy of his Church* as to the validity of his marriage with the pursuer. The opinions which he received of persons learned in the law of marriage, as recognized in the Roman Catholic Church, were to the effect that, whatever might be the binding efficacy of the ceremony entered into at Rio de Janeiro, in virtue of the above statute (George IV., c. 91), in any civil court within Her Majesty's dominions, the marriage was null and void according to the law of his Church. It was in these circumstances, he adds, and *on the advice of the religious persons whom he consulted*, that he went through a marriage ceremony with the Baroness von Beulwitz at Manchester on the 28th of August, 1871, he having explained to the Baroness his position."

The Scotch Vicar Apostolic, to whom Gordon had appealed, referred the matter to the Roman Inquisition, which deliberately decided that the first marriage was null and void, and that he was at full liberty therefore to contract the second. Does any one of the readers of this article, doubt for a moment that this man is guilty of adultery before God as well as by the civil law of England? The civil law of the country declares the marriage to have been a valid marriage, while "the most learned clergy of the Church of Rome" and the Roman Inquisition itself say it was no marriage, and tell Gordon that he commits no adultery in forsaking his real wife, but is at liberty to contract a second alliance. Well may the *Reviewers*, while professing to correct Mr. Gladstone's statement of Roman pretensions on this vital question, declare the case to be "obviously monstrous." It is so, and there should be a complete union of Protestant nations to destroy such pretensions utterly. A case very similar to this of Gordon's occurred in March last year in Munich, which appears to have created a great sensation. It was the case of a mixed marriage that had been celebrated according to the rite of the Evangelical Church to which the woman belonged, and which had been as lately as 1831 solemnly declared by the Bavarian Bishops to be adequate in such cases to constitute a binding and indissoluble union. The wife applied to the Archbishop's court for divorce, with permission to re-marry, apparently on account of her husband's adultery, and the Court, confirmed by the Roman Inquisition, decided in her favour, not however on the ground of the adultery, but of the nullity of the previous marriage, because it had been "celebrated after the Protestant rite." As the German papers said at the time, "all marriages solemnized only according to the Protestant rite, whether mixed or purely Protestant, were thereby declared to be clandestine and null, in other words, to be mere concubinage." We need not stay to point out that the validity or otherwise of the marriages contracted in any community, are the key-stone of the whole fabric of society. And we have here a body of men claiming in the name of religious freedom, a right in this most momentous of all contracts to trample upon the civil power, and to set aside by its decrees the laws and regulations that power has made for the good government of society and the preservation of public morals. And the patent fact all the while remains this, that it is not on moral grounds at all that Rome proceeds in this course. For while stigmatizing as concubinage marriages not Tridentine, she reserves to herself a right of acknowledging the validity of such marriages, if she thinks it "policy" so to do. Cases which present difficulties and menace her influence and that she dare not openly face, she solves by the dispensing power which she says resides within her. It rests with the Papal Curia to say whether a Protestant marriage or any number of them is valid or not. If it is to her interest or will promote her policy to declare them valid, then she so declares them; and in this way impiously affects the right of making adultery innocent, and an honorable marriage concubinage. If Englishmen stood face to face with this marriage difficulty as Germany has done for the last 50 years, they would better understand the policy of Bismarck and the causes which have placed the people in a body on his side. Wherever the Council of Trent has been published, that is, wherever its disciplinary decrees have been formally introduced, all marriages celebrated otherwise than it directs—and therefore of necessity all Protestant marriages—are rendered invalid. In France, the Council was never allowed to be published, nor has it been published in England. On the other hand, it is published in Ireland, and in parts of Germany. It is wholly at the option of the Court of Rome to publish the decrees of Trent wherever and whenever it pleases. And wherever they are published, all marriages not celebrated according to the rule there prescribed, are declared to be null and void. Perron, the favorite theologian of the Curia, points out, if we may credit Mr. Gladstone, that the decree "works for the benefit of heretics, as in their conversion it has often given them an oppor-

tunity of contracting a new marriage, during the life time, that is to say, of the former wife." De Mat. ch. ii. 245. Rome 1156.

If Rome were not morally better than her pretensions and her system, she would have been swept from the face of the earth by the common indignation of mankind.

THE HORSE OF THE RAJPOOTANA PLAINS.

AN article on the horse supply of India, in a recent number of the *Calcutta Review*, discusses a subject very important and interesting, both from a public and private point of view. Although a "light weight" may find no difficulty in India in providing himself with a suitable mount, it is very different when *pater familias*, approaching the tenth lustre, probably suffering from, although not admitting, some loss of nerve, and unwillingly showing an increase of corpulence not incompatible with his time of life, attempts a horse deal. The twelve-stone man, if at all a "hard rider," is practically limited in his choice to Walers and Cape horses, and the still heavier man is lucky if he finds a "Charghosha" or Yarkundee galloway equal to the occasion. But though most men, at the expense of a very considerable hole in their banker's account, may be able thus to find a suitable mount, it is at once evident that Government could not afford to provide for the cavalry regiments in the army. The fact of so much having been done to further the trade in horses between India and the Colonies, is evidence that the supply of horses from the Persian Gulf—call them Arabs, Persians, Gulf Arabs, or whatever you like—has not been sufficient to meet the requirements of the Indian market. We cannot help thinking however, that while Government has been sedulously endeavouring to improve the Australian horse trade, and to breed horses by its own Stud Department, the possibility of a better supply of country-bred animals has been somewhat overlooked. But it is not to Bombay or to Bengal, or even to the North-West or the Punjab, that the enquirer for good country-bred horses must turn his attention. It is in the semi-desert districts of Western Rajpootana, that Indian-bred horses attain most perfection. From Bickaneer in the north, to the Runn of Kutch and Kattywar in the south; from the the Aravelli Mountains in the east, to the Omurkote desert in the west, is the country which may be called the land *par excellence* for horse-breeding in India; and especially so towards the centre of this tract. The country consisting chiefly of stretches of apparently boundless yet sandy plains, is not very dissimilar to the Arabian desert on which the true Bedouin rears the steeds most famous for their powers of fleetness and endurance. As in Arabia, so in Rajpootana, good water is scarce, and only found at long distances; grain is too expensive for much to be expended as food for young horses, while at certain seasons of the year the whole surface of the earth is covered with a grass of a peculiarly fine and nutritious nature. Then again, the education of the young animal scarcely differs from that which its fellow receives from the dwellers in Bedouin tents. As a colt, it is expected pretty much to pick up its own living, and its limbs are unfettered by chain, rope, or hobble. If the dam has to work, the colt trots behind, and will for days follow its mounted mother through journeys of hundreds of miles. At other times, it roams with numerous companions over the vast expanse of plain surrounding the village or huts of the breeders. The breaking-in to the bit and saddle is also a very easy process; and the preparatory step is probably the being mounted by children scarcely less wild than the colt itself, and with whom an early friendship generally exists. In after-life the horse carries the thakoor of the district, or one of his sowars; men who think little of rivalling the distances travelled on horseback by the most famous cavalry India has known. The principal breeders of horses in these districts are the thakoors or zemindars, and hitherto they have bred more for local supply than with the idea of meeting the wants of distant markets. Little or no encouragement has hitherto been held out towards what might become a fertile source of equine supply.

There are two large horse fairs held in the district during the year, *viz.*, at Pokur near Ajmere, and at Tillotea in Marwar. At Pokur for several years past, the British authorities of Ajmere have offered prizes for the best cattle of all sorts; and here military officers from the local corps of Rajpootana and Central India attend to pick up remounts. But the best horses are not brought to these fairs. They are kept for home use; the Rajpoot Thakoor of the West being almost as fond of his horses as the Bedouin of the desert. Occasionally the *res angustæ domi* may oblige the owner to part with the best horse from his stable, but this is only an exceptional case; and even then it is but rarely a horse of superior quality finds its way to the public market, as one or other of the neighbouring Rajahs is always ready to give a good price for a fine Marwarree, Mullannee, or Kattywaree animal. Doubtless the horse-breeding districts of Western Rajpootana would meet but a small portion of the wants of the British Government for as observed above, no encouragement has been given to the breeders to produce animals for Government purposes. But practically the field would be found almost as extensive as untried, and in a few years, under tact and management, a very large supply of serviceable animals would be forthcoming. The horses bred in these districts are very different to the diminutive equine race of the other parts of India. They all have Arab blood, combined with bone and size, which latter has probably been derived from the occasional introduction into the district of an English entire horse, or as may less frequently have happened an English mare. But with stature and weight sufficient for military purposes, they possess all the endurance and capability of existing on scanty food of the Arab. If we recollect right, Mr. Hallen has expressed a most favorable opinion of the Marwarree or Mullannee horse, but his recommendation of cultivating this field of supply appears to have been lost sight of for some years past. As in Arabia, so in Western Rajpootana, it is the mare which is most prized by the owner, not only for breeding purposes, but also as possessing more endurance, and being less restive than the horse. An extraordinarily good mare can scarcely be purchased; for like the sage at the Olympic games, who told an enquiring competitor to ask the dam of his horse if he could win, the Rajpoot breeders are well aware that the colt owes more to the mother than to the sire. Unfortunately we cannot say so much for the beauty and good looks of these Rajpoot horses as for their other qualities. For although some handsome specimens are met with, the majority are rather big headed, Roman-nosed, white-faced, and often also white-stockinged. We recollect the old adage, "three white feet, and a white nose, cut his throat and throw him to the crows!", but there is no rule without the proverbial exceptions. We have seen ugly horses, with the opprobrium of white stockings and white nose, even with a wall eye into the bargain, just as good working-animals as the most handsome steed ever gladdening the eye of a cavalry officer. We are not now writing of a hunter for the Queen's stag hounds, or for the shires; nor yet of a park hack, or a lady's palfrey; but of animals fit for rough work in a tropical climate. Of such animals, a very large number might be produced in Western Rajpootana, where the nature of the country and the habits of its people differ so little from those of Arabia and its denizens. To induce the people to breed for the British market, some tact would be required and some trouble must be taken. For the people, and especially the nobles, are jealous and do not like to see the best animals leaving their semi-desert country, where the horse and camel are the only means of rapid locomotion.

RUSSIA AND THE TURCOMANS.

COLONEL IVANOFF'S report of his recent "campaign" against the Turcomans, proves the soldiers of the Czar employed in Central Asia to be little better in *morale* than they were a century ago. Ever since the occupation of Khiva they have hunted the adjacent tribes, burnt their villages and homesteads, torn the earrings from the women and spared neither sex nor age. It is now officially stated that the reason why the Tashkend column changed its route from Minbulak to Khalata, was that in order to enable the Chief of the Staff to receive the decoration of St. George, it was necessary for the detach-

ment to march along the route he himself had planned, all the fighting up to that time having been done by the Orenburg troops. Up to the capture of Khiva the Turcomans had made a determined opposition, but when once the city was taken they became peaceable and were on the best terms with their late enemies. A month after this amicable arrangement had been come to, General Kauffmann decided upon attacking the Nomads, merely that his men might have an opportunity of distinguishing themselves and obtaining decorations. He had received deputations from the elders of the tribe, and had ordered them to live in peace, which they had done. Ultimately, he imposed a contribution on all the Yomuds of 300,000 roubles, and because this could not be paid within the stipulated time, he directed a certain General to "move on the settlements placed along the Hazavat canal and its branches, and to give over those settlements of the Yomuds and their families to full and complete ruin and destruction, and to confiscate their property, flocks and herds." The first villages met with by the troops were found to be deserted, and then it was decided that "neither sex nor age should be spared." A massacre followed, and another order was issued by Kauffmann to this effect, if "the Turcomans be-"come submissive, stop pillaging them, but carefully see what is "going on among them, and on the least attempt to decamp, execute "my order for the final annihilation of the rebellious tribe." Naturally the warlike spirit of the people was aroused, and the Yomud cavalry continually worried the Russian outposts. When resistance was no longer possible came sullen submission, and the Turcomans asked to be allowed to pay the contribution levied upon them in kind, for money they had none. But the Russians were inexorable, and ornaments from daggers and saddle-bows, earrings and bracelets torn from women formed the loot the Russian Commander carried into Khiva. We may imagine the feelings of the people thus despoiled. The campaign was certainly stopped, and the Nomads were ruined, and thus enabled to fight in future with all the more disregard to consequences. The Tashkend warriors received showers of crosses and medals, the right bank of the Oxus was annexed, and a Russian garrison established in the newly erected fort of Petro Alexandrovsk. In appearance the Turcomans were quiet, but ugly rumours of hostile movements kept the garrison in continual fear o attack. Early in 1874 Colonel Ivanoff made a display of force on the Khivan bank of the river, several villages were burnt, the usual contribution was levied, and twenty decorations were given to the officers engaged in the foray. After repeated urgent entreaties, Colonel Ivanoff was at last empowered to take "active measures." He started with seven companies, eight guns, some Cossacks, and four rocket batteries, in all fifteen hundred men. A proclamation was sent to the different tribes of Turcomans, commanding submission and order. After the arrival of the forces at Kunya-Urgench, instead of turning to the south, as it was said would be the case they moved on to the encampments of the Kul-Yomuds who were not expecting them, and had therefore remained in their villages. The Kul-Yomuds, amounting to a thousand kibitkas, were considered to be most disobedient to the Russian commands, and were accused of having taken part in robbing a caravan of Persian slaves returning home, of insubordination to the Khan, and of an attack on the Khan's officials who came among them in June, 1874. If Colonel Ivanoff had not special orders for what he did, he certainly profited by the example set in 1873. Having encamped at Boyndur he sent out 150 Cossacks, and ordered all the villages within a radius of five versts of the camp to be burnt, and the cattle to be driven away. Within two hours, what had been flourishing villages and farms were a mass of ruins. After a time the expedition was met by ambassadors from the Khan of Khiva, and the onward progress of Colonel Ivanoff was marked by alternate collections of money and conflagrations. When the Russian Commander tired of the work, he had an interview with the Khan, whom he advised to "profit by the present terror and increase his influence over the Turcomans. He advised him to cease considering the Turcomans as a privileged class of his subjects; did not agree with him about cutting off their water, but urged him to let them have water on condition that they themselves made the canals, and not the Uzbegs for them, as formerly." He also insisted that during the present year the Khan should impose taxes of some kind, since it was only by the payment of taxes that they would recognize him as their real Sovereign, and become assimilated to the rest of the population. The troops recrossed the Oxus on the 13th February and were soon in the fortress of Petro Alexandrovsk. The total amount of money collected was 36,000 roubles, and Colonel Ivanoff expects the "best results," in other ways, from the terror he has inspired; but the reaction will be felt on the shores of the Caspian and the borders of Persia before long, and then we must, of course, agree to the construction of a Russian fortress at that Eastern goal of Russian ambition, Merve.

THE POLEMICS OF ROME.

It certainly gives us no pleasure, nor can it give pleasure to any one who is witness to the piety and self-devotedness of so many men in the Roman Church, to insist upon the strange disingenuousness with which that Church carries on its conflict with what it deems error. From the date of the false Decretals, maintained by the Papal Curia to be genuine, down almost to our own day, until the scorn of the world forced it to abandon them, her controversialists have falsified history to an extent of which the unlearned members of her communion can form no conception. We are fully sensible of the gravity of the charge, but it is nevertheless true. We are not therefore affirming that Protestant writers have always dealt honestly with history, for the fact is certainly otherwise; but there is this difference between the two, that on the one side the evil is palliated and excused, or held even to be justifiable, while on the other it is ever treated with the reprobation and scorn which it deserves. The unhappy belief that where the interests of the Church are in question, the end sanctifies the means, colours the whole of Roman thought upon this subject; and truth is held to be at times rightly sacrificed to charity for the souls of men. Thus, Dr. Manning does not hesitate to affirm positively that the Infallibility of the Pope was "a doctrine of the Divine faith before the Council of the Vatican was held" and that the Vatican decree made no change therein whatever. That the statement is untrue, every well-read man knows perfectly and Dr. Newman, for dealing more honestly with the question than Dr. Manning, has called down upon himself the strictures of the Papal newspaper *Voce della Verita* (21 January). We shall now shew our readers a specimen of the means by which Dr. Manning's contention is propagated amongst the unlearned members of the Catholic body. Keenan's "Controversial Catechism" is so widely known, that we need hardly speak of its authoritative character. The catechism is one of the 'stock' books of controversy put into the hands of Roman Catholics, for their confirmation in the faith, and as an armoury of weapons against Protestant assaults thereon. Now, no less than four Vicars Apostolic of Scotland, Drs. Kyle, Carruthers, Gillis and Murdoch, and Archbishop Hughes of America, have let this catechism go forth with the *imprimatur* of their approbation upon it. The catechism is authenticated by these five prelates of the Church, all thoroughly familiar with the teaching of that Church, and their authentication dates no further back than the last fifteen to twenty years. The book being out of print a third edition of twenty-four thousand copies was lately published in the name of the original author, and at page 112 of some of the copies are to be found the following question and answer, just as they appeared in the previous editions:—

Q. Must not Catholics believe the Pope in himself to be infallible?

A. This is a Protestant invention; it is no article of the Christian faith: no decision of his can oblige under pain of heresy, unless it be received and enforced by the teaching body, that is by the bishops of the church.

This third edition would seem to have been passing through the press at the moment when the Vatican decree was published, and both question and answer were at once quietly dropped from the remaining part of the edition, while not a word of intimation of the change was made in the work. On the contrary, the utmost pains seem to have been taken to pass off the copies thus altered as identical with the rest of the edition. The title pages of both profess that it is "the new edition. corrected by the author," although he was in his grave before the Vatican Council was even summoned. Both versions profess to be part of the same twenty-four thousand copies, and are paged throughout alike, so that from title page to index they are at first sight identical. The Roman Catholic publishers in Dublin, we are assured, were quite unaware of the change, and expressed great astonishment at what had been done without notice, while one Roman Catholic publisher in the same city indignantly urged the exposure of the deception. It was morever no error of the press, for the omission had been very neatly concealed in the printing, by slightly widening the spaces on pages 112 and 113, so that no one could possibly suspect that the work had been thus tampered with. Thus, but five or six years ago, the unlearned Catholic and his children were being taught by this catechism, under the authority of no less than five bishops of the Roman Church, that the infallibility of the Pope was a Protestant invention; while Archbishop Manning and almost the whole Roman Catholic hierarchy nevertheless today attempt to impose the belief upon the world, that the Vatican decree made no change in the belief of the people, although the

very catechisms of the Church had to be changed to make the new faith accord with the old. It is this disingenuousness in Roman controversialists that creates such irritation in many minds, and that shews such disloyalty to truth. Copies of the new edition of the catechism have no doubt long since found their way to India, and some of our readers may be able to verify for themselves the facts we have now stated, on the authority of one of the appendices to Mr. Gladstone's last essay.

THE KIRWEE BOOTY.

WHY repeated complaints from the men who suppressed the rebellion in Bundlecund and the adjacent territory are allowed to be made, we cannot understand. The property captured was estimated at seventy lakhs of rupees, and fifty-three lakhs, exclusive of interest, have been distributed; and in this amount is comprised the recovery of five lakhs, for several years withheld by the Indian Government but ultimately refunded. There are other funds, however, forming part of the moveable property of the captured chiefs of Kirwee, that have come into the possession of the local authorities in consequence of the military operations, and which ought, in accordance with the intention of the Queen's grant of 10th June 1864, to have been distributed as prize of war. The principal portion of these funds consisted of monies invested by the chiefs in the public loans of the East India Company, and for which the financial officers of the Company's Government had given promissory notes worth £256,000. Although the notes themselves were never traced, the value of the debt, after the conviction of the ex-chiefs, passed to the Queen as "right of war," but has not yet been paid to the troops who won it. The opinion of Sir J. D. Coleridge, Sir W. V. Harcourt, Mr. Fitzjames Stephen and other eminent lawyers, is that these funds are not distinguishable from property of the same kind which, in the instances of Chinsurah, Bordeaux, and the Deccan, was distributed by the Crown amongst the soldiers who had obtained the booty. There are also further claims, amounting to £31,915, for the proceeds of jewels, taken possession of by the civil power. In January 1859, after the town of Kirwee had been beleaguered by a numerous enemy, and relieved by General Whitlock's rapid march from Mahoba—eighty-six miles in thirty-seven hours—a large amount of valuable property was seized by the troops, *jure belli*, in the house of Makhound Rao, an imprisoned rebel. This property was taken from the captors and restored to its original owner, but the troops have not been compensated for the loss. The booty taken in bulk at Kirwee was consigned by the order of Government to the State treasurer at Allahabad. One portion of the spoil consisted of 14,65,335 locally current Sonwat rupees—rupees of the Mogul stamp, formerly issued by the East India Company from their mints and some years ago called in—and was allowed to lie unused four years. A claim for interest upon the money for this period has been made. The rupees, moreover, were needlessly sold by an auctioneer, whose commission amounted to Rs. 6,000, and was charged to the prize fund. The Prize Agents, Major General D. Hodson and Colonel J. Holmes, have asked that further inquiry may be made into the validity of their claims, but this is refused. The attention of the Treasury Lords has been especially directed to the claim to interest on the 14,65,335 Mogul rupees, reserved from 1858 till 1862 by the Government of India, although the authorities were promptly and repeatedly requested by General Whitlock and his prize agents to utilise them. The application is supported by many precedents. In the Bombay General Order for the distribution of the booty taken in 1824 from the insurgents at Kittoor, the payment of interest was readily allowed. The Court of Directors wrote in their despatch of 28th March 1827, "Interest at the rate of five per cent. per annum is to be allowed on the amount of booty deposited in your treasury, from the date of its deposit to the date when the distribution is announced in General Orders." In a Despatch, dated 30th March 1836, the Court of Directors wrote with reference to Coorg: "Interest at the rate of five per cent. per annum is to be allowed on the amount of the booty deposited in your treasury, from the date of the deposit to the date when the distribution shall be announced in General Orders." An Order of the Government of India, dated 14th June 1858, and stating that "Interest will be allowed at five per cent. per annum on all monies deposited by the prize agents in the Government treasuries," was, therefore, in strict accordance with previous usage. And the fact is well known that the 14,65,335 Mogul rupees, deposited by the prize agents in the Allahabad treasury in 1858, were monies bearing a definite cash value, and easily convertible into the coin of the day. With the utmost disinclination to "go to law," the officers have taken Counsels' opinions, which are in every case in their favour, but their Lordships "refuse to re-open the question."

THE BRAHMO SOMAJ ON WAR.

THE Burman difficulty has moved the conductors of the *Indian Mirror* to enter a "protest" against the warlike tone of the Indian Press, the Brahmo Somaj party taking their "solitary stand on the other side of the question." These gentlemen will, we hope, believe us when we say, that the love of war is as abhorrent to multitudes of Englishmen as to themselves, who nevertheless find it impossible to subscribe to the belief that war is necessarily immoral. When the Brahmo Somaj tell us that "if Christ had "been in the world at the present day, He would have denounced in "unmeasured terms the unrighteousness of war, and would have "been blown away from the mouth of a cannon for His courage," we think they are in error. For life is no gentle promenade through fragrant orange groves and flowery fields, but a march and a battle-field for nations as well as individuals. As long as Hell has power over God's upper earth, there will be war amongst the nations; wars in which our sympathies, if not our arms, must be put forth on the side of what we believe to be the right, at our peril. It is a false conception of Christianity altogether, that supposes it to mean anything but conflict with evil. Who can suppose for a moment, that the terrible war against slavery in America could have been avoided? There were two great leaders in that war—God and the Devil; and every man engaged therein was fighting under one leader or the other. That we have made many unjust wars is a humiliating truth, and the fact should make Englishmen careful to inform themselves, as exactly as they can, of the merits of every quarrel in which the country gets entangled. But that should not make us flinch from voting for war, when the interests of the world require that the sword should be drawn. And they constantly do require it, or history has no meaning.

But our attention is specially invited to the first opium war, and it must be remembered, says the *Mirror*, that the original fault was with the English. "It is they that thrust the opium poison down the throats of a whole nation; it is they that have shed blood in their country; it is they that have resented the least attempt to expel British opium from the country. The moralist is compelled to draw his own inference from these facts; and whatever the defender of bayonet Christianity may say, the facts are exclusively proved as against our rulers. Where reconciliation was possible, where a righteous policy was demanded, the British Government resorted to arms and adopted the most impious course that could be imagined."

The course of individual conduct that involved the nation in the opium war, deserves all that our contemporary says about it; but when he affirms that "reconciliation" was possible, and that the war might have been avoided, he is certainly wrong. The passions and interests of bad men constantly bring Governments into positions, out of which a way can be cut only by the sword. What we call Government, has no personal but a corporate existence only; and where the guilt of the war individually rests is known only to God. In the opium war, the Chinese Government could no more be called "innocent" than the English Government "guilty." It was the conduct of bad Chinamen on the one side, and of bad Englishmen on the other, that at last brought the two nations into such a position, that nothing but war was possible. If China could have arrested all her scoundrels and England all hers, and sunk them off Canton, another solution might have been possible. The distinction upon which we are insisting is vital. The individual conduct that brings about a war may be extremely bad, and yet the war on the part of the nation be unavoidable and necessary. We had but two alternatives in 1839, the abandonment of the Chinese seas to the swarms of smugglers, pirates, and murderers that infested them, or war. Let the *Mirror* look fairly at the results of our Chinese wars, as seen in the now peaceful and wide-spreading commerce of the China seas. War was absolutely necessary, we believe, in the interests

of the Chinese themselves, and there is no real humanity in avoiding its sharp surgery when it has become necessary. The facts that led to the war are very commonly forgotten, in the indignation with which the opium trade is regarded. The Emperor of China had a perfect right to keep out opium and to keep in silver, if he could do so by means consistent with public law. Finding that he could not suppress the trade by just means, because of the powerful private interests, Chinese as well as English, that supported it, Commissioner Lin proceeded to use means not merely unjust but atrocious. The sincerity of his own personal abhorrence of the trade no man doubts, but the violent means by which he tried to suppress it, made it the duty of the nation to declare war against a Government that defied all international rights by its course. By confiscating the property of men who had nothing whatever to do with the opium trade ; arresting and confining men of spotless character, as hostages for a reparation to which China was not entitled ; by demanding innocent blood, and by a course of violence and insolence springing from the belief that we were feeble barbarians who could be coerced at pleasure—he left the nation no alternative but war. He began by an enormous confiscation of private property, then demanded that a British subject should be delivered up to suffer death for the murder of a Chinaman by we knew not whom ; drove our countrymen out of Macao, flinging the lascars into the sea, while he imprisoned the community at Canton. There was no possibility of treating with him, for the man's insolence was immeasureable. There was nothing left the *nation* but to retire from the China seas altogether, which meant their abandonment to smugglers and pirates, and the destruction of the whole China trade—or to declare war against China, and shew that we had power to protect our subjects from the insolent and cruel outrages to which they had been subjected. There was far more sincere hatred of the opium trade in England than there ever was in China, large masses of men in which were as determined to get the drug, as English traders were ready to supply it. Macaulay has shewn how impossible it was to suppress the trade, and that the only thing left to us was to attempt to regulate it, and deprive it of the lawless character with which the contraband regulations of China, spasmodically and insincerely put in operation, had invested it.

As to Burmah, there are grounds for accusing the king of prompting the late attack on our mission. It is asserted, however, that his consent to the treaty of 1867 was only obtained through the British envoy secretly guaranteeing the free importation of munitions of war through our territories into the king's dominions, and that the Indian Government accepted the advantages conferred by the treaty, but refused to sanction this compact. It is conduct of this order that disgraces the nation. If Burmah is guilty of Mr. Margary's murder, we do not say the Government should declare war against him, but we must enter a protest on our side against the doctrine that the declaration would necessarily be immoral. The very first quality of statesmanship, as indeed of all morality in human affairs, is the recognition of facts ;—and it is a very strange conception of Christ to suppose that were He to-day preaching in Calcutta, He would be shielding treachery and murder from their just punishment. The spirit of revenge is entirely opposed to Christianity, but not the just punishment of evil-doers. We trust there will be no war with Burmah, just as heartily as the Brahmo Somaj does, and we doubt if any influential section of English Society desires it.

THE YARKAND TRADE.

THE mistake which the Government makes in extending no helping hand to the commerce with Central Asia by the Gwaleyree route, while fostering at so preposterous a cost the infinitely less vigorous one with Yarkand, is to be attributed we suppose to the lack of a sponsor for the former, of a godfather of the stamp of Sir Douglas Forsyth. To those interested in the subject, the *Gazette of India* of August 8th, 1874, and the subjoined paper from the *Geographical Magazine* of November last will give we think an exhaustive summary of the facts connected with both these lines of Central Asian commerce. Further details regarding the Yarkand trade may be found in the volume published regarding it by Messrs. Wyman and Co., written by the Trade Commissioner for that route. The Gwaleyree trade, being no man's child, there is very little information available concerning it beyond that given in Appendix 16 of the volume published by the Punjab Government in 1862 on the trade routes of the N.-W. Frontier. The proposals for facilitation of the Gwaleyree trade and the protection of the dangerous portion of the route, that near our border, brought forward in the paper we subjoin, appear simple enough. They are exactly similar to those which exist for the protection of the route through the Kohat pass, save that the cost would be met from a fund already contributed by the traders themselves, and that the subsidy paid to the tribes along the route for protective posts would be supplemented by a pass due paid at those posts direct by the traders themselves, for safe conduct from post to post, according to the precedent of the Khyber pass. What stops the way in this simple and practical arrangement we do not know. This much is certain, that delay in adopting it means the confinement to three months of the year (about six weeks in September and October, and six weeks in March and April) of a traffic which, if permitted to flow continuously, might speedily be expected to touch a million sterling. It is at present, and has been for years, nearly half the amount. And this would be effected at a cost to Government infinitely less than that incurred in favour of a trade, worth much under a tenth of that sum :

" The *Gazette of India* of August the 8th, upon the report on the Commissioner for the development of the Yarkand trade, contains some important remarks by the Lieutenant-Governor of the Punjab. It appears that the value of the trade has been all along shown as more than double what it really was, by the simple expedient of reckoning twice over a bale of goods entering the district of Ladakh from one side and leaving it at the other —a method of calculation, which, as the Lieutenant-Governor remarks, 'is perhaps likely to mislead.' Thus, 'the total value of the trade with Eastern Turkistan—though the greatest on record —amounted last year to less than 60,000*l.*, an amount which must be considered altogether insignificant. It is true that the sum total of imports and exports by the several routes increased in value from 158,480*l.* to 177,672*l.*; but the imports and exports' (through Ladakh) 'I being the same goods, the value of the transit trade is really only half the total shown above.' The Lieutenant-Governor further points out that this 'altogether insignificant' result represents all that the whole fostering power of the Goverment could do ; 'though the development of trade between Yarkand and British India has received the careful attention of the British Government for upwards of six years, though transit duties have been abolished' (by the Maharajah of Kashmir, whom the British Government reimburses therefor), 'and special officers appointed to watch over the interests of the traders.'

" The gross value of this trade (statistical and actual) is as follows :—

	Statistical.	Actual (deduced).
	£	£
1863	24,000	8,000
1864—1866	10,000	3,400
1867	55,000	20,000
1868	104,000	35,000
1869	129,000	45,000
1870	155,000	56,000
1871	125,000	45,000
1872	160,000	55,000
1873	178,000	60,000
	£940,000	£327,400

" We have not any statistics of the outlay which has produced this result ; but the expenditure on deputations and missions alone—those of Captain Grey, Mr. Shaw, and Mr. Forsyth—must have been great ; the yearly expenses on the route—the Trade Commissoner and his establishment, the Government mule train, repairs and maintenance of roads and buildings—must be a heavy charge ; but the only item of which we have any data is that of 'construction of roads,' regarding which the Leiutenant-Governor makes some suggestive remarks. It appears that of the three portions of Yarkand road lying south of the Karakorum Range, the portion in Ladakh yet remains to be taken in hand, but that from the Ladakh boundary to the head of the Kangra Valley ' an excellent hill road has been made, suitable for mules and possibly for camels, with bridges, bungalows for travellers, and supply depôts.' Finally, an 'enormous sum has already been spent, and is being spent, on the construction' of two cart-roads in the Kangra Valley itself. One of these ' has already been completed at a large cost, connecting Palampur with the railway at Jallandhur, a distance of about 117

miles ;' and His Honor quotes the opinion of the tea planters (the persons most interested) 'that this line of communication is amply sufficient for all trade requirements.'

Nevertheless, another costly road is being constructed for a distance of 65 miles, connecting Palampur with the plains *viâ* Pathankot. This is all complete except three bridges over mountain streams, estimated to cost 32,000*l.*, respecting which Sir Henry Davies observes:—'If the Government of India is prepared to contribute from the Imperial Exchequer the sum required to complete the bridges, the work will be taken in hand without delay ; but in His Honor's opinion, so large an expenditure would not be justified by the prospects of the development of Central Asian trade *viâ* Kangra, Kulu and Lahoul.'

"It must be remembered that the road from Lahoul to the Karakorum Range (about 150 miles) has yet to be constructed, and that, as pointed out by Sir H. Davies, when all the arrangements within our border are completed, there still remains the worst part of the obstacles to this trade to be overcome. 'The greater our experience of the routes between India and Yarkand, the greater do the difficulties appear in the way of establishing a satisfactory trade-route—owing to the length of the journey, the enormous altitudes to be traversed, the arid and unproductive character of a large portion of the country, the absence of population, and the deficiency of carriage and supplies. The expedition of last year, though aided by all the influence of the Government officials of British India and Kashmir, met with no small difficulties, and taxed the resources of the country, both as regards the carriage and supplies, to the utmost. If such were the case with an expedition proceeding with all the prestige and advantages of an Imperial embassy, the successful performance of the journey by large caravans under less favourable circumstances must be considered problematical.' When we observe that of the exports from India to Yarkand, in 1873, exactly half stuck fast in Ladakh till the following year, for want of carriage ; and that the only remedy the Trade Commissioner hopes for is, that in future, Indian cattle will be taken the whole way (over a route the terrific difficulties of which have already destroyed the Yarkand carriage, and caused the above-mentioned failure) we may safely concur in the Lieutenant-Governor's opinion of the 'necessity for caution in embarking in mercantile enterprises in regions so distant and inaccessible,' where 'formidable competitors for trade in piece-goods and other articles of English merchandise are already in possession of the field, while the population of the country, though well-to-do, is scanty.'

"Let us suppose, however, the roads all made, carriage plentiful, grass and water provided on the eight marches where these necessaries are almost non-existent, the fearful distress of crossing elevations of 18,000 feet to some extent mitigated, what will all this avail if China re-conquers her revolted provinces, or if, like the rest of Turkistan, they come under a Russian protectorate? In the first case we revert to the state of things antecedent to the Muhammadan rebellion, when intercourse was as completely cut off with Chinese Turkistan as with Thibet. In the second, we are met by heavy protective duties specially imposed, as at the present moment upon the Oxus, to retain for Russian commerce the command of the Central Asian market. Is either event impossible? Are the assumptions even improbable? Are we likely, or able, to interfere in either case? China is steadily and surely recovering herself. Chinese pertinacity has availed to crush the internal Muhammadan rebellion and the Panthay revolt ; it is suppressing the Tungan rising. Will Chinese pride leave the recovery of Kashgar and Yarkand unattempted? Again, may not cause of quarrel arise between the Amir of Kashgar and Russia, as between those of Khokand, Bokhara, or Khiva and the same Empire, and with the same results? Again, the Amir is not young, the provinces he has erected into a kingdom were distinct before, and are only held together by his iron hand. His death will be the probable signal for disruption and anarchy, with the certain result of the annexation of the various provinces to either Russia or China.

"But there is a branch of Central Asian trade, shortly described in the February 1874 number of *Ocean Highways*, on which a *moderate* expenditure would be immediately reproductive : a hardy commerce which has existed for a century under the most discouraging circumstances (instead of being a recent creation of our own), and the value of which, by the Gomul route alone, was considered by the Lieutenant-Governor of the Punjab, in 1871, to be not over-estimated at half a million sterling (actual, not statistical), and to be then considerably depressed from various easily remediable causes. The total value of the trade by all four of the great routes into Affghanistan is at least a million sterling.

"What has been done by the Indian Government to develope a commerce of which the germ (if an existing trade of 1,000,000*l.* can be called a germ) displays such exuberant vitality as to defy all the blighting influences detailed in *Ocean Highways*, and in the India House Report of Indian progress for 1872? Emphatically *nothing*. The profits of the trade are such as to attract constant accessions to the ranks of the Povindah merchants, from among the more venturesome mercantile spirits of the Indian frontier, notwithstanding the exactions and losses described in *Ocean Highways*, and the efforts of the Russians to exclude Indian and British products from Turkistan. It would seem that every political and mercantile consideration should lead us to take advantage of such an opening, and to adopt measures to develope it, somewhat similar to those already described in the case of the Yarkand trade. The abolition of harassing imposts, and the prevention of annoyance and oppression of the traders *en route*, could be negotiated as easily and cheaply with the Amir of Cabul, as with the rulers of Kashmir and Yarkund. No physical difficulties have to be overcome ; and if the British Government wished, the Amir could and would, in accordance with his undertaking at Umballa, in 1869, improve the roads. The traders have their own arrangements, and require no kind of assistance in the matter of carriage or supplies.

"The real and only great difficulty of the routes is *their* insecurity, on account of the turbulent tribes through which they pass. The mountaineers want payment for the right of way, and they take it sword in hand. The evil is one peculiarly easy of remedy, by the combined action of the British and Cabul Governments. The plan proposed is to protect the disputed portion of the main (called Gomul) route (that immediately upon the British border), by posts at each stage, held by small parties of the very tribes to be restrained, members of which would escort the caravans from post to post. The posts would be paid by the British Government from funds raised by a small tax which the Povindah merchants already pay at the Indus, the proceeds of which have been hitherto credited to the general revenues ; but besides this advantage, the tribes would receive from the merchants themselves certain pass dues, at a tariff fixed by the British Government. These posts would be supported and watched by a detachment of the Cabul troops, conveniently posted to command the route, and would be supervised and commanded by a selected frontier chief, appointed Pass Warden on the part of both the Governments.

"Practical, cheap, and simple as these measures are, and evidently certain as they are to develope a trade which is at present dwarfed by the impossibility of passing through to India, save by collecting the successive caravans till they form the strength of an army, and can push through the passes by main force, they still hang fire. Whether it be advisable or not to spend enormous sums on creating a trade with Yarkand, it must certainly be so to lay out 2,000*l.* a year to facilitate an existing commerce through Affghanistan, if for no other reason than to open routes and to encourage a class of carriers who have been, and may again be, of the utmost military importance to us."

OUR TASMANIA.

THE ANDAMANS.

ROMANCE is seldom found in any of the multitudinous blue books published annually in this country, but there is one report which would supply a novelist with scenes of "thrilling interest", and "startling incidents." This literary wealth may be discovered in the yearly narrative written by the Governor of Port Blair and the Nicobars—our Tasmania, as the settlement may justly be termed, since it possesses many features and characteristics which belonged to Van

Dieman's land fifty years ago. Nature is bountiful, and although the specks of earth-covered rock which form the home of India's rascaldom hardly merit the title of "Sunny Isles of Eden" they are far from being insalubrious, or devoid of those bounties which have been lavished upon Australasia. Man certainly is vile, but the pigs are famous for their pork, and from the sea are taken some of the finest fish the world produces. Father Neptune is in league with the convicts against their warders, the waves singing to the fettered rascals an everlasting song of liberty, with the effect that last year no fewer than a hundred and eight convicts managed to escape, thirty one being by sea. "In June 1873, three patients in Chatham Hospital managed on a dark and stormy night to possess themselves of a small punt attached to the Superintendent's steam launch, although it was at the time under the charge of a police sentry stationed at the jetty. The punt was without oars or rowlocks, and so small that three persons should have sunk it. Yet, there can be no doubt that these three convicts contrived to get out of harbour by means of it." Dumas or Mayne Reid would make these few words give birth to a novellette or, at least, two chapters of sensational fiction. In August of the same year a small canoe, employed in carrying the correspondence between Haddo and the northern stations was borrowed by the crew, who rowed out to sea and escaped, notwithstanding sentries and night watchmen. The next adventure was one that could only have been arranged by a man of genius. He unconcernedly embarked at Port Blair in the "Lady Lawrence" on her leaving for Calcutta with a *posse* of returning convicts on board. Tempting fortune further, he proceeded to Madras after Calcutta, and then left for Hyderabad to take service with the Nizam. In the next instance, a party of seven Afghans forced the convict police guard and carried off the only canoe on the west coast. The last successful escape by sea was effected by five men, who dexterously availed themselves of the temporary absence of the Andamanese from the Macpherson Straits Home, to secure a serviceable boat. The attempt was discovered within a few hours, but the voyagers in search of liberty were far away before they could be intercepted. The utter disregard of life displayed by these men may be illustrated by the case of one daring fellow, who recently left land in search of India upon a raft of plantain stalks. He had no very clear idea as to the direction of the land, and so, instead of reaching Saugor Island, he was blown towards Ross, where his frail bark stranded and its builder was re-captured. It is hardly credible, but the amount of food this man took with him consisted only of a few pounds of rice and a lotah of water. The escapes by land are not so interesting as those by sea, since the convicts who make the attempt also make up their minds to be re-taken, yet the desire for a holiday is so strong that seventy-one left their barracks for a stroll in the neighbouring bush. Some even ran away for the mere purpose of bringing their petty officers into trouble, when the latter were overbearing or fault-finding.

Another strange phase of life in our Eastern Tasmania is connected with matrimony amongst the convicts. Last year there were sixty one marriages between women, who had in their Indian homes strangled their infants, and men who had murdered small boys for the sake of their paltry ornaments. The number of married convicts now in the settlement is about a thousand. A woman has to remain five years as a drawer of water and hewer of wood before she becomes "eligible." For reasons of discipline, this probationary service is certainly not excessive, but the good effect of the marriages from a moral and social point of view so far outweighs even considerations of discipline that General Stewart would like to see the probationary period of labour reduced by twelve months. It would seem that the ties of family are not very strong amongst the people of India, for when after a long course of good conduct, a convict obtains leave to send for his family, the latter generally refuse to leave their native village. Looking at the manner in which marriages are contracted at Port Blair, it is wonderful how satisfactory most of them are. On the whole quarrels do not seem to be more common than among free people in the same social grade. Husbands, however, who do not live peacefully with their wives are required to support the latter, if separation is necessary, and this admirable rule has a good effect upon quarrelsome couples.

There has been little change in our relations with the anthropophagi of the Andamans. Our old friends continue to appreciate cast-off clothing and an occasional tin kettle, but the more distant tribes are not amenable to these prized treasures. Mr. Homfray lately visited the haunts of the Andamanese on the Northern Islands, but did not succeed in effecting a meeting with any of the race. The season for inspecting the coasts had almost gone before a steamer became available, and it thus happened that there was no time for ascertaining with any degree of certainty why the islanders who met us on friendly terms the previous year avoided a second interview. It seems as if the tribes to the north of Middle Straits had with one consent agreed to hold no intercourse whatever with their white invaders. Every endeavour has been made by the Governor to restore the relations which formerly existed between our people and the inhabitants of Interview Island, and it is hoped his efforts will eventually be crowned with success, although they have as yet produced no visible effect. On one occasion during the past year, the Little Andamans were visited and explored. At first the people hid themselves, but on the second day a large body followed our boats into the sea with the view, it is supposed, of decoying the visitors within arrow range by friendly signs and gestures, as the islanders were seen dragging bows and arrows by their toes along the shore and in the water. A small party of Andamanese from Port Blair was attacked, and only managed to escape by firing on their assailants. It is evident therefore, that we must defer occupying the Little Andamans for some time to come.

EDITORIAL NOTES.

No more striking illustration could be adduced of the revolution effected by the Suez Canal, than that suggested by a comparison of the shipping advertisements of to-day with those of 20 years ago. Then, we hardly ever heard of steamers in these regions, except in connection with the stately proceedings and crushing fares of the P. and O. Company. Then, it was a splendid run to get home in one of Green's or Smith's clippers in 90 days. Now, an ordinary cargo steamer, carrying a few passengers, lands us comfortably at Liverpool on the 30th day. First we have the time-honoured P. & O. Company, next the Messageries Maritimes de France, then the Italian Steam Navigation Company. Not inferior to the last-mentioned is the Austro-Hungarian Lloyd's Steam Navigation Company, then comes the Anchor Line, followed by the Wilson Line, the Star Line, &c. Besides the regular steamers of these and similar "Lines," we have our choice of a large and constantly increasing number of private vessels—less regular perhaps in their departures and arrivals, but many of them not a whit inferior, in size, accommodation, speed, and careful management. Another noteworthy feature in these noble Steam Fleets is the nature of the vessels generally composing them. It will be found that nearly the whole of the steamers are new, many of them having been built expressly for the Indian Passenger Trade; and all are superbly fitted out with every convenience and luxury. Twenty years ago, a vessel of 1,500 tons ranked as the largest of our Indian sailing vessels. Now, 3,000 tons is a very common figure to see appended to the name of a passenger steamer, and 4,000 tons not uncommon, whilst some are considerably above that tonnage. In point of speed, several steam vessels owned by new companies are equal, if not superior, to the P. and O. Recently we read of a steamer leaving Suez two days after the P. and O., and arriving at Bombay one day earlier. The lowering of fares is another item worthy of consideration. A first class passage can now be obtained, exclusive of beer and wines, for Rs. 450. The result of all this is, a greatly increased and rapidly increasing flight to England from India; and an annual accession of visitors and tourists from England, the continent, and America to India. Even our Hill Stations are losing their summer visitors—drained off by the absorbing Suez Canal. And many parents who formerly sent their children to Hill Schools are now taking advantage of cheap passages to give them the benefit of Home Education. As fares are reduced still more this homeward tendency will further increase. Why should not £30 pay as well for 30 days without beer and wines, as £60 used to pay for 90 days with beer and wines? We believe that first class passages will eventually be procurable for £30, and that now is the time for Shipping Companies to look the future in the face.

***

THE appointment of Mr. Kipling to Lahore for the establishment of a school of art in that city, evidences we hope the growth of a conviction in the country that the time has arrived when we must supplement the purely scholastic training of the Government Colleges of India with the technical teaching in which our own country is so sadly deficient, and the diligent cultivation of which on the Continent in the last twenty years is placing the industrial classes of England at an almost appalling disadvantage in comparison with those of Germany and other nations. Mr. Kipling's

appointment has been talked of for the last two years, and we hail its announcement with unmingled satisfaction. The complaint is universal that our colleges as now constituted, form merely a door of entrance into the subordinate ranks of the Government service, the domains of Vakildom or the profession of Medicine. A system that fosters an ambition so narrow as this stands self condemned, and the public will we believe be glad to know that a Conference was lately held at Belvedere for discussing the steps that should be taken to widen the aspirations of the native youth, who are being educated by Government in Bengal. Sir Richard Temple himself presided at the conference which was marked by an almost unanimous agreement of view as to the desirableness of some change. It is an evil of crying magnitude, that our educated native youths should be all looking either to Government, or to the Law Courts, or to the Hospital as the only fields of service open to them, while the country is absolutely destitute of the very first elements of real technical power.

***

The *Englishman* has entirely mistaken the point of our complaint that in the eyes of the poople the Baroda trial was simply a duel between the Prince and the Resident. "So far," says our contemporary, "from censuring Colonel Phayre's determination not to let the Gaekwar do as he liked, or regarding it as proof that the system works badly, we are rather disposed to take it as illustrating the necessity of allowing Residents a wide discretion. Colonel Phayre's error consisted, not in undue severity, but in the weakness and credulity which made his severity worse than laxity; and to charge these qualities to the system, is absurd. There can be little question that Colonel Phayre's dislike of Mulharao was intense. Nor do we deny that a certain amount of sympathy between Resident and Prince is generally desirable in the interests of good government. But there are native Princes with whom no honest man could possibly sympathise, and sympathy with whom could do no good; and Mulharao, it strikes us, was one of these."

Who doubts it: but what has this to do with the point of our complaint? We say that Travancore has been avenged at Baroda; that the sufferings of this good and amiable Prince at our hands, by our forcing Colonel Ballard upon him as Resident, were known to every native Court in the country, and we said that if either Sindhia, or Jeypoor, or even Dinkur Rao, found Mulharao guilty, we should be very greatly surprised; since the trial could be nothing in their eyes but a duel between the native Prince and the Resident. Do we suppose that the iron has never entered into the soul of these men themselves?

We have ourselves seen one of these very Princes trotted out by the Resident on a great State occasion, and in an immense assembly just as if he were a bear with a ring in his nose: through the manifest unfitness of the Resident for the delicate position in which he stood.

***

THE forthcoming Arctic Expedition is not, it seems, merely an attempt to reach the North Pole, but has been undertaken with objects worthy of the labour to be devoted to their acquisition. The two canons of Polar exploration to be observed are—first, that the Polar ice pack must be avoided, and the exploration must be along the coast; and secondly, that for efficient exploration, at least one winter must be past within the frozen zone, the sledges being the main instruments of discovery.

***

IT is a heavy reflection upon our administration, that with powers over the soil that are unquestioned, we permit the tenant-at-will system to prevail all over the country, and affect—for it is no longer anything but affectation—to regard freedom of contract as essential to the well-being of the agricultural classes. The whole civilized world stands up and contradicts us. Scotland tells us that even her capitalist-farmers in spite of their 19 years' leases, require tenant-right protection, while we affect to believe in "India" that we promote the well-being of the cultivator by leaving the landlord to make what terms he pleases with the tenant. And with this result, that while the State shews the utmost moderation in fixing its own demand everywhere, settling the rental for periods of 30 years without change, it leaves masses of the people in every province of the country, to be deprived by the zemindar and the sowcar between them, of the entire produce of the fields. What more damning fact can be told than that throughout Behar, for instance, it is known and acknowledged that the actual cultivator, as a rule, is never allowed to appropriate more than 6 annas of the 16, produce of his sweat and toil. And legislation is not wanted for the rescue of these poor, miserable men from a state of things like this. It has been one of the greatest misfortunes of India that our rule has been administered from the first, by men imbued with the convictions and the prejudices of the "landlordism" of our own country, that is at last being swept away by the intelligence and will of the people. Scotland with 19 years' leases demands tenant-right of the landlord: India with no leases at all does not require it!

***

DOES Germany mean peace or war? A London telegram of April 10th, tells us that all the morning papers contain sensational articles, consequent on the warlike tone of the *Berlin Post*, but that while the basis of the alarm is supposed to be the religious question, the real reason is the rapid manner in which the French army is being reorganised. Germany is under too wise leadership to plunge into war, in the reckless spirit which many heedlessly attribute to her. Bunsen once affirmed that the Germans were the people of God of the 19th century, and there was a truth in the seeming boast, not yet perhaps fully apprehended by Europe.

***

CAN any of our Bombay contemporaries tell us, who Mr. Shovakshah Dhaujibhai and Mr. Morauji are? We are able to guess from the context in the case of the latter, that Mr. Goculdass Morarjee is intended, but who Shovakshah Dhaujibhai is, we have not the least idea. It is spelling gone mad.

***

ONE would have hardly supposed *Vanity Fair* to be at all likely to distinguish itself by any very exact account of Mr. Moody's preaching, but Jehu Junior appears to have more correctly appreciated the secret of its power, than any other of the London papers:—

> He presents that view of Christianity which has always made the most converts in modern times, and which consists in leaving out of view almost entirely the necessity of Works, and in dwelling mainly upon the emotional and sentimental aspects of the Faith. These aspects he presents in the symbolical language of the Gospel as though the symbol were the thing; he insists that man shall have a "changed heart;" that he shall be "regenerated" and "find Christ." And it is held sufficient proof of the work having been effected if an individual presumes to say to himself and to declare to others that he believes himself to have undergone this vague process. In this sense Mr. Moody is doubtless justified in claiming that he has made "tens of thousands of converts." And if it be objected that his conversions when made only amount to the reception by the convert of shadowy symbols and suggestions of true religion, and not of true religion itself, that is yet a step in advance, and may afford ground for belief that such as have made it may yet seek to go beyond the sincere use of phrases to the sincere exemplification of the law and the duties which these phrases merely typify.

All this strikes us as just and enlightened criticism. The very root of the divine life in man, we take to be the vivid apprehension under one or other of its forms, of the truth that—"To him that "worketh not, but believeth, on him that justifieth the ungodly "his faith is counted for righteousness." Religious movements are influential or powerless as they apprehend vividly or otherwise this root doctrine of the forgiveness of sins without money and without price. The danger lies not in the apprehension of this truth, for it is the very root of all spiritual life, but in substituting it for the growth and fruit of the life thus commenced. On the one hand, Romanists have made so bad a use of the doctrine of "works" that Protestants are afraid to preach it: while Protestantism tends habitually to such antinomian perversions of what the Romanists call "solifidianism," that they are justified in complaining of it as heresy. We have little doubt with Jehu Junior that the "sincere exemplification" of the law and the duties of life, will shew that in a large number of cases these revival preachers have been the means of really changing the character of their converts altogether.

***

SIR HENRY RAWLINSON'S remedy for the prevention of Russian progress in Central Asia is our occupation of Western Afghanistan, not as proprietors, but as tenants. Taking it for granted, that we shall never wait to be attacked, in which case the troubles in our rear would be probably more serious than those in front, the next point to consider is how and where are we to meet the enemy. Sir Henry Rawlinson states that along the northern limits of India and its dependencies, Russia has herself drawn the line—the Oxus—which she cannot transgress. But this limitation hardly meets the general question, since the road into India from Russia's European base is not from the northward across the Hindoo-Koosh to Cabul, but from the north-westward by Merve, Herat and Candahar, and upon this line there has been hitherto no understanding as to a finality of advance. Without making "any offensive notification to Russia about the limitation of her advance,

and reserving to ourselves the right, in the interests of the Afghans, to impede her occupation of Merve, if it seem advisable, I submit, that we should at any rate make up our own minds that she shall not follow up the Murghab Valley from Merve into the Afghan territory unopposed. In fact, the facility of taking Herat by a *coup-de-main* from Merve is so patent, while the consequences of that movement to British India might be so fatal, that it seems a fair matter for consideration, whether the Russian occupation of the one city should not be immediately followed by the British occupation of the other." If the Ameer of Afghanistan is hostile, there must be a demonstration against the Khyber, but in any case, 10,000 men would suffice, Sir Henry thinks, for the Herat expedition; 5,000 at Herat; 3,000 at Candahar; 1,000 at Quetta and Pisheen; while 1,000 should be distributed between Ghirishk and Furrah, to connect Candahar and Herat.

***

THE jute industry of Calcutta is still deplorably depressed, and there seems to be a conviction in the city that it is unwise to encourage any hope of its revival. The extent to which this feeling prevails is, we think, simply reactionary and the tendency to take extreme views of the position is unwise. "Australian" affirms in a letter to a daily contemporary, that almost any quantity of close-woven jute stocks can now be sold in Australia at remunerative prices, and that he believes it would pay any one to buy up the whole stock of bags now on hand, and send them to Australia, if conveyance could be had. Right or wrong, we think this tone is more healthy than the elaborate efforts that are being made to establish the conclusion, that the jute industry of Calcutta was a speculative bubble that has hopelessly and justly collapsed. We are ourselves satisfied that Calcutta will never lose the hold she has got of the gunny trade of the world, and that her mills will completely beat those of Dundee in the end.

***

THE article in the *Ministerial Berlin Post*, which lately caused so unpleasant a sensation in Europe, runs as follows:—"Recent "events have unfortunately rendered it but too probable that the "Legislative Assembly of France, under the dangerous auspices "of MacMahon and the Orleans Princes, are anxious to precipitate "a *guerre de revanche*, while a strong body of Royalist Deputies is "there to profit by it for the reestablishment of Monarchy. War, "accordingly, is coming on, though the clouds gathering on the "horizon may yet be in dispersion. The Austrian Conservatives, "aided by influential military circles, are endeavouring to turn out "the Andrasy Cabinet, with a view to take part in coming events "in Italy. It is certain that Italy wishes to make the Pope a too "in her hands, and to use him for the exercise of Italian political "influence all over the world. The greater part of the upper classes "of Italy are ready to join any ally against Germany, whose anti-"Papal attitude is considered by them as anti-Italian and hostile "to their national interests. Yet it is by no means certain that the "French Government will be able to procure an Austro-Italian "alliance just now. If they fail in their endeavours to do so, war "will probably be delayed. Things however have reached a pass "when the German people should be better acquainted with the "realities of the situation. It is time to awake slumberers."

It is a high compliment to Republicanism that Bismarck openly avows his belief that with a Republic firmly established in France, the nations would have peace. Our own belief tends to the same conclusion. At this moment the political forces that are pressing Europe into war, are the interests of the Church on the one hand, and of the various pretenders to the French and Spanish Crowns on the other; in other words, the purely worldly ambition of the Pope and Princes. It is the Church that is at this moment answerable for the Carlist War. You cannot take up Catholic publications even in India, without seeing how passionately the Church is committed to the Carlist cause. Don Carlos, the Count de Chambord, or failing him, the Orleanists and even the Bonapartist princes are the allies with whom it is actively working for the bringing about of a general war.

***

THE latest utterance of Victor Hugo is, that "man was the problem of the 18th century; woman the problem of the 19th. And who says woman, says child—that is, the future." The question thus put appears in all its profundity, and on its solution depends the fate of the supreme social battle. What a strange and anomalous situation! "In reality, man depends on you, for woman holds the heart of man. Before the law she is a minor, incapable, without civil action, without political right—in short, she is nothing; before the family altar she is everything, because she is the mother. The domestic hearth is what she makes it; at home she is the mistress of good and ill. Sovereignty complicated by oppression; woman can do all against man, but nothing for herself. It is imprudent of the law to make her so weak when she is so strong. Let us recognise that weakness and protect it; let us recognise that strength and counsel it. There lies the duty of man, and there is also his interest. No, I shall never cease to say it; the problem is laid down, and it must be solved. She who bears half the burden ought to have half the right." It is but ten or twelve years since the subject of "womens' rights" was never mentioned in English journals but to be turned into ridicule. Demands that are now regarded as eminently reasonable, were but a few years ago assailed with every species of ridicule by the *Times*, the *Saturday Review*, and every leading journal in the country. And it required some courage in those days to shew the smallest sympathy for a movement that has since become almost popular. We are yet too near John Stuart Mill to estimate fairly all he did for the nation, and until the reactionary mood is over, it is dangerous even to name him.

THE WEEK.

LORD HOBART'S remains have been placed beside those of one of his predecessors, Sir Henry Ward. Dr. Druitt, we are informed, postponed his departure from Madras in order to watch the health of the late Governor. On the day of his death nothing more was known than that he was unwell, and that Lady Hobart was anxious. When the news of his death reached the suburban dinner-tables in the evening, it came as a severe shock, the impression having been general that he was simply indisposed. The Queen has telegraphed condolences to Lady Hobart, who goes to Coonoor for a time. The Hon'ble Robert Bourke and Sir Hercules Robinson are mentioned as likely Governors of Madras.

***

THE attempt to place Luxmeebai's child on the Baroda *guddee* seems to have been a somewhat serious affair. A multitude of Arabs, budmashes and bunyas armed with bricks and clubs proclaimed the child, after having had him adopted by the elder Ranee of Mulharao. On hearing of the *emeute*, Sir Richard Meade sent Captain Jackson with a few sowars to reconnoitre. When he arrived at the palace he was told by the crowd to leave them alone, and was then assaulted with stones and sticks, and compelled to use his revolver, one man being killed. In the meantime he had sent information into camp, and troops were rapidly on the spot. A large number of prisoners was taken, the palace occupied, all the Arabs that could be found were disarmed, and Luxmeebai and her child sent into camp. Besides the Gaekwaree troops four hundred sepoys and three guns were told off to patrol the streets. General Devine was seriously wounded by the mob before the arrival of the troops and Damodhur Punt's house was literally gutted, every article of furniture and wearing apparel being destroyed. These events took place on the 28th April. On the two succeeding days a large number of additional arrests were made, and on the evening of the 29th the Government telegraph wires were cut between Baroda and Etola, and the railway was threatened. The whole line is now being patrolled by the railway authorities and police. Five hundred men of the 9th and 22nd Native Infantry Regiments, under Colonels Nuttall and Hanson, Major Sibthorpe, Captains Hobson and Morse, and Lieutenant Smith, together with Surgeon-Majors Lewis, Boustead and Stock, are in possession of the city. A squadron of Native Cavalry patrol the streets, while some Artillery under Lieutenants Robertson and Beaufort, with two guns, render things more secure. None of the Sirdars have been arrested, but several of them are suspected of having sent emissaries to raise the Bheels. The Gaekwar's Ranees entered Bombay on the 30th April, by special train from Baroda. Among the personal effects brought by Luxmeebai were a gold cradle and a silver bedstead. She is said to have been much frightened, and on reaching the platform made an appeal *ad misericordiam* to the officials present, stating that *she* had committed no offence. She was taken to a bungalow in Girgaum, and the other Ranee, Mansabai, to a separate house in the same district. The two women left for Madras on Saturday last under an escort of sepoys. The Gaekwar takes daily drives on the beach, but unaccompanied by his attendants, who are troubled with the belief that they are to be sent on to the Andamans. The same notion is held by Mulharao, who is described as

looking "frightfully wan and miserable." Sir Madhava Rao has been appointed Dewan of Baroda on a salary of Rs. 5,000 a month. It is positively announced that Anund Rao is to be the next Gaekwar.

***

THE real cause of the disturbances at Baroda seems to have been this, if we may rely upon a correspondent of the *Pioneer*. Since the deposition of Mulharao, the trade of Baroda has been stagnant, and the *bunniahs* of the city have seen their means of livelihood slipping from them. Among the many claimants to the throne, the most direct was the infant son of Luxmeebai, and the tradespeople determined to hail him as their King and so institute a settled Government themselves. This accordingly was done; the baby, a remarkably unprepossessing infant, was taken from its plebeian mother, and first adopted by one of the elder queens. It was then taken across the road to the palace and installed upon the *guddee*, sirdars and leading citizens doing obeisance to it as Gaekwar. It was the news of this move that led to Captain Jackson's visit to the city and its unpleasant result.

***

THERE is little news about the Karen difficulty, except a rumour that the King's troops are gathering in strength on the frontier, and that the Shans are inclined to become his allies. At the public dinner given him lately in Rangoon, Mr. Eden spoke as follows about the rupture.—"Something has been said this evening of the excitement caused in the country by rumours of war. I am afraid that it is true that uncertainty has led to some temporary derangement of trade which I deeply regret, but this will only be for a time; I do not for one moment apprehend that the King of Burma will be so ill advised, or so foolish as to resist the moderate and just demands of the Government of India; but should it be otherwise it is a small matter. A misunderstanding would, with our present armament, our facilities of transport, our advanced base of operations, our knowledge of the country and the loyalty of our own people be no longer a matter of years, but settlement in a few days."

***

THE Supreme Government has addressed the Government of Bengal upon the excise administration of the Lower Provinces. Lord Northbrook is of opinion that unduly stringent measures will increase smuggling and illicit distillation, and that nothing should be done to place temptations before the people. The problem, says Sir Richard, is how to impose adequate restrictions without offering a clear premium on smuggling and other illicit practices and though this has not yet been perfectly solved, some progress has been made. He believes there has been no material increase in the consumption of spirits within the last five years, and that "there is no tendency whatever towards excessive increase among the population a whole." The people of Bengal do not drink more than a wineglassful of spirits per head in a year, and it would be "difficult to imagine how, as a people, they could drink a smaller quantity unless they abstained altogether." In the mass they are sober, quiet and abstemious and the great majority never taste spirits at all. But the Lieutenant-Governor fears that intemperance is certainly on the increase among the educated natives of Calcutta and other large centres of national life, and he hopes its victims will eschew their dreadful error and return to the principles of that sobriety which is honorably characteristic of their nation generally. In a notable Minute on the subject, Mr. Money points out that, as regards the consumption of spirits, Bengal contrasts favorably with British Burma, Bombay, Madras, and the Central Provinces. Referring to a petition from Baboo Keshub Chunder Sen in particular, Mr. Money says "this kind of sensational writing only misleads," and quotes able authorities in support of the statement that there is, generally speaking, no connection to be traced between drunknness and crime in this country. Crime is in India a profession, not the result of poverty or intemperance. The only way out of the difficulty is to reduce the number of liquor-shops as far as possible, and to refuse licences to applicants who possess no real evidence for their establishment. We think the collectors are, in many instances, to blame. They compel their darogas to collect a certain amount of revenue, and if the collections fall short of the sum named, the subordinates are wigged; if they are in excess, praise and promotion follow.

***

CHOLERA is reported to be gradually retreating from Bombay and Baroda. The disease began at Nassick on the 21st March. For four succeeding weeks there were three hundred and ten cases and a hundred and forty deaths. Want of food, nakedness and the poverty of the people had much to do with the mortality; quack treatment was moreover resorted to, and numbers who would not receive medicines from English surgeons derived much mischief from well-meant but mistaken attempts of the owner of a printing press who distributed preparations of tamarind to the people. The Collector mentions three cases where death followed upon treatment with the juice of unripe mangoes. "We experienced much prejudice and aversion," he says, "as concerns our medical effort. But I am glad to say that the people readily permitted sanitary measures, and in many cases houses were lime-washed and cleaned by their owners" voluntarily.

***

NOWROZ KHAN, the uncle of the prisoner Yakoob, is causing great trouble in Affghanistan. Dubb, a village bordering on British territory, was attacked by him during the past week, and the inhabitants have fled towards Fort Michnee for protection. A caravan which left Peshawur lately for Cabul has also been plundered by Nowroz of goods estimated to be worth three lakhs of rupees. A battle is said to have taken place between the followers of the rebel and the Ameer's troops six miles from Michnee. The merchants connected with the caravan have returned to British territory with the intelligence that the Khyber is impassable in consequence of these disputes.

***

THE audience question has been again revived, owing to the death of the Emperor of China. According to the treaty of Tientsin, all European Sovereigns were to have the right of sending representatives to the Court at Pekin. In 1873, an audience was given to the Japanese Ambassador, and another to those of England, Russia, France, America, and Holland. Since then there has been no repetition of the ceremony, and at present there is little likelihood of an audience for some years to come. Strangely enough the speeches on these occasions have to be translated into Chinese, and re-translated into Manchoo, for the benefit of the Emperor. Although the Manchoos have now been in China nearly three centuries, and have accepted the language of the conquered people, they are still regarded as foreigners by the Chinese. This is not to be wondered at, however, when his Celestial Majesty has to be addressed in the language of his Manchoo forefathers.

***

THE friend of a Kachin Chief is said to have been crucified by Burmese officials for theft, and the Burmese at Bhamo are expecting an attack from the clan of the deceased. A large number of Panthay refugees have entered the town, and delivered themselves up to Captain Cook, and asked to be sent to Rangoon where their Prince now is. They had been hiding in the jungles for months, to escape the Chinese troops who are still hunting the miserable followers of the Sultan of Talifoo from place to place and murdering them in cold blood.

***

THE Prime Minister of China is engaged in instructing the people how to mourn for the death of their Emperor, who "has sped upwards on a dragon to be a guest on high." Mourning is to be universally worn for twenty-seven days; for a hundred days the chin must go unshaven, while music and theatricals are forbidden for the same period. Officials cannot marry during the next twelve months, and all ministers must refrain from acts of public worship in the temples. The official red-tape has been changed to blue, and the colour of the official paper from red to a sort of saffron. The brunt of the mourning is supposed to fall on the young Emperor, who should wear sackcloth and ashes for twenty-seven months; but after being duly importuned by the officers of his court, he yields to their wishes and promises to content himself with a like number of days. In an early *Gazette* after the Emperor's death, his present Majesty said: "The grief which His Majesty feels is so profound, and the gratitude he owes is so immense, that life-long mourning would itself be insufficient to discharge his obligation. He cannot bring himself to abate any portion of the three years of mourning, which are, indeed, imposed by the ancient ritual. The official body and the people will observe the regulations heretofore in force, but His Majesty will continue to wear the mourning garb for three years." The Princes, however, lost no time in presenting a remonstrance, and the next *Gazette* contains the reply: "It appears that on the decease of the Emperors Kia K'ing, Tao Kwang, and Hien Feng, the entreaty of the Ministers of the day prevailed over similar resolutions on the part of the successors to the Throne, and His

Majesty, profound as is the grief he feels, does not feel justified in disregarding the ancestral precedent. He will, therefore, wear the full mourning garb of white for 100 days, and plain robes for 27 months. Let not the Princes and Ministers obtrude further solicitations on this subject."

The supposed writer of these effusions is a child three years old, who is said to pass the greater part of his time in tears, having, according to custom, been separated for ever from his mother since his exaltation.

***

THE Foochow telegraph dispute is attracting much attention at Pekin. It appears that the agents of the Company whose works have been destroyed, were warned by means of official documents so far back as October last. They were then told that the permission to erect telegraph posts accorded by a provincial governor could not be recognized at head-quarters. They were also advised not to land their sea line, but in spite of this the work was carried on with the results already known. At the intercession of all the foreign ministers at Pekin, despatches have been sent to the authorities at Foochow, directing them to take every precaution in future for the protection of the Company's sea cables.

***

THE French in Tonquin are imitating the conduct of the Russians near Khiva. When the late Lieutenant Garnier entered the country, he took into his service a large body of the Laes, or native partisans of the old rulers of the country. The Laes helped him in every way, hoping to find their homes placed under the protection of the French against the Annamites. After Garnier's death, the French troops were withdrawn, and the Laes abandoned to the Annamite mandarins. At first, part of them were killed, but the Laes soon gathered together, and were able to offer resistance, their object being to drive away the Annamite interlopers, and re-establish the present representative of the old Tonquinese dynasty. They had taken two provinces and were advancing rapidly when the French urged on by the Annamites, attacked them, and they are now nearly exterminated. Lately a Spanish Bishop, Monsignor Calomer, attempted to intercede with the French commander for the protection of the tribe, and the good priest gained his point. But while in the camp of the Laes telling them of peace, two French gunboats suddenly appeared and fired into the encampment. The Laes now say they will die rather than trust again to the "*Frenchmens' treacherous promises.*"

THE ENGLISH MAIL.

THE Home Press continues to speak very strongly with regard to the Baroda trial. The *Spectator* thinks the failure has arisen from the Government of India having tried to reconcile a despotic though just proceeding with constitutional forms. "There is," our contemporary remarks, "but one honourable way out of the scrape. The Gaekwar, guilty or innocent, must be restored. The native members of the Commission may be all wrong, or all prejudiced, or all corrupt, though we see no reason for imputations on them; but the Government of India chose them, and must abide by its choice." The natives of India neither love us, nor, except in the domain of material civilisation, greatly respect us; but they do acknowledge that Englishmen will, if obeyed, do justice even to their own hurt. "How is that belief," asks the writer, "the very keystone of our prestige, to be preserved, if a Sovereign who, on promise of a public trial and judgment according to the evidence surrenders peaceably, finds that with no verdict against him his judge still proceeds to announce his doom?" The enquiry would not be made, if the *Spectator* were more exactly informed as to the state of opinion amongst the people. The trial we now know was a fatal error, but almost no moral doubt exists in any quarter that an attempt to poison the Resident was really made and that Mulharrow was the instigator of the attempt. In addition to this widespread conviction in however latent a form it may exist, every man in the country knows the infamy of the Gaekwar's rule. Both the intellect and the conscience of the people approve his deposition, however reluctantly. And it is idle and mischievous to go on harping about his restoration. To have restored him would have been an act of weakness and folly greater far than any we had committed in the case.

***

THE English papers do not reflect the feelings of the people in the matter, and have missed their grip of the case. If the home press would improve the occasion as of course it wishes to do, let them understand that Travancore has been avenged at Baroda. The strong sympathy expressed for the Gaekwar has had no respect whatever to the person of the Prince but to the cause he represents. The trial has simply been a duel in the eyes of the people between a "British Resident and a Native Prince." Thus the *Hindoo Patriot* says:

"The revelations made by the Baroda Commission seem to shew that these Princes are more miserable than the humblest subject of the Queen. The pomp and pageant which surround them do but ill conceal the degradation they suffer. Theoretically the rulers of hundreds of thousands of subjects, practically they are the footballs of the single man, who represents the Paramount Power in their States. So long as they can keep him in good humour they are safe, and to what humiliation do they not stoop for the purpose of securing the good-will and favour of the great man, the Resident. Not only do they sacrifice all dignity, honor and power at the shrine of British supremacy, as represented in the person of the Resident, but they feel under the necessity of coaxing and rewarding his servants, as is shewn in the Baroda case, in order to keep the all-powerful man in good humour and also to obtain reports of the barometer of his temper." The lesson to be learned from this trial is the deadly way in which the people and Princes resist and justly resist our keeping men like Colonel Ballard for years together at the Court of a Prince like Travancore.

If our English contemporaries would turn this trial to the account of good government in India let them demand a Parliamentary enquiry into the relations between Travancore and Colonel Ballard in the last five years, and the attitude of the Government towards it.

***

THE new member for Kirkaldy will certainly not be counted among the "fine brute votes of the House," judging from his speech at the hustings. The terrible Sir George affirms that the condition of political parties is rotten, and that both parties will have to be reconstructed when the wave of conservative reaction has spent itself. Sir George Campbell, like almost all old Indians who retain their mental vigour, is a radical in home politics, probably without suspecting the extent to which he is so. He is not a party man *because* he is a radical, and is drawn to Gladstone by the instinct that draws all other radicals to the great Liberal leader. He is not without hope, he says, that Mr. Gladstone might yet, when he had rested a little, again come to the front, as, like other great men, he might not be able to tell what his own mind might be a short time hence. "Mr. Gladstone was Liberal to the backbone, an earnest, true man, and without any sham; and he hoped yet to be privileged to follow him as a leader."

***

IT seems that the visit of the Prince of Wales to India is not finally settled after all, and that if he does come, his visit is not to be a mere shikarri business, but that wisely "listening to the "counsel of Sir Bartle Frere, he purposes turning it to political "account by holding a series of Durbans, whatever they may be, "and so making the acquaintance of the great Rajahs and chiefs, the "oldest nobility in the world." So at all events says *Vanity Fair*. But we are now told that the Marquis of Salisbury will also come out with the Prince, and Dr. Russell of Lucknow and Crimean fame. Mr. Mackenzie of Kintail insists that the Prince should be accompanied by a Court, selected from the oldest and most historic families of the nobility; and that the Army and Navy, the Law and the Church, should each be represented by some of the highest officials likely to look and act with becoming dignity! There is a notion, he says, current in India that we are ashamed of our religion and as no one could imagine the Prince went on a missionary enterprise, "a good impression would be produced if he were attended "by an ecclesiastic of rank as chaplain, and the services of the "Church were regularly and openly performed." The districts must be traversed with an extensive provision of tents, horses, elephants and camels, and with the acompaniment of a guard of honour of from 10,000 to 6,000 men at the very lowest, insignificant in numbers, after all, to what the great native sovereigns were accustomed to take with them on similar occasions. "The Prince's tents should be of the regal red silk, and those of his Court of a costly description."

Mr. Mackenzie has kindly estimated the cost for us, and tells us that the total might be 600,000*l.* or 700,000*l.*, against which, however, there would be the set-off of saleable and money presents which would amount to about half, leaving the actual cost about 350,000*l.* to be provided by the Home and Indian Governments.

***

THE *Indian Statesman* seems to have been fortunate enough to secure Major R. D. Osborn as its London correspondent, who tells us that readers of the London morning papers are looking back, not without regret, to the stormy period when Gladstone was the parliamentary king. Spectators are beginning to fear that the present quiescent condition of the House, denotes a period of legislative stagnation. But this we are told, on the authority of the *World*, is a mistaken impression. The legislative machinery works with little noise, because the wheels are so carefully oiled. It is an eminent tactician who now leads the House, and who thoroughly understands that a soft answer turneth away wrath. The imperturbable good humor and ready wit of Mr. Disraeli conciliate opposition where Mr. Gladstone's impetuous wrath only hardened it into obstinacy. "During the current session," says the writer in the *World*, "we have not sat nearly so many hours as during any similar term under Mr. Gladstone's Ministry. But the amount of actual work done is at least equal in bulk. If Mr. Gladstone set out with the determination to reach a certain stage

or a given clause of a bill, he simply by pressure of his majority forced the House into agreement with his plan. The consequence was that a spirit of factious opposition was raised, and temper being lost on both sides, more time was wasted in fighting over the question of adjournment than might have served to effect Mr. Gladstone's original purpose. Mr. Disraeli never fights a minority that shows any determination to stay progress." He wins it over.

***

To give greater significance, it is supposed to the event, Cardinal Manning has selected the ancient city of Canterbury as the spot on which to deliver his first address to England upon his return from Rome as Cardinal. As Latin Christianity spread over Saxon England from Canterbury as its starting point, so does Rome hope that Catholicism will, at no distant date, rule over a reclaimed land with a Catholic Archbishop worshipping at the shrine of Beckett, in place of the usurping heretic who now holds wrongful possession of the See. The bitterness which is felt and expressed against Roman Catholicism, is no doubt due in part to petty and aggressive movements like this. There is a covert menace in the proceeding which irritates even where it does not alarm; and an *implied hostility to* legally established *facts* which *gives force and weight to demands* like Mr. Gladstone's "Political Expostulation." An English Cardinal selecting Canterbury as the scene of his first public appearance, gives to the event a political significance; and means of course that he is dissatisfied with the present constitution in Church and State, and would subvert it, if he could. It is this very impotency which renders the exhibition irritating to Englishmen, who feel that the representatives of "Vaticanism" deliberately calculate upon this impotency to protect them from the consequences of their unprovoked insolence.

***

A FOURTH edition of Dr. Newman's Reply has just appeared, with a postscript, in answer to Mr. Gladstone's second publication—"Vaticanism." It contains the following passage in regard to himself:—

"From the day I became a Catholic to this day, now close upon thirty years, I have never had a moment's misgiving that the communion of Rome is that Church which the apostles set up at Pentecost, which alone has the adoption of sons, and the glory and the covenants and the revealed law, and the service of God and the promises, and in which the Anglican communion, whatever its merits and demerits, whatever the great excellence of individuals in it, has as such no part. Nor have I ever for a moment hesitated in my conviction, since 1845, that it was my clear duty to join that Catholic Church as I did then join it, which in my own conscience I felt to be divine. Persons and places incidents and circumstances of life which belong to my first forty-four years, are deeply lodged in my memory and my affections; moreover, I have had more to try and afflict me in various ways as a Catholic than as an Anglican; but never for a moment have I wished myself back; never have I ceased to thank my Maker for His mercy in enabling me to make the great change, and never has He let me feel forsaken by Him, or in distress, or any kind of religious trouble."

The thought which this extract instantly suggests is, that the date—1845, which Dr. Newman gives as the moment of his admission into the inner sanctities of divine truth, marks also the close of his work in the world. From that day to the intellectual life of the West he has been as one dead.

THE London newspapers have this year entered upon a fresh phase of existence. By sending special trains of their own which start before 5 A. M. and travel fast, by new arrangements with the post-office, and by steadily ignoring anything Parliament may do after bed-time, the proprietors contrive to place their papers in the northern cities before eleven o'clock. The *Times* is a little earlier and in a short time will be distributed in Birmingham by 8, in Manchester by 9-30, and in Liverpool by 10 A. M. One bold writer sees no reason why the *Times* should not be flashed entire to any great city in England by 6 o'clock, set up, and given out for distribution by 9. The cost of telegraphing long messages is not great and it is clear that if it pays the *Times* to sell 100,000 copies in London and pay all the enormous expenses of production, it must pay to sell another 100,000 in the North-West and pay the comparatively smaller expenses of reproduction. "Some day," writes the editor of the *Spectator*, "science will find a cheap material for paper, the *Times* will drop to a penny, and be published in every city at once, and then the only thing left for political Englishmen to do will be to raise the House of Walter to the Throne. There only can we apparently be sure that power will remain latent, and yet be content."

***

GENERAL MARGARY has published the last letters received from his unfortunate son. They are full of new facts about Yunnan and the country round Manwynne. Momein, the only remaining stronghold, in 1874, of the Mahomedan rebels, is now in ruins, its destruction putting an end to the fifteen years' kingdom of Tu-Wen-Hsin. A Tartar General occupies the palace of this late worthy rebel, and he is much famed for a daring military feat which brought about the fall of Talifoo. He scaled the rocky heights behind the great city and dropped down in its rear, where the beseiged were weak and so panic-stricken as to let themselves be slaughtered almost without resistance. "He," the General, "has a calm, sphinx-like countenance, and a charming smile, yet this man slew thousands of Mahomedans on that day without quarter." Mr. Margary writes in a kindly tone of the people of the place where he was murdered. They are called Payi, and are a mixture of Chinese settled there five hundred years ago, and the Shans or Laotians, who cover the whole country between Burma, Siam, Cambodia and China. Divided into little principalities, they are governed by native chiefs, under Chinese supervision. Wherever he went, Mr. Margary was the guest of the chief, and owing to the "sociable disposition" of his hosts, enjoyed considerable intimacy with their families. The women "are not shy, like the Chinese, nor fear to talk with a stranger. Their dress is marvellous. The marvel consists mainly in their turbans, which outrival the busby of a Grenadier. They rise in concentric folds, backwards from the forehead, and attain a diameter of fully a foot at the same height above the head. The head can be seen in the hollow behind, where large silver buttons attach the hair, which is plaited in folds. A neat little dark-blue jacket fastened at the throat with a broad silver buckle, and short petticoats, tightly folded to the figure of the same dark material, and relieved by a phylactery of red, blue, white and embroidered panels, give them a neat, homely look. They wear also embroidered shoes, and wrap their ankles in blue embroidered cloth." The men are "light, active, well-made fellows. They wear blue cloth round their shins, and expose the knee in a fashion which at a little distance looks uncommonly like the Highland dress. Sometimes dressed in pure white, with a red girdle, covered with a straw hat like a Leghorn, and carrying a long sword in the belt, they enliven the road with their picturesque attire."

***

A MACHINE at last has been constructed capable of producing a hundred and twenty five lbs of ice an hour at a cost of working of fifteen shillings per twenty-four hours. The cost of the machine is Rs. 1,350, and it makes nearly eight lbs of ice for a penny. Larger machines would, of course, produce as much as twenty-three lbs for a penny, but the one we refer to has finally settled the question of producing ice in hot countries at a comparatively small outlay. The cost of natural ice exported to many ports is from 10*l.* to 20*l.* per ton, but machines are now constructed to make ice on the spot at 10s. per ton. The practical value of this operation was tested during the late Ashantee war. The *Victor Emmanuel* at the Gold Coast had a small machine, and notwithstanding all the inconveniences of shipboard, in addition to the severe test of a tropical climate, the process proved a remarkable success.

***

THE *Pall Mall* regards the trial of the Gaekwar as a hopeless mistake, a blunder whose dimensions it is difficult to trace, when we consider the lack of all excuse for committing it. Although success would have been barren of advantage, it was at least preferable to a failure teeming with trouble. The publication of the evidence has rendered the conduct of our Government more incomprehensible than before. To run the risk of an abortive trial with no compensating advantage in the event of success, was a mistake; but to take a step of such hazard and of such vast political consequence with no better backing than native evidence and the unsifted surmises of Colonel Phayre, was an act of "little less than criminal imprudence." The Gaekwar's prosecution looks, in the opinion of the London press, unpleasantly like a first attempt at introducing the Irish conciliation policy into the Government of India, and should be strenuously resisted. The *Times* regards the result of the trial as "bewildering," and thinks it not too much to say that it is probably the greatest and most mischievous blunder that has discredited our Indian policy since the mutiny.

***

CABRERA'S object in approaching the Spanish frontier by taking up his residence at Biarritz is surmised to be to induce the Navarrese and Basques to lay down their arms, and, by means of a Convention similar to that of Bergara to engage the officers to abandon the cause of Don Carlos. But it is pointed out, that the provinces which are the theatre of the war, are not yet reduced to the miserable condition they were in during the summer of '39: and the troops are not yet so much demoralized by defeat. The Navarrese battalions are but little in arrears, and bread, meat and wine are supplied so regularly as to prove that the means of subsistence are far from being exhausted in the country. Cabrera's recent manifestoes have produced but little result. The proclamations, it is said, have been even published in the Carlist official gazette, in contempt. The case was otherwise 35 years ago. Espartero, after bringing the war to a close in Navarre and the Basque Provinces, turned to the east, where Cabrera held sway, and drove him from the mountains of Catalonia and Aragon. His last defeat was on the 6th of July, 1840, ten months after the Bergara Convention, and the hero of Maestrazzo had to take refuge in France. In 42 Cabrera openly separated from the more bigoted faction who were in the confidence of the present Pretender's grand-father, then in exile, but gave his adhesion to the Count of Montemolin. After the revolution of February, 1848, Cabrera landed in Spain in the summer of that year, and raised the Carlist war cry in the mountains of Catalonia, and, after some trifling advantages, was utterly beaten and again driven across the frontier. Soon after the Revolution of Vicalvaro in 1854, Carlist bands again appeared on divers points against the Government of Espartero and O'Donnell, but Cabrera took no part in them, returning to England.

***

IT is announced that the Pope is in a very feeble state, and has been forced to give up billiards, and that he never leaves his room. Speculations as to his successor are rife, but the only thing known with certainty on the subject, according to *Vanity Fair*, is that the next occupant of St. Peter's chair will be a more uncompromising

defender of Papal rights and pretensions than even Pius IX. Is this intended to point at Dr. Manning? The strange point of the situation in Rome is, according to the same writer, that in spite of all that has occurred, the Pope and Victor Emmanuel are personally great friends, and that both equally hate Antonelli.

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

LONDON, APRIL 9TH, 1875.

THE most dramatic incident of the week is the visit paid by Francis Joseph to Victor Emmanuel. Since the day when Tom Sayers and Heenan, in the spirit of pugilistic brotherhood, went on a sparring tour through the provinces, the world has witnessed nothing half so touching as the reconciliation of these two potentates. The melted ointment that ran down Aaron's beard was nothing to it. The two men kissed one another on the cheek, and the Emperor pressed his lips to the Princess Marguerita's hand. Napoleon III. was more enterprising, and saluted his "Sister" Victoria on the cheek when he first met Her Majesty after his own usurpation. The sight must have been very magnificent. Of all cities in the world lVenice is peculiarly fitted for a theatrical pageant, by reason of her ovely sky, her glorious historic palaces, her countless gondolas, her picturesque people. And then we may be sure that the sensitive, excitable Italian was roused to thorough enthusiasm by the strange associations and reflections suggested by this singular episode. Some good may come from the evanescent emotions invoked by the friendly visit of the Tedesco, and it is hard to forbode any evil consequences. So let us not grudge the Venetians and their crowned guests this pleasant holiday, in which the hatchet was buried and the pipe of peace smoked all round. The German Emperor, however, will not be able to fulfil his promise to the "Gentleman King"—not because of the Pope, or through any political misadventure, but simply because his strength has failed him, and even a Kaiser feels fatigue, like any other child of earth.

The French and German papers have been doing their best to stir up strife between Germany and Belgium. Prince Bismarck appears to have written a sharp note to the Belgium Government reminding them that neutrality has its responsibilities as well as its privileges, and that if the existing laws do not suffice to prevent attacks upon a friendly neighbour, recourse must be had to further legislation. To this irate remonstrance, the Belgian Minister for Foreign Affairs made a spirited reply, in the name of "neutral and independent Belgium," protesting the due fulfilment of all international engagements, and declining to frame exceptional laws at the instigation of any foreign power. Prince Bismarck's note was founded on three plaints, not one of which will bear close investigation. The first is that in 1872 and 1873 some of the Belgian Bishops published pastorals in which the Prussian Catholics were exhorted to resist the Bismarckian policy of suppression. The second relates to a drunken freak on the part of one Duchesne an artisan of Spa, who in his cups declared that he was one of a band of conspirators who had pledged themselves to encompass the death of the German Chancellor. A close inquiry was made into the truthfulness of this statement two years ago, when it was satisfactorily shown that the plot was the momentary imagination of a diseased brain. The third grievance is of more recent date. It is alleged that the Société des Œuvres Pontificales addressed a sympathetic letter to the Bishop of Padderborn in December last, but this epistle is repudiated by that Society and is denounced by them as an impudent fabrication. In fact, moreover, the Belgian Government sent its reply to Berlin on the 26th February, when the war of words came to a natural termination so far as diplomacy is concerned, though it has only been revived by an officious press.

The champions of women's rights had their annual "innings" on Wednesday, but were defeated by 187 to 152. That is to say, their entire host comprises only one-fourth of the House of Commons, and it is quite certain that many who voted for the second reading of Mr. Forsyth's Bill would not have done so had they believed that the Bill would have been carried. It is, however, to be regretted that the question should be treated with such coarseness and vulgarity as characterise Mr. Smollet's attempts at humour. Whether the female breadwinner is, or is not, to have a vote is a simple matter, and worthy of respectful consideration.

Breech-loader or muzzle-loader, that is the question. According to Captain Nolan, whose speech in the House of Commons has been read with great interest throughout the British Isles, every European nation but our own has decided in favour of breech-loading artillery. In the late war, for every ten Prussians who were wounded by artillery fire, there were twenty-five Frenchmen, thus showing that the Prussian guns were two and half times more efficient than the French; of course, some allowance must be made for the superior skill and steadiness of the Germans; but this very coolness may have been partly due to the circumstance that in loading from the breech, the gunners are not nearly so much exposed as when engaged in ramming a long rod down the muzzle. The war office replies that the Royal Commission condemned the breechloaders, but that applied only to the Armstrong guns, which have certainly not answered the expectations formed in certain quarters as to their destructiveness. A large sum of money has no doubt been uselessly expended on these Armstrongs, but that is no reason for rejecting every description of breech-loader. Admiral Sherard Osborn, no mean authority on such matters, positively asserts that in a sea fight the protected gunners attached to breech-loaders would have an immense advantage over the exposed manipulators of muzzle-loaders. The Porte, it is true, still pins its faith to Woolwich, being Conservative in all things; but its confidence is said to have been shaken since the Sultaness purchased a battery of Krupp guns. But the Porte is scarcely an authority on military science, and the natural inference would be that she holds to the old system because the new one is as yet beyond her comprehension. The Moncrieff guns, indeed, afford good cover, but they cannot be universally adopted, and thus the War office will be compelled to choose between comparative inefficiency and the large expenditure necessary for the perfect equipment of the British artillery.

Mr. Mackenzie of Kintail takes a grandiose view of the Prince of Wales' contemplated visit to India. He modestly proposes that the country shall assign the best part of three-quarters of a million sterling to procure a suitable outfit for H. R. H. One half, indeed, of this "little bill" he expects to recover, in the shape of presents which will be sold in the usual manner, though he is quite willing to allow the Prince to retain whatever he pleases. To some thirty independent potentates, Mr. Mackenzie would have valuable objects presented to the amount of £10,000 in each instance, with less costly gifts to less distinguished personages. Whenever the Viceroy and the Prince come in contact, Mr. Mackenzie would give the second place to His Excellency, forgetting not only that Lord Northbrook would be the host and entertainer, but also that he alone in India is empowered to represent the Majesty of England's sovereign. He may not be far wrong, perhaps, in regretting that the Princess is not to accompany her husband, for there can be little doubt that her simple grace and beautiful purity of heart, thought, and manner would exercise a more than humanising influence over the most oriental Nawabs and Maharajahs. It does seem, however a little ridiculous to cite Maharajah Dhuleep Singh as an authority on Indian matters. The Sikh prince, we are told, entertains a lively recollection of the splendours of the Lahore Court and is decidedly of opinion that the Prince of Wales, if he would make a favorable impression upon the people of India, must travel in Eastern state, with an army of tinselled vagabonds in his train. But surely Mr. Mackenzie must be somewhat behindhand in his estimate of the native character. He evidently makes no allowance for the remarkable progress that has been made, since the Indian mutiny, on the high road to Western civilization. In any case it would be preposterous for the heir-apparent to the British throne to lower himself to the level of an inferior race. It might as well be asked of him that he should wear a fustian jacket and smoke a short pipe when he goes among the working classes at Home for some charitable purpose.

Dr. Newman has returned to the charge and has appended a postscript to the fourth edition of his "Letter to the Duke of Norfolk." He declares, with considerable pathos, that for close upon thirty years he has never had any misgivings that the communion of Rome is the Church which the Apostles set up at Pentecost. Never since 1845 has he hesitated in his conviction that it was his clear duty to join that Catholic Church, feeling in his own conscience that it was divine. "Persons and places," he sorrowfully continues, "incidents and circumstances of life, which belong to my first 44 years, are deeply lodged in my memory and my affections; moreover, I have had more to try and afflict me in various ways as a Catholic than as an Anglican; but never for a moment have I wished myself back; never have I ceased to thank my Maker for His mercy in enabling me to make the great change; and never has He let me feel forsaken by Him, or in distress, or any kind of religious trouble." This personal allusion is so tinged with melancholy, that one cannot help experiencing a sense of compassion and reverence for the pure gentle heart warped by a too subtle and refining intellect. For any one endowed with Dr. Newman's

peculiar frame of mind, the Church of Rome is the only communion that could satisfy its profound humility, its almost abject deference to ancient and even legendary authorities, its craving for a studious absorption into incomprehensible dogmas. The remaining portion of the postcript is a vigorous rejoinder to Mr. Gladstone's enunciations in his essay on "Vaticanism." Dr. Newman has the advantage of being thoroughly in earnest, and of handling weapons with whose use he has long been familiar, while his assailant, however skillful, is still in comparison a novice, and perhaps not quite certain whether he intends ultimately to ban or to bless.

"A Mahomedan," writing in the *Times*, insists "on the impossibility of an honest Mussulman changing his religion;" and he gives as his reason for this conviction that "the Mahomedan religion is rationalistic, and not founded upon miracles, and that the "proselytising missionaries cannot exhibit miracles now-a-days." The writer was alluding to the alleged persecution of certain Syrian converts, whom he stigmatizes as renegades from the faith of their fathers and deserters from the national army. I am afraid that a true bill would be found against the officers of the Turkish Government on the charge of persecution and cruel treatment. But on the other hand I would much rather not vouch for the sincerity of the supposed converts. There is reason to believe that many of them thought more of their immunity from military service than of the relative merits of the two religions. The motives of men's actions cannot, however, be analysed with precision, nor is it safe to attempt to fathom the depths of any man's heart. To talk of religious toleration being universally practised throughout the Turkish empire is downright nonsense. In provinces chiefly peopled by Christians, it is only natural that there should be neither danger nor discredit in professing or adopting the Christian religion. But this is certainly not the case in Syria, or in the remoter regions of the empire, and "A Mahomedan" himself admits that even in Asia Minor a renegade family was forcibly removed to Smyrna from a small town in the interior, though he affirms that this was done for their protection. At the same time we cannot be surprised at the Sultan's refusal to accord an interview to the gentlemen who represented the Evangelical Alliance. So long as friendly diplomatic relations are maintained between the two Governments, the wisdom of such attempts is very questionable.

OUR LIBRARY TABLE.

Indian Contract Act.—Messrs. Cunningham and Shephard. (Higginbotham & Co., Madras). The well-known Madras publishers have produced this work in a style equal to that of the most approved London firm. The printing is perfect, and the arrangement of the book most praiseworthy. The authors in the present edition have taken the opportunity of amplifying many of the former notes, and adding new ones where further explanation seemed desirable, reference having been made to all recent rulings of the English and Indian Courts that bear in any way upon the Law of Contract. As to the principle of the Act, we cannot do better than transfer to our pages a summary of the "Introduction," which tells us that this Act is the latest and most important instalment of substantive law, prepared for British India by the Indian Law Commissioners. Some points in the original bill gave rise to prolonged discussion, and portions of the measure were recast in the country. It consists almost exclusively of the rules which govern the English Courts, thrown into the form of legal enactment. Whenever these rules have been departed from, it has been on account of some difference between the circumstances of the two countries, which rendered it unsafe, in the opinion of those upon whom the responsibility of passing the measure ultimately devolved, to enact the English law without modification. Some special and subsidiary chapters of the Law of Contract, such, for instance, as the Law of Master and Servant, Landlord and Tenant, Consignor and Carrier, the law regulating Promissory Notes and Bills of Exchange, have been intentionally omitted, not that these topics do not require express enactment, but because, when the Act was passed, they had not received that elaborate consideration which their importance deserved, and because, in the case of some, matters of principle had to be decided, the discussion of which was still unripe. The Law of Contracts specially affecting land,—sales, mortgages, leases and other forms of alienation of immoveable property,—has also been left aside, as of so special and technical a character, and so diverse in its aspects in different parts of the Empire, as to render it unsafe to deal with it in a general enactment. The general principles, however, laid down in the earlier portions of the Act are applicable to these as to other contracts.

The Possibility of Applying the Roman Alphabet to the Languages of India.—Frederick Drew. The scheme of applying the Roman alphabet to all the vernacular languages of India was originated forty years ago by Sir Charles Trevelyan, Dr. Duff, Mr. Yates, Mr. Pearce and Mr. Thomas. Though a generation has passed since the commencement of the undertaking, far more remains to be done than has yet been effected. The Roman alphabet has not been adopted generally in India or in any one portion of India. It has, however, been brought into use among certain sections, chiefly among those who are influenced by the missionaries. These have done much in writing and publishing Hindostani books in the Roman character, so that a not inconsiderable literature is attainable by those who learn to use our alphabet in this application of it. But it must be remembered that in the forty years, during which the Government of India has done much to further general education, the use of native alphabets also has much spread; so that although perhaps the ratio of Roman to the others has been increasing, yet the native characters enormously exceed in their use the Roman. Mr. Drew now comes forward to enlist further aid. He attempts to show that among all the advantages which the Government of India is bringing to the millions who inhabit this continent, there have not yet been provided for them opportunities of acquiring the great though simple blessings which should be the possession of those who can read and write. "Much as has been done by us towards the education of certain sections of the nations whom we rule over; much as has been attempted by us for the wider spread of education among the huge numbers to be dealt with, we have hitherto neither effected nor attempted the introduction of a system that would give to any one who learns to read the superiority over the ignorant which that degree of learning might naturally lead him to hope for, or to those who may acquire the art of writing, the advantages which we are accustomed to associate with that accomplishment."

Our author ventures to predict that a general diffusion of the power of reading—of reading all that is put forward by Government—would enable the people of India to assert their personal independence of all assumed authority, which now so often oppresses them; it would relieve them from the fear of the lower ministerial officers of Government, would lessen or render impossible the indignities and injuries often inflicted by these in their 'insolence of office.' Mr. Drew has "hopes, too, that it would form the link now wanting between the English governors and the governed, that it would diminish the distance of unsympathy between them. We should, in the effort to bridge over this space, be meeting the natives more than half way, we learning their language, while they should learn our alphabet."

Sanskrit MSS.—Baboo Rajendralala Mitra. The important work of collecting information regarding rare Sanskrit MSS. is steadily progressing under the superintendence of Baboo Rajendralala Mitra. During the past year a travelling pundit visited nearly all private Toles, or Sanskrit Colleges, in the mofussil, and his chief has himself visited Benares on three occasions to inquire for and purchase valuable MSS. The places visited by the Pundit include Dacca, Nuddea, Burdwan, Hooghly, and 24-Pergunnahs. The large collections of Raja Jotendramohun Tagore, of the late Sir Raja Radhakanta Deb, of the late Baboo Ramcomal Sen, of the late Raja Pitambar Mitra, of Baboo Subaldasa Mallick, and of others in Calcutta, have also been examined. In Dacca, Pundits are the only owners of MSS., no private gentleman having anything like a large collection, and the few works they have being mostly such as have already been printed. In Nuddea, the library of the Raja of Krishnanuggur contains the largest number of Tantras, but at the time the Pundit visited it the MSS. were kept in a very neglected state, and most of them were found to be defective. In Burdwan, there are not many Toles, but Baboo Hitalala Misra of Manakara has a choice collection of works, including a great number of rare treatises on the Vedanta. In Hooghly, the Serampore College has a small but valuable collection of MSS. procured principally by the late Dr. Carey, and there are also a few Toles owning MSS. In the 24-Purgunnahs, several zemindars have good collections of the Tantras and the Puranas, and the numerous Toles on the left bank of the river Hooghly and at Harinabhi and elsewhere contain many old and rare works of which very little is known to European Orientalists. There are no *Maths* (monasteries) in any of the districts named containing a collection of Sanskrit works; not even the *Math* attached to the great temple of Tarakesvara in the Hooghly district is noted for its literary treasures. The case is, however, different in Rajshahye, Mymensing, Pubna, Tirhoot and Orissa, where some of the *Maths* own large collections of great age and considerable value. Of late Baboo Rajendralala Mitra's attention has been devoted to detailed notices of all works not included in the catalogue of the Asiatic Society's collection. Of these "Notices" two volumes and one part have already been published, comprising altogether 861 pages royal octavo, and descriptive accounts of 1,140 separate codices. For the sake of carrying on the printing while his researches are in progress, no systematic arrangement is attempted, and manuscripts are noticed as they turn up. The inconvenience arising from this course is obviated by annexing to each volume a classified table, and a full alphabetical Index. The number of Vedic works or portions of the Vedas in the published Notices is limited, and all of them have been seen or obtained at Benares, not a single codex having been found in the possession of a Pundit of Bengal in the Toles visited. This total absence of the most important and most revered of Sanskrit works in the libraries of those who have been the principal custodians of Sanskrit literature is a remarkable fact, and it is usually accounted for by reference to a verse of the *Yogini Tantra*, which says, "whoever keeps MSS. of the Vedas in his home, soon finds his abode struck by lightning." The verse is obviously due to the sectarian zeal of the Tantra which would admit of no rival in its neighbourhood, but the true cause is that Bengal has never been the seat of a Vedic school, and consequently it has never been taught here, nor MSS. prepared or preserved. It is said that when on the overthrow of the Pala Rajas, Adisura, the Hindoo sovereign of Bengal, wished to celebrate a great Vedic sacrifice, he could find no native Brahmin competent to officiate at it, and had to indent for five learned priests from Kunouj. These priests settled in the country, and gave new life to Hindooism everywhere; and many of their descendants have been noted as great scholars and distinguished authors; but they do not seem to have cultivated the Vedas, and there is not a single treatise on the Vedas

or Vedic learning among their writings. Their special forte has been philosophy, and works on the subject are abundant everywhere. The Nyaya schools of Tirhoot and Nuddea have enjoyed deserved celebrity all over India, and every Pundit of any note has some work or other on the subject, not common elsewhere. Works on the Vedanta are also numerous. The former class is represented in the published Notices by 98 treatises, and the latter by 67 codices. The Upanishads as bearing on the Vedanta are represented by 92 works. The Tantras come next to Nyaya, and Bengal is particularly rich in them, Baboo Rajendralala Mitra noticing 205 works or parts of works.

This gentleman has undertaken a truly colossal labour, but his energy and perseverance have already led to unexpected results, and we have no doubt that a still greater success is in store for him.

Indian Antiquary.—May. The Hon'ble Justice Phear contributes the leading paper in this issue of the *Antiquary*. It is called "Glimpses of old India, as seen through the Pages of Manu," and is full of valuable and curious facts. That the people were poor, even as compared with Hindoos of the present day, is abundantly clear. For a while their industry was mainly pastoral, and their acquired wealth took the shape of herds. In one portion of the *Institutes*, when property is spoken of (as when a present to a Brahmin is mentioned, or when a partition between brothers is to be effected), cattle has the principal place and importance attributed to it. But at a later period agriculture and trade acquired considerable development. There is a Deuteronomy in the *Dharma Sâstra*, and a comparison of the two expositions brings this advance to view. The people lived in large families under one roof, or in one dwelling-place, as they do now; and there is little indication of luxury about them. Talking birds were to be found in a king's palace, and a wealthly householder might have a riding-horse or carriage and ornaments. "A field, or gold, a jewel, a cow, or a horse, an umbrella, a pair of sandals, a stool, corn, cloths, or even any very excellent vegetable" is the list of articles any one of which was a fitting present to be made by a young man to his preceptor at the close of his student's career, and it may therefore be imagined to comprehend most of the valuables of the time. The *Dharma Sâstra* nowhere contains any direct allusion to music or to any of the fine arts, and in this respect is in strong contrast with the Hebrew Bible. Gold-workers, however, are spoken of; and rings and jewels are slightly alluded to. In one passage the hand of an artist is said to be always pure, an evident concession to the exigencies of his employment. Manners were very primitive, and not a little coarse. Sexual sensuality must have prevailed largely, if one may judge from the repeated prohibitions of it to be met with in the *Sastra* under every variety of form. Clothing was scanty, and it was necessary to authoritatively command the student to appear decently apparelled in the presence of his preceptor. Domestic utensils seem to have been of the most simple kind, of various metals, *i.e.*, of copper, iron, brass, pewter, tin, and lead, and generally of unglazed earthenware. Leather even was used. Minute directions are given by Manu for the cleansing of these articles; and the natural inference to be drawn from the character of them is that great simplicity of life prevailed among all classes.

The subjection of women to men was almost servile in its character. Manu himself declares over and over again that "woman is never fit for independence," though the general tendency to look upon them as mere chattels met with reprehension from him; and he found himself obliged to forbid their being bought and sold in marriage, and vindicated such rights of property as they had against spoliation at the hands of the male members of the family. A woman was liable to be personally chastised like a child by her husband, and was forbidden to be instructed. She is represented in the *Sastra* as completely animal in her passions, and entirely unable to resist temptation; wherefore she must be guarded, amused, and gratified at home, so that she may not go astray. She is not to be trusted with a secret, and gets no benefit from either the instructional or the expiatory portions of Scripture, so that a bad woman is bad indeed. Nevertheless, there seems to have been a nearer approach to social intercourse between men and women than is the case now. And courtesy of demeanour towards the latter was enjoined. Way should be made for a woman when she is met in a road. And at meal-time precedence, even before guests, should be given to a bride and to a damsel. This spirit seems hardly to have survived to the present day. At the village tanks and wells, and at the stand-pipes of Calcutta, the women coming for water are kept in the background until the men who may be there have served themselves—a marked contrast in the eye of the foreigner to that which occurs at the fountains and pumps of the country villages in Europe. It is noticeable that a great quantity of hair was not considered a beauty in a woman, and that the flexuous motion of a young elephant's limbs was thought the model of graceful gait! Hair with a red tinge was ranked as a deformity.

Although it is stated that the Aryans might dwell anywhere between the two oceans, the Eastern and the Western, and therefore it may be inferred that they had in some degree extended themselves to these limits, still it is very clear that they had little or nothing to do with the sea. "A navigator of the ocean" was the subject of abhorrence, and was ranked with a house-burner, a poisoner, and a suborner of perjury. Sea-borne goods are, however, mentioned; and in a passage of the—comparatively speaking—more modern portion of the law relative to the charges which might be made at ferries, and for the conveyance of goods by water, we have: "For a long passage the freight must be proportioned to places and times, but this must be understood of the passages up and down rivers; at sea there can be no settled freight." But the fact seems to be that the Indian Aryans in Manu's age were essentially an inland people, and had not yet reached the shores of Bengal and Orissa.

Professor C. H. Tawney contributes a clever translation of Bhartrihari's Niti Satakam and Mr. E. Rehatsck, a paper on the Lunar Mansions of the Mahomedans.

THE MUSSOORIE SEASON.

(FROM OUR OWN CORRESPONDENT.)

ANY man—I say advisedly man, for the female *mind is constituted* differently—must love Mussoorie above all other Hill stations for one great point, the absence of officialism of all types, civilian, military, and legal. It is pleasant to me to walk along the Mall, or the camel's back, and enter the library without having General Sir George Grampus K.C.B., scowling at my shooting-coat and sailoring gait, or Lady Grand Growler, wife of Sir Grumpy Grand Growler, K.C.S.I. and C.S., taking notes of my gloveless hands and somewhat dusty shoe leather. Sweet also not to meet Algebra of the Accountant General's office eliminating and imparting a new *nuksha*, or De Veaux that smartest of Settlement officers with his views on putwarees; or in fact any of those unmitigated official bores who, though good men and true enough in their way, are incongruous elements when taken into consideration with pure, cool air, rock, mountain and forest, and those calm, unapproachable virgin snows. What benefit that kind of man gets from the hills except such as his body may uncommonly suck in, I cannot divine; and the sight of one of them invariably recalls to my mind the old story of the reading Cambridge man, who being asked on his return from a reading tour in the English lakes, whether he had not admired the scenery of the mountains and derived great advantage from climbing to their summits, replied "Well, no; there was a little hill behind a house which did well enough for all practial purposes." Wretched man, among all the glories of nature and the loveliest landscape conceivable, his thoughts had never soared beyond trigonometry and mensuration!

But what of Mussoorie? you will ask for your readers, with your own descriptions of scenery, which most of them cannot enjoy if they would, or would not enjoy if they could. What of Mussoorie?, with its mall, club, library, assembly rooms, scandals, visitors, and residents, the truth must out—very little at present. The mall is frequented a little more of an evening and equestrians and equestrienes parade up and down it, but all orderly enough as yet. The club is filling, and owing to the new rules admitting temporary members is likely to be full to overflowing ere long. The library has the same dim religious light in its large room it had last year, which sends men to sleep while reading, and the assembly rooms are as yet closed and there *is* as yet no news of their opening. for a while. Scandals we have none; the only event of the week being not a Mussoorie matter exactly but relating to Deera. There has been a dispute between Mr. A. Skini and the Viceroy's body-guard, as to the right to land, &c., which the latter claim as their lines from time immemorial. Rumour hath it that all has been amicably settled, though at one time it was reported that legal proceedings would be resorted to in the Civil Court. Landour has monopolized the lion's share of the visitors, and there are still a goodly number of houses to let in Mussoorie. Given high rents and a bad system of repairs, and no one, least of all the landlords, should complain. It is difficult to conceive how some of the sums that are asked for houses which have bad natural situations with no corresponding internal advantages, can be put forward; but I suppose that to landlords a house in the hills is a house in the hills, and that they do not go on the principle that there are houses and houses. I hear of a Fancy Fair being got up for the benefit of that haunt of Morpheus, the Library, and if the proceeds are sufficient, I would suggest to the Library Committee to abandon the present site and rent or sell the building to some heathen Chinee for an opium divan. (Turkish baths on the premises, clarets and pegs also *ad lib.*) T. H. Clarke and Company's grand shop is shut up, and under the legal paw, and to many of last year's visitors this should cause a pang, as a half an hour in the evening spent in going round the large artistically arranged oriental room, and buying trifles here and there, contributed one of the principal preprandial amusements.

And here I must stop, as I have nothing more to chronicle, except that I hear accounts of a dispute between the Colonel Commanding at Landour and our librarian, which is likely to come into Court. It relates to the latter riding in Landour Bazaar, but what the rights or wrongs of the matter may be, are not yet clear. More anon.

BLAS EL MATADOR.

P. S.—There is actually to be a concert ere long at the Municipal Hall, and perhaps three little dancing parties as trial heats before the great event of the 24th May.

B. EL. M.

LETTERS TO THE EDITOR.

DISESTABLISHMENT AND DISSENT.

To the Editor of the Friend of India.

SIR,—Your correspondent, "Fair Play," in his letter on this subject, in your issue of April 24th, seems to me to have put the case in a way hardly accordant with his assumed cognomen. The question of disestablishment, as I understand it, turns on the rectitude of applying State funds to religious objects as such. As the State comprehends all possible varieties of religious opinion,

it is alleged to be unjust to appropriate funds raised alike from all, to the support of opinions entertained only by a portion and repudiated by all the rest. It is no answer to this to say that those who maintain this principle in theory contradict it in practice, if they carry out religious objects with the help of funds received from England. The question is, are the funds received from England State funds, or voluntary contributions? If the latter, then the proceeding referred to is no violation whatever of the principle of disestablishment; on the contrary, it is a perfectly legitimate proceeding, and is moreover equally open to all parties alike.

The extent to which funds raised in England for missionary objects by voluntary contributions, are expended on work among foreign Christians in India, and how far such expenditure is a misappropriation of such funds, are both points on which your correspondent speaks with more confidence than would seem to be justified by his apparent knowledge of the facts. Dissenting places of worship in India are almost entirely built with funds raised in this country by voluntary contributions. Dissenting missionaries whose whole or chief time is given to the service of foreign congregations, are generally in like manner supported by the congregations they serve. These replies to your correspondent's enquiries apply (to use his own italicized words) "*to all the dissenting organizations in the various nations throughout India.*" That is to say none of them receive any State pay whatever for any religious object, and it is to be regretted that our friends of the establishment do not adopt the same principle.

I was glad to find that your correspondent is a "staunch supporter of the disestablishment movement," and I hope he will be glad to learn that the "blots which in thought mar our own system and need expunging" have no existence. So far as Missionary funds proper are used in the service of foreigners in this country (and this is done to so small an extent as to be scarcely appreciable) it is no misappropriation. The funds are voluntary, not State funds. The appropriation is public, well known in England and sanctioned, and the service to which they are applied is sometimes so necessary, owing to the failure of the establishment principle, that it is a serious question with many persons whether, even for missionary objects, and to secure the conversion of the people, missionaries ought not first of all to go to their own countrymen, as the Apostles did to the Jews.

Allow me, Mr. Editor, to congratulate you on the new lease of life, and the improved appearance of the re-juvenescent *Friend*. May it prove worthy of, and an advance upon, its distinguished ancestry. But I must also express my regret at your apparent doubtfulness regarding the worth of Messrs. Moody and Sankey in London, and this too apparently on the ground solely or chiefly of the *Saturday Review*. An important portion of the evidence to prove the genuineness of their work would, in my opinion, be wanting, if they were *not* ridiculed and misrepresented in that Sadducean journal.—Yours, &c.,

IMPARTIALITY.

BABOO *versus* BENGALI.

To the Editor of the Friend of India.

SIR,—The last number of the Serampore edition of the *Friend of India* contained "Sikh's" letter purporting to be a reply to my letter which had been kindly published in the issue preceding. My purpose is not now to furnish a rejoinder to that reply, but to point out that it contains a number of misrepresentations of facts, and that therefore it has not been a reply at all. I venture to hope, Mr Editor, that in justice to myself, and in the interest of philology, you will be so good as to give this letter an insertion in your paper.

Pardon a short digression in order to enable me to recapitulate briefly the arguments advanced to shew that the word 'Babu' is not of Sanscrit origin. I wrote in my letter above alluded to that "Sikh" was perfectly wrong in calling the term in question a Sanscrit word. And with a view to corroborate my statement, I mentioned the fact of its absence in all the Sanscrit Dictionaries which the world possesses. As the fact of its occurrence in Sir Graves Haughton's Dictionary was alluded to by "Sikh" to shew that the word under notice is of Sanscrit origin, I remarked that Monier Williams calls that work a *Bengali Dictionary* and that Sir Graves gives the meanings of those words, whether of Sanscrit or of Arabic genesis, which are now in common use amongst the Bengalis. As an instance of this, I cited the Persian word "Ekrar" which occurs along with others in that Dictionary, and contended that if the fact of the occurrence of the term "Babu" in Sir G. Haughton's Dictionary leads "Sikh" to conclude that it is of Sanscrit origin, why does he not call the word "Ekrar" Sanscrit also. But to proceed to notice "Sikh's" reply.

"Sikh," says "Sir Graves Haughton, who is admitted by every eminent Oriental linguist to be one of the most learned and acute scholars, distinctly marks the word 'Babu' as Sanscrit." Who ever denied the scholarship of Sir G. Haughton? Sir Graves does not mark the word "Babu" as Sanscrit, he simply inserts the word with its meaning. "Sikh" says next—"As to the origin of the Urdu language, let your correspondent refer to &c., &c." This is an instance of deviation from the point at issue. To determine the origin of the Urdu Language is not the question. "Sikh" goes on to say—"No one ever before heard that any real Indian gentleman objected to the term Babu." This is an instance in which he betrays an utter want of information touching the subject. I know of a real Indian family, Brahmin by caste, a member of which engaged his servant to administer slaps upon a man whose only fault was that he addressed the members of that family as Babus. I also know of a gentleman in this city, who made a public speech deprecating the use of the word "Babu" with reference to the Bengalis. He showed also that a century back that was not the word by which Bengali gentlemen used to be addressed, but that the words "Mohashoya" and "Jà" were in vogue.

"Sikh" writes next—"Once for all I must emphatically disown that any English gentleman addresses the poorest native of India with venom in his heart." Here is another misrepresentation I have never said that *any Englishman* (the italics are mine) addresses the natives with venom in his heart. But what I did say, and I still do say, is as follow:—"The words 'Babu' and 'Native' have turned out to be contemptuous terms, and are pronounced by a certain class of Europeans with that peculiar intonation which at once speaks of the venom in their hearts against the natives of this country."

"Sikh" writes further—"The Bengali gentleman of standing in Calcutta objects to the word 'Native,' as not applied by one European to another; let him refer to Macaulay's Essay on Warren Hastings, page 231, where he says—'The baron was accompanied by his wife a *native*.'" I never used the word "European" as "Sikh" wrongly represents me to have used it. What I said was this—"Has any one ever heard an *Englishman* (mark, *Englishman*) call the people of England 'Natives?' If any one were to say so he would be considered as speaking bad English." The law says that by the mouth of three witnesses every thing should be determined. I have produced the full number, and therefore the charge of misrepresentation of facts brought against "Sikh" is clearly established. And his arguments to prove that the word "Babu" is of Sanscrit origin, which were based upon misrepresentations, have thus fallen to the ground.

As regards Macaulay's calling the German baron's wife a "Native," I beg to say that I am inclined to think that he has used the word either contemptuously, or it is due to the fact of his having been a slave to his pen. That Thomas Babington Macaulay, who could without hesitation give utterance to splendid falsehoods with reference to the character of the nation inhabiting Lower Bengal, should be found using a contemptuous term in connection with a German lady, is no marvel at all.—Yours, &c.

A BENGALI.

Calcutta, 28th April, 1875.

INDIAN INTELLIGENCE.

BENGAL.

AT the shooting by the Bengal and Madras regiments for the Commander-in-Chief's prize gold medal, five thousand four hundred and seventy one non-commissioned officers and men competed. The winning regiment was the 3rd Sikh Infantry, and the champion shot Private Iman Shah, who also won the first individual prize of fifty rupees. There was some improvement in the firing over that of the previous year, and also in the number of competitors. The average points per man in 1873 was 12·39; in 1874, it was 12·84, giving a rise of 0·45 points. The number of competitors for this prize in 1873 was 3,895, in 1874 it was 5,471, showing an increase of 1,576 competitors, and evidently greater emulation to excel in the different regiments.

THE disgraceful libel case of the manager of the *Bharat Asram versus* the printer and publisher of the *Saptahic Samachar*, has, thanks to the generosity of the Brahmos, ended most satisfactorily. The plaintiff offered to withdraw the case if defendants would offer a suitable apology for the gross libels he had published about Brahmo ladies and missionaries. An honourable proposal like this produced an impression upon the mind of the Court, thus expressed by Mr. Justice Phear: "Every civilized Court of Justice will strongly disapprove of the conduct of the defendants. No man of education and morality can help feeling himself disgraced by having made such statements as are set forth in the different passages read before the Court. If the defendants can wash their hands clean so easily of this affair by expressing their regret, and the plaintiff will withdraw the charges, the case cannot end more happily." Mr. Branson said he had been instructed by his clients to make an unreserved withdrawal of the reflections, as required, and to express their regret. The case upon this was withdrawn.

PEOPLE in England are both writing and speaking in ridiculous terms about the visit of the Prince of Wales to India. One gentleman who puts forth his views upon the subject as if he were a Jew, explains that when "the accounts are wound up, the final cost will be far less than the sum which has nominally to be provided. This will arise from the Eastern practice of making presents to official persons, which are in some measure intended to cover their expenditure, and which could not be refused without their rejection being regarded as an insult." The same writer advises the Prince to give thirty of the principal chiefs £10,000 worth of "mirrors, chandeliers, clocks and textile fabrics" and £100,000 should also be spent on "medals or coins." "Excluding the pay of the troops, which would of course fall upon the Indian Government, £5,000 a day would be but a moderate expenditure for the transport and commissariat of the Court, &c., and all other heavy incidental expenses of a Royal Eastern visit, including feasts, balls and durbar expenses, or equal to £300,000 for 60 days. The costs of tents, elephants, horses, &c., and the transport of the Prince, his Court, and baggage to and from India, from £50,000 to £60,000."

THE occultation of Venus took place on the morning of Monday last. Mr. C. Ragoonatha Chary, F. R. A. S., the able First Assistant, Madras Observatory, states that Venus, the brightest of all the planets, is now a morning star, shining conspicuously in the east. Our satellite, at present far distant to the west of Venus, approached

the planet gradually ; and on the 3rd, being only two days previous to new moon, her bright limb was so slender a crescent as to allow the dark portion to be clearly visible. The moon rose (about 3h. 37m.) with Venus lying closely beneath to all places eastward of a line drawn through Pondichery, Hydrabad (Deccan), and Indore. Places eastward of this line could not observe the disappearance as it occurred before the moon had risen above the horizon. Venus disappeared behind the moon's bright lower limb, and re-appeared alone in the unilluminated portion of her disc. The disappearance occurred at places of the line above indicated, just at moonrise, and the interval of time between moonrise and the moment of disappearance increased according to the distance of the place from the line eastward. For instance, Madras being close to the line, the interval was only two minutes in time ; for Vizagapatam, situated further east from the line than Madras is, it was 20 minutes ; for Calcutta, which is still further eastward, 54 minutes ; the reappearance was visible to all places south of Delhi and Hyderabad (Scinde). At Mooltan, Lahore, Peshawur, Kashmeer, and other places in the remote north-western part of India, Venus was seen only in close conjunction with the moon, but did not suffer occultation.

THE Viceroy has sanctioned the introduction into the Bengal Legislative Council of a Bill to amend the law relating to the Excise Department in Bengal. His Excellency hopes that after the proposed amendments have been made, the Acts relating to Abkari in the Lower Provinces may be consolidated. In allusion to the numerous petitions which have been presented to Government urging measures for the discouragement of intemperance, the Viceroy "cordially recognises the public spirit of those gentlemen who have addressed the Government on the excise administration of Bengal. The desire manifested for the discouragement of intemperance by every legitimate means has the cordial sympathy of the Governor-General in Council." The danger, however, of attempting by measures of undue stringency to suppress the use of stimulants, is clearly brought out by Mr. Money in an able Minute. They would without doubt lead to an increase of smuggling and illicit distillation ; and thus to the greater evil of an unregulated traffic in drugs and spirits, which under the present system is at any rate subject to some measure of control. At the same time, nothing should be done to place temptations in the way of the people that can possibly be avoided. The number of liquor shops should therefore be reduced to the utmost degree compatible with the reasonable requirements of the neighbourhood, and no new shops should anywhere be opened without strong evidence that on the above understanding they are really needed. "These are the general principles which the Government of India desire everywhere to inculcate." The Lieutenant-Governor is moreover assured of the support of Government in any measure that he may adopt for limiting the consumption of ganja. The entire suppression of the use of the drug would be justifiable if there were no fear of such a measure encouraging a contraband traffic.

H. M. S. *Glasgow* has gone home after four years' stay in Eastern waters. It is difficult to understand why a wooden frigate should be sent out to cruise in this climate. The quarters for the men are low and unventilated—evils that are absent in iron-built men-of-war.

THE first of the series of public concerts, to be given at the Town Hall, under the auspices of the Calcutta Orchestral Society of which Mr. Justice Jackson is President, will take place this evening. The programme is a very attractive one, and the fact of Herr Stoeckel being the conductor is in itself a guarantee of success. The concerts will be repeated on alternate Saturday evenings during the ensuing six months, and there will be an additional promenade concert once a month. The Orchestra is to consist of amateurs and the instrumentalists of the late Italian Opera, and several accomplished vocalists have promised their aid.

THE monument erected to the memory of the late Lady Canning in the Barrackpore Park has been removed and re-erected in St. Paul's Cathedral at the south-east end of the transept. This has been performed by Messrs. Llewellyn and Co., who have also repaired the lapidary work which was out of order, and renewed the inlaid and carved heraldic escutcheons. A facsimile of the monument is also nearly completed and will be placed on the site from which the original has been removed.

NORTHERN INDIA.

SIR DOUGLAS FORSYTH, with full instructions from the Government of India, is expected to leave Simla for Burmah to-day.

THE yield of tea this season in Kumaon promises to be large, many plantations having turned out more than double the quantity they made last year to this date. A few showers of hail did some damage to the bushes early in the month, but the moisture resulting from the melted hail compensates for the loss of the shoots.

THE Viceroy, in a letter addressed to the Maharaja of Puttiala, thus records his sense of the reception given him by His Highness: "I am glad of the opportunity of renewing my thanks to your Highness for the perfect manner in which, apart from the magnificence of the reception which was given to me as Her Majesty's representative, your Highness provided for my personal comfort during my visit. Nothing could be more complete than all the arrangements, and I shall always look back with pleasure to the time I passed at Puttiala."

A WRITER in *Blackwood* thinks it is unfortunate for the reputation of Kashmeer that a sudden death, not entirely free from suspicious circumstances, should have befallen three of our countrymen who had distinguished themselves by exposing the abuses existing in the country ; and it is at least remarkable that suspicion on the subject should have been roused by the Kashmeeries themselves—that is to say, by reports generally current in Sreenuggur. Lieutenant Thorpe, Dr. Elmslie and Mr. Hayward are alluded to. The first of these gentlemen had published a pamphlet entitled—"Cashmere Misgovernment ;" and in November 1868, when almost all visitors except himself had left for the season, he expired suddenly at Sreenuggur, after having walked up the Takht-i-Suliman, a hill which rises close to the city to the height of a thousand feet. Naturally the supposition was that he had been poisoned ; but Surgeon Caley, who happened to be on his way down from Ladak, examined the body shortly after death, and reported that there had been "rupture of the heart." Dr. Elmslie was a devoted medical missionary, who did an immense deal of good in Kashmeer, and had published a valuable vocabulary of the language ; but he had also published letters complaining of the carelessness of the Government in regard to a visitation of cholera which had carried off large numbers of the people, and pointing out that sanitary measures might save the lives of thousands every year from small-pox and other diseases. The Sreenuggur rumour was that his servants had been offered so much to poison him within the Kashmeer territory, and so much more if they would do so after he got beyond. Dr. Elmslie died suddenly shortly after he had got beyond the borders, and, it seems, also of heart disease. Mr. Hayward had published letters in the Indian papers complaining of the conduct of the Kashmeer troops in Gilgit and on the borders of Yassin, when he somewhat injudiciously returned to that part of the world.

A STARTLING episode took place at Umballa whilst Mr. McNabb the Commissioner, was holding sessions there. A prisoner was being tried for the murder of a child. Evidence and argument had been given, and the Commissioner was engaged writing his judgment, when accused asked leave to go outside for a few minutes. Permission having been granted, he, according to an account in the *Pioneer*, commenced moving out with a feeble gait as if infirm, until he arrived opposite a book-shelf, where an iron spike about a yard long had been placed. "Then, suddenly stooping down and seizing it in his manacled hands, he sprang with a ferocious howl on the Native Deputy Inspector, who was standing near, and endeavoured to stab him. The latter fortunately had noticed his action as he seized the spike, and succeeded in arresting the blow, not, however, without getting his sleeve torn and his arm slightly wounded. Closing with the prisoner, and aided by the constable who held the rope attached to the handcuffs, he threw the man down. The prisoner for some time struggled violently, and endeavoured to force the point of the spike into the Deputy Inspector's chest. Mr. McNabb, however, rushed in and managed to wrest the weapon from the prisoner's hand, and he was then secured. On being taken outside he admitted at once that he had intended stabbing the Commissioner so as to ensure being *hanged immediately*."

THERE will be a levee at Peterhoff on the 24th instant. The Simla Tongha Dak will henceforth run between Simla and Umballa.

CHOLERA is very prevalent in Oudh, 2,780 deaths having been reported in the province during the past week.

LORD NORTHBROOK and the Hon'ble Miss Baring and a small party left Simla yesterday for Mahasso, where they will probably remain a week.

BOMBAY.

THE *Bombay Gazette* furnishes us with some facts relating to the Baroda trial which have hitherto been kept secret. "It is now no secret that, while the trial was actually in progress at Baroda, a foolish attempt was made by Mulharao's friends to bribe Mr. Souter with the offer of five lakhs of rupees ; and one of the agents employed in the negotiation was the karbaree of Mulharao's daughter. But perhaps bribery is to be considered admissible where it is practised in behalf of a persecuted prince. Another little matter may be mentioned now, which it would have been unfair to speak of while the result of the trial was still doubtful. The real reason assigned by Damodhur Punt for making his confession was that the Gackwar had one day told him in confidence he thought the best thing he could do was to make a clear breast of it, and throw himself on the forgiveness of the British Government, which would probably deal generously with him. Alarmed by this confidence, Damodhur Punt thought the best thing *he* could do was to be beforehand with his master, lest the prince should be tempted, in making his confession, to throw all the blame of his own crime on the Private Secretary, who had been the principal instrument employed in carrying it out."

THE population of the towns of this Presidency is put down at 4,136,578, or an average of 14,464. There are 286 towns whose actual number of inhabitants is 5,000 and above ; whilst that of the villages is 20,949,740, an average for each out of 44,592 villages of 470 inhabitants. For every 10 dwellers in town there are 55 in the country.

THE inhabitants of Nassick have hit upon a strange plan for putting an end to the cholera epidemic. They are about to send an unfortunate low-caste creature, a Mang woman, into the jungle, whither she is expected to carry the sorrows of the people, after the manner of the scapegoat of the Hebrews. Before sending her forth they will dress her in new clothes, and the Hindoos will surround her in hundreds with offerings of rice, flour, ghee, and so forth. She will have to sojourn in the woods for eight days, and on returning will be met with rejoicings, as the pest will then be supposed to have left the town for ever.

THE officers of the Baroda State troops were received in Durbar on Saturday last by the Resident. After referring to Mulharao's gross maladministration, he congratulated both officers and men on the loyal, soldier-like and useful services rendered by them since the government of the State came under British administration. The Gackwar Brigade under European officers was organised by the late

Khundee Rao, all who then enlisted swearing allegiance to the Queen.

No public meeting has been held at Poona since the deposition of the Gackwar. There has been no religious procession nor public subscription on Mulharao's behalf, but the Deccan Mahrattas are watching eagerly, although not agitating, and will accept the situation when the succession tranquillises the Baroda people. The rumoured participation in the agitation of Government servants is unfounded.

IT is said that Damodhur Punt, whose house was recently sacked at Baroda and his wife stripped and insulted by the mob, is to be excommunicated by his caste-people, in accordance with a precept in the Shastras, for revealing the secrets of his friend. If the unhappy Damodhur was a lying witness, he does not seem to have made much by his motion, and would probable have found it more profitable to have held his tongue or told another tale.

ONE of the greatest difficulties encountered in taking the Census of the Bombay Presidency was in overcoming the prejudices of the population against the measure; and so far back as 1867 we find a correspondence on the subject of a Census in 1871 between the Government of India and Her Majesty's Government; the former recommending that the local authorities and district officers should make every effort to familiarise the minds of the people with the object in view. Upon this subject reports were made from every district in the Presidency, announcing varying results. It was stated that among the mass of the community there was a superstitious notion that enumeration is the precursor of an epidemic, or that its object is the future levy of a tax of one kind or another; and in some castes, such as those of Brahmins, Rajpoots, and Lingayets, as well as among Mahomedans, it is considered unlucky to make known the numbers of their families, especially the female members. With some of the people, and especially village communities living at a distance from large towns, this feeling is one of custom as well as superstition; but the progress of education, we are told, has tended to remove this prejudice during the past few years.

THE Ameer Saood, younger and more popular son of the old Wahabee, Feysul, of whom so much is written in *Palgrave's Arabia*, died at Riadh on the 25th January 1875. The warlike and fanatical Abdulla bin Feysul, brother of the deceased Saood, is said to be advancing on Aredh, and the Arabs of the West with Saood's family and Abdool Rahman bin Feysul have taken refuge with Bin Muneykher near Riadh. Assurances of safety have been sent to the refugees from Abdullah bin Feysul.

THERE is no need to attach particular importance to the news of disturbances at Baroda. Such as it is, the ebullition might have been expected at any time for months past; and had it been genuine, it could scarcely have been restrained for so long. But it is evidently not genuine; being got up by disappointed intriguers who have probably made the Maharanees their instruments equally with the mob. It is not to be expected that the sirdars would remain quiescent at such a tempting opportunity as the present, when one king has been deposed without another being put in his place, and the suggestive baby remained to fill up the gap. It was not in human nature for Luxmeebai to stand in the way of her son's nominal elevation, and whether that juvenile Queen be concerned or not in the affair is a question which, for political purposes, need not be determined.

WHILE the Gackwar's Ranees were in Bombay, reports were current that among the many sufferers from ill-health was no less a person than Luxmeebai's baby. It was supposed that his removal from the *guddee* on which he had been so recently placed did not agree with him, and dire were the prophecies of consequences in the event of anything happening. The idea of his indisposition appears to have originated in no less an authority than the young Maharanee herself. A medical officer was accordingly called in to see the child, and the result of his visit was most satisfactory, for after a very brief examination he decided that there was nothing at all the matter with it.

ON Monday last Sir Richard Meade, pending the result of the inquiry by the Government of India into the validity of the titles set up by the various claimants to the vacant throne of Baroda, installed the Ranee Jumnabaee on the *guddee* as a representative of the sovereign of the State. The ceremony would have taken place on Sunday, but the day was regarded as unpropitious.

MADRAS.

A BOODHIST priest ondemned to death at the Kandy Criminal Sessions has lately suffered the extreme penalty of the law. The culprit, since his conviction disrobed at his own request by a high priest of his faith, was executed, in a public place adjoining the Artillery barracks.

THE burst of the little monsoon in Colombo on the 18th-19th of April was accompanied by one of the fiercest thunder-storms on record, the fall of rain in 24 hours exceeding ten inches, an almost unprecedented experience even in that tropical city. Rain has been very general and continues all over the hill-country, inflicting serious damage on the coffee-blossoms and changing the prospects of a very good crop to one of a low average if not a seriously short crop. A million sterling is said to have been lost.

IN seven years, the Colombo-Kandy-Gampola line of 83 miles has yielded £900,000 of profits to Government, or, after providing for interest and sinking-fund, over half a million to the general revenue.

A COURT MARTIAL has been held at Cannanore on Captain Mylius of the 43rd Foot, who was paymaster of his regiment, and within three months misappropriated 13,232 rupees. From the accounts laid before the Court, it appeared that on the 20th October there was a cash balance in Captain Mylius' hands of Rs. 10,893-6-2; on the next day he received from the treasury Rs. 10,000, and in the following month another remittance amounting to Rs. 20,000 besides several sums on various accounts: the whole making a total of receipts in two months of Rs. 43,122-9-8. Of this, he accounted for Rs. 29,890-5-7, leaving the large balance of over thirteen thousand rupees unaccounted for. The sentence was dismissal from the service, and to make good the missing money.

IT is said that M. Cremazy, son-in-law to the Governor of Pondichery, has been summoned to France to answer the charge of having fought a duel with Captain Castellini, of the retired list. It is feared that matters will go hard with this functionary, inasmuch as he, a Magistrate and Justice of the Peace, should decidedly have upheld and preserved the laws of the land, instead of violating them. The duel, it will be remembered, took place at Cotacoopam, about two miles from Pondichery, in British territory. Not long since, a Magistrate in France was found guilty of a similar offence and was summarily dealt with by being deprived of his appointment.

EXPERIMENTS made by a planter at Manantoddi, in the Wynaad District, have shown that the *Eucalyptus Globulus* will flourish at an elevation of above 5,000 feet. Some of the plants sown in March last year by this gentleman have attained a height of 11 feet, with a girth at three inches from the ground of 7½ inches.

MULHARAO is well cared and provided for, and with his personal liberty unrestrained so long as he abides within the limits of rules laid down for his guidance. It is expected that his "allowance" will be a liberal one, sufficient to maintain a considerable degree of that luxury so necessary to people of his peculiar tastes. Seldom has a measure been better planned or executed. So well was the transfer executed, that none of the European guards had the slightest idea, until they were in the train and whirled away, who they had come to look after, and their destination was never known until they reached it. Since His Highness was deposed all his friends and followers have forsaken him, and most of the retainers who went to Madras had to be pressed for the service. The chief attendant with Mulharao is a sharp-looking Mahratta, fairer than himself, scarcely so tall, and with much better features, called his *vizier* by the escort.

THE arrangements at the funeral of the late Governor of Madras were most discreditable. The rotten footway of the Wallajah Bridge gave way, and over a hundred people were precipitated into the river Couum. Had the whole of the footway fallen at once, at least a thousand people must have been thrown into the river, to be killed or bruised. It was only by the brave exertions of a gallant band of European gentleman that the mortality by the accident was not infinitely greater. First to the rescue was Captain Smith, R. E., who regardless of his full uniform rushed into the water and saved several struggling coolies. Behind him came Messrs. Turner, Bone, Turnbull and others, who managed to force their way through the mass of native lookers-on and rescue others.

THE first announcement that Madras received of the death of the Governor was at the bandstand on Sunday evening. Ere the programme had been gone through, a messenger arrived from Government House, desiring the band to cease playing. This naturally aroused public curiosity which was only too suddenly allayed by the fact being made known that the order had been issued on account of Lord Hobart's death.

IT is stated that Mulharao will make choice of Tanjore or Vellore in which to pass the remainder of his days as a State prisoner.

THE general and genuine feeling of regret expressed in Madras for the death of Lord Hobart, is shared in all parts of India where His Lordship's public and private character are known. For a time he was but little understood in his own Presidency. Of retiring habits and studious disposition, he did not court popularity out of doors, and people complained that he stayed away over-much in the hills. But he was a genial host and a kind friend, and those who knew him best esteemed him the most. By degrees it was found that his literary tastes did not divert him from practical affairs, as foolish people think that literary tastes must do. It was found that whatever time he gave to his books he took a deep interest in the welfare of the Presidency, which has prospered under his rule, and placed much on record which will bear testimony to the high qualities of its ruler. The latest object to which he devoted himself was the formation of the new harbour at Madras, and his successful efforts in obtaining the sanction of the Home Government for this work won the gratitude of many who but imperfectly appreciated his beneficial exertions in other ways. In the cause of education, Lord Hobart was always earnestly at the front; and it is lamentable to think that his zeal in the promotion of the object brought about his death. For there seems to be little doubt that but for the fatigue which he incurred at the Presidency College a few days before his illness, he might have fulfilled his term of Government in India, and obtained a renewal of strength on his return home sufficient to prolong his life for years to come.

SEVENTY-NINE years ago Lady Hobart, the wife of the then Governor of Madras, died at Government House, and was buried in the nave of the Church in Fort St. George; and the body of her grand-nephew, the late Governor, has been placed in the chancel of the same edifice.

LORD HOBART was, in the opinion of the *Madras Mail*, an "abnormally shy and reserved man." This was due partly to temperament, but also probably to his having been denied the advantage of a public school education. Educated at first at Dr. Mayo's celebrated private school at Cheam, he proceeded to Oxford, won a scholarship at Trinity, and graduated as a 2nd Class in

Classics. He left the University with strong predilections for philosophical research, ancient and modern poetry, political economy, and speculative theology. He succeeded Mr. Baring (now Lord Northbrook) as Private Secretary to Sir George Grey when President of the Board of Trade, and afterwards as Secretary to Lord Granville. He was an intimate friend and cordial partisan of Mr. John Bright in political, and the late Revd. Mr. Maurice in theological matters. All this combined to make Lord Hobart more acceptable to editors of magazines of "progress" than to the Government. He also advocated the abolition of capital punishment. In 1866, he was appointed Director-General of the Imperial Ottoman Bank at Constantinople, and remained in that city five years. In 1871, he resigned, returned to England, improved his acquaintance with the Duke of Argyle, by whom in the spring of 1872 he was offered the Governorship of Madras, and he arrived in this Presidency, and took his seat as President in Council on the 15th May following. He was descended in the female line from John Hampden, the cousin of Oliver Cromwell, of Hampden, Buckinghamshire, who was one of the first to take up arms against Charles I.; and his life was influenced by the example of that eminent ancestor. The estate at Great Missenden Bucks that belonged to John Hampden was two years since inherited by the Earl of Buckinghamshire, who, however, at once made it over to his eldest son, the late Lord Hobart.

THE Mahomedans at Madras, to whom the late Lord Hobart was a true friend, are taking steps to commemorate his governorship by a permanent memorial.

AN important case has been disposed of by the Cantonment Magistrate of Bangalore. One Mahomed Ali charged Ameen Bee, a well-known bad character and procuress, with having enticed away his wife. Eight witnesses were examined, and it came out in evidence that the woman Ameen Bee, to prevent her victim being discovered, had a pit dug in the compound of her house and buried the girl up to her neck and covered her head with grass. The poor creature was fortunately discovered in time, but had she remained an hour longer in the pit, she would have died. Ameen Bee, in defence, said that the wife of complainant was not a properly married woman, as no Cazee had performed the marriage ceremony, and there was consequently no record of it. On this, the Pesh Emam of the Shoolay Musjid was called, and he deposed to having celebrated the marriage in proper form. After a patient hearing of the case, the woman was sentenced to four months' rigorous imprisonment.

THE following telegram has been received in Madras from the Secretary of State for India:—"The Queen desires me to convey the expression of her very sincere sympathy to Lady Hobart, for whose bereavement she feels deeply."

THE death of another officer of the 76th Regiment, stationed at Secunderabad, is announced. Lieutenant Rhenius died of heat apoplexy on the night of the 29th ultimo, having been ill for three weeks with brain fever. This makes the third death among the officers of this regiment within less than a month, and the sixth since the regiment has been quartered at Secunderabad.

LADY HOBART and party left for the Neilgherries on Thursday by special train. She stays there some weeks before going to England. The Government removes to Ootacamund to-day.

BURMA.

THE Hon'ble Ashley Eden, at a dinner given him recently in Rangoon, while referring to the present complications, remarked—"Something has been said this evening of the excitement caused in the country by rumours of war. I am afraid that it is true that uncertainty has led to some temporary derangement of trade, which I deeply regret, but this will only be for a time: I do not for one moment apprehend that the King of Burmah will be so ill-advised or so foolish as to resist the moderate and just demands of the Government of India; but should it be otherwise, it is a small matter. A misunderstanding would, with our present armament, our facilities of transport, our advanced base of operations, our knowledge of the country and the loyalty of our own people, be no longer a matter of years, but of settlement in a few days. If there is one thing which more than another tends to make the administration of Burmah simple and satisfactory, it is the completeness with which officials and non-officials unite in recognizing their community of interest in everything which affects and promotes the progress and well-being of the country. We have here none of the jarrings and contentions which we sometimes see elsewhere, because each party believes that he or the other is as honestly as himself striving to promote the common end." Mr. Eden's observations regarding the good understanding prevailing among officials in Burmah convey a much needed lesson to many people in India.

THE eclipse expedition to Camorta does not appear on the whole to have been successful. The principal object of the expedition—the photographing of the corona and its spectrum—unfortunately failed owing to heavy clouds during the two hours of the eclipse. Signor Tacchini was, however, able to make some spectroscopic observations of the cusps; both the external contacts were observed in an almost clear sky, the last contact being observed both by the spectroscope and ordinary methods.

DR. SCHUSTER, of the Eclipse Expedition, met with a splendid reception from the King of Siam and the principal Government officials at Bankok. Extensive preparations were made to build an observatory and to provide for the comfort of the visitors.

A RANGOON telegram to a contemporary states that the troops of the King of Ava on the Karennee frontier are being strengthened, and that the Shans are disposed to act against us. A letter from Mandalay in the *Burmese Herald* points out that the King has always been our faithful ally, but that he has several substantial grievances against the Indian Government. One of these grievances in connection with the Karennee question is that the English Government demarcated the frontier and set up the boundary marks without consulting the Burmese authorities; another is, that His Majesty's subjects have been, in divers insidious ways, induced to emigrate to British Burma. The Queen is not believed to be responsible for these offences, which are attributed solely to the Indian Government. It is probable, therefore, that an apology from Her Majesty and the redress of the grievances complained of would be accepted as satisfactory atonement for the wrongs done to the King by Her Majesty's representative in India!

ASIA.

THE Russian *Invalide* states that the Government has received a report, dated the 18th of March, announcing complete tranquillity in the khanate of Khiva since the last Russian expedition. The Turcomans had not made any further raids. The Khan of Khiva intended to start on March 20th upon a visit to all the Turcoman settlements. He would be accompanied in his journey by 1,500 horsemen and two guns.

ACCORDING to the latest intelligence from Khiva, the Khan, towards the end of March, was preparing to visit his Turcoman subjects on the confines of the Ust Urt. A military escort with some guns was to accompany him. The Yomud Turcomans—it is not said which Yomuds, the Khiva Yomuds or the Attreck Yomuds—had asked the Merve Tekke tribes to assist them in a contemplated operation against the Russians; but the Merve people had declined to have anything to do with the venturesome enterprise. The whole condition of Khiva, Bokhara, and Russian Central Asia is stated to have been satisfactory and pacific since the last expedition of Colonel Ivanoff.

THE principal wife of the late Emperor of China died on the 27th March.

ACTIVE measures are in course of completion to open up Formosa to Chinese enterprise, in a way calculated to properly develope the resources of that island. The recent memorial to the Throne upon the subject has evidently had good effect, as orders have been issued to the mandarins of Formosa to afford every aid and protection to immigrants, a number of whom are stated to be setting out from the ports of Swatow, Amoy, and Foochow, for the purpose of settling there.

LITERARY.

A PRIZE of a thousand rupees has been offered to the composer of the best essay in English on the sources and history of Boodhist Law as it prevails in British Burma.

WHILE preparing for the press the journals relating to the mission to Thibet, on which Mr. Bogle was despatched by Warren Hastings, Mr. Clements Markham became acquainted with the fact that Lassa had been visited by a Mr. Manning, of whose adventures hardly any notice had beed taken, if we except a casual mention in a little book on Mongolia, published many years ago by Mr. Prinsep. It now turns out that Mr. Manning was a member of the well-known family of that name who hold the living of Diss, in Norfolk, and, it appears, some records of his journey are preserved at Diss. These notes form an additional proof of the active interest formerly taken in Thibet, and we hear that Mr. Markham is likely to publish the manuscript. Curiously enough, Mr. Manning turns out to be "the friendly, the mathematical Manning" of Charles Lamb.

DR. JOHN MUIR has printed for private circulation two volumes, one consisting of 'Religious and Moral Sentiments, freely translated from Indian Writers,' and the other of 'Metrical Translations from the Hymns of the Veda, and other Indian Writings.'

ECCLESIASTICAL.

THE survey of Palestine is making rapid progress. By the end of May it is expected that the whole of the southern portion will be finished. Very bad weather has prevailed in Palestine, which necessitated a retreat to Jerusalem. Here Lieuts. Conder and Kitchener made good use of their time in examining the recent excavations of the Muristan, and those of Mr. Maudslay on Mount Zion. The former is a site of great historical though not Biblical interest. It is an area of 170 yards east and west by 150 north and south. The eastern half has been given to the German Government, and is now completely excavated, showing the piers and walls of the large church (date 1130) of Ste. Marie la Grande. Under the western portion lie the remains, yet to be recovered, of the buildings of the Knights Hospitallers, which were erected in the reign of King Amaury. The works of Mr. Maudslay have extended our knowledge of the rock scarp of Zion and the course of the first wall. The chief new identification recently proposed is important—that of Bethabara, the place where John baptized. Lieut. Conder points out that the site hitherto generally received, Bethnimrah, is too far south, one condition being that the place must be within two days' journey of Cana and Nazareth. He has examined all the fords of the Jordan,—there will be fifty in the new map, against eight in Mr. Murray's latest map—and finds one twenty-five miles from Nazareth, which not only seems to answer all the conditions, but also preserves the name. It is called Makhádhet Abára, the "Ford of the Crossing-over." As Bethabara means the "Town of the Crossing-over," this identity of name might be met with at any of the fords, so that the identification must be supported on other grounds. Besides the condition of distance, the new site, however, is the ford over which the road down the Wady Jalud to Gilead and the Haurán passes. Here the river-bed is more open than at other places, the steep banks of the valley are further retired, and a broad space is left, suitable for the collection of the great crowds which followed John the Baptist.

THE first detachment of theological students from the Mission College, Madagascar, completed last year their four years' term of study, and were stationed as pastors and missionaries in important positions. Mr. Sibree, missionary, describes many of them as men of ability, but he adds: "Our satisfaction, however, was considerably alloyed by the fact that ten of the best of these students were taken by the Queen and placed by her and 'the Church in the palaces' (a convenient fiction for what is done by the Government in religious matters) in ten of the chief towns in the district round the capital. Professedly, these ten men were to have the charge of the schools, but, in fact, they have had authority given them over the churches and congregations as well; and subsequently papers were sent to us in which a district containing from a dozen to sixteen villages was assigned to each of them, with which districts the Government evidently wish us to have as little to do as possible, although they include the most important places in the country away from Antananarivo. In some instances these young men are working cordially with the missionary in whose district they are placed; but in other cases they appear to think themselves quite able to go on without any co-operation with the agents of the society, to which they owe all their training, and in some cases their support, during their college course. On the 6th of April, the Queen and Court being at Ambohimanga, a sort of ordination service was held at the top of the town, at which service the ten students were appointed to their districts, and admonished as to their duties. Being held within the town of Ambohimanga, none of the missionaries could take any part in this service, or even be present, this being probably the deliberate intention of the Queen's advisers in choosing this place for the occasion. These ten men are paid by the Queen and 'the Church in the palace' a salary considerably larger than what we have been able to give to any evangelist, and have become, in fact, very important and influential Government officials. The other twenty students are settled either as evangelists in the country or as pastors of city churches."

MILITARY ORDERS.

BALDERSTON, Capt. A., to Mussoorie to the 15th October.
BUCKLEY, Major F. A., to be Lieut.-Col.
CLARKE, Capt. W. C. S., to be Major.
DARRAH, Major H. Z., to Futtegurh and Mussoorie, from 10th May to 10th November.
DAVIS, Major W. G., to be Lieut.-Col.
DEBRETT, Major H., to be Lieut. Col.
DWYER, Vet. Surgeon. *J. C., to* England to appear before a medical board.
DYCE, Lieut. G. H. C., furlough for eighteen months.
ELLIOT, Lieut. G. L., furlough for twelve months.
FOX, Capt. E. S., to be Major.
GARSTIN, Major E. C., to be Lieut. Col.
GARSTIN, Capt. C. J., to be Major.
GRAHAM, Capt. T., ditto.
JOHNSON, Col. G. V., (A Brigade,) to England, to appear before a medical board.
MADDEN, Copt. T. D., to be Major.
MILLET, Capt. R. T., to England, to appear before a medical board.
MONTAGUE, Capt. F., to England, for four months.
MURPHY, Capt. T., ditto to appear before a medical board.
O'CALLAGHAN, Lieut. J. W., for two years.
SARTORIUS, Major R. W., to Simla to 15th October.
SAWYER, Lieut. G. W., to officiate as an Asst. in the Pay Dept. on probation.
SCOTT, Capt. T. A., to be Major.
SHARPE, Major C. F., to be Lieut.-Col.
SKINNER, Capt. G. J., from 20th May to 30th June.
STRANGWAYS, Lieut.-Col. G., to be Col., with Col's. allowances.
STEWART, Major J. M., to be Lieut.-Col.
STEWART, Major A. McL., to be Lieut.-Col.
SZCZEPANSKI, Capt. H. C. A., to be Major.
VENOUR, Major E., to be Lieut.-Col.
VANRENEN, Capt. A. D., to be Major.
WAUCHOPE, Capt. R. A., to be Major.
WINTLE, Major H. R., to be Lieut. Col.

CIVIL GAZETTE.

IMPERIAL.

BAYLEY, Hon'ble E. C., leave for six months.
BLENNERHASSETT, Mr. W., to officiate as Deputy Commr., Oudh.
CLARKE, Major T. G., to officiate as Secretary to the Chief Commr. of Mysore and Coorg.
DODSWORTH, Mr. R. S., Oudh, to be 1st Grade Asst. Conservator.
DURAND, Lieut. E. L., to officiate as 1st Asst. to the Agent to Governor-General for Central India.
EDEN, Hon'ble A., to be a temporary Member of Council.
HILL, Mr. H. C., promoted to the 2nd Grade of Asst. Conservator.
KIEENANDER, Mr. C. R., to officiate as Deputy Commr. of Paper Currency, Lahore Circle.
KNOWLYS, Mr. H. B., appointed Asst. Commr. of the 2nd Class in the Hyderabad Assigned Districts.
McMINN, Mr. C. W., to officiate as Deputy Commr. of Bahraich.
MOIR, Mr. E. McA., to be 1st Grade Asst. Conservator.
O'CONNOR, Mr. J. E., to be Asst. Secretary to the Govt. of India in the Statistical Branch of the D. R. A. and C.
THOMPSON, Mr. R. H. E., Central Provinces, promoted to the 2nd Grade of Deputy Conservators.
TURNBULL, Mr. G. D., permitted to resign Her Majesty's Bengal Civil Service.
WILD, Mr. A. E., transferred to British Burma.
WATERS, Mr. G. A., ditto.
WILSON, Capt. F. A., to officiate as 2nd Asst. to the Agent to Governor-General for Central India.

In accordance with the report of their final examination, the gentlemen appointed to the Bengal Civil Service in 1874, are to rank in the following order:—Mr. Hugh Shakespear Barnes, North-Western Provinces, Punjab and Oudh. Mr. Eustace John Kitts, North-Western Provinces, Punjab and Oudh. Mr. John Delabere Gael, Bengal. Mr. Richars Morris Dane, North-Western Provinces, Punjab and Oudh. Mr. Francid Loraine Petre, North-Western Provinces, Punjab and Oudh. Mr. Francis Henry Harding, Bengal. Mr. Cecil Michael Wilford Brett, Bengal. Mr. William Dunber Blyth, Bengal. Mr. Robert George Thomson, North-Western Provinces, Punjab and Oudh. Mr. Henry Savage, Bengal. Mr. Percival Nelson Langdon, Bengal. Mr. Hugh Fraser, North-Western Provinces, Punjab and Oudh. Mr. *Joseph* Kennedy, Bengal. Mr. James Ramsay Drummond, North-Western Provinces Punjab and Oudh. Mr. William Grierson Jackson, North-Western Provinces, Punjab and Oudh. Mr. Henry Arthur Denteros Phillips, Bengal. Mr. John Alexander Anderson, North-Western Provinces, Punjab and Oudh. Mr. Arthur Edwin Comerford Casey, North-Western Provinces, Punjab and Oudh. Mr. John Henry Harrison, North-Western Provinces, Punjab and Oudh. Mr. Robert Carstairs, Bengal. Mr. John Arthur Jeffreys, North-Western Provinces, Punjab and Oudh. Mr. William Robert Millar, Bengal. Mr. Frederick Beatson Taylor, Bengal. Mr. David Norton, Bengal. Mr Harry Lee, Bengal. Mr. Robert Ferguson Gibbon, North-Western Provinces, Punjab and Oudh.

PUBLIC WORKS.

CAPPEL, Mr. A. J. L., to officiate as Deputy Director-General of Telegraphs.
DOWNING, Capt. A. E., Executive Engineer, transferred to British Burmah for employment on the Rangoon and Irrawady Valley State Railway.
ECKFORD, Major J., to officiate as Supdt., 1st Grade, ditto.
GILBERT, Mr. E. L., transferred for employment on the Rangoon and Tounghoo Railway Survey.
GRAVES, Lieut. H. A., to be an Asst. Engineer, 2nd Grade, North-Western Provinces Provincial Establishment.
LANE, Mr. J. H., to officiate as Director of Traffic, in the Telegraph Dept,
OLDHAM, Capt. F. G., to officiate as Controller of Public Works Accounts. Hyderabad.
MURRAY, Lieut. Col. R., to officiate as Director-General of Telegraphs.

BENGAL.

BIRCH, Mr. J. B. Asst. Supdt. of Police, Pubna, leave for three months.
BOWIE, Major G. McH., to be District Supdt. of Police, Patna.
CHARLES, Mr. T. G., to have charge of the Police in Mymensingh.
CLARKE, Mr. F. Barrister-at-Law, to act as Asst. Secretary to Govt. in the Legislative Dept.
DOWNING, Mr. S. F., Asst. Professor, Presidency College, to 3rd class of the Educational Service.
DEY, Baboo O. C., Subordinate Judge of Rungpore, leave for six months.
DUTT, Baboo K. D., to act as Subordinate Judge of Rungpore.
EWBANK, Mr. A., Offg. Principal of the Dacca College, to the 3rd Class of the Educational Service.
GARRET, Mr. A. W., Offg. Inspector of Schools, Presidency Circle, ditto.
GORDON, Lieut-Col. W. R., to be Supdt. of Police, Nuddea.
GILLON, Mr. H., Asst. Magistrate, posted to the Sudder Station of Jessore.
GHOSE, Baboo P. C., Deputy Magistrate, transferred to the Sudder Station of Maldah.
GHOSE, Baboo H. C., Deputy Magistrate, transferred to the Sudder Station of Durbhanga.
MUNSOOR, Moonshee A., to act temporarily as Subordinate Judge of Dinagepore.
MACPHERSON, Mr. W., to act in the first grade of Judges.
MOOKERJEA, Baboo R. C., Deputy Magistrate, leave for three months.
MILLER, Mr. C., Magistrate of Police, Calcutta, leave for fifteen months.
MUKHURJI, Baboo B., Inspector of Schools, Burdwan Circle, to the 2nd class of the Educational Service.
NOLAN, Mr. P., Acting Joint-Magistrate, Pubna, leave for three months.
REILY, Mr. E. M., Deputy Magistrate, to have temporary charge of the Serajgung Division.
RATTRAY, Mr. A., transferred to Julpigoree.
SCOTT, Professor, J. M., Presidency College, to the 2nd Class of the Educational Service.
TOTTENHAM, Mr. L. R., to act in First Grade of Judges.
THWAYTES, Mr. R., Principal, Hooghly College, to the 1st Class of the Educational Service.

MADRAS.

ANDREWS, Surgn. Major C. A., to act as Medical Officer, Coonoor.
ARBUTHNOTT, Hon'ble D., Board of Revenue, to act as First Member.
CLEMENTSON. Lieut.-Col. C. D., Cantonment Magistrate of St. Thomas' Mount, leave for six months.
DAVIS, Surgn.-Major W. F., to act as Zillah Surgn., Coimbatore.
KINDERSLEY, Hon'ble J. R., Acting Judge of the High Court of Judicature, Madras, leave for three months.
MORLEY, Revd. S., to act as Joint-Chaplain of St. George's Cathedral, Madras.
SMITHWHITE, Revd. J., to act as Chaplain of Cannanore.
SMITH, Revd. C., to be Chaplain of Trichinopoly.
SEWELL, Mr. H., to act as Collector of Trichinopoly.
SHERMAN, Major S. W. B., to be British Consular Agent at Pondicherry.
STURROCK, Mr. J., Acting Under-Secretary and Canarese Translator to Govt., furlough for eighteen months.
TROTMAN, Revd. W. S., to be Chaplain of Coonoor.
WHITTON, Surgn.-Major G. E., to act as Medical Officer, Ootacamund.

PUBLIC WORKS.

HASTED, Major J. O., to officiate as Chief Engineer for Irrigation, and Joint Secretary to Govt.
MULLINS, Lieut.-Col. J., to officiate as Chief Engineer and Secretary to Govt., P. W. D.
PETERS, Mr. C. J., to be Executive Engineer, 4rth Grade.
SMITH, Mr. R., to officiate as Supdg. Engineer, 3rd Grade.
WYBROW, Mr. G. D., to be Executive Engineer, 4th Grade.

NORTH-WESTERN PROVINCE.

BATTENBURH, Mr. C. A., Extra Asst. Commr., Jalaun, dismissed from the service of Govt.
BULLER, Capt. F., District Supdt. of Police, Saharanpore, leave for three months.
CONYBEARE, Mr. H. C., to be an Asst. Collr. of the 1st Class.
DAVIS, Mr. A. H., to officiate as District Supdt. of Police, Muzuffernuggur.
LAING, Mr. J., to officiate as District Supdt. of Police, Mirzapore.
MOULE, Mr. H. F. D'O., Deputy Supdt., Family Domains Maharajah of Benares, leave for two months and twenty-five days.

SANDYS, Mr. M. W., Magistrate, Budaun, three months leave.
SMITH, Surgn.-Major H. S., to be a Civil Surgn., 1st Class.
TUCKER, Mr. W. R., Extra Asst. Commr., from Jhansi to Jalaun.
WOOD, Surgn. A., to be a Civil Surgn., 2nd Class.
WILKIE, Surgn. D., to officiate as Junior Civil Surgn., Allahabad.
WILLIAMS, Mr. G. R. C., to be Deputy Supdt., Family Domains Maharajah of Benares.

PUNJAB.

COURTNEY, Surgn. Major S. C., to officiate as Civil Surgn. of Peshawur.
HARINGTON, Major F. D., Asst. Commr., Jhelum. six months' leave in India.
ROBINSON, Mr. H. C. T., Asst. Commr., from the Dera Ghazi Khan, to the Kangra District.
ROSS, Surgn. G. C., to officiate as Civil Surgn., of Kurnaul.
THORNHILL, Mr. G., 1st Member of the Board of Revenue, leave for three months.
UDNY, Mr. R., to officiate as Deputy Commr. of Kohat.

LATEST TELEGRAPHIC NEWS.

LONDON, APRIL 30TH.

PAPERS relating to the first Baroda Commission have been presented to Parliament, accompanied by a despatch from the Marquis of Salisbury fully approving the Viceroy's proceedings in the matter. Lord George Hamilton promised to communicate the papers relating to the second Commission and deposition when received. Motions have been announced for and against the action taken by the Indian Government towards the Gaekwar.

Repeated demonstrations have been made by the populace and students of Gratz against Alphonso, brother of Don Carlos. The military dispersed the rioters, many of whom were wounded.

LONDON, APRIL 30TH.

THE following is the result of the race for the 1,000 Guineas :—Spinaway, first ; Per Se, second ; Chaplet, third.

LONDON, MAY 1ST.

A TERRIBLE colliery explosion has occurred at Bunkershill in Staffordshire ; 35 people were killed.

The Emperor of Germany has approved of the introduction of a bill for suppressing religious orders. The Bishop of Munster has been released.

LONDON, MAY 2ND.

THE following appointments and promotions are gazetted in the Royal Engineers in consequence of the death of General Sir John Cheape : Major General Henry Rigby to be Commandant. Colonel J. T. M. Browne and Lieutenant Colonel T. G. Moberly to be Colonels. Major R. F. Oakes to be Lieutenant-Colonel. Captains D. H. Trail, A. J. Filgate, and Henry M. Vibart to be Majors. Brevet promotions : Lieutenant General Walter Scott to be General. Major General Henry Rigby to be Lieutenant-General. Colonel V. M. Harris, and G. W. Walker to be Major-Generals. Major W. Welme to be Lieutenant-Colonel.

LONDON, MAY 3RD.

THE reply of Belgium to Germany on the subject of the laws regulating the license of the press does not treat generally of the questions in the German note and reserves the declaration of any resolutions. The bill for the suppression of religious orders has been introduced into the Prussian Diet.

LONDON, MAY 3RD.

THE Homeward Mail, *viâ* Brindisi, which left Calcutta 9th April and Bombay 12th April, were delivered yesterday. The Heavy Mails, *viâ* Southampton which left Calcutta 2nd April arrived on the 1st May.

LONDON, MAY 4TH.

THE bill for the preservation of peace in Ireland is meeting with stubborn resistance from the Irish members.

Alfonso, the brother of Don Carlos, has quitted Gratz.

LONDON, MAY 5TH.

In the Commons last night the Marquis of Hartington brought forward a motion to place the relations between the Parliament and the Press upon a satisfactory footing. Mr. Disraeli deprecated for the present any change being made. On the motion of Mr. Sullivan strangers were excluded during the debate. The House has adjourned until the 25th instant.

The Pope is again indisposed. He is suffering from extreme physical weakness.

The Chester Cup has been won by Freeman.

The reply of Belgium to the German note has been communicated to the Chambers. It promises to follow the initiative of Germany regarding the modification of laws regulating the license of the Press.

PARIS, MAY 6TH.

THE approaching interview between the Emperors of Russia and Germany creates great uneasiness here.

LONDON, MAY 6TH.

IT is reported that Government intend reforming the Indian Civil Service Examinations and raising the age limit to 25 for Europeans.

Forty two deaths have been reported as the consequence of the late terrible colliery explosion at Bunkershill.

Lieutenant General J. W. Smith has been gazetted Colonel of the 14th Regiment.

Obituary :—General the Earl of Carnwath, Lieutenant-General Mathew Smith, Major-General J. C. Brooke, General J. Brigg.

THE LONDON ASSURANCE CORPORATION.

FOR FIRE, LIFE, AND MARINE ASSURANCES,
INCORPORATED BY ROYAL CHARTER, A.D. 1720.

HEAD OFFICE.
No. 7, ROYAL EXCHANGE, LONDON, E.C.

GOVERNOR,
JAMES BLYTH, ESQ.
SUB-GOVERNOR, DEPUTY-GOVERNOR,
EDWIN GOWER, ESQ. DAVID POWELL, ESQ.
JOHN P. LAURENCE, ESQ., Secretary.
JOHN ANTHONY RUCKER, ESQ., Underwriter.
ARTHUR H. BAILEY, ESQ., Actuary.
THOS. B. BATEMAN, ESQ., Manager of the Fire Department.

LIFE DEPARTMENT.

This Corporation has granted Assurances on Lives for a period of nearly One hundred and Fifty Years, having issued its first Policy on the 7th June 1721.

Two-thirds of the entire profits, without any Deduction for expenses of management, are alloted to the Assured.

The profits are declared at the *end* of every five years, and the share of the Policy-holders may be appropriated either in increase of the Sum Assured, or as an immediate Cash payment.

Assurances may also be effected without participation in profits, at reduced Rates of Premium.

The premiums have been computed *from* the most recent information on the subject of European mortality in India, and they will be reduced to the corresponding English rates on the return to Europe of the persons whose lives are Assured.

Premiums may be made payable either yearly or half-yearly.

Policies on lives of Military Officers in civil employ issued at the Civilian Rates.

Risks on Male Parsee and Eurasian lives, under 40, accepted at European Rates.

Medical Fees and Stamps are paid by the Corporation.

DECLARATION OF BONUS.

Examples of additions to life Policies of £1,000, to 31st December 1870.

Age at Entry.	Duration of Policy. 5 years.	Duration of Policy. 25 years.

Alfred Lowe, Esq.
John Napier, Esq.

Henry Michael Steinthal, Esq.

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policyholders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 40 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly, at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds ... ... **£ 971,942 10 10**
Annual Income ... ... **£ 169,497 15 8**

Claims promptly adjusted on proof of Death.

Total of Claims Paid Since 1834, £ 2,070,348 17 1

COLVIE COWIE, & CO.,

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,

ROYAL INSURANCE COMPANY,

CALCUTTA.

PHŒNIX FIRE OFFICE.

ESTABLISHED IN 1872, UNLIMITED.

The importance of this Company's transactions with the public may be judged from the fact that since its commencement it has been able to pay 9,000,000*l.* sterling as losses under insured risks and without a single call on its proprietors whose liability is unlimited.

The undersigned are authorised to issue policies in Bombay and the Mofussil at the tariff rates of all the old established Company, which are as low as the nature of the risks can justify.

The rates on bungalows in the Mofussil, and Residences, Offices, and Godowns in Elphinstone Circle, have been lately much reduced. Particulars on application at the Agency office.

A. C. BRICE & Co.,
Agents.

THE STANDARD LIFE ASSURANCE CO.

Established 1825.

THE FUNDS amount to upwards of FOUR MILLIONS, FOUR HUNDRED THOUSAND POUNDS STERLING, and are invested chiefly in the Security of Land in the United Kingdom.

THE INCOME exceeds SEVEN HUNDRED THOUSAND POUNDS per annum.

THE ASSURANCES IN FORCE amount to upwards of SEVENTEEN MILLIONS STERLING.

THE STANDARD is one of the oldest and most successful of the Life Assurance Institutions of Great Britain. Its Profits have been very large, and persons assured have derived very important benefits from their connection with the Company. It has also acquired a marked character for liberal management, being the first Institution which relieved Policies of Assurance from restrictive and unnecessary conditions, and gave such contracts increased value and stability in other ways.

THE ANNUAL REPORT for the past year, bearing reference to the very onerous and responsible duties which the maintenance of the Company at its present high standard of progress and accumulation devolves upon the Directors, may be obtained on application.

LIFE DEPARTMENT.

The Life Funds are free from any liability to the Fire Department by the Company's Acts 33 and 34 Victoria. Session 1869-70,

Accumulated Funds irrespective of the Paid-up Capital £2,551,589-16-7

Annual Revenue from Premiums and Interest 360,625-18-9

At the last Quinquennial Investigation and Division of Profits for the period ending 31st December 1870, the Surplus Fund divided amounted to £182,274 5 2

The value of the loading reserved for Future Profits and Expenses amounted to £601,554 0 0
Besides which there were reserved for Contingencies, &c. .. 33,925 6 2

Making a Total Reserve of £635,479 6 2

During the five years preceding 1870, the Company transacted the following new business:—

NO. OF POLICIES ISSUED.	SUMS ASSURED.	PREMIUMS.
£4,567.	£4,132,141.	£133,279 16 5.

A Bonus was declared upon the Policies of the Company on the Participating Scale, at the rate of £1 5s. per cent. per annum, which in many instances was equal to £1 19s. per cent. per annum, on the original sum assured, the principle of division being to declare the Bonus not only on the original sum assured, but also on all previous Bonus additions.

THE RATES OF PREMIUM are moderate and generally LOWER than those of other Offices.

REDUCTION TO ENGLISH RATES without Medical Certificate or fresh examination, *from the date of leaving Alexandria, or Port Said for Europe.*

NINE-TENTHS OF THE WHOLE PROFITS in the Life Business are divided amongst the assured in the Participating Scale every FIVE YEARS.

THE NEXT DIVISION OF PROFITS WILL BE MADE AT 31ST DECEMBER 1875.

All Policies on the Participating Scale opened on or before that date, will share in the Fund then to be divided, which will consist of the Profits made during the previous Five Years.

The following Gentlemen have been appointed, with all the usual powers, as

Local Board of Directors:

F. S. Collis, Esq., Officiating Administrator-General.
Capt. H. P. Lovell, Supdt., P. & O. S. N. Co.

Agents, Rubattino Steam Navigation Company.

Bombay, 1875.

Steam Communication with the Malabar Coast, Ceylon, Madras and Calcutta.

THE British India Steam Navigation Company, (Limited), UNDER CONTRACT WITH GOVERNMENT, despatch steamers as above with Mails, Passengers and Cargo, every fourteen days.

This route is the most expeditious and economical for passengers for the Neilgherry district, Bangalore and Madras, who can land at Calicut for Beypore, and proceed from thence by rail.

Passengers for Calcutta can take the same route, picking up the steamer at Madras.

W. NICOL & Co.,
Agents.

Bombay, 1875.

Steam Communication with Kurrachee.

THE British India Steam Navigation Company (Limited) UNDER MAIL CONTRACT WITH GOVERNMENT, and in connection with the weekly service from England, despatch a steamer to Kurrachee every Monday at noon.

W. NICOL & Co.,
Agents.

Bombay, 1875.

Steam Communication with the Persian Gulf, via Kurrachee.

Interchanging Cargo and Passengers at Bussorah, to and from Baghdad, with the Euphrates and Tigris Steam Navigation Company.

THE British India Steam Navigation Company (Limited) UNDER MAIL CONTRACT WITH GOVERNMENT, will despatch a steamer every 14 days to the PERSIAN GULF, touching at KURRACHEE, GUADUR, MUSCAT, BUNDER ABBAS, LING, BUSHIRE, FAO, MAHOMERAH, and BUSSORAH.

W. NICOL, & Co.,
Agents.

Bombay, 1875.

E. B. RAILWAY, AGENT'S OFFICE, 17th November, 1873. FRANKLIN PRESTAGE, *Agent.*

NOTICE.

THE interest and responsibility of us, Meredith White Townsend and Dr. George Smith in the "FRIEND OF INDIA." and "THE OVERLAND FRIEND OF INDIA" newspapers ceased on the 16th April. For the sake of convenience, Messrs. Nicholls & Co., Accountants, Calcutta, have consented to collect all sums for subscriptions, or otherwise due up to the 16th instant, and also all subscriptions payable to the present Proprietor subsequent to that date. All claims against the late Proprietors are to be sent to Messrs. Nicholls & Co.

M. W. TOWNSEND and GEORGE SMITH,
By their Attorney,
J. C. MURRAY.

21st April, 1875.

ASSURANCE COMPANIES.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836,

And specially empowered by Parliament,

OFFICES : DALE STREET, LIVERPOOL,

Cornhill, and Charing-Cross London.

At the annual General Meeting of the proprietors, held 24th February 1875 in the Company's Office, Liverpool, the Report of the Directors for the year 1874 was read, and it showed that :—

The Fire Premiums were	£ 1,082,521
The Life do.	„ 244,607
The Annuities payable	„ 59,511
The Invested Funds	„ 4,089,747

For Tables of Rates and full particulars both for Fire and Life Insurances apply to

GILLANDERS, ARBUTHNOT, & CO.,
Agents, Calcutta.

THE "Indian" is a Life Office only, and its Funds are therefore free from the Risks attaching to Fire and Marine business.

INDIAN LIFE ASSURANCE COMPANY, LIMITED.

COMBINING LIFE ASSURANCE AND PENSIONS.

Funds *entirely* in GOVERNMENT SECURITIES AND REMAIN IN INDIA. Policy-holders can appoint an Auditor.

Established 1869

ON NEW, SOUND AND POPULAR PRINCIPLES.

(Preliminary expenses including Establishment of 44 Agencies Rs. 2,066 only instead of Rs. 50,000 and upwards!)

REGISTERED UNDER ACT X. OF *1866.*

Capital Rs. 500,000 Fully Subscribed.

Paid-up Rs. 100,000 only (to leave a large surplus to Policy-holders) as advised by the Actuary, J. Hill Williams, Esq., Vice-President, Institute of Actuaries, London.

HEAD OFFICE : MEERUT.

BRANCH OFFICE : BOMBAY.

Advantages of Assuring with this Company.

(1) ECONOMICAL MANAGEMENT. (2)* ENTIRE DIRECTION IN INDIA (3) NO AMALGAMATION. (4) FUNDS in Government Securities only. (5) REDUCTION OF PREMIUMS. (6) POLICY-HOLDERS entitled to appoint an Auditor. (7) REDUCTION TO ENGLISH RATES from date of leaving any port in India, Ceylon or China. The first Company which granted this complete concession. (8) NO RESTRICTION ON TRAVEL. (9) INDIAN RATES of Premium charged while in India. English Rates on leaving for Europe. Assurers who do not contemplate spending a *life time* in India or other tropical climates, will find that the rates of this Company compare *favourably* with *enhanced English Rates*. They have the advantage of *consistency*, as it is *proved beyond doubt* (by the various Civil and Military Funds) that English Life is of less value in India than in Europe. (10) ASSURANCES EFFECTED on lives of EUROPEANS, EURASIANS, PARSEES, AND HINDOOS. (11) CLAIMS PAID three months after satisfactory proof of death. (12) POLICIES for the whole term of life. Short terms of years certain, or payable during life time. ENDOWMENT ASSURANCES combine the advantages of Personal and Family Provisions. They are made payable to the assured themselves on attaining a specified age, or to the representatives at death should that happen sooner. A PROMISSORY NOTE GRANTED for every PREMIUM PAID. (13) HALF CREDIT SYSTEM. (14) NON-FORFEITABLE POLICIES BY LIMITED NUMBER OF PAYMENTS. Should payment of premium not be continued, a paid-up Policy in the form of a Negotiable Promissory Note payable to bearer is given for every Premium paid, which Promissory Note cannot lapse, and is payable on the death of the assured or may be converted into cash during his life time to the extent of 30 *or* 40 per cent. of the premium after 1st or 2nd years paid, without forfeiting the balance of the sum assured. Thus, the assured receives full value for his money for although he can only withdraw 30 or 40 per cent. of the amount of his premiums paid, he receives value for the remainder by being assured. In this way he has full control of his money, the Premiums paid becoming to him equal to a current banking account withdrawable at will. (15) LIBERAL SURRENDER VALUES. (16) SUMS PAID under Promissory Notes exempt from all charges. (17) PREMIUMS are payable monthly, quarterly, half-yearly, yearly, in five, ten, fifteen or twenty payments, or on the half credit system. (18) LAPSED POLICIES may be revived at any time on production of approved Medical Certificates and payment of arrears of Premium, with interest. (19) LOANS ON POLICIES. (20) EXCHANGE OF POLICIES by the substitution of Lives. (21) PENSION BRANCH. *The Rates are more favourable than those of any similar Fund in India.*

THE TWO GRAND INDUCEMENTS TO POLICY-HOLDERS
MUST ALWAYS BE
Unquestionable Security; and as large Profits as the System of Life Assurance admits.

Forms of Proposal, Tables of Rates, and any further information may be obtained on application to the Company's Agents, or to

D. LANCASTER, *F. I. A.*,
Secretary.

Head Office, Meerut, 1875.

* Extract from Mr. P. M. Tait's Paper on "Anglo-Indian Vital Statistics,' read before the East India Association, London, on 28th January, 1874.

"One formidable objection to English proprietary Companies doing business in India is, that the local Directors and representatives of these Companies in India are simply Agents without any substantial power, and removeable at pleasure by the chief authorities in this country."—(England) *Insurance Record, February*, 1874.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London,"—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½ lb. and 1 lb. tins, labelled thus:—

JAMES EPPS & CO.,
HOMŒOPATHIC CHEMISTS,
48, THREADNEEDLE STREET, & 170, PICCADILLY.
Works—EUSTON ROAD, AND CAMDEN TOWN.
Makers of Epps's Milky (Cocoa and Cocoa Condensed Milk).

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages:—

First.—Extreme lightness, being completely self-supporting.

Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.

Thirdly.—Absolute immunity from pain.

Fourthly.—Nature so closely imitated, that detection becomes an impossibility.

Parties residing in Calcutta and the Suburbs attended at their own residences f desired.

Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.

Artificial Teeth repaired and returned by following post.

PRINCIPAL.—J. PRYCE JONES, L. C. PREC.

ATTENTION is respectfully invited to the following facts:—1. The locality of the School is remarkably healthy. 2. The premises are extensive, and fitted up with due regard to the comfort of the Pupils. 3. Every facility for recreation is afforded by the large playground and cricket-field which adjoin the house. 4. There is a sufficient staff of well qualified Masters, including a Classical Master, B.A., in Classical honours, Cambridge, and a resident Frenchman. 5. At the Examinations of the College of Preceptors and the Oxford and Cambridge Universities, Pupils from the School have taken Honours in several distinct branches of Education, *e.g.*, Latin, French Mathematics, Book keeping, and English. 6. At five examinations by the College of Preceptors, Certificates were Awarded to one-third of all the pupils in the School. 7. At five out of seven examinations by the College the highest place in Book-keeping was given to candidates from the School. 8. The Principal earnestly endeavours to form in his Pupils a manly Christian character. 9. The Diet is liberal.

21st April, 1875.

ASSURANCE COMPANIES.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836.

And specially empowered by Parliament.

OFFICES : DALE STREET, LIVERPOOL,

Cornhill, and Charing-Cross, London.

At the Annual General Meeting of the proprietors, held 24th February 1875, in the Company's Office, Liverpool, the Report of the Directors for the year 1874 was read, and it showed that :—

The Fire Premiums were	£ 1,082,521
The Life do.	244,607
The Annuities payable	59,511
The Invested Funds	4,089,747

For Tables of Rates and full particulars both for Fire and Life Insurances apply to

GILLANDERS, ARBUTHNOT & CO.,
Agents, Calcutta.

THE "Indian" is a Life Office only, and its Funds are therefore free from the Risks attaching to Fire and Marine business.

INDIAN LIFE ASSURANCE COMPANY, LIMITED.

COMBINING LIFE ASSURANCE AND PENSIONS.

Funds *entirely* in GOVERNMENT SECURITIES AND REMAIN IN INDIA. Policy-holders can appoint an Auditor.

Established 1869

ON NEW, SOUND AND POPULAR PRINCIPLES.

(Preliminary expenses including Establishment of 44 Agencies Rs. 2,066 only instead of Rs. 50,000 and upwards!)

REGISTERED UNDER ACT X. OF 1866.

Capital Rs. 500,000 Fully Subscribed.

Paid-up Rs. 100,000 only (to leave a large surplus to Policy-holders) as advised by the Actuary, J. Hill Williams, Esq., Vice-President, Institute of Actuaries, London.

HEAD OFFICE : MEERUT.

BRANCH OFFICE : BOMBAY.

Advantages of Assuring with this Company.

(1) ECONOMICAL MANAGEMENT. (2)* ENTIRE DIRECTION IN INDIA (3) NO AMALGAMATION. (4) FUNDS in Government Securities only. (5) REDUCTION OF PREMIUMS. (6) POLICY-HOLDERS entitled to appoint an Auditor. (7) REDUCTION TO ENGLISH RATES from date of leaving any port in India, Ceylon or China. The first Company which granted this complete concession. (8) NO RESTRICTION ON TRAVEL. (9) INDIAN RATES of Premium charged while in India. English Rates on leaving for Europe. Assurers who do not contemplate spending a *life time* in India or other tropical climates, will find that the rates of this Company compare *favourably* with *enhanced English Rates*. They have the advantage of *consistency*, as it is *proved beyond doubt* (by the various Civil and Military Funds) that English Life is of less value in India than in Europe. (10) ASSURANCES EFFECTED on lives of EUROPEANS, EURASIANS, PARSEES, AND HINDOOS. (11) CLAIMS PAID three months after satisfactory proof of death. (12) POLICIES for the whole term of life. Short terms of years certain, or payable during life time. ENDOWMENT ASSURANCES combine the advantages of Personal and Family Provisions. They are made payable to the assured themselves on attaining a specified age, or to the representatives at death should that happen sooner. A PROMISSORY NOTE GRANTED for every PREMIUM PAID. (13) HALF CREDIT SYSTEM. (14) NON-FORFEITABLE POLICIES BY LIMITED NUMBER OF PAYMENTS. Should payment of premium not be continued, a paid-up Policy in the form of a Negotiable Promissory Note payable to bearer is given for every Premium paid, which Promissory Note cannot lapse, and is payable on the death of the assured or may be converted into cash during his lifetime to the extent of 30 *or* 40 per cent. of the premium after 1st or 2nd years paid, without forfeiting the balance of the sum assured. Thus, the assured receives full value for his money for although he can only withdraw 30 or 40 per cent. of the amount of his premiums paid, he receives value for the remainder by being assured. In this way he has full control of his money, the Premiums paid becoming to him equal to a current banking account withdrawable at will. (15) LIBERAL SURRENDER VALUES. (16) SUMS PAID under Promissory Notes exempt from all charges. (17) PREMIUMS are payable monthly, quarterly, half-yearly, yearly, in five, ten, fifteen or twenty payments, or on the half credit system. (18) LAPSED POLICIES may be revived at any time on production of approved Medical Certificates and payment of arrears of Premium, with interest. (19) LOANS ON POLICIES. (20) EXCHANGE OF POLICIES by the substitution of Lives. (21) PENSION BRANCH. *The Rates are more favourable than those of any similar Fund in India.*

THE TWO GRAND INDUCEMENTS TO POLICY-HOLDERS MUST ALWAYS BE

Unquestionable Security; and as large Profits as the System of Life Assurance admits.

Forms of Proposal, Tables of Rates, and any further information may be obtained on application to the Company's Agents, or to

D. LANCASTER, *F. I. A.*,
Secretary.

Head Office, Meerut, 1875.

* Extract from Mr. P. M. Tait's Paper on "Anglo-Indian Vital Statistics," read before the East India Association, London, on 28*th January, 1874* :

"One formidable objection to English proprietary Companies doing business in India is, that the local Directors and representatives of these Companies in India are simply Agents without any substantial power, and removeable at pleasure by the chief authorities in this country."—(England) *Insurance Record, February*, 1874.

THE LONDON ASSURANCE CORPORATION.

FOR FIRE, LIFE, AND MARINE ASSURANCES,

INCORPORATED BY ROYAL CHARTER, A.D. 1720.

HEAD OFFICE.

DEPUTY-GOVERNOR, DAVID POWELL, ESQ.

JOHN P. LAURENCE, ESQ., Secretary.

JOHN ANTHONY RUCKER, ESQ., Underwriter.

ARTHUR H. BAILEY, ESQ., Actuary.

THOS. B. BATEMAN, ESQ., Manager of the Fire Department.

LIFE DEPARTMENT.

This Corporation has granted Assurances on Lives for a period of nearly One Hundred and Fifty Years, having issued its first Policy on the 7th June 1721.

Two-thirds of the entire profits, without any Deduction for expenses of management, are alloted to the Assured.

The profits are declared at the end of every five years, and the share of the Policy-holders may be appropriated either in increase of the Sum Assured, or as an immediate Cash payment.

Assurances may also be effected without participation in profits, at reduced Rates of Premium.

The premiums have been computed from the most recent information on the subject of European mortality in India, and they will be reduced to the corresponding English rates on the return to Europe of the persons whose lives are Assured.

Premiums may be made payable either yearly or half-yearly.

Policies on lives of Military Officers in civil employ issued at the Civilian Rates.

Risks on Male Parsee and Eurasian lives, under 40, accepted at European Rates.

Medical Fees and Stamps are paid by the Corporation.

Agents in Bombay.

THE STANDARD LIFE ASSURANCE CO.

Established 1825.

THE FUNDS amount to upwards of FOUR MILLIONS, FOUR HUNDRED THOUSAND POUNDS STERLING, and are invested chiefly in the Security of Land in the United Kingdom.

THE INCOME exceeds SEVEN HUNDRED THOUSAND POUNDS per annum.

THE ASSURANCES IN FORCE amount to upwards of SEVENTEEN MILLIONS STERLING.

THE STANDARD is one of the oldest and most successful of the Life Assurance Institutions of Great Britain. Its Profits have been very large, and persons assured have derived very important benefits from their connection with the Company. It has also acquired a marked character for liberal management, being the first Institution which relieved Policies of Assurance from restrictive and unnecessary conditions, and gave such contracts increased value and stability in other ways.

THE ANNUAL REPORT for the past year, bearing reference to the very onerous and responsible duties which the maintenance of the Company at its present high standard of progress and accumulation devolves upon the Directors, may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

5, Hare Street, Calcutta, 8th September 1873.

MANCHESTER FIRE ASSURANCE CO.,

ESTABLISHED 1824.

98, *King Street, Manchester;* 96, *Cheapside, London;* 35, *Castle Street, Liverpool;* 80, *Buchanan Street, Glasgow;* 12, *Bennett's Hill, Birmingham.*

Alfred Lowe, Esq.
John Napier, Esq.

Henry Michael Steinthal, Esq.

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policyholders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 40 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly, at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies [illegible]
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds	...	... **£ 971,942 10 10**

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August*, 1874.

Terms of Proposal, Tables of Rates, &c., forward on application to

PEEL, JACOB & CO., Agents,

ROYAL INSURANCE COMPANY,

CALCUTTA.

PHŒNIX FIRE OFFICE.

ESTABLISHED IN 1872, UNLIMITED.

The importance of this Company's transactions with the public may be judged from the fact that since its commencement it has been able to pay 9,000,000*l.* sterling as losses under insured risks and without a single call on its proprietors whose liability is unlimited.

The undersigned are authorised to issue policies in Bombay and the Mofussil at the tariff rates of all the old established Company, which are as low as the nature of the risks can justify.

The rates on bungalows in the Mofussil, and Residences, Offices, and Godowns in Elphinstone Circle, have been lately much reduced. Particulars on application at the Agency office.

A. C. BRICE & Co.,
Agents.

DECISIONS of the Sudder Dewanny Adawlut from the commencement in 1843 to the year 1859. *Price*, only Rs. 100.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED:

No. 2096.] CALCUTTA : SATURDAY, 15TH MAY, 1875. [Vol. XLI.

THE FAMINE.

II.

"THERE have been some hereditary honours conferred for civil services, and therefore I don't think the hon. gentleman right in his assumption that the honours and rewards conferred by Her Majesty are strictly for military services. With respect to the great labours of those who successfully contended with the Indian famine, I may say it is but very recently that their success has been attained. On all these occasions—I am not now speaking with reference peculiarly to the labours connected with the Indian famine, but to labours of this character when the conduct is performed in a distant country and the exertions have been shared by many individuals—it is of great importance that the utmost care should be taken that no mistake is committed—that you should not, for instance, reward the wrong people, a mistake that is sometimes made and not easily remedied."—*Mr. Disraeli, House of Commons, April*, 1875.

WE INSISTED at some length in a recent issue, upon the mistake made by the Government of India in refusing to stop the export of rice from Calcutta towards the close of 1873, when famine was plainly discerned to be coming upon the country. By the 25th October, the local Government knew the situation fully, and it was the urgency of its representations that brought Lord Northbrook down from the hills in the first week of November. Now, instead of coming down to take counsel and co-operate loyally with that Government, he came unhappily full of jealousy of Sir George Campbell, and with the plain purpose that whatever credit was to be got by surmounting the calamity, should be reaped by himself, while the discredit of any failure in the arrangements was to fall upon the local Government. The attitude which *the Supreme Government really took up towards Sir George* Campbell was concealed from the public, and it was only the few who knew the jealous hostility with which every step of the local administration was watched, while professions were being made in public of the sympathy and support that were being accorded thereto. The only disagreement that reached the public ear, was the difference of opinion between the two Governments on the question of stopping the export, and that difference came about in the following way. Instead of frankly taking counsel with Sir George Campbell on the point, Lord Northbrook immediately upon arriving in Calcutta sent privately for two gentlemen of the mercantile community, and finding that they were opposed to the suspension of the trade which the local Government deemed necessary, at once made up his mind to show his superiority at starting, to the fears and counsels of the Lieutenant-Governor. Not a member of the local Government was present at this conference. Any other man in Lord Northbrook's position, if in doubt as to the wisdom of Sir George Campbell's advice, would have frankly suggested to him, that it might be well to ascertain the opinion of the merchants upon the matter. It was an act of indecency to call a conference and to exclude the local Government therefrom. The simple truth was, that Lord Northbrook did not want to act *with* Sir George Campbell. He wanted to show himself superior to him, and so, when he found the Chairman and Secretary of the Chamber of Commerce opposed—as the merchants in a body naturally were—to any interference with the trade, his mind was made up at once. Now the gentlemen thus called on to be his counsellors, were in ignorance of the real state of matters in the country. They had not the least conception of the extent of the calamity which had befallen the people, in the failure of their harvest. As soon as its nature was really known, one of them felt it incumbent upon him to tell Lord Northbrook that he had been compelled to change his view of the matter, and that the Lieutenant-Governor was right, and that the export ought to be instantly stopped. But by this time the world knew that Lord Northbrook and Sir George Campbell were at issue upon the point, and the former would have resigned office rather than acknowledge that the Lieutenant-Governor had been right, and he himself wrong. And so, after long and painful elaboration, the famous Resolution upon the question was published to the world, setting forth "the grounds" on which the Government had deemed it expedient to allow the export to go on without interruption. We have already reviewed those reasons, and shown how inconsistent and mutually destructive they really were. They were an after thought.

But while this was the first, it was not the only mistake into which the Government of India was betrayed, by its unworthy determination to co-operate with Sir George Campbell no further than it was compelled so to do, for the safety of its own reputation. Animated by this spirit, it refused for nearly three months, to recognize frankly the extent of the disaster that had occurred. From the 25th October, until Sir Richard Temple was sent into Behar, in the middle of January, Lord Northbrook, as far as he safely dared, held aloof from all sympathizing support of Sir George Campbell's administration. We say sympathizing support: for the world knows well the difference between a jealous and a cordial support of subordinates. Knowing his great ability and insight, Lord Northbrook feared to oppose his course, but took good care not to do or say anything that would make him sharer in any mistakes Campbell might make in the responsibilities that overwhelmed him. While the Viceroy was professing in words to stimulate, and superintend, and criticize the heroic efforts that were being made by him, Sir George was nevertheless allowed to discern clearly that his forecast of events was regarded as very doubtfully true, and that when his measures came to be reviewed, the public would know well, if mistakes were made, whose mistakes they were. And this detestable attitude—for it was detestable—was maintained until the Supreme Government itself became thoroughly alarmed, about the middle of January. Sir Richard Temple was then hurried up to Behar as a member of their own body, to see for the Viceroy what the state of matters really was. Now came the reaction and the terror. It was at last discovered that Sir George Campbell had been right all through. Haunted by the knowledge that three months of precious time had been lost, and by the fear that events might be close at hand that would ruin his political career, everything was now taken up by the Viceroy in a whirlwind of anxiety, and considerations of economy thrown to the winds. Happily for Lord Northbrook, the delusions which he had nursed from jealousy of Campbell had never been shared by his Lieutenant, or the staff at his command. The world will never know, for it is impossible to describe the truly heroic labours, the self-sacrifice, and the devotion with which the local Government and its officers had laboured, while Lord Northbrook and his advisers slept, or looked cynically on, waiting for those "Christmas rains" that were to come—but never came—and that were to prove to the world how much more reasonably they had estimated the position than the excitable and sensational gentleman who ruled at Belvedere. What if there had been a heavy failure of the aghanee rice in Behar, did not every one know how important were the cold weather and the rubbee crops of that part of India, and would not the "winter rains" and the wheat crop redeem the people from all danger. Fortunately for the people, all that human energy could do, and it was almost superhuman, in preparing the district executive officers for what was coming upon them, the local Government had already done, while Lord Northbrook had the *courage* to affect to blame the local administration that it had not done more, when at last he himself discerned what was really coming. A more discreditable passage is not to be found in the history of our rule in India, than the conduct of the Supreme Government towards the local administration of Bengal, throughout the early months of

this great calamity. To say that there was not a spark of generosity in the attitude of the Viceroy towards Sir George would be pure bathos. He was wanting in loyalty towards him; and as every one, we suppose, knows, it was he who forced Sir George Campbell to retire, under pretences of concern for his health, the real purpose being that he might remove out of his way the one man to whom by a sure instinct the public would have given, and justly given, the credit of having timely discerned and surmounted the calamity. If instead of being the intensely self-conscious, vain man he really is, Lord Northbrook had the least generosity of character, he would have loyally cast himself from the first upon the man whose special duty it was to meet the calamity—the one man most fitted in the country to do so, by a consensus of opinion. He would loyally and frankly have placed all the resources of the Supreme Government behind him, and sympathizingly assured him that he would take his full share of the responsibility of what was done. *But it was not in Lord Northbrook*; and his vanity and jealousy went near to have filled the world with a story of suffering never before heard of. The unforeseen circumstance that the granaries of the Punjab were full to overflowing with accumulations of food from past years, and the fact that the food reserves of the people proved to be immensely greater than we dared hope, saved his reputation the reproach of a calamity greater than the mind willingly dwells upon.

Now the time has come when it is fitting that all this should be said, for it is true, while no one has before said it. Lord Northbrook had the narrowest escape from total shipwreck of his political career, by his unworthy conduct towards Sir George Campbell in this calamity, and it is only right and proper when honors are being talked about in Parliament, that the world should know the facts. Sir George Campbell has probably forgiven him long ere this, but he must have had a thorough contempt for the vain, self-conscious nobleman at whose hands he suffered this great wrong. Let the people of Bengal, let all India, and let the Parliament of England, understand well that it is Campbell and not Northbrook to whom the country really owes the credit of our surmounting this great calamity. Down to the very middle of January, there was not a member of the Viceroy's Government that did not affect to be incredulous of the whole affair. Their rude awakening plunged them into a whirlwind of anxiety, and caused the enormous expenditure that followed. We have not yet done with this subject.

THE LANDHOURA CASE.

THE recent case of the claimant to the Landhoura Raj in Saharunpore, N.-W.P., presents the curious spectacle of the executive first straining the law to suit their view of the manner in which the matter was to be dealt with, and then appealing to it to decide between them and the *soi-disant* Rajah. In fact, the law was first treated as a complaisant menial, and then appealed to as an impartial umpire. This is a strange and, as we take it, highly unsatisfactory state of affairs, although, as it has happened to turn out, the claimant is an impostor, if his confession be accepted fully and the experiment has accordingly been made on a very vile body. Let us suppose, however, that the result had been transposed, and that he had been the real Simon Pure;—what then would now be said, what then could now be done? We recompense him for the harsh treatment, we call it by no other name, he received at the beginning of this celebrated case. Here lies the little rift in the apparently harmonious flute of such matters.

There are men who are apt, owing to ignorance of the power and scope of law, to argue that because in the end cases such as this usually terminate in the discomfiture and prove the falsehood of the legal victim, therefore initial measures of harshness and oppression are justified, and that their absolution has been decreed by the chorus of execration which is sung over the impostor whose guilt has been detected. This sentiment, we fear, sways a great many persons in this country, and not only such as look upon the people as 'niggers,' but those, too, who are often in charge of most responsible stations, and who, holding such tenets, are able by virtue of their position to do an infinite amount of mischief. We deprecate Adrastes, but it is for the benefit of this latter school that we intend to discuss this Landhoura case, as it is its disciples who bring the executive into collision with the law, and who, if too readily supported by the paramount power, apparently prove the illogical and unfair proposition that "might is right."

In the Landhoura case, the problem the executive authorities of the district had really to solve was whether the claimant to the title and estates who had suddenly appeared in their midst was an impostor or not, and in the event of the former not being proved, what steps should be taken to assure at the same time the peace of the district and justice to the claimant. By justice, we mean the prevention rather of any possible denial of justice to him, and not that the authorities were bound to afford him any assistance towards proving his claim. The authorities, too impatient to work at the tangled skein, cut the Gordian knot by assuming the claimant to be an impostor, without proceeding against him according to law on that count, and by locking him up as a vagabond. By doing this they most effectually secured the peace of the district, as far as outward demonstrations went, but in the event of his guilt they shirked the 'onus' of proving him a criminal at law which was incumbent on them, while in the event of his innocence and of his being the Simon Pure enhanced the difficulties in his way of obtaining justice. Moreover, the action taken was first illegal and afterwards abnormal, for the first Magistrate who tried him, released him on the condition of his not re-entering the district, a condition which no law either prescribed or permitted: and the second, we will not say purposely but we must say most unaccountably, suffered delays to take place in the proceedings relating to the release or security of the accused from jail;—delays harrassing to the prisoner not so much on account of the discomforts of a jail, or of the waste of time which might have been most valuable to him, but because, supposing him to be the true man, of the impression which must have been made on the minds of people almost wholly natives, who had a fair reason to presume that the hand of the Government was against him, as witnessing the action of the local magnate.

The authorities proceeded under a section of the law which cannot be too rarely resorted to, and which empowers a Magistrate to require security from any person who cannot give an account of himself, and in default to imprison him for a period not exceeding six months. Great latitude is given to a Magistrate under this section, and it is to be feared that this power which, in the case of the discreet and wise, strengthens the otherwise feeble hands and prevents *crime*, degenerates in that of the hasty and impulsive into tyranny and oppression, however unmeant they may be. We would ask now, was this their wisest course, and could not the law have helped them to a better and indeed more just way of settling the matter? Undoubtedly it could. There is a section whereby persons cheating or attempting to cheat by personation, impostors in fact, can be dealt with and severely punished; and we would ask why it was not under this section that action was originally taken? We fear the answer must be that the authorities were weakly uncertain about the results, that they dreaded an appeal, and possible reversal of sentence, and accordingly took the easy and far too often adopted method, of arresting the claimant on a vague charge of living without ostensible means and being unable to give a satisfactory account of himself. Then followed a lamentable *fiasco*, begun by one Magistrate and carried on by another, and ending in an appeal to the High Court, which sacred mountain's labours were ushered in with more than Olympian thunders, and terminated by the delivery of a very 'ridiculous mouse' indeed.

Fortunately, the North-West Provinces Government saw at a glance what should be done, and what should have been done long before, and ordered the claimant to be prosecuted as a cheat, with the result of an overwhelming mass of evidence for the prosecution, and the game being up, a confession from the accused. But we ask, why was not all this done before, why was this scandal of the executive battling with the law allowed to be exhibited: and why was law denounced by one

if not more influential journals, while during the whole time law was in the right and the executive, owing to its ignorance of law, in the wrong? The answer is, because those who administer the law are of all trades and master of none. Even Proteus himself, we fancy, could hardly have been at home in all his transformations, and must, even if he had a stern sense of duty, have preferred invariably two or three of them to the rest. So too his modern prototype the Magistrate and collector, work he ever so conscientiously, must prefer some branches of his duties to others, and *he* generally prefers all others to law.

Remedium quæris? Adspice! A scheme to separate judi*cial* from executive functions all over India: for if in the face of such a complication as this case has been, matters are allowed to go as they do, it would be better far to re-introduce Personal Rule than to allow law to be treated as a *valet-de-chambre* at one moment, and as king omniscient and omnipotent at the next.

THE *PIONEER'S* ANGELS.

THE *Pioneer* has ever been on the side of the angels—happy angels!—but hitherto its kind support has been given chiefly to the higher orders of the hierarchy. For Viceroys always, for Lieut.-Governors and Commanders-in-Chief nearly always, our contemporary has had its stereotyped approval. Regarding the "virtues and powers" below these, there was no certain rule laid down. It might, or it might not, be worth while to patronize a Member of Council; but up to this time we never suspected that the favour of a Chief Justice was worth purchase at the cost of journalistic propriety and fairness. If our readers will look at the *Pioneer* for Monday the 3rd instant, we believe that they will admit the fitness of the terms we have used. They will find in that issue, the copy of a judgment delivered by the "learned" Chief Justice, Sir Robert Stuart, upon an appeal from the Sessions Judge of Agra. They will also find an editorial paragraph in which it is taken for granted, that upon every point the higher Court is right; the lower, wrong. Had the case been finally disposed of, such an assumption might perhaps have been pardonable. Legal fictions are useful in their way, and there would have been nothing very bad in pretending to believe that Sir Robert Stuart was to be recognized as the brightest incarnation of juristic lore. But surely when a new trial had been ordered, it was no time for a newspaper openly to anticipate the result one way or the other. The very publication of Sir Robert Stuart's judgment seems to us ill-advised, if nothing more. We do not for a moment believe that the Chief Justice had anything to do with this. He may not be Themis, Dike, and Nomos in tri-une personification, but we are sure that he would not in any way seek the support of a public journal to enforce his views about a matter yet waiting the decision of a lower Court. In fact, by the remarks with which he himself concludes, he shows how anxious he is that the judge who is to preside at the new trial, should approach his task unbiassed by "previously conceived opinions and impressions."

But the *Pioneer* has not only been guilty of an impropriety in publishing Sir Robert Stuart's remarks, and of injustice in assuming that the lower Court was necessarily in error; but it has made the mistake of treating the case as one of a point of law. The Session Judge's view of the case is evident from the report of his judgment. In a sea of falsehood, he was unable to find the facts, and he therefore came to the conclusion that, whether the defence were true or not, the charge was not proved. The more *prudent* course might have been to pretend that he believed the defence. But, not believing it, he said so openly.

Whether the Chief Justice or the Sessions Judge is right in the case, we shall not attempt to determine; but since the former in coming to his decision, did so without having the witnesses before him, while the latter enjoyed that advantage, it must be obvious that there is a sufficient element of doubt in the case, to demand a suspension of opinion until the enquiry has been carried to its completion. The High Court of the North-Western Provinces does not, we believe, enjoy a reputation for infallibility, nor can the "learned" Chief Justice boast the long experience which should command an unhesitating trust in his judgments.

It may be said that a paper which could defend the entire action of Government in the Baroda case, would (to steal Disraeli's joke) declare that it "liked dry champagne." The value of the *Pioneer's* opinions is generally in inverse ratio to the accuracy of its intelligence, a fact perhaps easy of explanation. But its ready faith in the Chief Justice of the North-Western Provinces is striking from its novelty. We do not, however, feel jealous of its happiness. The wily Ulysses, we are told, *vetulam suam prætulit immortalitati.* To the *Pioneer*, it seems, the concrete exponent of law is dearer than mere abstract justice.

EXACTION.

IT is a common complaint of women that men are tyrannous exacting creatures, never satisfied with anything or anybody, and as this doctrine is one of a very soothing nature for fine ladies who love flirting better than domestic economy, it is no wonder if it is widely disseminated on the hills and in the plains of India. If a husband ventures to advise the amiable being, humourously called his better-half, for what he considers their joint good, the doctrine of "exaction" is immediately thrown in his teeth; and whether the remonstrance be due to an excessive display of shoulder, or an inclination on the lady's part to become the talk of the station, it does not much signify who is right or wrong in the matter when a woman is determined to have her way. Under such circumstances she ridicules reason, and treats with the utmost contempt the interests of those most dear to her, and her own. She knows perfectly well that she is doing wrong in encouraging the attentions of Mr. Fopington, for whom she has really no tenderness, yet so pleasant is this belief in the excessive "exaction" of husbands, that she cannot resist the opportunity of asserting her independence of it, in a way that may possibly eventuate in a scandal and the Divorce Court. These fair creatures, it must be borne in mind, will never admit for a moment that they give occasion for exaction from those who are the responsible guardians of their destiny. Any one of them would consider it an unwarranted interference or impertinence on the part of a husband, to remark that a bodice was too low, if low bodies were in fashion, and we veritably believe that many a couple's happiness—with perhaps the fortune of their children as well—has been wrecked upon some such question, as this, where the husband strove to do his duty by his wife, and the latter her duty by the fashions. In the revelations of those Indian scandals that from time to time convulse society, it will be nearly always observed that the "exaction" theory plays a prominent part in the domestic drama. The husband would not allow the wife to take rambles upon starry nights with the *ami de maison*, and so she went; or it was remonstrances on the subject of her conduct which drove her to the fatal step, and precipitated a poor young family into the direst dismay and despair. Exaction, remonstrance, objection, or whatever we please to call it, is becoming in fact, one of those things which woman will not submit to at the hands of man, but whether the frivolity of the day, or the agitation about Woman's Rights is to be credited with this independence on the part of the ladies, we cannot say; we can only observe the circumstance, and comment upon it as we may.

The selfishness of man is proverbial, and if we were to ask one of our fine dames to define the exaction of a husband, she would probably reply in one word—selfishness. We should see with her, this poor victim of tyranny dissatisfied, despite *carte blanch* with a dress-maker, a train of admirers, a special cavalier-servente, dinner out thrice a week, and Badminton eternally. Balls would not be unmixed bliss to her, or dreamy waltzes after champagne suppers. And why? Doubtless on account of the horrid selfishness of her absurdly named lord and master, a self-indulgent wretch with his nasty cheroots, his office, and his dinner, that he is as cross as a bear about if it is half-an-hour late, or not perfectly served. It is truly lamentable that the cup of woman's enjoyment, nay needful recreation, should be poisoned in this way by the abominable selfishness of man; nevertheless—and taking the man's view of the case—the self-love of the woman men now-a-days marry, is sufficient to account for the unusual number of "spins" in Indian stations. It is certainly true that, however little a woman of our time likes exaction from any one, a sensible man is shy to marry a lady who abhors it. It is so easy to change the words "judicious remonstrance" into "everlasting exaction" for instance, and despite the immensely weighty authority of a man milliner like

Worth, there are young men—silly young men it may be—who might object to a too liberal display of their wives' charms in public. But they are philosophical enough to admire these things in the wives of others, and being well aware at what cost to the husband all this exhibition is made, the young man—be he civilian or *militaire*—has no ardent desire for the expense himself, and is therefore in a great measure impervious to the tender assaults of the superabundant spinsters of our towns and stations. For the doctrine of exaction, however convenient for wives, is unfriendly to maids; at least in this way only can we account for the batteries of glances that are now wasted in a cold weather campaign, and the holocausts of dresses that have failed their wearers in society.

It would, of course, be idle to tell any woman that she was doing herself, or her sex, an injury by her hatred of what she terms "exaction." She prefers to believe in the cruelty of man with a devotion worthy of a better cause, and attributes the failures annually returning in the Suez Canal steamers to the place from whence they came, to the scandalous exactions of the other sex whom nothing will content—not angels. Tell the fair critic that men are learning to think; that if they cannot get anything better than half naked, painted, and wholly artificial women for their wives, they will remain single, and she will retort that the fashions which countenance these peculiarities are far more important than men think in the matter. In short, without much trouble one may believe that when a woman rails at exaction, it is because exaction is not in the fashion. But then men have no pity or compassion on the women that are made in the likeness of their mothers, say these apologists for the fair sex, and there is some truth in the imputation of selfishness here. We see young things arrive with the "Europe" color—by which is meant rouge—fresh upon them, and we see those things, alas! no longer young, depart to some bourne, from whence they never return, with unfeigned indifference. Nor as selfish men do we very much care for their future fate; but then what is woman—as we see her every day—that we should painfully interest ourselves in her affairs, when she is not at the trouble to reciprocate, as the Americans have it? We owe no particular duty that we know of, to the lady of fashion who believes in nothing but dress and money, and who would sacrifice any man to either, nor are we called upon to go into tears or mourning, when the natural result of her career is a scandal.

We may pity her as a woman, if we can, but in truth the task is a hard one: for woman should be womanly, and the type we speak of is everything else. And the type is frequent now. We do not know if New York and French fashions for female dress and behaviour are ousting all that were British from this country; but it certainly is the case that there is a freedom of action noticeable among some of our Anglo-Indian ladies of fashion that may cause the moralist well to wonder on the lives they lead their husbands. When the Marquis de Montespan discovered that his wife had fled from the "uxorial exactions" of that period to the protection of Louis the Fourteenth, he revenged himself by driving a chariot ornamented at the four corners with large horns; but the indignation which at another period of history adopted so singular a method of remonstrance has apparently little fervour now; or, at least, it is in some sort stifled. The husband that dared to remonstrate in our era as he of Montespan did, would be deemed so abominably exacting by the female society in which he moved, that he would be probably expelled therefrom—and serve him right—for his exactions. In short, and if the exquisitely dressed and painted creatures we set upon so lofty a pedestal, continue as they are now doing, to repudiate all claims of the viler sex to their admonishment, it must come to this: that men must either accept their doctrine of exaction, or take to the alternative of celibacy.

NATURE AND THE "COSMOS."

IT may, at first sight, appear surprising that of John Stuart Mill's posthumous essays, the one upon "Nature" should have chiefly excited indignation and protest. As he himself observes, it is in harmony with accepted theological ideas to regard Nature, whether displaying herself in the untutored impulses of man or in the instinctive physical life within and around him, as antagonistic to his spiritual diviner self,—a temptress to be held ever fettered and subdued, lest she should beguile him from that worthy estate appointed him "a little lower than the angels." This being so, how are we to explain the sense of outraged religious sentiment with which we behold Nature arraigned before the critical tribunal, stripped of her fair-flowered garment, and having no voice to answer the accusations heaped upon her, driven forth branded as a criminal?

To begin with, we cannot but feel grateful,—those of us at least, who honestly prefer clear ideas to facile vagueness of expression,—that this discussion has arisen. With perhaps one exception, no term is more ambiguous. That there was a divergence of meaning in its use, and that the deity of the poet was scarcely the same "Nature" whom the preacher exhorted us to abjure, must have been suspected ere this by us all. Mill at any rate, with his usual perspicacity and fairness, has given us a sufficiently clear definition of the sense, or rather senses, in which he employs the word; the sense also, in which he believes it to be generally used, even by those for whom Nature is not the enemy, but the encourager of all that is noble and beautiful in human souls; the symbol not of anarchy and selfish lust, but of sympathy, innocence, and peace. It is to the last clause we must demur. Mill's definition does not grasp the conception of Nature formed by reverential and poetic minds, to whom she represents not the sum of elemental forces and properties, but the integrity of all the progressive tendencies and various beauty revealed in the universe. Mill has drawn a Pessimist's picture of life, and with effective vigour. Schopenhauer himself could not paint in blacker colours the pains and evils of existence; but Mill has failed to bring home culpability, or even complicity, to that "Universal Mother" whom we celebrate, as worthy of all love and praise. No voice has she in that law of death, against which she is more helpless, and which weighs upon her more cruelly, than upon man himself; no part in those destructive hurricanes and earthquakes, whose ravages she seeks to cover with fresh flowers and fruitful crops. Never discouraged in her loving energy, she builds up again and again the beauty of the world; and has always a peaceful smile with which to meet the troubled gaze of man, though under the yoke of relentless laws, she, with him, "groaneth and travaileth in pain."

It may be objected that this conception of Nature is a purely ideal one. We need not dispute the assertion, so long as it is admitted that the ideal rests upon corresponding external fact. It is the privilege of the mind, thus to raise up for itself associates out of the dust of the ground. And the creative act is not a visionary one, when it is the result of the mysterious yet indestructible harmony which unites the physical universe and the conscious soul. When Jesus bids men learn faith from the grain of mustard seed, and quietude of mind from the lilies of the field, we want no exposition of the parable; and if we feel grateful to the poet who uses sea and sky and forests to paint the picture of human life, it is because he confirms our own intuitive perception of relationship with external Nature.

Nor, though we may admit a certain tendency to exaggerate the authoritative character of the so-called "Laws of Nature," can we, with Mill, dismiss the assumption that Nature does in very fact supply us with a certain standard of conduct. The standard is not a very exalted one, nor does it behove us to remain content with it; but to act in disobedience to it is plainly perilous, save under very exceptional circumstances, and when it is *unmistakeably* clear that the opposite course has the sanction of a higher authority. Mill, on the other hand, will not allow that the terms "natural" and "unnatural" have any reference to morality. "There is hardly a single point of excellence," he says, "belonging to human character, which is not decidedly repugnant to the untutored feelings of human nature";—and again "There is hardly a bad action ever perpetrated which is not natural, and the motives to which are not perfectly natural feelings." If the term "natural" here, includes all the instincts and impulses to which man is, or ever has been, subject, the last statement simply amounts to saying that no bad action has been performed without some motive; a proposition which, save in the case of lunatics, no one will dispute. But when the words "natural" and "unnatural" are employed in the sense above referred to, they have a distinct significance. Mill himself has traced back all the faults which disfigure mankind to the instinct of egotism; and all our virtues or capacities for virtue, to the equally natural instinct of sympathy. But whilst a man may consider his own selfishness to be perfectly natural, *i.e.*, excusable, he does not extend this indulgence to the selfishness of his neighbour. When speaking of the actions of another as "*natural*," or the reverse, it will almost invariably be found to be the sympathetic instinct which is referred to as having been outraged or obeyed. Thus it is pronounced "natural" that a mother should take a false oath to save her child from punishment; and again "unnatural" that a son should accuse his father of a crime he may have actually committed. And in neither case can the popular sentiment, though it may possibly exaggerate its clemency

on the one hand, or its censure on the other, be called unsound. He would be a dull legislator who would not admit an extenuation of the offence, in the first instance : whilst in the second, all we can say is that a virtuous zeal, not only superior to, but in direct contradiction of natural feelings is always perilous. From Brutus to Torquemada "*il n'y à qu'un pas :*" and we shall not find that the world has been greatly blessed by those who have immolated human sympathies to an ideal principle.

'Nature,' then, as poetically or popularly conceived of, does not come within reach of the accusations that are directed in reality against the whole scheme of creation—the Cosmos, in other words, that "*Laboratory of order and goodness,*" as it is styled by Strauss ; but in which Mill will apparently see nothing but the rude friction of machinery, and the disregard of private and personal interests. The essay upon Nature we are told was written in 1850. We cannot but think that had it been supervised by the author before its publication, some reference to the evolution theory would have allowed the possibility of a glimmering light of order through the chaotic darkness. As for Mill's assumption of a beneficent Creator, of limited power, who has done the best he could under disadvantageous circumstances, it reads like a *reductio ad absurdum* of the *Deus ex machina* systems. It is clear that, whilst an omnipotent Creator, as the first cause of all thing, cuts the Gordian knot, a Creator who is not omnipotent, but himself controlled by incontrovertible laws, or a Being of superior power to himself, is a purely useless hypothesis, leaving the problem just where it was before. It is a repetition of the old story, that the world was supported by an elephant, who stood upon the back of a tortoise, who stood upon,—it was not precisely known what. Nevertheless there is profound truth in Mill's observation that as the religious sentiment becomes more cultured and enlightened, there is a gradual disassociation of the ideas of Infinite Goodness and resistless Force. As reverence more and more emancipated from fear, becomes the free spontaneous aspiration of the heart towards the Divine Ideal, comprising all beauty and perfectness of virtue, devout and candid persons will gradually cease from associating their feelings of devotion with *a priori* systems concerning the construction of the universe. And this not only, nor even chiefly, because science has dispossessed these systems of authority ; but because it will be recognised that in truth the Lord "is not in the Tempest," nor the earthquake, but that He must be sought where truly He may be found, in that progressive Law of Righteousness and Justice, which ever in advance of the practise of each succeeding generation, goes before, to show them the way. Thus a Pessimistic view of the condition of the material universe, leaving out of the question as beyond the reach of human knowledge, the how and why it is ordered as it is, and in no other manner, in no way involves any inconsistency in our reverence for that Divine Presence, who, astray in the wilderness though we be, does not remove from before us His pillar of cloud by day nor by night of Fire. It is thus possible to approach dispassionately the question of whether or no the little insight we have into the laws and organization of the Cosmos should lead us to the conclusion that man, so far as inspired with the love of harmony, justice and spiritual growth, stands alone amongst rebel elements ; or whether, on the other hand, his struggle for personal and social improvement (which, as Strauss has it, consists mainly "in regulating the element of capricious change within and around him, and in developing the higher "from the lower, the delicate from the rugged") is but the life-struggle which pervades the entire universe ; and, for the time being, at any rate, finds its centre in him. The evolutionist of course must hold the latter more encouraging conclusion ; and regard his own efforts to develope into spiritual powers his own instincts and passions, as well the circuitous forces external to him, to be his conscious association in that same Universal Law, which has consolidated a floating mass of vapour into this habitable earth; has clothed its slowly cooling surface with mighty forests and blooming fields; has made the dim dream of a vegetable life awakening into consciousness ; and moulding the first grotesque unwieldy shapes of monstrous animals and birds into all diversity of beautiful form and colour, has quickened, at the same time, the spark of instinct, until it has reached the consummation (not even so, we may hope, a final one) of the human intellect and conscience. But Mill we must needs suppose held a distinctly opposite opinion ; and we cannot but recognise the courageous and high-souled spirit, which believing man to fight single-handed, and that with but slightly effectual assistance from the Higher Powers, could nevertheless feel hopeful confidence in the ultimate triumph of virtue and justice, though with the whole blind brute force of the material universe thrown into the opposing scale.

WIVES OR CONCUBINES.

THE *Indo-European Correspondence* admits that since the promulgation of the decree of the Council of Trent concerning marriage, "it is the law of the Church that wherever the decree has been published, marriages celebrated otherwise than before the parish priest and two witnesses are invalid." It proceeds as follows: "Though Protestants do not feel inclined to submit to the authority "of the Church and recognise her laws, yet that does not deprive "the laws of the Church of their innate force by which they are "binding on all who have received the sacrament of Baptism, and "thereby become enrolled members of Christ's Church." This, as we pointed out last week, is the very gravamen of the wrong. Rome claims the right of determining the marriage law, not over Roman Catholics alone, but over all baptized persons. And she not only claims, but exercises the right, and as in the two cases cited by us last week, openly tramples on the decrees of the civil power as to what constitutes marriage, and what does not. The natural law of marriage as enunciated by the Divine Saviour Himself, runs simply thus, "From the beginning God made them male and "female. For this cause shall a man leave his father and mother "and shall be joined unto his wife, and they two shall be one "flesh. What therefore God hath joined together, let not man "put asunder."

Now in the interests of morality, and for the settlement of the social rights and obligations that spring from this union, the civil power in all ages and countries, has found it absolutely necessary to declare that a certain course of conduct in the parties shall constitute a marriage contract between them, which neither the one nor the other shall be permitted to repudiate. At this point Rome steps in, and affects the right of setting the parties free from the contract and of declaring it to be no contract at all. And the length to which she carries these pretensions is shown in the Gordon case, which our contemporary admits to have been correctly stated. Let us recal the facts once more. Gordon, who was a British subject residing at Rio de Janeiro, married the daughter of a merchant, also residing there, in 1843. Both parties were Protestants, and the marriage was celebrated by an English clergyman in the ambassador's house. They lived together for a quarter of a century as man and wife down to 1868, when Gordon, who had become a Roman Catholic, proceeded to marry a Baroness von Beulwitz, of his adopted faith, in a Roman Catholic church at Manchester, and the next year a child of this second marriage was born. His first wife now appealed to the Courts at Edinburgh, when Gordon admitted the alleged facts, and pleaded the law of his Church in defence of the bigamy. And our contemporary admits that the Roman Inquisition upheld what he had done for it had assured him officially that he was committing no adultery in forsaking his wife, and living with the other woman he had picked up.

The conscience and intellect of every man must rise in judgment against such claims. But Rome cannot change. The Tridentine decrees are the infallible truth of God. The marriages contracted in a community are the key-stone of the whole fabric of society, while we find a foreign power claiming in the name of religion a right in this most momentous of all contracts, to set aside by its own decrees, the laws and regulations which the civil power has made for the good government of society and the preservation of public morals. And the patent fact remains that it is not on moral grounds that Rome proceeds in this course. For while stigmatizing as filthy concubinage marriages not Tridentine, she reserves to herself a right of acknowledging the validity of such marriages, if she thinks the interests of the Church require her to do so. Cases which she dare not solve violently, she solves by the dispensing power which she says resides in her. It rests with the Papal Curia to say whether a Protestant marriage or any number of them is valid or not. If it is to the interest of the Church to declare them valid, then she so declares them ; and in this way affects the right of making adultery innocent, and an honorable marriage concubinage. These claims are so crucial a test of the length to which Roman pretensions go, while Englishmen in the mass are so little aware of the importance of the issue that is being fought out, that it is desirable, we think, to reproduce Mr. Gladstone's final statement of the matter :—

"I have before me the Exposition,* with the text, of the Encyclica and Syllabus, published at Cologne in 1874, with the approval of authority (*mit oberkirchlicher Approbation*). In p. 45 it is distinctly taught that with marriage the State has nothing to do ; that it may safely rely upon the Church ; that civil marriage, in

* '*Die Encyclica, der Syllabus, und die wichtigsten darin angeführten Actenstücke, nebst einer ausführlichen Einleitung.*' Köln, 1874.

the eyes of the Church, is only concubinage; and that the State, by the use of worldly compulsion, prevents the two concubinary parties from repenting and abandoning their guilty relation to one another. Exactly the same is the doctrine of the Pope himself, in his speeches published at Rome; where civil marriage is declared to be, for Christians, nothing more than a mere concubinage, and a filthy concubinage (*sozzo concubinato*).* These extraordinary declarations are not due to the fondness of the Pontiff for speaking *impromptu*. In his letter of September 19th, 1852, to King Victor Emmanuel, he declares that matrimony carrying the sacrament is alone lawful for Christians, and that a law of civil marriage, which goes to divide them for practical purposes, constitutes a concubinage in the guise of legitimate marriage.† So that, in truth, in all countries within the scope of these denunciations, the parties to a civil marriage are declared to be living in an illicit connection, which they are called upon to renounce. This call is addressed to them separately as well as jointly, the wife being summoned to leave her husband, and the husband to abandon his wife; and after this pretended repentance from a state of sin, unless the law of the land and fear of consequences prevail, a new connection, under the name of marriage, may be formed with the sanction of the Church of Rome. It is not possible, in the limited space here at my command, adequately to exhibit a state of facts, thus created by the highest authorities of the Roman Church, which I shall now not shrink from calling horrible and revolting in itself, and dangerous to the morals of society, the structure of the family, and the peace of life.

"It is true, indeed, that the two hundred thousand non-Roman marriages, which are annually celebrated in England, do not at present fall under the foul epithets of Rome. But why? Not because we marry, as I believe nineteen-twentieths of us marry, under the sanctions of religion; for our marriages are, in the eye of the Pope, purely civil marriages; but only for the technical, accidental, and precarious reason, that the disciplinary decrees of Trent are not canonically in force in this country. There is nothing, unless it be motives of mere policy, to prevent the Pope from giving them force here when he pleases. If, and when that is done, every marriage thereafter concluded in the English Church will, according to his own words, be a filthy concubinage.

"The decrees have force already in many parts of Germany, and in many entire countries of Europe. Within these limits, every civil marriage, and every religious marriage not contracted before a Roman *parochus*, as the Council of Trent requires, is but the formation of a guilty connection, which each of the parties severally is charged by the Church of Rome to dissolve, under pain of being held to be in mortal sin.

"In 1602, when the Decree of Trent had been in force for thirty-eight years, it was applied by the *Congregatio Concilii*, with the approval of Pope Clement VIII., to non-Roman marriages, by a declaration that heretics were bound to conform (which was impossible) to the rules of the Council, in default of which their marriages, whether religious or civil, were null and void.‡

"To this portentous rule exceptions have been made, especially by Benedict XIV. in the case of Holland. Indeed, he questioned its propriety; and Pius VII., in a communication to the Primate Dalberg, formerly Archbishop of Mentz, referred with approval to the language of Benedict XIV. Many theologians have held an opinion adverse to it, and clergy have been allowed to act at times upon that opinion, but only under cover of a policy of dissimulation, a name by which the Court of Rome itself has not been ashamed to describe its own conduct.§ But when the abrogation of the rule for non-Roman marriages has been prayed for, even by Bishops, and bodies of Bishops, the prayer has failed.‖ It has been kept alive; and transactions positively dreadful have taken place under its authority, and under other provisions calculated for the same end. Perrone, who may be called the favourite theologian of the Curia, points out that it works for the benefit of heretics, as on their conversion it has often given them an opportunity of contracting a new marriage, during the lifetime, that is to say, of the former wife.

"The upshot, then, seems to be this; that Rome, while stigmatising marriages not Tridentine as concubinage in the manner we have seen, reserves a power, under the name or plea of special circumstances, to acknowledge them or not, as policy may recommend. This is but the old story. All problems, which menace the Roman Chair with difficulties it dare not face, are to be solved, not by the laying down of principles, good or bad, strict or lax, in an intelligible manner, but by reserving all cases as matters of discretion to the breast of the *Curia*, which will decide from time to time, according to its pleasure, whether there has been a sacrament or not, and whether we are married folks, or persons living in guilty commerce, and rearing our children under a false pretext of legitimacy."

THE RUSSIAN ADVANCE.

WITH the expedition to Khiva public opinion on the subject of the Russian advance in Central Asia may be said to have entered on a distinctly new phase, and the greatly increased demand for accurate political, ethnical, and geographical information has called forth a great deal of more or less valuable literature. Newspaper correspondents, military critics, savants and politicians have all contributed their quota, but no work has been looked forward to with so much interest as Rawlinson's "England and Russia in the East." From his wide experience of Oriental politics, his accurate knowledge of the Eastern character, and his deep and varied scholarship, no one is better fitted than the distinguished President of the Royal Geographical Society to deal with the complex and, to us, vitally interesting problem known as the Central Asian question, and we can hardly express ourselves more strongly than when we say that this book has entirely fulfilled the high promise which the name of Sir Henry Rawlinson bestowed upon it. The work is divided into six chapters, of which three are reprints from the *Calcutta* and *Quarterly Reviews*. The first two deal with our political relations with Persia; the others discuss the Central Asian question proper. We leave to a future issue the examination of the chapters on Persia, and we need now only say that it is a striking tribute to the political foresight of the author, that the 25 years which have elapsed since the first was written have so largely verified his inferences and predictions, that it can be reprinted with hardly a note of correction.

After the submission of Shamil in 1859, and the consequent pacification of Circassia, Russia began the advance up the valley of the Jaxartes which culminated nine years afterwards in the capture of Samarkand. Moving slowly and cautiously, but with the resistless certainty of fate, she has lined the banks of the Syr with fortresses, launched steamers on its waters, and established a position from which no Asiatic force could ever hope to dislodge her. Although the Khanates of Kokand and Bokhara have been subjugated, and their rulers reduced to a condition of complete vassalage, no military occupation of the greater part of their territories has yet been effected. Russia at present enjoys all the advantages of a ruling power without the expense of administration, but she will probably be compelled before long to incorporate both States in the Russian Empire. Meanwhile, though her military position is impregnable, there seems no hope of the realization of her dream of agricultural and commercial activity in the Khanates. Smiling and fertile though the vallies, rich the mines, and great the anxiety of the Russians to promote and extend the growth and manufacture of cotton, it appears that the trade of Turkestan has actually declined with their approach. In the vallies of the Jaxartes and the Zerefshan, amidst the influences of Mussulman fanaticism, their policy of colonization and gradual absorption so successfully applied in Siberia has completely failed; and far from the rise of an eastern Manchester a blight seems to have fallen even on the busy weavers of Tashkend.

The Khivan expedition of 1873, undertaken nominally for the punishment of the Khan, the protection of trade, and the repression of slave dealing, was undoubtedly principally directed to the establishment of military communication between the bases of the Jaxartes and Oxus and the Caspian. A special envoy, Count Schovaloff, was despatched to London to convey to the British Government the assurance of the Czar that no part of Khivan territory would be annexed, but, although General Kaufmann in annexing the whole of the right bank of the Oxus and establishing upon it a system of forts, one of which, Petro-Alexandrvosk, may be said to command the town of Khiva itself, was declared to have exeeeded his instructions, his action was accepted and the reduction of the Khanate to the condition of a dependency completed. So long as Khiva remained independent, neither the establishment of connection between the Caspian and the Aral seas, nor the navigation of the Oxus could ever be properly accomplished, and it is impossible to believe that the members of the Russian *bureau*, less conscientious than their august master, had not understood and approved of the terms dictated by Kauffmann.

We now turn to the third link in the chain, the gradual establishment of the Russian position on the eastern coast of the Caspian. As early as 1837 the Russians occupied the small and barren island of Ashurada off the coast of Khorassan. Their avowed object was the protection of caravans from the attacks of the nomads, but they were not long in making the post a basis for the establishment of political relations with the Turcomans. The island was gradually improved and utilised as a naval station, and repeated remonstrances on the part of Persia proving ineffectual to induce the Russians to withdraw, the Shah was finally compelled, with the best grace he could, to give in his adhesion to the occupation. In 1869, on their old stock pretext of protecting trade by restraining the Turcomans, they landed at Kasnovodsk and established a fort. This descent upon the Turcoman territory was in reality quite indefensible, but it was hardly so glaringly arbitrary as the occupation of Ashurada. That island was acknowledged by the Russians to be the territory of a State with which they had diplomatic relations, whereas the eastern coast of the Caspian was occupied by sparse and ever moving bodies of nomads living under no fixed form of Government. The founding of Krasnovodsk was followed in 1871 by the erection of a fort at Chikisliar, numerous reconnaisances were pushed forward eastwards, and the whole coast north of the Atrek was claimed as Russian territory. The position on the Caspian was gradually strengthened, nominally with the view of supporting the operations against Khiva, and no effort has since been spared to spread Russian influence amongst the Yomut, Göklen and Tekke Turcomans, and to induce those tribes to submit to Russian rule. After the Khivan campaign a complete line of communication was established across the desert, and in May 1874 a Trans-Caspian military Government was formally established at Krasnovodsk. Levels have already been taken preliminary to the construction of the two great works suggested by General Romanovski, namely a railway between Mertvi Bay on the Caspian and Chernicheff Bay on the Aral, and a ship canal to follow the old bed of the Oxus. With the execution of these works the line from the Caspian to the Oxus and Jaxartes will be complete.

From Sir Henry Rawlison's Memorandum of 1868 on Central Asia, containing the substance of a speech which he was prevented from delivering in Parliament, and publishes as chapter V of this volume, we quote the following pregnant passage :—"Any one who traces the movements of Russia towards India on the map of Asia, cannot fail to be struck with the resemblance which these movements bear to the operations of an army opening parallels against a beleagured fortress. The first parallel would thus be the Russian frontier of twenty years back, stretching from the upper end of the Caspian, by the Orenburg and Siberian lines northward of the steppe, to the Irtish. This may be considered strategically as a mere line of observation. The second parallel, which would constitute her line of demonstration, would be the frontier which she is now preparing to take up, and which, according to Romanovski's plan, would be drawn from Krasnovodsk Bay, about the centre of the Caspian, south of Khiva to the Oxus, and along the course of that river to the Pamir plateau, thus including the whole of the Uzbeg territory, and placing at her command the entire water way of the Oxus and Jaxartes. This parallel is above 1,000 miles in advance of the first line, but it does not directly menace India, inasmuch as the intervening Affghan mountains constitute a strong military defence. The third parallel, which would be the natural result of the preceding preliminary operations, and which, if Russia survive revolution in Europe and catastrophe in Asia, she will assuredly some day attempt, would be drawn from Asterabad at the south-east corner of the Caspian along the Russian frontier to Herat, and from thence through the Hazareh uplands to the Oxus, or possibly by Candahar to Cabul." We have already seen that Russia has taken up the greater part of the second line. Her advance on Merv, to which we alluded in our issue of the 1st inst., shows that she is moving on the third, and that the curtain has fallen on the last act of the drama which England can consent to witness as a spectator.

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

LONDON, APRIL 16TH, 1875.

WARS and rumours of wars : but the end seems as far off as ever. Prince Bismarck's object appears to have been easily and speedily obtained. A Berlin paper of no great importance sounds a note of alarm, declares that France is arming, and predicts an aggressive alliance between the French, Austrian, and Italian Governments. Down go the shares on every Bourse in Europe, until a half-hearted contradiction is put forth in the Chancellor's own journal. The horizon, we are told, is not quite so black as it has been represented. There is no immediate prospect of a disturbance of the peace of the Continent. Still, there were "disquieting" movements in France, and Germany would do well to stand on her guard.. Then came the Belgian incident, which cropped out more than a month after the correspondence had terminated. As Mr. Disraeli stated in reply to Mr. Lewis, no threats were addressed to Belgium—only a "friendly remonstrance," which was despatched on the 3rd February, and confidentially communicated to the guaranteeing Powers. A reply left Brussels for Berlin on the 26th February, and there the matter appears to have dropped. In answer to a very unfair enquiry by Mr. Lewis, as to what the Government would do if Belgian independence were in danger, Mr. Disraeli happily answered that if the independence of Belgium were really threatened, Ministers would do their duty to their Sovereign and would not be afraid to meet Parliament, *Ais te, Œacida, Romanos vincere posse.* The ambiguous reply was greeted with cheers and laughter, and the Conservative press is delighted with this example of high spirit and "Rule Britannia-ism," unmindful of Lord Derby's equivocation at the time when the Duchy of Luxembourg seemed likely to be occupied by the Prussians. However, we need not be in a hurry to sharpen our words, or to oil any, but our hyacinthine locks. The *braves Belges* are in no immediate danger of smelling German gunpowder, nor are the Uhlans tightening their girths for a foray into the vineyards of Champagne. For ourselves, we shall very shortly hold a material guarantee in the person of this fire-eating Bismarck, who is said to have engaged a villa at Sandown in the Isle of Wight, while the children of the Crown Prince are expected at Hastings. And yet it is believed that these unpleasant rumours took their flight from the Chancellor's cabinet, and were intended to rouse the good Germans from their mid-day slumber. The enemy is still at their gates, but it is the cowl, not the kepi, that covers his head. A silly and outrageous remonstrance has been addressed to the Emperor by certain Roman Catholic Bishops assembled at Fulda, who gabble about persecutions, and object to taking an oath of allegiance to the State, except so far as it is consistent with their obedience to the See of Rome. Thereby they justify the distrust of Prince Bismarck, and strengthen his hands for his wrestling match with his spiritual foe. The Bishops appeal to the Emperor against himself. They call upon him to affix his veto to measures which he has already sanctioned ; but it is impossible that they could be so ignorant of the legislative procedure of their own country, in a matter directly relating to themselves, as to imagine that their petition could have any chance of success. We must look upon it therefore as a sort of rallying cry to all the Ultramontanists throughout the Empire, as though the Roman Catholic faith were menaced by the civil power, and the Emperor had refused to aid them. It can hardly be that the priesthood has influence enough to set State against State in these days, however militant the temperament of the soldier sovereigns. France will not be ready for at least a dozen years, unless supported by powerful allies. Not only is she passing through a transitional stage of a very delicate nature, but she is utterly deficient in leaders, and the people are thoroughly demoralized. The only ally who could really help her is Russia, but that Empire is in no condition to court an aggressive war. Strong for defence, she is powerless beyond her own borders. The ploughshare is master of the field for the present year.

It is to be hoped that the outbreak of cholera in Oudh will be of a temporary and local character. One of its minor and yet regrettable consequences, would be to prevent the projected visit of the Prince of Wales. If the journey can be satisfactorily arranged, H.R.H. will probably spend three months in India, leaving Bombay the first week in March, unless he should be tempted to go from Calcutta to Madras and thence to Ceylon. As his object is partly to enjoy some sport of the nobler kind, it is, expected that he will meet Jung Bahadoor in the Terai, and in return invite his Excellency to come and shoot partridges at Sandringham. One of the rumours of the day is that the Prince will be accompanied by his brother, the Duke of Connaught, who has the gift of winning all hearts wherever he goes. Dr. Fayrer will be the Prince's guide, philosopher, friend, and fellow-sportsman, and will doubtless put him up to a good thing or two. Not a little amusement has been caused by Mr. Mackenzie's (of Kintail) notion of hampering the Prince with an escort of at least 6,000 soldiers. Seeing that the travelling will be nearly all done by railway, it might be difficult for this little army to keep pace with their royal treasure. As to the magnificent presents, moreover, which the laird of Kintail

wishes to distribute, it is certain that Parliament would never vote the money, and, as I remarked in my last letter, the general feeling is adverse to setting up Eastern customs as superior to our own.

Sir George Campbell has encountered a noisy, blustering opponent in his canvass for the Kirkaldy Boroughs in one William Jarvis Harker, who talks of impeaching Sir George before the House of Commons. He says that he was in India during the supposed famine, and that he is prepared to prove that the people were in no danger of starvation. Perhaps not in the district honoured by Mr. Harker's presence, but the meeting took his measure fairly enough by giving three cheers for Sir George Campbell.

From a strictly legal and logical point of view, Lord George Hamilton was justified in opposing Mr. Gregory's motion for taking into consideration the case of the unfortunate shareholders of the Bank of Bombay. In the first place, the shareholders have themselves to thank for empowering the Directors, at the Special Meeting held in November 1861, to vary, alter and annul the provisions of the act, under which the bank was originally constituted, and in fact for investing the Directors with discretionary authority as regarded the management of the bank. Then a good deal of nonsense was talked of the shareholders being men who had maintained and consolidated our Indian Empire, as if only Civilians and Military men were shareholders, or as though it were not a mixed body consisting of all sorts and conditions of men, who had chosen this mode of investment from their own free will. Beyond that, Mr. Gregory and his supporters asked the Government to make compensation out of funds which never had any existence. They particularly single out the profits realized from the sale of certain Government lands as the source whence these losses are to be made good. As it happens, however, the Government is one million and three quarters on the wrong side of the balance-sheet, having received only £750,000 against £2,500,000 expences incurred in connection with this property. A Court of Honour would probably hold Sir Bartle Frere and his colleagues morally responsible for the losses arising from their laxity and want of sound judgment. It is quite clear that it was a most hazardous speculation to advance such large sums of money to Premchund, in the vain hope of averting a catastrophe that was almost certain to come to pass. On the other hand, it would be a most dangerous precedent to recognise the claim of the shareholders as against the Government, as it would naturally render the shareholders of all banks connected with the State comparatively indifferent as to the danger of this or that speculation, seeing that Government would have to bear them harmless. So the division showed 104 Noes to 37 Ayes.

"Sugar! Sugar! Sugar!" was the tremendous opening of one of the great Chatham's awe-inspiring speeches. "Tremendous" because of his flashing eye, his commanding voice, his haughty bearing. The idle laugh that greeted the first word died away in terror, as that word was thundered forth a second and a third time. In far milder accents is the word breathed by our modern statesmen, by our Derbys and Northcotes. It seems that the French and Dutch Governments are so old-fashioned that they actually give bounties to their sugar refiners to enable them to import sugar into England below cost price, and at a lower rate than it can be purchased at in their own countries. The real object is evidently to benefit the agricultural interests by stimulating the cultivation of beetroot, which is a most profitable crop. But it comes to this, that Peter is robbed to pay Paul, because the bounties have to be furnished by the taxpayers, and thus towns are mulcted for the benefit of rural villages. The consequences to our English sugar refiners are for the moment so distressing, that a very influential deputation waited the other day upon the Foreign Secretary and the Chancellor of the Exchequer in the hope of inducing them to use diplomatic means for bringing about a cessation of the bounties. Ministers, however, are placed in an awkward dilemma, for in assisting the refiners they would virtually be endeavouring to raise the price of sugar to the consumer, that is, to the people of these islands. The deputation insinuate that if the English refiners are received and compelled to abandon this branch of industry, the foreigners will then raise their prices and we shall be compelled to pay whatever they choose to exact, as if Holland and Belgium would not outbid, or be outbidden by, France with a view to secure such a splendid market for their goods. Happily, no reprisals are asked for in the shape of differential duties, and it is tolerably certain that the bounties will soon cease of themselves. Our refiners, it appears, are a good deal to blame for the present state of affairs, by insisting that the French refiners should be compelled to refine in bond and so incur all the annoyance inseparable from excise supervision. Better times are doubtless in store for this branch of industry.

Nothing is so interesting to the House of Commons as that which relates to their boasted privileges. The happy time may perchance come to pass when Contempt of Court and Breach of Privilege shall both be relegated to limbo, but it is also possible that the millennium may arrive as soon as the reign of common sense. Captain Bedford Pim, M.P. for Gravesend, in giving evidence before the Foreign Loan Committee, reflected severely upon the conduct of M. Herrar, the Honduras Minister, who repels the charge by aspersing his assailant, in a letter addressed to the chairman, Mr. Robert Lowe. The original was in the French language, but an English translation of it was read by Mr. Kirkman Hodgson and published *in extenso* in the *Times* and *Daily News*, though it was not received as evidence by the Committee. The other papers contented themselves with giving the substance of the letter. Thereupon Mr. Lewis, Member for Londonderry, "moves" in his place that the above-named journals have committed a breach of privilege which nobody can deny. It is a breach of privilege to publish reports of the debates of Parliament, and even more so to publish the evidence given before Parliamentary Committees. No one, however, has thought it worth while to insist upon the strict observance of Parliamentary usage for nearly 40 years, and the objection to publicity had tacitly lapsed. But then M. Herrar's letter contains a libel upon an M.P. which, of course, aggravates the breach, though more than one speaker suggested that Captain Bedford Pim could obtain redress in a Court of law. Mr. Lewis was right enough up to a certain point, until he affected to discover a "mystery" in the mode by which two papers became possessed of a *verbatim* report of the erring letter. The *Times* denies that there is anything mysterious in the matter. The reporter took shorthand notes as usual, and got his report corrected afterwards in the ordinary mode, and the explanation is perfectly satisfactory. Mr. Disraeli, however, followed by Mr. Hardy and Mr. Cave, was of opinion that the "mystery" ought to be cleared up, and accordingly voted for the motion requiring the publishers of the two peccant journals to appear before the Bar of the House. Many think this was done to annoy Mr. Lowe, who, as chairman, refused to open his lips. Be that as it may, the verdict out of doors is opposed to this nonsense and waste of time, and condemns Ministers for not moving the previous question and so quietly shelving the matter without any further fuss or annoyance.

The Cabinet have made another mistake in suffering themselves to be defeated on Sir John Lubbock's motion for preserving from desecration and ruin the ancient Celtic monuments still to be found in various parts of the British Isles, but which are in imminent danger of destruction at the hands of the snob and the utilitarian. Lord Hervey, true to his race, indulged in feeble wit on the subject of blue paint, mistletoe, and obscure rites, while the more serious Conservatives maundered over the rights of property, forgetting that the nation collectively is far above any individual interests. It is, of course, not a political question, but it is unwise on the part of even the strongest Government to permit themselves to be out-generalled or to allow their followers to acquire a habit of going over to the enemy in the middle of a skirmish, however insignificant. An adverse majority of 22 in a comparatively small house such as Wednesday draws together cannot be otherwise than a sign of great carelessness.

It is premature to discuss the Budget, the figures of which may possibly have been known in Calcutta before they were generally known in London. No surplus to speak of, and consequently no remission of taxation; in other respects a dry prosaic statement before an empty house. Emptied rather than empty, would fitly describe the House, for until the Chancellor of the Exchequer rose, the attendance was unusually large—again because the proceedings were of a personal character. In a weak moment Colonel Makins had consented to present a petition without ascertaining its precise contents. It was from the miserable little town of Prittlewell, between Tilbury and Southend, and impugned the conduct not only of the Tichborne Judges but of the Speaker. Mr. Disraeli, therefore, moved that the petition be discharged, but clever members affected to consider that the right of petitioning would thereby be imperilled, and therefore divided the house. Mr. Bright voted with Mr. Disraeli, and called upon Dr. Kineally to make or withdraw the motion so long announced inculpatory of the Tichborne Judges. The ex-Q. C. replied that he had expected to be supported by "floods of petitions," but members refused to present them. He will be nailed, however, to-night.

Those who go down to the sea in ships, though they may still see marvels in the mighty deep, need no longer be disquieted nor wax faint-hearted. Has not Captain Boyton passed fifteen hours in the midst of the cold stormy waves of the channel, and came out of the struggle for life fresh and vigorous? And in his case

there was a waste of power, for he worked hard all the time to paddle his way against adverse tides and currents. Starting from Dover at 3-20 A.M., he was taken on board the steamer at 6 P.M., still 12 miles from Boulogne, because the French pilot feared further responsibility, as the wind was rising and a thick fog closing in upon the steamer. The English Channel skippers however, declare that in two hours more the tide would have swept the courageous mariner to Cape Gris Nez and thence to Boulogne. They also wished him to leave Dover before midnight so as to have the tide in his favour, both on leaving the English and on nearing the French coast. The Humane Society of Boulogne, however, had chartered a steam tug to wait upon him, having on board the most experienced pilot of that port, so that Captain Boyton naturally felt some delicacy as to acting in opposition to mounseer's opinion. The good people of Boulogne who had been straining their eyes, and shivering for hours in the bitter east wind, were much disappointed at his entering the harbour in a rolling steam tug, but soon recovered their usual good temper when in the presence of 20,000 people he disported himself in their harbour at the top of the tide, and accepted a bouquet from a fishwife. There is, of course, a good deal of nonsense mixed up with the advantages of Captain Boyton's invention. The dress can be quickly fitted on, and unless the wearer is stunned by the waves he may live for some hours after escaping from the ship, especially if he have the presence of mind and an opportunity to provide himself with food and water. But the flag, the sail, the wicker-apparatus, &c. &c., count for nothing, and would be an embarrassment rather than a safeguard. Nevertheless, some lives may be saved, and much misery may be prolonged, by means of this dress, if it ever come into use, so that we need not grudge the inventor the Boulogne Humane Society's gold medal.

EDITORIAL NOTES.

THE Government has chosen a most inopportune moment for the opening of the new Loan of two-and-a-half crores, which was announced by Government Gazette Extraordinary late on Wednesday evening. The Loan will form part of the four per cent. transfer loan of 1st May 1865. Tenders will be opened at the Office of the Comptroller General at noon on the 16th June. The object of opening this Loan in India is, we suppose, to avoid the necessity of asking Parliament to sanction it, and so running the gauntlet of a debate upon the Famine Expenditure. The review of that expenditure is only deferred, and, considering its enormous amount, it is most important that the review should be searching and complete. With a money market daily tightening, the reasons for launching this loan in Calcutta instead of upon the London exchange should be called for in Parliament. As there is no money in India that can be loaned to the State with advantage—the great want of the country being capital—there ought to be solid grounds for resorting to this most doubtful mode of financing. What are they?

***

THE Indian Legislation Bill has passed its second reading in the Lords, but its operation is to be confined to one of its original branches only, a most important one, however, the law of India. The courts in India have the curious power of declaring measures passed by the Legislative Councils to be *ultra vires*, and this power is not confined to the superior courts, but can be exercised by the meanest court of summary jurisdiction. In the case of the Wahabee conspirators, Mr. Anstey argued that the unwritten law of Great Britain was violated by any legislation affecting the social contract, and he impugned the authority of Government to make the law, under which the conspirators were arrested, and called on the people to resist. The judges listened with regret to Mr. Anstey's argument, but admitted that there was an ambiguity in the Act, which it is the object of the present Bill to remove. If laws are to be declared *ultra vires*, it should be done by a Court which is really supreme; and it is now proposed that no court shall have power to say that the Acts of the Legislative Council are invalid; but if the supreme courts of the Presidencies are of opinion that such is the case, they may by three of their members represent the facts to the Government of India, who will transmit them to the Secretary of State, by whom they will be submitted to the judgment of the Judicial Committee of the Privy Council. The Bill has been prepared by Mr. Skeen, than whom no more capable draughtsman could have been charged with the duty.

***

IT is remarked at home that the Viceroy's final minute on the Bengal famine is little else than a recapitulation of the report of Sir R. Temple's, with the addition of sundry compliments to Sir Richard himself, Mr. Ashley Eden, and other persons, whose energy and good management had contributed to the alleviation of human suffering and the arrest of the progress of the famine. "In regard to the measures of the Government itself, the document "merits the appellation of the 'Complacency Minute.' The Viceroy "in Council seems to have been very well satisfied with his own "foresight and diligence, and the soundness of his calculations "respecting an interference with private commerce in seeking "supplies of grain."

Sir George Campbell upon whom the whole brunt of the famine fell, is so studiously thrown into the background, that English readers forget that he had anything to do with it. Very honorable certainly.

***

THE Indian press have received the news of Sir Andrew Clarke's appointment to be Minister of Public Work in India with strangely little curiosity as to his antecedents. That he belongs to the Royal Engineers and is Governor of the Straits Settlements, seems to be all that is known about him. The home press assures us that there are two points strongly in his favour—viz., 1st., that he will enter upon the duties of his office unbiassed by early associations with his subordinates; and, 2nd, that the eyes of the whole public of India will be upon him, and, particularly, the eyes of those who consider him an intruder on their special preserve. On his success, moreover, we are told, will depend future improvements in other departments of the State. What does this mean?

It is argued that he will not find himself launched on a bed of roses, but thwarted by those who should give him their support; and that it will be some time ere he will be in a position to attempt reforms. "But one thing he can do the moment he assumes office, and that is to let it be distinctly understood that in no instance will any expenditure over estimates be sanctioned."

***

Vanity Fair says, it is to be hoped that the facts elicited at the trial of the Gaekwar of Baroda, will make the Indian Government more carefel in the choice of the Residents it appoints to the Courts of native princes. *That* is the real moral to be drawn from this episode of our rule. We said last week, that if our English contemporaries would turn this trial to the account of good government in India, they should demand a Parliamentary enquiry into the relations between Travancore and Colonel Ballard in the last five years, and the attitude of the Government towards the matter. The people and princes resent, and justly resent, our keeping men like Colonel Ballard for years together at the court of a prince to whom they are personally distasteful.

We said also, that we ourselves had seen one of the very princes who tried Mulharao, led out by the Resident on a great State occasion, and in an immense assembly, just as if he were a bear with a ring in his nose, through the manifest unfitness of the Resident for the delicate position in which he stood. The exhibition we refer to, was most painful and embarrassing. Again, it is but the other day that another of our Residents, on the occasion of opening a new State Railway through the territory of a native prince, had the execrable taste to enlarge in open assembly upon the strategic advantages the construction of the line would give the British Government for putting down rebellion. The man who could be guilty of such a speech ought to have been at once relegated to duties of another kind altogether.

***

We ask again what has become of Mr. Cockerell's and Hem Chunder Ker's report upon the Stevens murder case? The report went into Government long since, and although we must admit that there seems to be little impatience on the part of the public for its production, it is time that we knew the true history of the case. Not being the *Pioneer* we don't know what the Commissioners have made of the matter.

***

SIR BARTLE FRERE has been encouraging Mr. Mason, to tell the Manchester men that as the Government of India were the manufacturers of the opium they taxed, the system led to most immoral consequences, while it interfered very greatly with the improvement of the people. It is hard to believe that Sir Bartle Frere is sincere when we find him countenancing statements of this order. If he believes the opium revenue to be immoral, why did he not say so when he was administering that revenue? There is something intensely cowardly in reserving these criticisms, until no responsibility is attached to

what you say. Were we Finance Minister to-morrow and thought the revenue an immoral one, no power on earth should keep us from saying so, and dealing as heavy a blow at it as we could. But the charge is futile. Sir Bartle's doubts are insincere, or he was a coward never to have avowed them when in Council. To tell the world that Sir William Muir is administering an immoral system of finance that men may look upon Sir Bartle as a saint, is pure Pecksniffianism.

***

MR. HUGH MASON next avowed his impression, that the Government of India was capable of great improvement! "Especially he thought that the principles of Indian finance were most antiquated, and ought to be reformed. Above all things, he condemned the mode in which taxation was raised in that great dependency. It did not seem compatible with the enlightenment of the present day that £7,000,000 of the revenue of British India should be raised by a tax on one of the greatest necessaries of life—common salt." If ever a Government was required to make bricks without straw, it is this unhappy Government of India. Our self-sufficient critics tell us that our land tax crushes all enterprise out of the people, that our stamp-tax is vile and abominable, our opium revenue immoral, our salt tax a villainous impost upon the poor, our abkaree designed to promote drunkenness, our export duties insane, and our import duties a wrong to Manchester. And the bland, silly, popularity-seeking Sir Bartle, instead of slaying this folly on the spot, blandly rubs his hands and assures Mr. Mason and his friends that they are right, and that the proper source of the Indian revenue is—alchemy we suppose.

***

IT is the opinion of one of the English journals that the Gaekwar of Baroda was saved, not so certainly because his case was necessarily a winning case—for it is always awkward fighting with officials—but "because he had the good sense to retain Serjeant "Ballantine for his defence. All well-conditioned people need do in "any scrape is to ascertain what is the amount of Serjeant Ballan-"tine's fee, and then go to bed in the blessed assurance that they will "get out of it." The writer then becomes serious, and assures us that there is a vast deal of silly invective hurled against law costs and counsels' fees. "Happily it does not hurt the lawyers, and if "it relieves foolish minds to be purged of their folly, there is not "much harm done."

English law ever has been and still is, a scandal for the costliness of its processes. The new Procedure Codes were framed for India, with the hope and intention of materially lessening the evil, but we believe it is the fact that the new procedure has already come to be more burdensome than the old. There is probably no country in the world, in which the administration of the law is more simple and effective than in America, where bills of costs are almost unknown. And America owes the fact, we suspect, to the Puritan statesmanship that more than two centuries ago was spending its life in England in a struggle against abuses which have endured down to our own day. "There is one general grievance in the nation. "It is the Law; and the great grievance lies in the execution and "administration." So said Cromwell to the Parliament of 1656, as with patient bridle-hand but with resolute spur he set himself to the task of reforming the lawyers. "There are wicked and abominable "laws which it is in your power to alter. To hang a man for six "and eight pence and I know not what. This is a thing God will "reckon for, and I wish it may not be upon this nation a day "longer than you have an opportunity to give a remedy." The great heart of Cromwell never saw it done, and it "lay there" down to our own days, men never being able from Oliver's days to these to produce a king's speech of the same order. The "Little" Parliament would have helped the grand old Puritan soul, and had decided on abolishing the Court of Chancery, finding "for one thing seventy-three thousand causes of from five to thirty years' continuance lying undetermined there;" but Church and Law were too strong for them. Oliver was just two centuries in advance of his time, and it was reserved for Charles Dickens to carry a reform that would have been made two centuries ago, had the great Puritan statesman lived but ten years longer. Men were being hung at Newgate in batches of twenty at a time for sheep-stealing, within the memory of the present generation, and Jarndyce *vs.* Jarndyce was the type of Chancery proceedings down almost to the last twenty years: thanks to the Nell Gwynn defenders of the faith that came in with the happy Restoration, Americans owe more to the Pilgrim Fathers than they themselves suspect.

***

IT is impossible not to be struck, we think, with the mental vigour that distinguishes the press writings of the age, and it is not clear to ourselves that the complaint that we belong to a reading, rather than a reflecting, generation is true. Take as an illustration of the character of the modern newspaper, the following note from *Vanity Fair*:—"If another shall come in his own name him ye will "receive," the meaning of which I take to be that any man who is "ready to lay bare his interior self to mankind, or who in other "words is in earnest in what he says, will always find acceptation "for that he does say. Which, indeed, has always been the case. For "in spite of all we pretend we do yet so thoroughly believe in each "other that a mere persuasion of a man's honesty will suffice to win "him disciples, and that before honesty itself nothing can stand. Then "may every man be received as sent from God. Yes, when every "man shall come in his own name, and not in the name of the unreal "fantastic personage whom he knows himself not to be, and whom "he has invented for his shop-window."

Who could have expected writing of this order in a paper almost avowedly flippant and cynical. The writer has curiously perverted the meaning of the text, but the strange thing is that he should have reflected upon the words at all. For he plainly has, and has beaten very good music out of them too, though in a strange key. There is a capital sermon in the paragraph. It is impossible to conceal that the press has become head and shoulders taller in these days than the pulpit. We do not think the statement ought to offend any one. For ourselves, it is with a feeling of despair that we contemplate the modern pulpit. The intellectual feebleness of the mass of preachers, their inability to interest their hearers, and the tacit acceptance of the evil as irremediable, portend a revolution of some kind or other and at no distant date. Messrs. Moody and Sankey, and Father Taylor, are followed by crowds, because they *are* able to interest them in what they say, and we doubt whether any man ought to be allowed to enter the pulpit who does not know their secret. Wesley used to say that God never called *any* man to the ministry, whom he had not qualified for the office by the requisite gifts and graces; and that He called *every* man whom he had so qualified.

***

A CORRESPONDENT asks us the meaning of the last line of the 86th stanza of Tennyson's "In Memoriam":—

The bar of Michael Angelo.

To tell the truth we do not know, for we have frequently been puzzled over it ourselves. Perhaps some of our readers may be able to tell us. In one respect, we think this strange and beautiful poem stands alone. We mean in the number of "life problems" which are touched therein with almost prophetic insight. The extent to which these passages have taken hold of the intellect of the age is hardly we think, yet understood. As an illustration, we may instance the *Reign of Law*, the indirect references in which to this poem are endless. We wish that some lover of Tennyson would take up this feature of the most beautiful poem in the language, and illustrate it in a series of papers in our columns. We know no richer mine of thought in our possession. The author himself modestly says that

If these brief lays of sorrow born,

were taken to be such as closed grave doubts, they would be "such as men might scorn." They are but

Short swallow flights of song that dip
Their wings in tears, and skim away.

But it is long since we were impressed otherwise, and we should gladly welcome a review of *In Memoriam* in these columns with special reference to this aspect of the poem.

***

IN our article on the "Landhoura Case" we have assumed that the trial of the claimant is virtually over, but this, we are informed by later intelligence, is not so. He has attempted to withdraw his confession, alleging that he had been induced to make it by coercion. We hear that he has called 146 witnesses for the defence, and that the trial is not likely to be over for some time. The article, however, does not relate to the claimant except indirectly.

***

WHY does not the Calcutta Chamber represent to Government the reasonableness of placing the administration of the Customs in the hands of a gentleman selected from their own body? The perpetual squabbles that occur between mercantile men and the Customs, arise nineteen times out of twenty from the latter being administered by men who have no knowledge of mercantile usages or practice. Every house by turns has its grievance against the institution, and many of them serious cause of complaint. It

is not easy to find in the public service, an officer of Government who rightly grasps the spirit in which the office should be administered. A Commissioner of Customs who understands his duties rightly, will look upon himself as a necessary nuisance, and will steadily aim at reducing the nuisance to the narrowest limits compatible with public interests. He will never strain the regulations but in one direction—the merchants' favor. And a Government of any *morale*, or breadth, will expect him to do this. It is a misfortune that we are compelled to have a Custom House at all ; but when its administration gets into the hands of a narrow official, full of a sense of his own importance and authority, the evil becomes intolerable. Even when the office is in the hands of a broad man, he is sure to be troublesome and obstructive, unless he has some knowledge of the course of mercantile business, and is able to see at a glance how the knot has got tied in a case of difficulty, and should be undone. In the last few years case after case of grievance has come up, and hardly in one of them have the authorities been right. They have in every case strained the regulations in the wrong direction. Our own judgment is that the office of Commissioner of Customs should be administered by an officer who has had practical experience of mercantile life, and is able therefore to *see* through difficulties at a glance. In its turn, every house in the city has to "swear" at the Customs for some *bêtise* or other.

***

THE Beecher-Tilton case is in some respects the most extraordinary and the most painful case of the kind on record. Mr. Beecher is accused of having seduced one of the ladies of his congregation; He declares the charge to be simply the outcome of the strangest conspiracy in the world. The charge he says was held over him for years ; he was in close and intimate correspondence with the conspirators ; in his letters to them he speaks in an agony of remorse about something that if disclosed will blast his own character and that of the lady implicated therein and her children for ever. He writes in one letter to the chief conspirator, that forsaken of God and man he clings to him as his only hope ; tells him he has suffered "all night the torments of the damned," and that there is nothing but suicide *left* for him.

The case at last comes before the world, and Mr. Beecher now says that these conspirators are the most worthless of mankind ; that he had never wronged them in any way, except by speaking thoughtlessly of the lady's husband, injuring his reputation as a literary man ; and that all the agonizing expressions of remorse, shame, and madness in his letters were dictated by his sense of the injury he had thus innocently done the reputation of the husband. We forbear all expression of opinion in the case, but it is the most painful one by far that has ever come under our own notice. Mr. Beecher must be insane if we are to accept his own theory of the letters, and what are we to say if that theory is false ?

***

THE Tories make better appointments than the Whigs ; and as John Bull dearly loves a 'lord,' the appointment of the Duke of Buckingham to be Governor of Madras, will be held by many to shed a lustre upon the office. It is desirable that the Indian Governorships should be made more of than they now are, and if the ministry can give us a sprinkling of "Dukes" amongst the number, so much the better. The Duke of Buckingham is associated in our memory with the fact that he consented to the entail on the estate being cut off, to meet the debts accumulated by his father, and for his relief. Our memory is not clear upon the point, but the Duke acted in a very fine way at the time, if we remember rightly. It required some resolution to sell Stowe, and the chances, we think, are that, though their new Governor may be impecunious, the Madrassees will find in him a man of fine and generous character.

THE WEEK.

CAPTAIN COOK, our late Resident at Bhamo, is decidedly of opinion that the King of Burmah intended to arrest the progress of the expedition commanded by Colonel Brown. The conduct of His Majesty is very suspicious, but he will doubtless discontinue his "preparations" when Sir Douglas Forsyth with his escort and two guns are within fifty miles of Mandalay. The King is reported to be building a fort on an island between Minbla and Thayetmyo, twenty miles from the frontier. An Italian engineer is in charge of the works. Two other forts are in course of construction at Isagine, ten miles from the capital, "thousands of people" being employed in building them. His Majesty is stated to have expressed this opinion on the question at issue, "If the English require their boundary extended a few miles more or less I am quite agreeable to it, but had they allowed me to get Snider rifles and Armstrong guns and ammunition, I might have contested the point, but with the guns we have made, I could not think of doing so." He is storing a large quantity of paddy and *gnappee*, and building a number of so-called gun-boats which turn over as fast as they are launched. Sir Douglas Forsyth leaves Calcutta on the 17th, and Colonel Horace Brown is on the way to Shanghai.

***

WE mentioned last week that our Resident at Bhamo had protected a number of the late Sultan of Talifoo's unfortunate followers from their Chinese pursuers. The Woon of Bhamo called upon Mr. Cook to give the men up, but he, notwithstanding repeated and threatening demands from the Woon, adhered to his decision. "It is said that the discussion was so warm, that the Burman went the length of calling out troops and marching upon the Residency !" Anyway, the poor Panthays are now safe in Rangoon, and the Woon is making false professions of friendliness. At present British Burmah is garrisoned by one thousand men more than at this time last year. There is a ship of war at Rangoon, and the European regiments have been raised to their full strength. A battery of artillery, a wing of native infantry, and a few officers have also been added. The rumours in the Bazaars are as sensational as ever. The Chinese merchants of Rangoon assert that an army of 100,000 is concentrating at Momein, and that the chief Mandarin has intimated to the King of Ava that he intends crossing the frontier to his assistance as soon as the English force enters Upper Burmah. The Chinese traders of Mandalay are leaving Ava in great numbers. "Several months ago it was stated by Chinamen in Rangoon that their fellow-countrymen would certainly cut off their heads if they had a row with us, and were victorious, and found them trading in the place." Another report from Upper Burmah positively states that the King has ordered 40,000 troops to Minbla (about 100 miles north of Mandalay) to construct entrenchments and stockades, under the direction of some Europeans, and that he has already sent his treasure and intends taking his women there when we attack him.

***

NOWROZ KHAN is still troubling the Ameer of Affghanistan. He has robbed another caravan ; and two regiments of infantry, and one of cavalry have been sent against him. Shere Ali offered through a Ghilzaee chief, to reinstal him in Lalpoora if he would send his two sons to Cabul. To this Nowroz is reported to have replied, "You will not catch me as you did Sirdar Yakoob Khan. Do you think anybody will trust you, after you had taken an oath on the Koran and yet got Yakoob Khan in trouble ?" The Mohmundees are joining the rebels in large numbers, and so great is their power for evil that trade has been almost paralysed in some places. A fort is being built by the Ameer near Lalpoora, and it will be garrisoned with troops from Cabul. All is quiet at Herat. It is thought that there will be several changes amongst the Governors before long, as all have been ordered to attend upon their sovereign by render up their accounts, which are reported to be in great confusion.

***

LATER intelligence from Cabul informs us that there has been a battle between the Ameer's troops and the followers of Nowroz Khan, the latter being victorious.

***

The last China mail gives us several new facts in connection with the murder of Mr. Margary. The French Missionaries at Hankow had, it appears, received information from their colleagues in Szechuan that the authorities at Manwyne had declared their intention to interfere with the Rangoon expedition, and stop its progress altogether. The Fathers communicated this to the French Consul at Hankow, before the news of the murder of Mr. Margary and the attack on the expedition had reached China. Passports have been obtained by Mr. Wade to enable two English officers, accompanied by a Chinese official, to investigate the affair on the spot. Prince Kung has given a positive assurance that no one accused of participation in the outrage shall be sentenced till the officers sent by Mr. Wade have had an opportunity of hearing the evidence against them. News of Mr. Margary's death reached Pekin ten days before the officials in Shanghai were aware of the disaster. They evidently assumed, however, in the north, that Shanghai would

have had the first information, for a few details only of the occurrence were mentioned casually in a private letter to Mr. Medhurst. It is remarkable that the information failed to reach Shanghai earlier. Mr. Medhurst has hitherto been kept punctually acquainted with the movements of the Mission, by the Commissioner of Rangoon, and received a telegram from him on the 26th March, saying that Mr. Allen was to leave that place on the 28th March, for Shanghai *viâ* Singapore. This telegram made no allusion whatever to the catastrophe, so it is to be inferred that an intermediate one has been lost. Mr. Allen, it will be remembered, was also with the Mission, having accompanied it from Rangoon.

***

A STRANGE case of "wounding religious feelings" has occurred at Trichinopoly. Three native Christians have been charged before the local magistrate with having placed a cross in a public place resorted to by Hindoos, with the deliberate intention of annoying them. The defendants pleaded that the site on which the cross was erected belonged exclusively to themselves, and that the cross had been put up by one of their priests on the occasion of the pastoral visit to the village of the Bishop of Pondichery. The Deputy Magistrate, however, was of opinion that the evidence for the prosecution showed that the act complained of was contrary to mamool; that the locality on which the cross was erected was a Government building site, and that a deliberate intention to wound religious feelings was inferable from the fact of the cross having been placed where it was. Each of the defendants was found guilty of the charge, and fined 50 rupees, or four months' rigorous imprisonment. The decision is now being appealed.

***

IN 1871, Rundheer Sing, a noted outlaw, escaped from the Allahabad jail, and has since then been the scourge of Jhansie. He has committed outrage after outrage, and has defied every effort of the police to seize him, notwithstanding that a reward of Rs. 3,000 was on his head. On the 25th March an informer brought news that there was at last a chance of catching the man; he with five others having on the previous day taken refuge in a hut near the village of Baponi in Gwalior territory. The informer urged Mr. Mills, the Inspector of Police to whom he applied, to lose no time in seizing the robbers, as on the following day they would probably decamp. Mr. Mills set out with thirteen armed constables and eight mounted police, and on the morning of the 26th arrived upon the scene of action. The outlaws held possession of several loop-holed houses on the southern slope of a low hill; to the south and south-east of the buildings was an open plain, and to the north and north-west a hill covered with thick brushwood—extending nearly up to the tiny fortress—wherein the police ensconced themselves. Through this brushwood and over the brow of the hill, up to the house, the informer led the party. Mr. Mills finding himself within range of fire, and his instructions disregarded, ordered instant retreat over the hill-brow, despatched a chowkeedar to the nearest Gwalior police-station, Paniari, for aid, posted constables along the ridge, and ordered the mounted police to watch the south and east sides of the houses. With the aid of the Jhansie constables and the Paniari police, he hoped in the course of a few hours to be able to make an attack. Assistance, too, during the day might be expected through the efforts of the Subah from Pichore or Jhansie. But the eagerness of Sub-Inspector Jaggat Singh and four of his constables precipitated matters and upset Mr. Mills' plans. Ordered to remain inactive on the ridge, Jaggat Singh and four constables, Nandan, Khuda Baksh, Kalyan, and Sabrat Khan, left their positions, and, approaching the houses, attempted to enter them. Jaggat Singh, while getting over a wall was fired at from an upper-storey and badly wounded. He staggered twenty yards back and fell. Two hours later he crawled out of the heat of the sun to the shelter of a tree near the two-storied house, from whence a shot despatched him. Of the other constables, Nandan was also killed from an upper-storey, Khuda Baksh, his companion, retiring after a while unhurt, carrying off with him his comrade's musket. Kalyan at the same time approached the house from another direction with Sabrat Khan, and was shot dead, Sabrat Khan escaping unhurt. The musket, ammunition, and ornaments of Jaggat Singh and Kalyan fell into the hands of the outlaws. The Nagda party were thus reduced to seven, who remained with Mr. Mills inactive on the ridge awaiting reinforcements. The brushwood was then ignited: the wind blowing from the west carried the flames towards the houses: the thatched roof took fire, and the flames drove the outlaws to the shelter of a tree in the enclosure. No advantage was taken of this further than that Mr. Mills, after an ineffectual effort to advance on the buildings, concealed himself behind a mauhwa tree, 90 or 100 paces to the south of the house, and, accompanied by a constable, Chotey Lal, who was subsequently slightly wounded, commenced exchanging desultory shots with the outlaws, and so remained till sunset. "It was from this place," writes Mr. Mills, "that I issued orders, nay *implored* the head-constable to gather together as many men as he could, so that an attempt might be made to rush in and capture the outlaws before it was dark, when it would be worse than useless to attempt anything. The head-constable reported to me next morning that he had entirely failed to collect the men, and that they refused to attend his call." During the day armed villagers arrived in groups and offered aid: and in the evening the Thanadar of Paniari came up, unaccompanied by any police, stating that the chowkeedar had merely told him that Mr. Mills had sent for him, but had made no mention of a force being needed. Mr. Mills then sent an express to Pichore and to the Duputy Commissioner of Jhansie, for aid, and as darkness was setting in, made arrangements for surrounding the house. At night a narrow escape from fresh casualties occurred, the guard firing into one another. It will be sufficient to add that the outlaws walked away, carrying with them five members of the informer's family (whom they subsequently released unhurt), and that when, with the dawn of day, the troops arrived from Pichore, the houses were found empty.

***

SIR JOHN STRACHEY'S resolution on this disgraceful affair is justly severe. Mr. Mills excuses his conduct on the ground of physical weakness and a long march. Remarking on this Sir John states that the former no doubt greatly increased his difficulties, and the latter in a measure may account for his gross cowardice. The fact remains that when, owing to the courage of some of the police guard which accompanied him from Nagda, his first scheme failed, he neither attempted to support the men who had commenced the attack, nor, at a later hour, on the arrival of the Jhansie constables, did he get them, after a brief resting time, into hand, and arrange for an assault at the critical moment when the flames had driven the outlaws in the face of an overwhelming force into the open courtyard—seven men with four fire-arms only, against twenty armed constables, besides mounted police; nor by personal example did he at any one moment encourage or animate his men, or give them to suppose that if they would follow, he, their officer, would lead them. "In a word, he showed neither discretion nor courage, nor any single quality which is necessary in a Police Officer." The Lieutenant-Governor is of opinion that Colonel Davidson is to blame for not himself proceeding to capture the notorious outlaw, when he was informed of his hiding place; and that both officers utterly failed in their duty, "Colonel Davidson from an almost criminal negligence, Mr. Mills from personal cowardice." The former has "forfeited his character as an efficient public officer," and the latter has been placed in the grade of inspector from which he had been recently promoted.

***

GURJON OIL has been found quite as efficacious in the treatment of leprosy in Burmah as in the Andamans. The civil medical officer at Shwegyeen has cured several bad cases, and other doctors have met with equal success. Remarking on the reports sent in, the Chief Commissioner expresses his regret and surprise that so little interest has been taken in this important matter. There is enough evidence to establish the fact that, under proper supervision and careful attention to details, much may be done to alleviate the worst symptoms of this revolting disease, unusually prevalent in Burmah. The question of establishing leper hospitals has been long under discussion with district officers and the Medical Department, but the main difficulty is the unwillingness of the people to subject themselves to continued and systematic treatment. This feeling no doubt partly arises from a sense, by the patient, of the hopelessness of any treatment to effect a material improvement in a disease which has always been looked upon as incurable. Mr. Eden is satisfied that the time has now arrived for making a practical attempt to meet the difficulty, and he has ordered estimates of the cost of establishing small experimental leper hospitals at Prome, Rangoon, and Moulmein.

***

AS an instance of the great stride which British Burmah is making in social and commercial advancement, we are informed that two breweries have been established in the province, and that ordinary bottled beer is manufactured of a quality able to compete and carry off prizes at the district shows. Since the annexation of Pegu the culture of the potato has been tried year after year with little success, but it has now been ascertained that *two* crops of really excellent tubers can be raised annually in the

Tounghoo district. An experiment on a large scale has been undertaken with two thousand pounds of seed. As to the character of the soil, the Rev. A. Bunker writes: "I have had my eye on the district north of Tounghoo for some time. I think I never saw better soil promising greater returns for little outlay, in all my experience. The soil is a brown black loam, deep and rich, covered with a dense growth of low jungle; there are admirable facilities for watering and for irrigation. I have been talking to the Karens about the gold beneath their soil for a number of years past, and have led them to experiment with potatoes." On all sides we are meeting with fresh illustrations of the fact that British Burmah is one of the richest portions of our Eastern dominions.

***

THE late dispute between China and Japan has done some good in drawing attention to Formosa and the wealth that may be obtained from it. The Special Commissioner appointed to regulate Formosan affairs is doing his work sensibly, his last attempt to improve the present condition of the island being the promotion of emigration thereto. It is very curious that, at a time when China was sustaining, at the risk of war, her claim to Formosa as an integral part of Chinese territory, there should have been in force a law making emigration thither from the mainland a penal offence. The Special Commissioner has discovered an old enactment, as follows: "The surreptitious crossing over to Formosa by people of the mainland, is forbidden. On any vessel making the surreptitious voyage being captured, the master and crew shall be punished, penalties shall be inflicted on the civil and military authorities, and the soldiers and police shall be criminally dealt with." Persons emigrating were to receive a hundred blows, and persons decoying others to emigrate were to be banished. Penalties were also enjoined for crossing into the territory of the savages, which was carefully marked off, and on officials who let traders pass these limits; intermarriage with the aborigines being likewise forbidden. The Japanese might have founded no mean argument on all this, to sustain their claim that the eastern half of Formosa was not Chinese territory. The enactment, however, has now been repealed, and there is hope that the persevering Chinese colonist will press backward the barbarian line that has hitherto kept the land waste, and that the naturally fertile soil will gradually be put to better uses than a hunting ground of the savages.

***

ON the occasion of the eclipse of the sun in 1868 the King of Siam spent £8,000 in entertaining his European guests, and this year a like sum has, we believe, been expended. Several good photographs were obtained at Bangkok and at Petchaburi. The eclipse differed much from the last. Then, writes an observer, "the flames were numerous, large, and I may say furious as the gas jets of some London butcher's shop; and the corona was evenly distributed round the orb. On this occasion the red flames were few and small and quiet. There was one bright white flame or spot; and the corona, making but small show north and south, shot out in two fans or fish-tails east and west, or, to speak more intelligibly, above and below; each fish tail being at least as long as the sun's diameter." The King joined the party of observers, and gave his nobles a lecture on the subject, while the astronomers were busy with their chronometers and telescopes. His Majesty observed the eclipse through a transit instrument, noting every change on a diagram, as did his brothers and many of the noblemen. After the totality was over, His Majesty retired, in accordance with an ancient custom, to bathe, and then rejoining the party on the lawn distributed a few hundred pounds' worth of small silver coin, according to rank and favour. The King is continuing his reforms. A new Code is being prepared on the basis of our law; the police have been put on a more efficient footing, and laxity is being met by vigorous action. His Majesty takes his seat in office daily at 11, and seldom leaves before 5. Everything relating to the improvement of the country passes through his hands, and he frequently drafts documents, and writes the notes asking questions of, and conveying orders to, his ministers and governors.

***

THERE is little news from Achin, except that the enemy still hold out, notwithstanding the growing weakness of the war party. Another petty chief has surrendered to the Dutch. The health of the troops is bad, and the N. I. Government has appointed a Commission to inquire on the spot into the cause, and endeavour to improve the present state of things.

***

BEFORE leaving for his new appointment in India, Sir Andrew Clarke has visited the minor settlements under his charge, and has the satisfaction of knowing that the condition of the native States is better than it has been for the last twenty years. Sir Andrew has personally allayed the discontent among the ryots in Malacca, while his lieutenants have been doing equally good work in Salangore, Lanjat and Laroot. "All is quiet along the Malay coast" report the Residents, who are convinced that the Rajahs possess an intelligent understanding of the new order of things, and fully intend to promote the permanency of peace and the security of life and property. Labour and capital are slowly flowing into these hitherto neglected and abused countries, the tin mines being especially well worked. The old Sultan of Salanpore, who has borne a somewhat indifferent reputation, appears to be the most amiable of sovereigns without pride, and a pattern to his lazy subjects. His Highness was discovered at Langat "cutting timber down himself for a new road." New miners are continually filling the tin mines, more than eight hundred having arrived at Klang in one month, and as the country is explored, other resources will doubtless be discovered by the persevering Chinese. Perak and Laroot appear to be the richest of all the States. In the month previous to the visit of Sir Andrew Clarke's representative, the revenue of Laroot exceeded $1,000 a day, which compares favourably even with our own revenues in Penang or even Singapore, considering the relative proportion of population. In Klang the revenue at present is only about $10,000 to $12,000 per month, but as a proof of what Salangore has suffered from its troubles from 1867 until last year, it may be mentioned that Rajahs Bot and Yahya of Lukut state that their revenues have fallen from $15,000 per month in their father's time to $500 now. All the Rajahs appear, however, hopeful, and consider the disturbances "settled." With ordinary tact and judgment on the part of the Residents there should be no danger of their ever being revived.

***

"THE moral triumph of his Highness Mulharao" is the heading of an article in a Bombay native paper, which urges restoration since the culprit has not been deposed on account of the charges brought against him, but because of "previous bad conduct, which had been condoned in solemn state documents, and damned his posterity for ever, and this has afforded great gratification to the frantic and earth-devouring advocates of pseudo 'prestige.' We repeat, is not this a moral triumph for the Gaekwar?" The proceeding "strikes the nation as ridiculously inconsistent and grossly unfair, and is calculated rudely to shake its confidence in the solemnity and the good faith of the deliberate declarations of the Government. The guddee is still vacant, and by the happy constitution of England a way is still left for the correction of this strange mistake and this wrong by the highest authority in the realm. The moral effect of such an act will be immense, except in the eyes of the false advocates of 'prestige', and Mulharao will descend to the place he occupied before, and will be again on his trial in the eyes of the people as well as the Government."

***

THE Rajpootana princes are indulging in ideas of matrimony generally. The young Maharana of Odeypore has already chosen two fair ladies, one of them being a Princess of Jodhpore. The last alliance between the two houses led to disastrous results, the primal cause being Krishna Komaree, a daughter of Odeypore, and one of the fairest of the fair. The story is thus concisely stated in the *Pioneer*: The arrangements for the betrothal were in train when the young Chief of Jodhpore died. The Prince of Odeypore accordingly considered the affair at an end, and when advances were made by the Maharaja of Jeypore he felt himself at liberty to meet them half way. But scarcely had he made the first step when the new Chief of Jodhpore, Maun Singh, demanded that the Jeypore proposals should be at once rejected by the Maharana, on the ground that the hand of the girl was already pledged to Marwar. It was in vain that the Odeypore prince represented that no betrothal had actually taken place, and in so far as it had been carried out, it had been a personal arrangement with the deceased Prince and not an engagement with the Chief of Marwar as occupant of that throne. The discussion waxed hotter and hotter, till it culminated in a war the most fatal in its result to all parties, the innocent cause of the trouble included; for her wretched father, seeing no way out of the dilemma and fearing the disgrace of keeping an unmarried girl grown to womanhood in his establishment, caused poison to be administered to her and thus rid himself of one source of anxiety. The present negotiations, therefore, mark a period in the history of these two great Rajpootana houses. The Maharaja of Jesulmere lately travelled a hundred and eighty miles on camel-back in three days to wed a bride belonging to the State of Doongurpore.

It is stated authoritatively that five lakhs of rupees *were* really offered by the Gaekwar's friends to Mr. Souter: and the fact ought to be widely known. We do not suppose, however, that much real doubt is entertained anywhere as to the guilt of Mulharao. It may be taken as a fact that he did instigate the attempt to murder the Resident. As for any sympathy for him, the thing is ridiculous.

***

The Bombay papers publish a valedictory letter from Bishop Douglas to his clergy, last month. There was a service in the Cathedral on the evening of the day he left, and after the 3rd collect the Bishop left his place, and going to the altar, pronounced the Benediction. His voice was firm and musical as in past days, but appeared mellowed by the feeling that was softening the hearts of all to whom he spoke. The majority of the congregation stood in the porch to shake his hand, and many of them "accompanied him to the ship." A boat of H.M.S. *Glasgow* was waiting at the pier to convey him on board. The last two or three years of the Bishop's life have been clouded as our readers may remember, by a deep sorrow from the accident that bereaved him of his only son, and he is himself now understood to be labouring under a mortal disease. His work is over, but he leaves behind him the memory of his high example as a devoted and good man. His preaching was of a high order of excellence, and though his extreme views as a Churchman alienated many from intimate personal intercourse with him, his piety was so simple and unaffected, that they felt it to be their own loss and sorrow. *Vale.*

***

Difference of opinion is said to exist among the authorities at Simla about the Karen difficulty. The Chief Commissioner of British Burmah urges vigorous action in case the Burmese offer any determined obstruction to a peaceful settlement, while the F. O. leans to "firm and more moderate measures." The King is pushing troops towards the frontier, and our Government is strengthening the works at Thayetmyo which command the passage of the Irrawaddy.

***

Nothing has been definitely settled about the successor to Mulharao, but the Governments of India and Bombay are considering the report of a Committee appointed to inquire into the claims of the Kandiesh branch of the Gaekwar's family. There are three candidates for the throne—mere children, aged from seven to ten. Further disturbances have occurred in the districts, the village of Currypatten having been burnt, four men killed, and thirty wounded. Three hundred and sixty Gaekwaree sepoys have been disarmed, and the Arab contingent is being similarly treated. A circular has been issued to departmental officers, announcing that Sir T. Madhava Rao has taken charge of all departments, except the fouzdaree and military. This is nearly all that we know positively. Reports differ, and Sir Richard Meade has no object, as Sir Lewis Pelly had, in telling everything that is going on to the press. From all we can hear, however, it seems probable that the disaffected in the city will continue to give trouble until the new ruler is placed upon the throne; and if this event is not to take place for three months, as announced in some quarters, we may expect more decided manifestations than have yet been made. But it was not to be expected that the deposition of the Gaekwar, considering all the blundering with which the measure has been accompanied, would be accomplished without some unpleasant incidents; and the wonder is that Baroda has remained quiet for so long. Cholera, we regret to say, is spreading both in Baroda and Bombay.

THE ENGLISH MAIL.

Were it possible to regard the Papacy as a purely religious institution, we should feel it wrong to attack it in these columns. But the Papacy is a religious power only in the sense in which the Roman Cæsar was. The Papacy is simply the development of ancient Cæsarism under a new form. The institution is essentially the same. The Imperial purple has simply put on the cloak of Christ. Its ambassadors for ages past, and in every Court of Europe, have been purely political personages, through whom the modern Cæsar has sought to rule the world. The gift of sovereignty, or its withdrawal, the creation of kingdoms and their subversion, the rights of princes, the rights of nations, the possession of remote lands, the despotism of the whole earth, and the decrees of peace and war—are the prerogatives of this modern Cæsar. And we should see them all in active exercise to-day, but for the emancipation of the human mind from the delusions of past ages. It is this power that they are to-day fronting in Germany, and that is steadily urging the Latin nations upon a war against the new Empire.

***

The Roman Curia would probably not be unwilling to see Don Carlos withdraw his pretensions, that Spain might gather itself together to take an effective part in the coming contest; but all its sympathies are with Carlos. And so has it ever been from the time of Charlemagne down to our own day. Rome has been the centre of the political intrigues of Europe, and the prime mover and instigator of many of its most bloody wars. It is necessary to draw a broad line between Roman Catholicism, as a system of religious belief and discipline, and the intensely political character of the Papacy. We yield to no man in our admiration of the piety and self-devotedness of the private members of the Catholic Church. We believe the cloister, and the convent, and the school, and the mission house to have been witness in all ages to piety and devotedness of the highest type. On the other hand, the pulses of worldly ambition have beaten as wildly at Rome as in any of the Courts of Europe, while she has distanced them all in the arts of intrigue and diplomacy. She is the most dangerous enemy to human freedom the world has ever seen, because of the disguise she wears. For Rome is *still* Cæsar, but Cæsar disguised as Christ. She claims the same universal *dominion* as the Cæsars claimed; the complete subjection of all races, nations, peoples, and tongues to her decrees; and just as the pretensions of the Cæsars culminated in the claim to Divine honors, so have we seen the Papal Cæsar at last solemnly invested with the attributes of the Divine Being, and the whole earth commanded to submit its reason and conscience to the Infallible Priest that sits on ancient Cæsar's throne.

***

Colonel Ivanoff, known amongst his compatriots as the Chief of the Yellow Beard, has found an apologist in M. Karasim, a Russian traveller who recently traversed the banks of the Oxus, and an account of whose journey appears in the *Messenger of Europe*, a review published in St. Petersburg. Colonel Ivanoff is the hero of the story, and is described, like all other heroes, as being "young and handsome." He is "tall, fair-haired, and has an immense fair beard. The natives have accordingly called him Ser-i-sakal-toorah, Chief of the Yellow Beard, and they know him now by no other name, so that it has become the practice to call him in this way in all official correspondence carried on in the native language." Several instances are given of *his presence of mind*. In the last Khivan campaign he had ventured away from his camp with only twelve Cossacks and a few native irregular cavalry, when he was suddenly attacked by two hundred Turcomans. The Russians dismounted, and having made a breast-work of their horses, kept the enemy at bay till a reinforcement arrived. The commander was taken back to camp "covered with wounds." He had been armed during the encounter with a revolver only, and five balls out of six had been used. When asked for whom he had reserved the sixth, he replied that he had reserved it for himself. "If any Turcoman had caught him with a lasso, he would have committed suicide to prevent their making him a captive." The troops under his command at Peter Alexandrofsk are always on the alert and ready to pass the Oxus at a moment's notice. When intelligence reaches the fort of a Turcoman foray he directs his men towards the head-quarters of the enemy, where the old men, women and children are sure to be found. He then "destroys all he can get hold of," and when the native warriors return they find their homes in flames, and are "only too glad to come to terms." The Chief of the Yellow Beard is, according to M. Karasim, held in great respect by the Turcomans. They appreciate the fact that he keeps his word, and the "usual stories in such cases of his being invulnerable and having a charmed life" prevail among them.

***

Another great national affliction has fallen upon Turkey. Cattle disease is rife throughout the Empire, and, unlike the famine, it is a disaster for which the Government cannot be held responsible. At Scala Nova, in the province of Smyrna, and at the Dardanelles, the murrain has wrought terrible ravages. A recent visitor to the plains of Troy noticed the skeletons of thousands of sheep bleaching on the ground. In Smyrna, vast flocks have been destroyed, and one letter tells of a shepherd who, stripped of his entire charge, has become insane, and takes out to pasture a pocketful of white pebbles which he fondly believes to be the fleecy tribe in the possession of which he was a few weeks ago comparatively rich. From European Turkey the accounts are very distressing. From Adrianople we learn that 30 per cent. of the horned cattle and horses have been lost, and that sheep have died in a very much greater ratio. The Turkish official journal *Edirné*, published at Adrianople, attributes the mortality among the sheep to the severity of the winter and scarcity of pasturage. In Macedonia, there is not only scarcity of pasturage, but also of food for human consumption. From the most trustworthy accounts, however, it may be gathered that, as regards bread, the scarcity is only temporary, for it would appear that the agricultural operations in the province of Drama have been conducted this sowing season under exceptionally favourable conditions, and that the area of land sown has been above the average. From the province of Gallipoli the accounts are very bad indeed. The horned cattle are being swept away by a disease which, in some localities, affects the bowels, in others the respiratory organs, but which seems to partake generally of a typhoid character.

A CONTINENTAL paper says that Theodore, the late Abyssinian King, was an enlightened and comparatively well-educated tyrant who knew his people well, and reigned over them with ability. The country, since he died, has gradually grown powerless to defend herself against Egypt, whose troops are drawing in upon her from all sides. All the roads which connect Abyssinia with the sea-coasts pass through Egyptian territory. The road from the western provinces on the Blue Nile goes partly by Senaar to Khartoum, the capital of the Soudan; the remaining and largest part passes by Gallabat and Kassala to Suakim, on the Red Sea. The principal road from Central Abyssinia, Amhara, and Tigre ends at Massowah, the chief harbour of Abyssinia on the Red Sea, which has now for 300 years been under Turkish rule. From the fertile districts of Southern Abyssinia, too, the routes leading to the Indian Ocean have been in Turkish hands since Egypt occupied the Somali coast last year. The Abyssinians regard themselves as the first people in the world, their present sovereign Kaisa, reigning under the pompous title of "Johannes, King of the Kings of Ethiopia." In a letter from Massowah to the *Cologne Gazette* he is said, when compared with Theodore, to be a "poor actor by the side of a real hero," and the writer prognosticates the absorption of his kingdom into Egypt. The Bogos districts have already been silently annexed, and King Johannes' protests pass unheeded. Hamasia will doubtless soon follow, and with as little noise. There is not a single element of the population of Abyssinia capable of presenting a strong and united resistance to a foreign invasion. One-half of the people would be on the side of the invaders, and the remaining half would soon be beaten. "A struggle of the undisciplined and badly armed Abyssinians with Egyptian troops would be hopeless. . . . Even religion would hardly be an obstacle, for nearly one-half of the people of Abyssinia are Mahommedans. As matters are at present, King Johannes must sooner or later be forced by the quiet advance of Egypt into a war, and you must be prepared at any moment for the news of a collision and of the annexation of Hamasia to the Khedive's dominions. In this struggle, civilization and progress are on the side of Egypt, whatever may be thought of it from a European point of view."

***

A NEW book on that little known land, New Guinea, has been published by Captain J. A. Lawson, whose account of the island differs materially from that of most of the few travellers who have wandered there. The inhabitants possess herds of hump-backed cattle and goats; keep pigs and fowls, cultivate maize, rice, and cocoa-nut, and eat roast-monkey. Many of them, we are told, can speak Dutch. Having crossed wooded plains and hills, and fine savannahs abounding in buffaloe, deer, and hare, Captain Lawson reached a magnificent sheet of water, between sixty and seventy miles in length, upon which he bestowed the name of Alexandrina, in honour of Her Majesty. The lake is dotted with numerous islands covered with tropical vegetation, harbours many kinds of fish, and is fringed by sedge and tall reeds abounding in ducks, king-fishers, quails, frogs, and newts. Its water is fresh though no outlet is mentioned, and, to judge from the general tenor of the narrative, its height above the sea is about 1,500 feet. Close to this lake Captain Lawson had his first encounter with a troop of monkeys, who pelted him with wallah-nuts, the leader of the troop actually spitting down upon him "with all the gravity of a human being," for which he was speedily punished, by a rifle-bullet through his hide. The tree bearing the wallah-nut is described as resembling the English elm, and one of them was ascertained to be 337 feet in height.

THE long neglected India Museum is to be opened in the light and airy eastern galleries of the Exhibition buildings in South Kensington on the 25th of this month. This is a great change from the prolonged attic which forms the hard sky line of the India Office, and a greater still is necessary to show to advantage the multitude of collections which have been growing for the last quarter of a century. The present resting place of the curiosities is only a temporary one. The galleries will possibly be wanted again for an international exhibition, and they have been taken by the Secretary of State for a sort of inspection parade for three years only, during which time the future of the Museum will, it is hoped, be settled.

***

THE *Times* has certainly beaten the *Telegraph* in its Corinthian treatment of the visit of the Prince of Wales to India. The young lions of the latter paper are outdone in Orientalism, even allowing the *Times* to appropriate such terms as the "Great Mogul," "two branches of the Aryan race," and numerous other Eastern references to which the *Telegraph* has acquired a prescriptive right. This journal, however, has endeavoured to regain its lost position in a later issue. We are informed that "Bombay, Poona, Benares, Agra, Delhi, and the City of Palaces are all of them more fascinating and amusing, than the majority of the most famous Continental resorts." It is in itself "a singular intellectual refreshment to pass from the restless energetic stress of Western existence to the antique calm of sunny Oriental life." Before the Prince of Wales accomplishes this feat, he is warned that great things are expected of him. He must "fill his mind with rich after-memories of India," for, "if no Englishman could travel there without pride at the magnificent charge which Providence has committed to the British nation, assuredly 'the Prince of all the land' may well and usefully desire to see with his own eyes the Oriental empire which the great men of his realm have made part of his hereditary dominions." It will surprise many to learn that the "purpose" of the visit is to cause 350,000,000 of people to stand in the sun all day long, in order that the majesty of Great Britain may be firmly impressed upon their minds. "Next to seeing Her Gracious Majesty in person—to do which the three hundred and fifty millions of the land would cheerfully stand in the sun all day long—the Hindoos would like to have amongst them the Heir Apparent to the throne; and the majesty of Great Britain would ever afterwards live in their minds from that time forward." There are, it would seem, however, "perils in this aspect of the question."

***

IT is probable that the famine in Asia Minor will be prolonged over another year, the relief afforded by the authorities being wholly inadequate. Although the number of mouths to feed have been greatly reduced by death and emigration, still it is physically impossible that the seed sown this season can at all supply the requirements of the remnant of the population left. Mr. Farnsworth, the almoner of the Foreign Famine Relief Committee, has passsd through most of the afflicted districts, and his narrative is a very distressing one. He first visited Ijni Sou, where he found the agents of the Government distributing seed to those who could offer security for repayment, but there was no relief organisation which reached the starving class of the population. There were 736 persons in this village far too reduced to give security, but hungry, nevertheless, and these Mr. Farnsworth relieved out of the means placed at his disposal by the Committee. At Karahissar, there were nearly 300 families in utter destitution, and these, also, Mr. Farnsworth relieved. At Misli 65 persons had died of starvation within three months. At Nigde, 125 persons, chiefly refugees, were relieved; and at Sazali he found that a fourth of the population had fled, and that the rest were subsisting upon a compound of bread, composed of grass, weeds, and rubbish. We must quote Mr. Farnsworth's own words with regard to Soongoorloo:—

The same sad sights met my eye everywhere. The *desolation* wrought by the famine is greater between Kir Shehir and Soongoorloo than in any region that I have visited. Boz Tepé, three hours north of Kir Shehir, has lost more than half its former inhabitants. Here I distributed aid to 250 persons. I came through a region thoroughly blasted by the famine. I stopped at Hassan Beykeui, which formerly consisted of 60 families, but now contains but 12. Granted aid to 49 persons. Gave help also to 37 persons in the village of Ibikli, which formerly had 55 families, and now has but 9. I spent some time at Mejidieh, with Moosta Bey. In June of last year, I gave to this bey 13 liras to help the most needy persons in this caza. He thanked me much for that aid and declared that it proved very timely to many sufferers. I gave to 149 persons in this place. The bey, who is now acting as *caïmakam*, told me that the caza two years ago consisted of 80 villages, but has now only 45, that the aggregate population then was 19,800, but now only 7,600. Many have emigrated, but not less than 2,000 have died, and numbers are now perishing for want, despite all the efforts which are being made to relieve them. The *caïmakam* and medjliss have within a few days applied for 24,000 kilehs of grain to keep the people alive till next harvest. The authorities here seem much more in earnest than in the regions passed before, and I have strong hopes that the needed amount of grain will be forwarded.

***

THE home papers have been discussing whether the Prince of Wales or the Viceroy should take precedence in India, and which should enter durbar first. On the visit of the Duke of Edinburgh we are told, the fact that the Viceroy took precedence of a royal prince occasioned some surprise. Lord Northbrook is Her Majesty's representative, and there is no sound reason why the Prince should not in India, as in Ireland and in Canada, take the position of second to the throne. There can be no question that the Viceroy is entitled to the precedence because he is Viceroy.

***

IT may interest some of our readers to know that Belgium is the only country in northern Europe, where living can still be called cheap. In some of the old towns—Ghent, Bruges, Malines, Ypres—a man can live in great comfort we are assured for half what he would spend in any French or English provincial city. This will suit old Indians exactly, while we are also told that the artistic tastes of the people provide everywhere fine public walks, parks, and museums, good theatres, and church services, which in point of ceremonial splendour and choral perfection can be matched nowhere out in Italy. "If a man have to do with the Belgian law courts, he gets good justice, and rapid judges, who from having never, as in France, been converted into political tools, are upright and respected. Belgian officials of all ranks are also conspicuously fair and obliging, being untainted by that red tape conceit which cleaves to every Frenchman and German drawing Government pay, and makes them disagreeable." It is somewhat too good, we are afraid, to be true. Perhaps some of our readers may be able to corroborate or correct the account by their own experience.

***

THE most disagreeable feature about Mr. Moody's services is their being haunted by the aristocracy, apparently for no higher purpose than witnessing their effects. Thus we now hear that the Princess of Wales, accompanied by the Duchess of Sutherland, was present at a late Bible reading given by Mr. Moody in Her Majesty's Opera House, Haymarket, and occupied a seat in the royal box. There was no perceptible difference in the attitude and manner of the two evangelists as they took their seats in their

usual places. Mr. Moody preached on the subject of "Grace," and concluded by pronouncing the "Benediction." There being a very large congregation, it was some time before all could leave, so Mr. Sankey and the choir sang, "What shall the harvest be?" The Princess of Wales we are told listened to a verse or two of the hymn, and then returned to Marlborough House. We dislike these reports exceedingly. At the same time it is only fair to recal that Whitfield, Rowland Hill, and Irving were followed in the same way by fashionable crowds, while their preaching was a novelty.

***

THE Paris *Echo Universel* publishes a despatch from Vienna, according to which the exchange of views that passed between Count Andrassy and Signor Visconti-Venosta at Venice "resulted "in a united conviction that, with regard to religious questions "raised by Germany, it would be politic to leave each Government "to combat the power of the Vatican according to the special "necessities of its position, and to abstain from all international "action against the Pope: the Papal question to be treated by Italy "as a matter of internal order." Another report is that the bases of a new commercial treaty between Italy and Austria have been definitely settled at Venice.

***

THE breakdown of Sir Jung Bahadoor's visit to Europe is attributed by some curious blunder in the home press, not to his accident in Bombay, but to ill health. Mr. Stocqueler (*Oriental Magazine*) sees nothing to regret in the postponement of his visit. "We have not forgotten his former appearance among us. It was "dazzling because he dressed well, rode well, spent a good deal of "money in public, and was here, there, and everywhere. He "passed, however, for a dissipated youth, possessed of qualities "scarcely adapted to a civilized state of society, where law is "dominant. After his return to India he made his way to the "exalted position he occupies by a process which in this country "would have given the hangman ample employment, and, setting "aside that he did not add to our complications during the rebel- "lion of 1857, he has continued to make himself obnoxious to the "Government of India by interposing obstacles to a passage through "Nepaul. We cannot conjecture upon what grounds, personal or "political, Sir Jung Bahadoor had any right to expect a hearty "welcome from the people of England."

This is not very complimentary, and if Mr. Stocqueler really represents English feeling on the subject, which we doubt, there is no reason to regret the accident which has kept Sir Salar Jung in India.

***

AN ex-Boundary Officer in writing to the *Oriental Magazine*, to give an idea of the style of treatment to which Native Princes in India are occasionally subjected by our Residents, relates the following occurrence, for which he vouches as having taken place in his own presence:—

In 1865 the Government of India, in consequence of reports which reached it through political officers, the nearest of whom *did not live within a hundred miles* of the place, deputed a certain political officer to proceed to a certain State and "hint" to the young Rajah who governed the State, "that it had become known to the British Government that he spent a good deal of time in the amusements of the chase and the society of ladies; that he did not take much personal interest in the conduct of State affairs; and that it would more become his position and dignity, and probably conduce more to the despatch of business and the public welfare, if he hunted and shot less and spent more time in the personal direction of his administration." The political officer, having arrived at the capital, summoned a public durbar. At the hour and place appointed he was received with all that ceremonious politeness and deference which Oriental men of position use towards British officers. With a violent gesticulation which astonished his audience, and which, perhaps, was had recourse to in order to conceal his ignorance of reciprocal etiquette, the officer took his seat. Presently he intimated to the courtiers that they might retire. ("*Jao ir go*" was the expression he used.) I must tell you that this officer is well-known as one of the very worst linguists in the Political Department. He has a violent, blatant *bonhommie* which he introduces on all possible occasions. He speaks his, I was going to say *Khidmutgar* Hindustani, but "*Bootlere*" Hindustani, describes his hybrid *patois*, more accurately, with a strong Irish brogue, and he is utterly unacquainted with the forms of Eastern etiquette. To thoroughly appreciate what passed between the Political Agent and the young Chief, the story should be heard in the vernacular; but as this cannot be done I will endeavour to render the English equivalent for the strange words in which the delicate "hint" was conveyed.

"Now, Rajur, the British Government has heard of your goings on, You are an immoral man (*tum randibazee karte ho.*) You don't attend to your work. You do nothing but hunt and shoot. Now, take my advice. and leave off all such nonsense, and employ yourself with the business of the State, and the flower of labour will come out (*mehnut ki phool nikulega.*) Otherwise, I warn you, in accordance with the instructions I have received, that it will become necessary for the British Government to put the screw on you." The speaker at this point burrowed with his thumb into the ground, close to the young Chief's feet, by way of illustrating the process of punishment prepared for him by the Government should he fail to take the hint.

We believe that not one-half the care is taken that ought to be taken in the selection of men to fill these appointments.

***

MR. LOWE seems to have been guilty of a breach of the privileges of the Commons, in sending to the Press a letter addressed to him as Chairman of the Select Committee on Foreign Loans before it was presented to the House. The rule is so generally broken, that it seems preposterous to resent the breach in any case. We were guilty of it ourselves upon a large scale some years ago, as others of our contemporaries have been. It is odd that Mr. Disraeli should have lost his temper over the matter, and demanded to know who had given the letter to the press. Member after member rose, we are told, and delivered himself of language more or less offensive, and all kinds of nonsense were talked by usually sensible men. The only man in the assembly who appeared cool and collected was Mr. Lowe himself, the Member for the London University, who simply declined to give any information at all. In the end it was decided after two divisions, that the printers of the offending newspapers should be summoned to the bar of the House. Disraeli and Lowe cordially dislike each other, and we suppose Dizzy would have been glad to fasten a mark upon his adversary.

OUR LIBRARY TABLE.

The Management of Estates in Oudh—Captain Fendall Currie. Here we have in a brief and concise form the law as to, and practical hints for, the management of estates in Oudh attached for default or made over to the revenue authorities of the civil or rent courts under section 125 of the Oudh Rent Act. The work has been compiled from select cases and circular orders, the object of the author being to bring within as small a compass as possible, and to give in a consecutive form, the procedure on this subject contained in Act VIII of 1859, and sheet case rulings at present scattered about in several volumes. In fact Captain Fendall Currie has made reference easy on an important subject hitherto eschewed because of its intricacies.

On the best mode of providing Recruits for the British Army—. Captain J. C. Fife. This essay was written for the prize medal of the United Service Institution in 1874, and embodies a plan of recruiting and forming reserves, first advocated by the author in a pamphlet at the end of 1870, which may be summarised as follows:—1. Voluntary enlistment for the various forces, encouraged by every judicious means. 2. The Militia ballot to be enforced, effective Volunteers being exempt; also those electing to pay for this privilege. 3. The Militia to be ballotted to supply the regular Army for *war service only, voluntary enlistment failing.* 4. Substitutes not permitted for those drawn by either ballot, but persons *on payment according to their income, exempted from the ballot for the Militia.* The latter is the special feature of the entire scheme. Captain Fife believes that difficulties of detail would probably prevent the classes of incomes paying an equal amount for exemption from being small, and thus, as an extreme case, we might even find men with £100 a year paying as muuh as those with £1000 a year, or *those with incomes just exceeding £50 paying as much as those having* nearly £500. But any classification for payment in proportion to income, is fairer than none at all, for in the latter case the price of a substitute or of exemption is alike for poor and rich. If the principle is admitted in the first instance, perfection of detail will be approached after trial and experience. The expenses of a great organization are provided for by the payments. Substitutes, the disadvantages of whom are treated of in the body of the essay, are rendered unnecessary. A choice of methods of obtaining exemption is given, which would make the scheme as nearly a purely voluntary one as possible, and cause it to be regarded as one of "persuasion to serve" rather than of "compulsory service." The slight restraints and personal inconveniences which such a scheme as the above would cause, sink into insignificance when compared with the rigorous systems of Prussia and Russia, where all are liable to service in the Regular Army during peace or war, and substitutes or other equivalent modifying arrangements, are not permitted. The decisive periods of wars now often number only weeks instead of months or years, as formerly, owing to the perfection of organisation of one of the belligerents and to good communications; and we have the example of the huge French levies of 1870, to show the very small value of extemporised troops. "Let us then make preparations for the hour of trial, now that we have leisure to do so effectively. If it is long deferred, so much the better? Perhaps its being so may be due to our preparations, and in any case we are certain to gain in the dignity of our natural position, if not in solid advantage indirectly due to our increased strength. When it does come it will be found that we have set our house in order."

The Oriental—April. This Magazine continues to keep up its character as a budget of well selected Indian news and essays on Asiatic affairs. The editor is at present enlivening its pages with a modern tale called "Under Suspicion," which is being worked out well. General Sir G. Le Grand Jacob is noticed under the heading of Anglo-Indian Celebrities. He did his duty from first to last sedulously, conscientiously, and with great advantage to the State. But though he recognized the law of obedience in all his political as well as his military relations, he had, at the same time, the courage of his convictions; and placed on record sentiments alike honourable to his sagacity, his sense of justice, and his zeal for the honour and welfare of the Government. The causes of the Mutiny were not opaque to his vision. He foresaw the evils of the Inam Commission, which disallowed succession by adoption. He denounced our systems of legal procedure as unsuited to the native character. He protested against the too common practice of dealing with the millions of India without ascertaining their feelings, treating them, "on the one hand, as if they were mere savages; on the other, as though the laws that suit us must necessarily suit them." He objected strongly to the practice of bringing poor people great distances to appear as witnesses in courts of law, detaining them for a long time, and then sending them back, without compensation, to disseminate opinions unfavourable to our *modus operandi*. In fact, without

any morbid tenderness for classes with whose vicious features he was familiar, Colonel Jacob never lost an opportunity of dwelling upon the security to our rule which would be the inevitable corollary of justice in its most extensive application to the measures of Government. In a letter addressed to his brother, the Archdeacon of Winchester, the Colonel thus tells the real secret of the mutiny: "The mutinous soldiery were but the index of the native mind. Confident in their strength, and roused by an extraordinary incident, they were the first to move; but cunning emissaries, both Mahomedan and Hindoo, had been long sapping their fidelity, and preaching in secret the need of a struggle for their faith. It is unwise, nay, most hazardous, to conceal from ourselves the extent to which disaffection had spread—to speak of the great rebellion as only a mutiny of the soldiers. The greased cartridge was the match that lighted the mine, not the mine itself, as Colonel Edwardes would have us believe. In the apathy of routine we had forgotten the example af Vellore, where in like manner change was seized upon as a weapon by civil conspirators in the background. It is silly to pooh-pooh the prejudices of religion, however absurd they may appear to those of another faith. If we are to have Jew soldiers, we must prevent our Commissariat issuing to them pork rations."

Several articles are devoted to Chinese subjects, and there is a large number of reviews, and among them one of "Tara," which comes rather late in the day.

Indian Medical Gazette—May. As usual this valuable periodical is full of information and advice upon medical affairs and the sanitary condition of India generally. Cholera still claims a large portion of the *Gazette*, and Surgeon-Major Kellett contributes a paper on the treatment of the disease by sub-cutaneous injection of water. It is admitted that to supply the blood with water is the great desideratum in cholera cases. Dr. Aitken says, "The *post-mortem* appearances and order of symptoms show that the blood has a difficulty in passing through the lungs, mainly on account of its viscid and thick condition." Certain it is that the failure of the circulation commences from the periphery and in the finest vessels; and when there are no pulse and collapse is severe, the blood is chiefly concentrated in the large internal vessels. The above theory is strongly supported by the practical fact that several persons suffering from ascites and anasarca have recovered from attacks of cholera, the dropsy becoming absorbed during the progress of the disease; it therefore occurred to Dr. Kellett that if dropsy were artificially produced, good results might follow. The plan was tried in a few instances with some apparent success. The instrument used, however, was only a common quart pewter syringe, the nozzle of which was fitted into the cylinder of a hypodermic syringe; but even with this rough instrument several pints may be injected in a short time. A *pint can be thrown into the inguinal region in* twenty minutes. "In later experiments I used a zinc bucket or cistern of water raised a few feet above the ground, and which was further elevated as additional pressure was required; from this were led as syphons some ⅜ inch guttapercha tubes, several feet long, the lower ends being armed with large-sized hypodermic syringes (pistons removed). With this apparatus in two or three hours many gallons of water will pass into a body. The axillary and inguinal regions receive it most freely. Experiments on the dead body will at once show how easily water will pass into the connective tissue." Unfortunately, Surgeon-Major Kellett forgets to add what the results were.

There is a well-written article in the same number on medical superstition in Rajpootana, the following instance of the credulity of the *oi polloi* being given. A few months back, in the native state of Marwar, one of the principalities of Rajpootana, a man suddenly announced a cure for small-pox. And, strange to say, this person was not a high caste Brahmin, whom the people might be expected to follow and believe in, but one of the despised order of Chumars. The Chumar having found a peculiarly oval-shaped hole in a rock, declared that all children passed through this hole would escape the much dreaded disease. The news spread far and wide, and, as we are credibly informed, parents brought their children from near and far, even from a distance of fifty miles, in order that they might be passed through the rock, and become proof against 'Sitla.' The Chumar, beating a gong, seated himself above the hole, and for days received the alms and offerings of the deluded wretches. At last the Thakoor, or chief of a neighbouring village also brought his child, which was duly passed through the hole. It is not, however, an improbable supposition that out of the numbers of children previously taken there, some few might have been suffering from the disease which it was desired to prevent; and the fact of the malady breaking out among a concourse of people thus assembled is altogether in accordance with our knowledge of *variola*. Be this, however, as it may, unfortunately the Thakoor's child, on returning home, sickened, suffered from small-pox, and died. Naturally the deluded Thakoor was fully inclined for vengeance on the Chumar. But the latter appears to have been equal to the occasion, and to have thoroughly understood the bent of the minds with which he had to deal. He immediately declared that the child had been bewitched by a village woman, and the wrath of the Thakoor was as immediately turned from the Chumar to the reputed witch. The latter was seized under the orders of the Thakoor, and burnt with hot copper pice—a species of punishment formerly much in vogue in Rajpootana, and which, it would appear, has not yet entirely died out. It is satisfactory, however, to add, that on complaint by the woman's friends to the political authorities, the Thakoor himself was seized, and now, in durance vile, has time to meditate on the cunning manner in which he was deluded by the astute Chumar.

Report on the Burmah Baptist Mission.—Referring to famine in Tounghoo, a writer in this report says: "The sufferings which were reported of the Bghai department last year are now beginning to be felt among the Pakus. About one-half of the villages will scarcely have paddy enough left for seed in the coming year. The northern half of the district has been overrun by rats, and nearly the whole crop of rice has been destroyed. In the southern half it is reckoned that about half the rice crop has been spoiled. There will doubtless be great distress among the villages. The government have furnished relief works for the people. The government have rightly judged that it is better that the people should work for what they receive, or at least go through the form of work, than to receive it as beggars. It is not wise or best to give indiscriminately, nor is it wise to have rival plans which will interfere with the government system. If a part of the people receive gratuitous contributions from the different missionaries, a strife is awakened among the people which makes a sort of *auction* of their adherence to one or another. It also produces false hopes or discouragements to those who would work for the government, so that it may be understood that we are not presenting this distress as begging charity from the churches of other missions. There have been and will be cases of severe suffering, and it may be a few have or may actually die of starvation, but it will not be because there are no means provided for their sustenance, but through their own neglect or that of their friends. This will doubtless be remedied as the government system of relief becomes more complete and extended; and the able-bodied men and women are stirred up to provide by wholesome work for their infirm and suffering friends." Again, writing of the Tounghoo Bghai Karen Mission, another missionary states: "Famine has prevailed during the year throughout almost the entire mission, with the exception of the Mopgha tribe. Much suffering, however, has been relieved among the Christian population, by generous donations from all parts of Burmah, amounting in all to Rs. 2,219. Of this sum Rs. 355 was from private sources. The balance was contributed by the native churches. In some districts, however, the suffering among the heathen has been very great, and from carefully gathered evidence not less than 200 deaths from starvation have occurred, and not unlikely many more. The rats have again swept the whole hill country, and at the time of writing many villages have broken up; the inhabitants coming down to the plains. Over 600 of these unfortunate people are now employed on government relief works. Multitudes must desert their hills as the famine increases. As a consequence, churches and schools are breaking up altogether, and the outlook for another year is most gloomy. The native preachers have done all they could to encourage the people, and aid them. Many tours for preaching have been made, it is hoped not without good effect. The native preachers generally regard the famine as a judgment of God upon the Karen Christains for forgetting him. Taking the judgments of the children of Israel as an illustration, they, in their discourses, urge repentance and a return to God as a means of averting further chastisement. A few of the preachers, sadly pressed by the famine, have deserted their posts and returned to secular pursuits."

Sukshama Dnyan—Hurry Chund Chintamon. The author calls this pamphlet a "Hindoo Tract," the reason for the publication of which it is difficult to find. Mr. H. Chintamon begins by informing his readers of the startling fact that "man is born in an undeveloped and helpless state," and that his parents find it necessary "to feed and clothe him." The human body is then likened to a churn, to a chariot, and lastly to a "hubble-bubble"! To make the subject more intelligible, Mr. Chintamon introduces a dialogue between a Hindoo Guro and Seessha, a teacher and disciple, on the philosophy of knowledge. In reply to the question, what is your opinion of the doctrine of mortification, the teacher replies:—

Gu.—Idle folly. Can a man kill a snake lying hid at the bottom of a large dung-hill by hammering on the top? How is it possible to affect the spirit by mortifying the flesh?

See.—What is sacrifice?

Gu.—The word sacrifice is generally understood, in all nations of the world, of an offer to the Deity in the shape of some animal, which is killed either to appease the hunger or propitiate the wrath of God,—as if God was like man, capable of suffering either!

See.—This, indeed, I see is a m'stake; but what then is the real meaning of sacrifice?

Gu.—If you will but consider you will find that true sacrifice is the contrite heart, and passion is the animal which is to be conquered by application and perseverance in truth and virtue.

See.—What is repentance?

Gu.—Simply a change, the result of a true and complete knowledge of evil; for it is only blindness of mind which conceals from us the deformity of vice. Vice to be abhorred needs but to be known. Therefore there is no repentance unless knowledge effects that change.

See.—What is true happiness?

Gu.—True happiness consists in sound sleep and *Maithun*, for in these two natural states there is the greatest abstraction from the material universe, and the greatest indifference to all things.

See.—What is true love or friendship?

Gu.—An attachment material as well as spiritual—love to God and love to man. The Hindu proverb says, "Blessed! Blessed is he who doing his worldly duty neglects not his duty to God! Friendship should be like the coloured silk, which may be divided into a myriad pieces yet each retains its original colour."

See.—What is your opinion of the Deity?

Gu.—I have no knowledge. I am as a child groping in the dark of an unknown chamber; I only seem to feel that all is in him, of him, by him, and through him; that he comprehends all things but is not comprehended by any; that he is less than a grain of sand and larger than a sun; imperceptibly small yet immeasurably great; perfect in a peppercorn, yet pestered in an universe. In a word he is the first and the last, the centre and the circumference, yet without a circumference and without centre, without beginning and without end. He seems to me to be passive and active, spiritual and material, a father as well as a mother, a daughter as

well as a son. He is that Pan, or god of universal nature, whom we see in the fierce red glow of the fire, and hear in the gentle whispers of the wind.

NURSERY RHYMES.

(For the use of very Junior Civilians, N.-W.P.)

THE ADVENTURES OF MR. SUB-BOARD.

Young Mr. Sub-Board
He goes to his cup-board
To get his Patwaris some tape ; (1)
When he gets there
The cup-board is bare,
And so his Patwaris escape. (2)
* * *

He fired off a note
At the Board and said "See
"How your Bund-o-bust (3) eats up
"The N.-W. P." (4)

The Board said "You've hit
"The right nail, and the head
"Of Government must
Be at once con-sul-ted."

He went to His Honor
And begged for a Minute ;
His Honor said "Yes !
"But I trust you'll square Sinnett

"Who sneered at the last
"New department in Oudh
"In a style which we thought
"Should have not been allowed.

"Meanwhile I'll record
"My views on the matter,
"And rest quite assured
"Your exertions I'll flatter."

As good as his word,
At the end of November,
Of the late Government,
This prominent member

An of-fici-al paper
Submitted to India—
(Somewhat exercised
By Holkar and Scindia):—

"A provincial department
"Of Tables and Trade,
"Mál, minerals, et cetera,
"At once must be made.

"Eighteen hundred a month
"Will support its Director ;
"Now don't let me hear
"There's a single objector."

Thus flourished H. H. ;
Replied the G. G.:—
"I am pleased to approve
"For the N.-W. P.

"A project so vast,
"A direction so thrifty—
"Eighteen hundred a month,
"Tentage only two fifty." (5)

This was all very nice,
And the pay was delightful,
But no one foresaw
The catastrophe frightful,

By which poor Mr. Sub-Board,
From pillar to post,
In less than five years
Came to give up the ghost.

First he sought the Commissioner
Who, busy like most of us,
Briefly replied "*Sir* !
"*I'm only a Post-Office.*"

Then he ran to the Bench,
Where a dignified judge
Drawled :—"Experience assures me
"Patwaris are fudge."

"Thanks ! we've heard that before,"
Cried our baffled Director,
And a little he swore,
And addressed the Collector.

The Collector, a person
Of courteous retorts,
Said, "*The instant I get off*
"*My annual reports*

"I shall *so* be delighted
"To argue the point,
"Meanwhile I'd suggest
"That you call on the Joint." (6)

He rushed to the Joint,
In excitement distracting,
Who calmly observed
"How unlucky : *I'm acting*

"*For less than three months*;
"If I only were *pucka*
"How gladly I'd run
A regular mucker,

"At those beastly Patwaris
"And smash their resistance.
"Meanwhile,—might I mention
"The unpassed Assistants ?—

"Such *very* nice fellows,
"*So* anxious to learn ;
"With zeal like Ozokerit
"Candles, they burn."

This "fetched" our Director,
He bounced up at once,
Cursed Joint and Collector
And called on the 'Stants.

These poor little dears
Sighed "Sir ! we should be proud,
"If it wasn't for fear
"That we're going to be ploughed

"At the April Exam,
"So if you'll excuse us,
"We'll stick to our cram,
"Or else they'll abuse us."
* * *

And now, my dear boys,
You may all go and play,
We'll end these adventures
Another warm day.

(1) Notwithstanding doubts that have been entertained in exalted judicial quarters as to the function of the putwari, he is *not* the same as the pattidar. He is the village accountant. Read very carefully what your ex-e-cu-tive Boss says about him, and then you will be sure to score good marks at your next exam. "Only a short time ago, in his despatch of the 27th August 1874, the Secretary of State urged upon the Government of India the necessity of measures to secure the maintenance of correct and uniform agricultural records, and expressed the opinion that machinery already existed in the North-Western Provinces which only required systematic supervision to become really efficient. I am satisfied that this opinion is perfectly correct. A better working staff could hardly be found in any country than that which we possess in our patwaris or village accountants, but it has never been efficiently utilized. Year after year have thousands of *putwaris filed voluminous* records and statistics in the public offices, but through the want of a proper supervising agency, and a clearly defined and continuous purpose, the district officials have found it impossible to cope with the laborious task of testing their correctness or of superintending their preparation. The records are therefore untrustworthy and of little practical value."—Official Paper, Govt. Gazette, N.-W.P. 20th February, 1875.

(2) "The village accountants are, on the whole, an intelligent body of men, but very much remains to be done to increase their efficiency. The material is good, but wants to be properly moulded. Uniform arrangements are required for educating them and their successors, for preventing the appointment of incapable men, for maintaining discipline and enforcing obedience to orders, and for raising the efficiency of the whole staff to a standard level."

(3) "*Bund-o-bust*, an appalling monster, with the teeth of a Jabbar-"wock, the wings of a phœnix, and the claws of a Kalim-snatch. It is "always hungry and never dies. It ranges over Upper India devouring "stunted ryots, and despairing yeomen. It is ignorantly worshipped as "a *fetish* by Boards of Revenue and (with some exceptions), by the "picked men of a picked service. A fine specimen of the most malig-"nantly devilish type of Bund-o-bust yet discovered is still on view "near Ajudhia. It is there called by some the Demon of Unsettlement, "by others an equitable, buoyant, homogeneous, and popular Govern-"ment demand."—Glossary of Vernacular, Judicial, and Revenue Terms, compiled in the Department of Revenue, Agriculture, and Commerce.

(4) "Mr. Bach, the Officiating Secretary to the Board of Revenue, has estimated in the Note which he lately submitted on this subject, and which had been mentioned with approval by the Secretary of State in the despatch to which I have just referred, that the expenditure on re-casting records which had been rendered necessary only by the neglect to maintain correct ones, will amount to between £700,000 and £800,000 or about one-half of the total cost (inclusive of expenditure on Survey) of the re-settlement of these provinces. The same officer has represented, on behalf of himself and other officers of experience in settlement work, that their appraisements of land are imperfect and their assessments unequal and unfair, because information regarding the crops, irrigation, and cultivation of each village for a series of years is not procurable..... The facts stand out that a year of scarcity reduces a large portion of the cultivating community to a condition of severe distress ; that in some parts of the country the people are always underfed ; that throughout these provinces the majority of them are in debt to the money-lending classes. The fact is equally prominent that a large number of proprietors who bore up under the exactions of oppressive Native Governments have broken down or are breaking down under the demands of a Govern-ment whose intentions at least are infinitely more benevolent.—Official Paper quoted above.

(5) "The Governor-General in Council has read Sir John Strachey's minute with great interest, and I am directed to convey his cordial approval of the objects which His Honor has in view. His Excellency in Council is pleased now to authorise the appointment, for a period not exceeding five years, of an officer on a pay of Rs. 1,800 a month, and fixed travelling allowance of Rs. 250 a month."—Financial Department No. 449, dated 22nd January, 1875.

(6) "District Officers who may not have the inclination, who probably have not the necessary knowledge, and who certainly have not the time."—Official Paper.

NOTE TO CORRESPONDENTS.

OWING to great pressure on our columns this week, we have been compelled to postpone the publication of several interesting letters to our next issue.

INDIAN INTELLIGENCE.

BENGAL.

THE first of the concerts given by the Calcutta Orchestral Society came off on Saturday evening, and, as we anticipated, proved an unqualified success. The instrumental performances were beyond praise, evidencing careful study on the part of the musicians as as well as skilful training on that of the talented conductor.

THE *Hindoo Patriot* notices two remarkable cases of longevity among the Hindoo community. "Baboo Peary Chand Mitter's mother died last week at the age of 95 years. Another Hindoo widow in our neighbourhood died lately after completing a century. Such longevity is rare among males. Baboo Tara Chand Banerjea, of this city is dead. He attained the age of 75 years, and ordinarily we do not see Hindoos amongst the upper classes of native society in this town, who complete three-score and ten. Baboo Tara Chand was a man of active habits, and he retained his usual activity within six months of his death."

FROM all parts of India we hear of complaints about the great heat, those from Madras almost approaching wails. Calcutta is certainly not behindhand in the matter, although occasional showers tend to mitigate the nuisance for a few hours now and then.

THE only members of the Prince of Wales's suit at present positively settled to accompany him are Sir Bartle Frere, General Probyn and Lieutenant-Colonel Arthur Ellis, the equerries being Doctor Fayrer and Lord Suffield. Doctor Russell of the *Times* comes out as a special correspondent.

NORTHERN INDIA.

AN immense "rogue" elephant is troubling the peasants of Kheree. He has been in a *must* condition for the past two months, and a few weeks ago killed a man in Lucknow. In the grazing season he was sent along with the other elephants of the commissariat department to Mithoulee and his docility led his keepers into believing that he was recovering from his mad fit. But a few days back he commenced the first of a sad number of disasters ending fatally, by trampling to death his *chara-walla*. He then went in among the stalls of a number of other elephants and succeeded in freeing two other *must* elephants from their chains. He then marched to the surrounding villages, killing and injuring all that came in his way. Four unfortunate villagers and a woman and half-a-dozen oxen were trampled to death. A regular crusade has now been organized against the monster.

DEFALCATIONS of Rs. 18,000 have been discovered in the stamp department of the Deputy Commissioner's office at Akola. They are said to have been carried on for a series of years by the head native in the office, who has confessed.

A VERY interesting institution in the form of an Orphanage and Boarding School for destitute European and Eurasian children has been lately started at Lahore. It is supported entirely by voluntary contributions, and is the first institution of the kind in India. There are at present nearly a dozen girls and about twice that number of boys, who would be otherwise running about the bazaar.

TWO thousand two hundred and seventy deaths from cholera in Oudh are reported during the week ending the 5th instant. The mortality has been greatest in Baraitch, Gonda, Fyzabad, Sultanpore and Oonao.

THE Burmah Mission left Simla on Saturday last. The following are the officers composing it: Sir Douglas Forsyth, Envoy on behalf of H. E. the Viceroy and Governor-General; Lieutenant-Colonel Duncan, Madras Staff Corps, Member of Mission, and Captain Forsyth, 62nd Foot, Secretary.

THE Nerbudda Coal and Iron Company have issued their report for the year, and it is more favourable than usual. A dividend of 5 per cent. is declared out of legitimate profits, and the outturn of coals is said to be on the increase. The discovery of copper ore on the property is also alluded to. A slight movement in the shares has followed this news.

PREPARATIONS are already being made for the visit of the Prince of Wales. It is stated that Captain Biddulph has gone to Saharunpore to select horses from the depôt for the use of His Royal Highness, and that a large military camp is to be assembled at Agra or Delhi during the Prince's stay.

THE Annual Fine Arts Exhibition will be held in Simla at the end of September. Doctor De Fabeck acts as Honorary Secretary. The Seepee Fair, seven miles in the interior, came off on the 13th instant. The Viceroy and Miss Baring were present, giving a picnic to a large party.

MR. JUSTICE TURNER has been appointed to officiate for the Chief Justice of the North-West Provinces, Sir Robert Stuart, during his absence on privilege leave.

BOMBAY.

THERE is but little concerning the Baroda case in the English journals received by the last mail. The only notable articles upon the subject are in the *Army and Navy Gazette*, the *Daily Telegraph*, and the *Economist*. The first is written under the impression that the prosecution had failed, the preponderating opinions being against it, for the report which found its way by telegraph to the *Times* appears to have been accepted generally as a fact. Accordingly the *Army and Navy Gazette* announces itself as confirmed in its already expressed opinion, and is satisfied to find that the evidence which it described as unfit to warrant the committal of a pickpocket has not been held sufficient to condemn the Ruler of Baroda. The Government, the writer declares, has been misinformed and misled, and the deception is attributed to a great extent to Colonel Phayre, whose inquiries into the Gaekwar's private life are condemned in strong terms. The case, we are told, must be thoroughly investigated in Parliament; although the writer points out the fact, which we have ourselves anticipated, that Lord Salisbury having given his support to the Government of India, Her Majesty's Ministers cannot oppose an act of that Government; while the Opposition will naturally acquiesce, as Lord Northbrook is one of themselves and was appointed by the Government of Mr. Gladstone. Our contemporary concludes by saying: "The restoration of Mulharao to the throne may be a blunder, but it is the inevitable sequel of one of the most lamentable, if not disastrous, *fiascos* recorded in the annals of our Indian Administration. The British Army may yet have experience of the troubles to follow in the train of one national mistake."

SIR RICHARD MEADE had an interview on the 3rd instant with Sir Madhava Rao, who was afterwards introduced to Jumnabace. Everything is quiet in the city. Sir R. Meade has sent a circular letter to the Baroda Field Force, thanking them for their exertions and for their forbearance from blood-shedding while they were being insulted and pelted by the mob. No authoritative statement regarding the appointment of Anundrao to the *guddee* has yet been published. It is not known who is to be appointed, though there is every probability that one of the Khandeish branch of the Gaekwar's family will be nominated. Cholera is largely on the increase, and the troops have gone into a cholera camp.

IN a Bombay mill, children seven years old are employed from 5-30 A.M. to 6-30 P.M. in the hot weather, and for about an hour less during the cold season. Many of them, moreover, are compelled to rise at three in the morning in order to cook their breakfast, and reach their factory in time. The acting Manager of the Goculdass Morarjee Mill objects to any reduction in the hours of labor of the children; on the contrary, both he and the mill owners "would be glad" to see them increased. The mills are generally unventilated. And so intense is the heat in the rooms that new hands can remain in them for only a quarter of an hour at a time. The air of the "grinding and blowing rooms" is so thick with cotton fluff and dust, that the mill-hands, even when protected with a covering over the mouth and nose, have to be relieved at short intervals.

MAJOR EVAN SMITH, C.S.I., acts as Consul-General and Political Agent at Zanzibar during the absence of Dr. Kirk with the Sultan.

COLONEL PHAYRE has succeeded to the Bombay command *vice* Brigadier-General Gell, who has proceeded to Europe on furlough.

MADRAS.

THE rumours of Sir Richard Temple and of the Hon'ble Robert Bourke being probable Governors of Madras are without foundation, so far as is known at Simla.

THE *Madras Mail* publishes, as received from a Mahomedan, the following well-meant tribute of respect for the memory of Lord Hobart, and of sympathy for his Lordship's widow: "The not uncommon hand of death has distilled with febrile wings from amongst a *débris* of bereaved relatives, friends and submissive subjects, into the interminable azure of the past, an unexceptionably finished politician, and philanthropist of the highest specific gravity, who only a few days ago represented our most gracious Majesty the Queen in this Presidency. The hand of destiny has willed that he should be carried into the infinite azure of the past, when the incipient symptoms and buds of his fostered love and hope for the Oriental element were observed to be gradually blossoming. The Oriental mind was just in the incipient stage of appreciating his noble mental and moral qualities, and consequently can only confine itself to a prediction of what his indefatigable zeal would have achieved for it, had he remained within the category of the 'survival of the fittest.' Under the auspices of his limited reign, the Oriental mind has been relieved of the traditional *incubi*, to wit, the entire concentration and bestowal of favour upon the *favored race*, in the struggle for life. The picture of his elaborate peroration at the Presidency College, prior to his demise, showed, the due development of his undeniable impartiality, his broad and liberal-minded views regarding the education of the masses of the subordinate races. The native mind is perfectly satisfied that had he lived, he would have reduced these theoretical sentiments to practice; but as ill luck would have it, we will have to look to his future successor for the due execution of the same. It it futile for the native mind to ventilate anything relative to Lord Hobart's refined culture and unobstrusive character, as a versatile *littérateur* in public and his amiable and self-denying philanthropy in private life, which will leave their indelible traces behind. Suffice to say that his limited reign and spasmodic demise has completely clouded the promising sunshine of Oriental Bliss. His sudden loss is sincerely bemoaned by the native community in general, and the Mahommedans in particular, who can humbly offer the exclusive consolation to his bereaved Lady, by asserting that the symptoms of Oriental love he kept in the background, and incidentally ejaculated resulting in their favour, will for ever leave an indelible mark of respect for his loved name, and which will remain a home word saturating the dwellings of the native community from the lowest hearth, to the highly organised home. And in conclusion a few words of respect to the bereaved Lady, in whose grief the native mind fully shares and sympathises over. Her zeal, and kind patronage, has been fully appreciated by the various native schools, in which she took a commensurate interest with the lamented Lord Hobart, and will ever remain a remembered and loved benefactress, whose far fetched, and golden advice being so kindly bestowed incidentally upon insatiate minds in these various schools, is sincerely hoped will be duly assimilated, and bring forth fruit according to the love and respect of her name."

THE local Government is about to order a special enquiry into the circumstances connected with the accident at the bridge during Lord Hobart's funeral.

THERE has been another outbreak at the Trichinopoly jail. A party of convicts armed with some of the working implements within their reach, attempted to effect an escape through the large or outer gate. The police guard fired on the men and hit eleven of them, four being mortally wounded.

THE heavy weather in Ceylon has proved to be the first and probably greatest burst of the south-west monsoon, and a steady strong wind from the west has continued blowing since the great storm and heavy rain of the 18th-19th. Fifteen inches of rain—very nearly the average annual fall in England—fell in five days at Colombo. Much damage has been done to coffee blossom, but planters are not without hopes of "yet another,"—the May blossom.

THE future Governor of Madras and prospective Viceroy, Richard Plantagent Temple-Nugent-Bridges-Chandos-Granville, was born on the 10th September, 1823; married in 1851 the only daughter of Mr. Robert Harvey, of Langley Park, Bucks—and has issue, living, three unmarried daughters. The Duke is a widower. He was educated at Eton and Christ Church, Oxford; was Lord of the Treasury from February to December 1852, Lord President of Council from June, 1866, to March, 1867, Secretary of State for the Colonies from March 1867 to December 1868, and has been Lord-Lieutenant of Bucks since 1868. His grandmother was the sole remaining descendent of Mary, the Queen Dowager of France and sister of Henry VIII., whose issue, under certain contingencies, were named by Henry's will in succession to the Crown of England.

THE Mahomedans of Madras have held a meeting at which they resolved to present an address of condolence to Lady Hobart, and establish a memorial of their late Governor, in the shape of a scholarship, to be given to the Mahomedan Girls' School lately opened by her Ladyship.

BURMA.

AN attempt is being made in earnest to enter Western China by way of Burmah. Mr. Stevenson, who has been a missionary in eastern China for nearly nine years, and Mr. Henry Soltan, one of the Secretaries of the China Inland Mission, have recently sailed from Glasgow for Rangoon with the immediate intention of commencing work at Bhamo on the Burman frontier, to be extended as soon as possible into several of the nearer provinces of China Proper.

CAPTAIN COOKE, late Political Agent at Bhamo, has arrived at Rangoon, accompanied by the remnant of the unfortunate Panthays who had taken refuge in his Residency. One of these is the son of Tah-si-koon, who was murdered by the Chinese when Governor of Momein.

HER Majesty's ship *Briton* collided on her arrival at Rangoon with the steamer *Madras*, carrying away two of the boats of the latter vessel. Colonel Duncan, Colonel MacMahon and Major Sladen are to accompany Sir Douglas Forsyth to Mandalay with a guard of 70 men, two guns, and a complement of gunners.

THE King of Burmah's warlike preparations continue, but it is believed that nothing serious will result.

ASIA.

MR. WADE has demanded, and the Chinese Government has consented under pressure, that two foreign officers, accompanied by a Chinese official, shall proceed to Yun-nan with an Imperial passport to investigate the circumstances of Mr. Margary's murder.

SOME valuable observations were made in Siam of the total eclipse of the sun on the 6th inst., the sky being fine, though somewhat hazy. The English observers obtained several good photographs of the corona.

A NAVAL Court of Enquiry has investigated the circumstances attending the fatal collision between the steamers *Ocean* and *Fusing* off Hong-Kong. The proceedings occupied three entire days. The finding was to the effect that the instructions of the Board of Trade as to speed had been complied with by the master of the *Ocean*; though, considering the locality and thick fog that prevailed at the time, the Court were of opinion that the speed of the *Ocean* might have been still more moderated. The efforts of the master, officers and crew of the *Ocean* to save the drowning crew and passengers of the *Fusing*, and their care of the survivors, merited praise, and the certificates of the master and officers were returned to them. The non-entry of the occurrence in the official log was censured, and will, together with the slovenly manner in which the engineers' and ship's logs were kept, be brought pointedly to the notice of the Board of Trade. The voluminous evidence and the finding of the Court is to be transcribed and translated for the satisfaction of the Chinese authorities, who took the greatest interest in the proceedings, the Court being numerously attended during the investigation, by native officials of various grades. We are informed that one reason why the Chinese authorities took such interest in the proceedings before the recent Naval Court, was that the wives of two of the rice-mandarins drowned on board the *Fusing*, committed suicide on the receipt of the news of their husbands' death. They were residents at Soochow.

THE honesty of some of the Japanese lower classes appears to be becoming proverbial. Another "finding" case is reported in the *Gazette*, in which a teacher in the Eigo-Gakko, lost a pocket-book containing 140 yen and several important documents. Some three weeks afterwards, he received a notification from the British Consul requesting his attendance at the Central Police Station. On repairing thither, he discovered that his pocket-book had been picked up by a jinreksha coolie. The owner found every thing as he had left it, not a coin being missing. He rewarded the finder with 50 yen. As if to counteract the good impression thus created, the next paragraph describes seven burglaries in Yokohama in three days, besides several petty larcenies in private houses.

THE Hong-Kong papers speak warmly of Mr. Margary, and one suggests that, if the Indian Government see fit to read the Chinese a lesson, they have before them a field in which much credit can be acquired at a minimum of danger. The Chinese of Yunnan, like their countrymen elsewhere, simply require a lesson, and this lesson might be more easily taught them than some people would imagine. It is extremely probable that a threat of foreign interference would again rouse the whole Mahomedan population against the Government, which, in view of such a danger, might deem it prudent to enter into negotiations.

A NATIVE newspaper states that the Louchooans have been summoned to Yedo to answer for the offence of having paid tribute to China. According to the *Choya Shimbun* Japan is intending more reforms. H. I. Majesty has appointed Commissioners to investigate and report upon the present system of administration, and it is hoped that the country will benefit by the results of their labours. Ten persons have already announced their intention to contribute a display of Japanese specimens of porcelain, bronzes, lacquer-work, ivory, of the value of $184,000, to the forthcoming centenary Exposition at Philadelphia.

A LOCAL paper publishes a remarkable instance in illustration of the rapid way in which Japan is following Western customs, even in fiscal matters. It says, "A most important reform has been made this week in the taxation of the country. It consists in an abolition of the taxes on some two hundred and fifty articles, and the substitution for them of a tax on tobacco and saké. The annual revenue abandoned is about $1,200,000; while the revenue which the new taxes may be expected to yield is about $2,000,000."

THE body of another huge cuttle fish has been found by a Yokohama fisherman. The fish is said to have measured 12 feet long, and one of its arms was a foot in circumference.

LITERARY.

A NEW work on Labuan, Sarawak, and Borneo is in preparation, the joint production of Governor Pope Hennessy and Mr. B. A. Cody. Mr. Pope Hennessy, it will be recollected, was formerly Governor of Labuan, from which his services have been successively transferred to others of our colonies, his present appointment being to Barbadoes and the Windward Islands. Mr. Cody was his private secretary while at Labuan, where he has continued to reside for the last eight years.

THE sketches of the Indian Mutiny campaign made by Mr. E. Lundgren, who accompanied the army of Lord Clyde in the Oude campaign immediately following the relief of the garrison of Lucknow, and now the property of Mr. S. Mendel, are offered for sale, as a whole, and if not sold, the collection will be *disposed of by* Messrs. Christie, Manson, and Woods, in 271 lots, according to the catalogue. In the meantime the drawings are hung upon the walls of the rooms, and they form an exhibition which, if it were only to be seen on payment of the usual fee, would certainly meet with the greatest success. Nothing so interesting has ever been shown in the way of portraits of the great men who served their country in that most terrible time. In passing round the galleries such is the lifelike look and gallant bearing of these brave soldiers and civilians that we seem to be with the men themselves. Havelock looks out upon us with his deep-set, sad, grey eyes his hair and brow white with suffering. Sir Colin (Lord Clyde), with his thick curly hair and fresh coloured hardy features and blue eyes; Outram with his face of bronze and deep black hair; Sir W. Mansfield, with his sharp-cut Italian-like head; and Sir Hope Grant in open jacket and black tie looking more like a jolly tar than the great general he was—all live before us in a wonderfully attractive and striking manner. The younger men, who were the muscles and sinews of these chiefs, come out splendidly in the vigour and freshness they delight to call by their own peculiar military monosyllable "fit." No artist has ever been so happy in giving this look of the clear calm eye of a young English officer with the unquestionable air and presence of a gentleman. Some hundred or more are to be seen amongst these soldiers of the mutiny campaign. Some ladies appear among them, too; for there are Lady Outram, Mrs. Anne Ogilvie, who was at Lucknow in the seige, and Mrs. Barbor, who was a prisoner in Lucknow. The picturesque sketches of natives, of the army on the march, and especially of the native ladies and dancing girls, are admirable in the character and the beauty of the colouring. Mr. Lundgren "seems to have seized the peculiar grace of the Indian girl in her gauzy dress, and decked with her splendid ornaments, with more complete perception of the native beauty of these houris than any painter." His sketches are full of charm and vigour combined, telling once more the truth that the finished picture is but the laboured copy of the sketch. Mr. Lundgren was, we are informed, especially sent out at the expense of the late Mr. Agnew, of Manchester, to make these sketches with the intention of reproducing them in some published form—an intention which it is much to be regretted has not yet been carried out. Mr. Mendel, in the end, became the purchaser of the whole series, and until the present time they have not been seen except privately.

MR. WILLIAM SIMPSON, the well-known and accomplished artist of the *Illustrated London News*, is to be sent to India on the occasion of the Prince of Wales's visit.

COMMERCE AND FINANCE.

FRIDAY NIGHT.

BUSINESS in the Calcutta Money Market has for some time past been exceedingly quiet, although there has been a steady and continual drain upon resources, which the Bank of Bengal has been called upon to supply, at a time when its balances are in a very

weak condition. The result has been considerable tightness, and a general enhancement of rates. The Directors of the Bank, at their last meeting raised their charges one per cent. all round, which fixes the miminum rate at nine per cent. The figures of the Bank statement as compared with the previous week show that the public demand has considerably increased, and that it has been chiefly supplied by an augmentation of the Treasury balances, the general position being weaker.

The announcement of the issue of the new four per cent. loan of two and-a-half crores took the commercial world somewhat by surprise. Although it has been known that the loan was pending, it was generally thought that its issue was being delayed for a time until the money market was in a more favorable position ; and the financial success with which the last loan was launched gave confidence to the expectation that the Government was prudently waiting for an opportunity of placing the present one with similar advantage. We find, however, that the moment chosen is one when money is tighter than it has been for many months past, and rates are probably as high as they are likely to be for some time to come, there being every reason to hope for an easier market shortly.

Government paper has fallen during the week about three-fourths per cent., and rates close as follows :—

4	per cent.	...	Rs.	101-10 to 102
4½	Do. 1872	...	„	102-12 „ 103
5½	Do.	...	„	108-12 „ 109

Exchange on London is still much against remitters; the following are the closing quotations for Bank Bills :—

At 6 months' sight	...	1-10⅞*d.* to 1-10 7-16*d.*
At 3 months' sight	...	1-10⅞*d.* to 1-10¼*d.*
On demand	...	1-9 15/16*d.* to 1-10*d.*

The share market has been very inactive. Jute scrip is somewhat weaker, but Tea shares generally are in favor. Bank of Bengal shares have been dealt in at good rates, and National Banks have to a very considerable extent recovered the position they lost on the issue of the last report.

STOCKS AND SHARES.

Transactions reported from 7th to 13th May.

GOVERNMENT SECURITIES—

LATEST TELEGRAPHIC NEWS.

10TH.

London, 8th May.

IN the House of Commons, last night, Mr. Disraeli announced amotion that the House should decide definitely upon the exclusion of strangers during debates. He also announced that to free the Government from charges of slackness and mismanagement, the Ministry were determined to pass the measures now pending, even if it proved necessary to advise Her Majesty to prolong the session. In the meantime the present intention is to adjourn on the 25th instant. The Peace Preservation bill has passed through Committee.

The steamship *Schiller* with the homeward Australian and New Zealand mails, *viâ* San Francisco, has been totally wrecked off the Scilly Islands. Out of 260 passengers only a few were saved.

The *Berlin Post* considers the Belgian note meaningless and unsatisfactory.

In the House of Lords, after a protracted debate, the Regimental Exchanges Bill has passed a second reading by 137 against 70 votes. In the House of Commons, last night, a debate was held on the budget resolutions. Messrs. Gladstone, Lowe and Childers criticised the budget, which was defended by Sir Stafford Northcote, and the resolutions were adopted.

Obituary—Sherard Osborn.

12TH.

London, 10th May.

THE Heavy Mails, *viâ* Southampton, which left Calcutta April 9th, arrived yesterday.

THE Duke of Buckingham has accepted the Governorship of Madras.

The flying squadron will escort the Prince of Wales to India.

The steamship *Schiller* went ashore in a fog ; 311 lives were lost, and 44 persons and a portion of the mails were saved.

The *Caledonian*, homeward bound from Bombay, has gone ashore near Cape de Gaeta, with her hold full of water ; the crew were saved.

FRAGRANT ROSILINE MOUTH-WASH.

A DELIGHTFUL preparation, invaluable for cleansing the mouth, preserving the palate, and purifying and sweetening the breath. It readily dissolves all tartarous incrustations on the teeth and causes their firm adhesion to the gums, at the same time imparting to the teeth a pure and pearl-like whiteness.

PREPARED ONLY BY
H. C. HOBSON & Co.,
London Dispensary, Umballa.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½ lb. and 1 lb. tins, labelled thus:—

JAMES EPPS & CO.,
HOMŒOPATHIC CHEMISTS,
48, THREADNEEDLE STREET, & 170, PICCADILLY.
Works—EUSTON ROAD, AND CAMDEN TOWN.

Photographs and Books containing over 500 designs upon application. Indents must be sent through an English house or covered by drafts 60 d/s.

DISSOLVED PERUVIAN GOVERNMENT GUANO,

PREPARED BY

OHLENDORFF & Co.,

LONDON, ANTWERP, HAMBURG, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of Non-Volatile Ammonia.

20 „ Soluble } Guano Phosphate.
4 „ Insoluble }

Price £14 per ton for 30 tons and upwards.
„ £15 „ under 30 tons.

Delivered Free at any of their Depôts in the United Kingdom.

TERMS.—CASH.

THIS Manure is prepared from *genuine Peruvian Government Guano.* The result of its special treatment is, that the Ammonia is fixed, the Phosphates in the Raw Guano rendered soluble, and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Planter with a *Guarantee* of its composition, and is, in fact, the richest, and, considering the quality, the cheapest *Guaranteed Manure* at present in the market. *Its* fertilizing properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

APPLICATION OF DISSOLVED PERUVIAN GOVERNMENT GUANO TO COLONIAL PRODUCE.

INDIGO.

Dissolved Peruvian Government Guano will give the plant greater strength to resist unfavourable influences and the Planter in thus developing the crop will be amply repaid the cost of the manure by the increase and superior yield of Indigo.

Dissolved Peruvian Government Guano is a highly concentrated Manure offering a large and guaranteed percentage of fixed ammonia and soluble immediately available phosphate of lime, and may therefore be recommended with the utmost confidence for Indigo plantations. A quantity of about 3 cwts. per acre will be found materially to benefit and increase the crop. This quantity may be increased with advantage if the land be impoverished by previous crops.

RICE.

We would strongly recommend the use of 2 to 3 cwts. per acre for Rice; for, although irrigation is generally solely relied upon as a means of producing a good crop of Rice, there can be no doubt that, in addition to irrigation, 2 or 3 cwts. of *Dissolved Peruvian Government* Guano per acre will be highly beneficial.

TEA.

We are confident that Dissolved Peruvian Government Guano will be highly esteemed as a Manure for Tea, and we recommend, say, 3 cwts. per acre, mixing the Dissolved Guano first with vegetable ashes or dry soil so as to secure its uniform distribution. If the land is very poor, and exhausted by previous cropping, more Guano may be used with advantage.

SUGAR-CANE.

Dissolved Peruvian Government Guano produces heavy crops of well-matured Canes, rich in juice, yielding a high percentage of crystallizable sugar, without detriment to the soil. From 3 to 4 cwts. of Dissolved Peruvian Government Guano per acre is a good dressing for Sugar-cane. A few trials of Dissolved Guano in comparison with other manures will soon convince the Planter that no manure yields so large a profit *in* the increased production of sugar as Dissolved Peruvian Government Guano.

COTTON.

Dissolved Peruvian Government Guano meets the requirements of the Cotton Plant, inasmuch as it furnishes all the elements of fertility which are calculated to promote the luxuriant growth of the same. If the increase in quantity be made the chief object, 4 to 5 cwts. of Dissolved Guano per acre will prove most advantageous; but if greater care be given to the fine quality of the Cotton, the use of 2 to 3 cwts. of Dissolved Peruvian Government Guano, together with 2 to 3 cwts. of mineral superphosphate, per acre, will be found to answer better.

JUTE.

3 to 4 cwts. Dissolved Peruvian Government Guano cannot fail to materially increase both the quantity and quality of this crop which is becoming of more commercial value every year.

RAPE AND LINSEED.

Colza and Flax exhaust the land very rapidly, and for this reason require liberal treatment with manure. Experience has shown that Dissolved Peruvian Government Guano, is the most efficacious manure that can be used. Mixed with diluent as we recommend sow the Dissolved Guano broad-cast, and harrow it in with a light harrow about a week or a fortnight before the rape or linseed is sown. 4 cwts. of Dissolved Guano is a fair dressing per acre on land of average fertility. On poor soils 5 to 6 cwts. will give a more profitable return than a smaller dose.

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages:—

First.—Extreme lightness, being completely self-supporting.

Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.

Thirdly.—Absolute immunity from pain.

Fourthly.—Nature so closely imitated, that detection becomes an impossibility.

Parties residing in Calcutta and the Suburbs attended at their own residences if desired.

Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.

Artificial Teeth repaired and returned by following post.

J. CORFIELD & CO.,

LIFE DEPARTMENT.

The Life Funds are free from any liability to the Fire Department by the Company's Acts 33 and 34 Victoria. Session 1869-70,

Accumulated Funds irrespective of the Paid-up Capital £2,551,589-16-7

Annual Revenue from Premiums and Interest 360,625-18-9

At the last Quinquennial Investigation and Division of Profits for the period ending 31st December 1870, the Surplus Fund divided amounted to £182,274 5 2

The value of the loading reserved for Future Profits and Expenses amounted to £601,554 0 0
Besides which there were reserved for Contingencies, &c. .. 33,925 6 2

Making a Total Reserve of £635,479 6 2

During the five years preceding 1870, the Company transacted the following new business:—

NO. OF POLICIES ISSUED.	SUMS ASSURED.	PREMIUMS.
£4,567.	£4,132,141.	£133,279 16 5.

A Bonus was declared upon the Policies of the Company on the Participating Scale, at the rate of £1 5s. per cent. per annum, which in many instances was equal to £1 19s. per cent. per annum, on the original sum assured, the principle of division being to declare the Bonus not only on the original sum assured, but also on all previous Bonus additions.

THE RATES OF PREMIUM are moderate and generally LOWER than those of other Offices.

REDUCTION TO ENGLISH RATES without Medical Certificate or fresh examination, *from the date of leaving Alexandria, or Port Said for Europe.*

NINE-TENTHS OF THE WHOLE PROFITS in the Life Business are divided amongst the assured in the Participating Scale every FIVE YEARS.

THE NEXT DIVISION OF PROFITS WILL BE MADE AT 31ST DECEMBER 1875.

All Policies on the Participating Scale opened on or before that date, will share in the Fund then to be divided, which will consist of the Profits made during the previous Five Years.

The following Gentlemen have been appointed, with all the usual powers, as

Local Board of Directors:

F. S. Collis, Esq., Officiating Administrator-General.
Capt. H. P. Lovell, Supdt., P. & O. S. N. Co.

BORRADAILE, SCHILLER & CO.,
3, Fairlie Place, Calcutta.

Eastern Bengal Railway Company.
Through service to Chuttuck, Sylhet, & Cachar.

The Steamer "*Queen of Seebpore*" and Flats, plying in conjunction with this Railway, will, until further notice, perform the service to Chuttuck, Sylhet, and Cachar every third week, instead of fortnightly as heretofore, commencing as from Sealdah on Saturday the 22nd current.

Goods for despatch should be delivered at the Sealdah Terminus by 1 P.M. of the Thursday previous.

Full particulars as to the dates of departure, rates and fares, &c., may be obtained of the Enquiry Officer, Sealdah Terminus, or of the District Agent at Dacca and Naraingunge.

AGENT'S OFFICE, Sealdah Treminus, 10th May 1875. (Sd.) GEO. LOW CALDER, *Acting Agent.*

Eastern Bengal Railway.
NOTICE.

WEEKLY Communication by Railway and Steamer between Calcutta, Dacca and Naraingunge for Sylhet, Cachar, Tipperah and Eastern Districts.

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7-30 A.M. or 8 P.M. Train on the Saturday preceding the departure of the Steamer, and goods for despatch should be delivered at the Sealdah Terminus before 3 P. M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. RAILWAY, AGENT'S OFFICE, 17th November, 1873. FRANKLIN PRESTAGE, *Agent.*

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S
ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt*, by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort ; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the facsimile of our signature.

THE great Eastern Remedy for all Diseases of the Skin, such as Herpes, Scabies, Eczema, Scurvy, Rupia, Pustular Eruptions, Acne, Ringworm, Lichen Scaldhead, Scaly Eruptions, Lepra, Elephantiasis, Freckles, Syphilitic Eruptions, Boils, Blanes, Pimples, Blotches, Foul Ulcers, Cancer, Indolent Tumours, Cancerous Tumours, &c. &c.—is

DR. E. J. LAZARUS'S
ESSENCE OF NEEM.

Full directions accompany each bottle. Beware of Spurious imitations.

Prepared only by Messrs. E. J. Lazarus & Co., at the Medical Hall, Benares, from the Original receipt of Edward John Lazarus, M.D., and sold by them and by all Medicine Vendors at 4 Rupees each bottle.

ASSURANCE COMPANIES.

THE STANDARD LIFE ASSURANCE CO.

Established 1825.

THE FUNDS amount to upwards of FOUR MILLIONS, FOUR HUNDRED THOUSAND POUNDS STERLING, and are invested chiefly in the Security of Land in the United Kingdom.

THE INCOME exceeds SEVEN HUNDRED THOUSAND POUNDS per annum.

THE ASSURANCES IN FORCE amount to upwards of SEVENTEEN MILLIONS STERLING.

THE STANDARD is one of the oldest and most successful of the Life Assurance Institutions of Great Britain. Its Profits have been very large, and persons assured have derived very important benefits from their connection with the Company. It has also acquired a marked character for liberal management, being the first Institution which relieved Policies of Assurance from restrictive and unnecessary conditions, and gave such contracts increased value and stability in other ways.

THE ANNUAL REPORT for the past year, bearing reference to the very onerous and responsible duties which the maintenance of the Company at its present high standard of progress and accumulation devolves upon the Directors, may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

5, Hare Street, Calcutta, 8th September 1873.

MANCHESTER FIRE ASSURANCE CO.,

ESTABLISHED 1824.

98, *King Street, Manchester;* 96, *Cheapside, London;* 35, *Castle Street, Liverpool*; 80, *Buchanan Street, Glasgow*; 12, *Bennett's Hill, Birmingham.*

BOARD OF DIRECTORS.

JAMES CHADWICK, ESQ.—*Chairman.*

DAVID REYNOLDS DAVIES, ESQ.—*Deputy Chairman.*

John Barratt, Esq. | John Halliday, Esq.
Sir Edmund Buckley, Bart., M. P. | Wm. Henry Houldsworth, Esq.
John Chapman, Esq. | Alfred Lowe, Esq.
Thomas Barham Foster, Esq. | John Napier, Esq.
Henry Michael Steinthal, Esq.

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,

ROYAL INSURANCE COMPANY,
CALCUTTA.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836.

And specially empowered by Parliament.

OFFICES: DALE STREET, LIVERPOOL,

Cornhill, and Charing-Cross, London.

At the Annual General Meeting of the proprietors, held 24th February 1875, *in the Company's Office, Liverpool, the Report* of the Directors for the year 1874 was read, and it showed that:—

The Fire Premiums were	£ 1,082,521
The Life do.	244,607
The Annuities payable	59,511
The Invested Funds	4,089,747

For Tables of Rates and full particulars both for Fire and Life Insurances apply to

GILLANDERS, ARBUTHNOT & CO.,
Agents, Calcutta.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policyholders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 40 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in *Europe:*
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in *India.*

Available Funds	**£ 971,942 10 10**
Annual Income	**£ 169,497 15 8**

Claims promptly adjusted on proof of Death.

Total of Claims Paid Since 1834, £ 2,070,348 17 1

Copies of the last Report, Proposal Papers, &c., on application to the Society's Sub-Agents in the principal Mofussil Stations or to

Established in 1820.

C. LAZARUS AND CO.,

(Incorporated with SHEARWOOD & Co.)

CABINET MAKERS, UPHOLSTERERS, BILLIARD TABLE MANUFACTURERS, AND GENERAL FURNISHING CONTRACTORS.

BY APPOINTMENT

TO HIS EXCELLENCY THE VICEROY AND H. R. H. THE DUKE OF EDINBURGH,

56, 59, 60 & 61, *BENTINCK STREET,*

CALCUTTA.

THE numerous testimonials received by C. Lazarus and Co. tend to prove that their

BILLIARD TABLES

are now the only ones appreciated in India, being constructed on an entirely new principle introduced by C. Lazarus and Co.

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and *Painless Dentistry*

Afford the following advantages:—

First.—Extreme lightness, being completely self-supporting.

Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.

Thirdly.—Absolute immunity from pain.

Fourthly.—Nature so closely imitated, that detection becomes an Impossibility.

Parties residing in Calcutta and the Suburbs attended at their own residences if desired.

Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.

Artificial Teeth repaired and returned by following post.

J. CORFIELD & CO.,

Surgical and Mechanical Dentists, Pharmaceutical Chemists, &c. &c.

11a, Government Place, Calcutta.

(*Under Royal Patronage.*)

JOSEPH GILLOTT'S

THE FAMINE.

IV.

WE pointed out in our last issue that the result of the State conduct of the operations for the relief of the famine, stands at last disclosed in the fact that every pound of rice that reached the people thereunder, was laid down at the rate of 5 seers the rupee. We doubt even then whether we have not understated the cost, from the enormous amount of pillage, wastage, and damage that are known to have attended these operations. To find out what the cost of the grain really was, we require to know the precise quantity of food that actually reached the peoples' mouths, and the whole outlay that was made in the purchase, freight, transport, and distribution of it. From the accounts published, we see that it must have cost 7 rupees a maund; while we know at the same time that the private traders of Calcutta, the Eastern districts, the North-West, and the Punjab were simultaneously laying down *their* supplies with a profit, at 3 rupees per maund. Now, if we ask for the explanation of this uncomfortable disclosure, we fear it may be given in a word. Lord Northbrook believes implicitly in himself, and in no one else; and so he entered upon the work of carrying the people through the famine, under the conviction that he had so much knowledge of trade and finance, and such strong mercantile aptitudes generally, that he could manage the vast operations in which he embarked, more economically and more efficiently than the whole mercantile community put together.

Convinced that no one could give him any counsel worth listening to, he took upon himself, without a misgiving, operations that never *can* be so managed but at ruinous cost. He was his own financier, his own merchant, his own carrier, his own warehouseman, and his own mahajun. And the result of it all is what might have been told beforehand. He really believed that there was no man in Calcutta who could show him how to finance the three or four millions required for these operations, without disturbing the money market: and the result of *that* was an immediate panic, and money at 18 per cent. He believed fully that he could buy and ship rice at Burmah and Saigon, far more economically than the English merchants of Calcutta could for him—although *they* had all the machinery for such operations in full working order, and he none. And the result of *that* is, the present disclosure that, somehow or other, these improvised arrangements have cost the country a waste of, probably, two millions sterling. It is unpardonable that so late in the day as this, any Government in the world should be led away by the notion that in mercantile operations of an order like this, it is wise to ignore any private mercantile enterprise whatever that can be impressed into the public service.

Primâ facie, what are we to say to the broad fact that the mercantile machinery at the disposal of Government in this city, with its vast ramifications throughout the world, was ignored all through these operations? The men whose very business it is to conduct such operations for all the world could not possibly be trusted to do anything for the State. They no doubt could buy rice satisfactorily for the London market, but would be sure to break down if they were asked to do so for the Government. The cargomen and warehousemen of the city might conduct very well the forty millions of private trade on the Hooghly, but could not reasonably be expected to land and dispatch the three or four millions worth of rice that the Government was bringing into the river.

This total ignoring of the existence of the mercantile machinery and resources lying at its hand, is one of the facts that at once strike us in looking back on these operations. The "skilled labour" of the city was allowed to sit twiddling its fingers and thumbs, while the Viceroy and his Private Secretary were acting as merchants, shippers, carriers, financiers, warehousemen, and porters. Nothing could justify such a course but absolute success; while these amateur operations have ended just as they might have been expected to end—in the most frightful cost. It is necessary to insist upon the fact, because there is a plain disposition to regard it all as a triumph of administrative power, and to "pigeon-hole" the record of it for our guidance on the next occasion, while the only proper endorsement to put upon the record may really have to be, "*How* NOT *to do it!*" "If you want to meet such a calamity rightly another time, beware how you ignore the machinery of private trade in your operations. We laid down our rice in 1873-74 at a cost of 5 seers the rupee, while private traders were laying it down at 11 to 14 with a profit."

The other lesson to be remembered in connection with the famine, is the error of the Government in being so slow to discern what had really befallen the people. The seasons are so clearly defined in Bengal, and the dependence both of the aghanee and rubbee crop upon the autumnal rains so absolute, that when those rains have failed, there is no excuse whatever for any man's failure to discern what is coming. The same cause that destroys the aghanee (or rice crop of December) is fatal to all hope of a successful rubbee, or spring crop. Sir George Campbell himself was somewhat slow to wake up to this fact, although it had been made clear by the events of 1865-66. He discerned it practically, however, before the Supreme Government did so, and was proportionately alarmed. The very same mistake was made in 1865-66, and in the great famine of 1770, last century. The connection between the failure of the aghanee and of the rubbee crops is a direct one, the same cause producing both. And this undoubtedly is the first lesson that requires to be learned—that we do not require to wait till January to know what is coming, but that the fate of both harvests is sealed by the middle of November. We are ourselves disposed rather to say, the middle of October. *For there is no normal rain-fall after the middle of October.* If rain fall after the 15th October it is abnormal, and does not come once in 20 years. Now these are facts, and it is necessary to insist upon them.

When Warren Hastings, on 23rd November 1769, wrote:—"Owing to an uncommon drought that has prevailed over every "part of the country, in so much that the oldest inhabitant "never remembered anything like it, there is a melancholy pros-"pect of universal distress before us," and added: "This dis-"tress cannot be alleviated for six months to come," he was counting upon the spring crop to rescue the people fom starvation. The hope proved fallacious. The spring crops did not arrest the course of prices for a moment, but they continued to rise, just as they did in 1866 and in 1874, until the bhadoi harvest in September came to the rescue of the people.

If, therefore, we would learn the teaching of these calamities, they warn us with great distinctness that no real help can reach the people when the autumn rains have failed, in the way of a fresh harvest for ten months. The Council of 1769 made every effort to stimulate the people to sow unusual crop of pulse, gram, barley, and vegetables; and after all they wrote on the 31st August 1870: "Our miseries have been daily increasing "to the present period, nor do we view relief (even now) but as "a distant prospect." And it was not until the 14th November in the next year, that it is recorded that the famine had entirely ceased, and that the embargo was taken off the export of grain. The course of events was precisely the same in 1866

and again last year. *And it ought to have been as clearly seen by the Government early in November*, as it was three months later. No one can read Sir Richard Temple's minute without seeing that it was not, until the very end of January, that the Supreme Government rightly apprehended the position of the people. The minute indeed almost frankly avows that this was the case. And it was the parent as we reasonably fear, of the heavy expenditure that followed, while it might have resulted in the depopulation of entire tracts in Behar. For it was a case of touch and go for weeks, whether time was left to head the calamity. It was most fortunate for the country that there was a man of Sir Richard Temple's energy at the service of the Government in the emergency. Had he been a slow man, or a fussy one, or wanting in *coup d'œil* and instant decision, the time that had been lost might have been fatal. This in fact is Sir Richard Temple's really great quality. His claim to respect as an administrator, is his truly marvellous energy when real work has to be done. And it is of all others, perhaps, the most valuable quality an Indian statesman can have whose life may be a constant recurrence of emergencies.

Finally: it is important to remember that throughout the famine a conjuncture of the most favourable circumstances occurred, not one of which could be foreseen. Thus the grain stores in the hands of the people proved to be much more considerable than there was any reasonable ground for believing, when the Government was preparing to meet the calamity. The course of events showed that the fears which were entertained upon this head, by every one who looked into the situation, were really groundless and that in spite of anything but generally favorable harvests in the two preceding years, there were large reserves of food in the country. In the second place, it was discovered that immense accumulations of grain were lying in the North-West and the Punjab, and these stores came pouring down in apparently exhaustless supply, night and day, from above Buxar. To the surprise of every one, moreover, the fact disclosed itself, that the foreign rice markets were everywhere in a state of glut, and that the world could dispense altogether, if necessary, with the Bengal supply for a full season. Then there was the unprecedented harvest in Burmah. Then again, the fact that the railways showed a power of transport in the emergency, of which the railway officials themselves may have been conscious, but of which the outside world believed them incapable. And finally there was the deep consolation of an abundant autumn harvest in September. Now when the coming calamity disclosed itself in October 1873, not one of these facts, except that of the Burmah harvest, was known. A conjuncture of the most fortunate circumstances came to the relief of the people; and if we are to gather up the lessons which our procedure should teach us, it is necessary to reflect upon what the result might have been under other circumstances. Suppose, for instance, the food reserves in the hands of the people had really been as small as the British Indian Association and every reflecting person believed them to be; or that the North-West had been itself in distress for food, as it was fully believed it would be, or again that the rice markets of the outside world instead of being glutted were starved, and that Calcutta was being drained heavily for their necessities at any price; or that the railway had proved inadequate to the strain upon it, and had broken down,—What *then* should we have thought of the three months' fatal delay from October to January, and what might not have been the result of it? It is most necessary to insist upon these considerations, because both in the Official Minute and Resolution under review, the fact that these three months were allowed to glide away is held to have been no fault whatever. Indeed it is laid down as a sort of vindication of the delay, that at such periods the Government is bound not to act prematurely. But what *is* premature, is begged throughout. We say that the history of these calamities shows clearly, that their course may be seen with certainty about the third week in October, and that to wait upon Providence until the end of January, is to court a calamity of the most frightful order. We think that this conviction must by this time be shared by the Government itself, and it would have been better to have avowed it, than to have left the lesson to be insisted upon by the press.

OUR POLITICALS.

SIR Henry Lawrence wrote many years ago in the *Calcutta Review*, "If there ever was a device for securing mal-administration, it is that of a Native Ruler and Minister, both "relying on foreign bayonets, and directed by a British Resident. Even if all three were able, virtuous and considerate, "still the wheels of Government could hardly move smoothly. "If it be difficult to select one man, European or Native, with "all the requisites for a just administrator, where are three, "that can and will work together, to be found? Each of the "three may work incalculable mischief, but no one of them *can* "do good if thwarted by the other. It is almost impossible for "the minister to be faithful and submissive to his prince, and "at the same time honest to the British Government, and how "rarely is the European officer to be found, who, with ability "to guide a native state, has the discretion and good feeling to "keep himself in the background, to prompt and sustain every "salutary measure within his reach, while he encourages the "ruler and his minister by giving them all the credit, to be the "adviser and not the master, to forget self in the good of the "people, and of the protected sovereign. Human nature affords "few such men, and therefore were it for no other reason we "should be chary of our interference." And the words thus quoted from Sir Henry Lawrence's pen, still hold good. There are indeed few political officials, both sufficiently capable and sufficiently modest to meet the ideal of a political officer as sketched above. And when this rare union of qualities does exist, the policy of the foreign office—or we might rather say the "masterly inactivity" of the foreign office—scarcely permits the officer accredited to a native court, a fair field. If he keeps himself in the background, it soon comes to be supposed that he possesses no influence, while the fussy agent who foments and excites disputes for the mere purpose of an opportunity of the display of the *fortiter in re*, often receives a measure of applause and commendation, which he in no way deserves. We have now been going on for many years without any settled or declared policy, with regard to the native States of India; and it would appear that the views of the foreign office are still in accord with those expressed long ago by Lord Dalhousie, who, by the medium of the then Foreign Secretary, wrote, "So "that the Rajpoot rulers pay their tribute to us, and abstain "from serious aggression on their neighbours, His Lordship is "quite content with the general state of things in that part "of India being such as it is at present." And so until the present period, this Fabian policy would appear to predominate; rarely broken at intervals, when, as before remarked, some political official more astute than his compeers has seized an opportunity of making much out of little, and of asserting the paramount power for his own glorification. Our political agents and residents may be broadly divided into two classes, those who interfere in all matters connected with the durbar to which they are accredited, and who are therefore constantly before Government; and those who, choosing the more flowery path, join hands with the durbar, and almost ignoring the fact that they are servants of the British Government, consider their interests identical with the views and desires of the Chief. And we are scarcely prepared to say which class are the least efficient. Constant interference in petty details, and continual proffer of unsought advice, is certainly *not* the line of conduct calculated to promote harmony of relations between the Supreme power and the feudatory States. And thus we find native rulers occasionally goaded into the desperation of even soliciting the British Government to take the full management of their estates. They cannot please the agent, and they cannot please the foreign office, because their manner of conducting public business is more in accordance with long-established custom and of a more despotic nature, than that which we in our superior wisdom are prone to imagine the correct method.

It is even now a question whether the rule of a native chief, notwithstanding a considerable modicum of what we regard as tyranny and oppression, is not more fitted to the people so dominated, than our complex system of written rules, laws, and

regulations. It is certain that the great majority of the people in a native State have no particular desire to escape from the thraldom under which they are supposed to exist, for the greater freedom of British rule. For if at times they are injured and oppressed by the native Durbar and its *employés*, on other occasions they disport themselves in the benefit and light of a prince's favour, and rise, as many have ere now done, from the lowest to the highest position in the State—a culmination of career which the most fortunate cannot hope for in British territory. All this side of the question, however, seems to be ignored by the British resident, who with characteristic insular pride, thinks his own views as to what should and what should not be done, infinitely superior to the practical knowledge and experience of the native government. Given a meddlesome agent, an ordinary chief, and an artful dewan or minister, and we venture to say, that however things may appear on the surface, the condition of the principality so encumbered will be simply miserable.

When the political agent throws in his lot with the durbar, he assures himself of a more easy life than falls to the officer bent on interference. As a general rule, although not without exception, the agent playing this *rôle* is a favourite with the Durbar, and if not a man of high honor and principle, may find a more solid reward than the internal satisfaction of doing right and good. It does not follow that every political officer (and the class is numerous) supporting to the extent of his power the views of the durbar to which he is accredited, is actuated by interested motives. On the contrary, we are glad to believe that few indeed are thus influenced. But they are exposed to the continual flattery and cajolery of the court officials, until they become more or less liable to view events through durbar glasses. This of course denotes weakness on the part of the European official. But a political officer is not like a poet ; he is not born a political, and many a good man has been utterly spoilt when brought within the influence of the incense of a native chief and his courtiers or officials. The Grecian hero was invulnerable save in one point, and the Trojan's arrow struck him there. A political officer may be similarly invulnerable on all points, but this openness to flattery. The weak spot is quickly discovered, and the whole battery is directed to the spot. When a political officer comes to imagine that the Court to which *he* is accredited, concentrates the political interests of India—and there are not a few who from their supercilious conduct would seem to hold such an opinion—it may be accepted as a sure sign of vision through native glasses. Hence often arises much and tedious opposition, when by chance the views of Government happen to find firm expression on any particular point. Then the political becomes the mouth-piece of the durbar, and triumphantly refers to clauses of antiquated treaties, showing the reason why the views of Government cannot be carried out. This, interlarded with a little "tall writing" about justice and the inviolable rights of treaty, is an impediment over which the Foreign Office cannot take the necessary flying leap, and through which it not unseldom blunders. And so a durbar too often succeeds in delaying the evil day, when one more avenue of progress may be opened out. Political officials of the partisan class, would do well if they acted more in accordance with what is their manifest duty: "A loyal subordinate should "cheerfully work out the policy of his superior, although he is "not required to abandon his own convictions." The strength of convictions should not, however, cause a political officer to become a partisan of the durbar or State to which he is accredited. We have now had political agents for many years in all the feudatory States ; and with the exception of those in which a long minority has occurred, we cannot really discern that much improvement has taken place ; or that the States either as regards government, or in any other way are materially altered from what they ever were. A garden or road, a school or a dispensary, is about the sum total of what the influence of our political agents has generally produced. There are perhaps some exceptions, and if we were asked to signify the principality most conspicuous for real improvement during recent years, we should mention Indore as certainly in the first rank, if not indeed the State pre-eminent above all others. But Indore has had the advantage for some years past, not only of a capable, but what is even better, of a practical Agent, and also of an able and painstaking native minister in the person of Sir T. Mahadava Rao. If we were asked in what way progress has tended at Indore, we should say without doubt to the institution of different departments of government, and by the removal of State business and power from the hands of one man, and by its entrustment to special officials of revenue, police, public works, military, public instruction, customs, post-office, &c. Then a system of irrigation has been inaugurated, facility has been afforded for the rapid construction of railway works, cotton mills have been set up and promise to be largely successful ; a special internal postal service has been organized, while jail sanitation and medicine have not been forgotten. All this is very different to what was reported of Indore, but a very few years ago. Colonel Meade then wrote, "The government may be briefly described as arbitrary and "despotical in the fullest eastern term. The ruler himself "makes and at pleasure administers the law, of which there "is no written code, and which is wholly undefined, though, in "practice, justice is ordinarily meted out according to the "shasters, or custom, or precedent ..... It is a subject for "regret that the system of government in this state, is not of "a more enlightened character, and more in harmony with the "known views of the British Government." What was then said of Indore, is still applicable to the great majority of the native States.

There are few with any pretensions to improved forms of administration. This would tend to evidence that the policy of the Foreign Office does not permit the development of any energy which political officers may possess. For while there is little or no improvement where there has not been a minority, other States which have been differently situated show perhaps the most perfect system of government, which has been or can be devised for these principalities. They show the good points of native government welded with a certain amount of British system, justice, and economy ; but without the tiresome codes of rules and regulations, under which even our non-regulation provinces suffer. We presume it would be regarded as a breach of relations, if the Paramount power insisted on a State being mal-administered (as Baroda, for example) and if the Gaekwar, supported on the *guddee* be it recollected by the British Government and not by his own people, should introduce reforms somewhat similar to those so frequently established with such good effect during minorities. We confess, that we are at a loss to know what *is* the policy of Government towards the native Chiefs. At one time, they are encouraged to make treaties as equals with the British Government. Only lately, several extraditionary treaties have appeared in the *Gazette*. At another time, the British Government lays down the rank and salute, and even orders the comings and goings of those whom it is thus pleased to treat as Feudatories. At one period, native chiefs are permitted almost any scope and license, and deeds have been committed which, unprotected by the British ægis, would have cost them their thrones at the hands of their own indignant people ; at another period, as for instance when land is required for a railway, or when a salt mine is "wanted," Government through its agent makes the chief understand that although there is no compulsion still he must. What is required is a confirmed and settled policy with regard to the native chiefs of India. And on determining this policy, it might be well if it were recollected that we are no interlopers of to-day, coming in to disturb families that have been for ages the rulers of the land. Many of the greatest native princes were set up by ourselves, and of the remainder few, if any, have been in possession of their countries so long as have the English of Madras and Bombay. The Gaekwars of Baroda, and the families of Holkar and Scindiah, do not count a long royal lineage. The Nizam can scarcely boast a hundred years. In fact there is nothing politically ancient in India ; unless we except one or two of the Rajpoot chiefs ; but even in their case the fiction of continuity of the line has only been maintained by adoption. We therefore hold, that the less hesitation might be evinced towards the inauguration of some

settled policy. We do not advocate annexation or seek for interference. But the native chiefs should understand that they are feudatories, and that the Government, under whose protection their thrones are secure, will not tolerate mismanagement, such as that at Baroda, and as prevailed in Joudpoor, in Ulwar, and in various other States, and which should have brought down the immediate interference of the Paramount Power. Under the declaration of such a policy, there would arise scope for the display of ability by political officers. At present they are, speaking generally, simply "proper channels" of communication between the Foreign Office and the Durbar, and satellites of the chiefs to which they are accredited, when these Chiefs are *permitted* to leave their own territories for their own amusement, or *required* to attend a durbar to meet the Viceroy.

FISCAL SCIENCE IN INDIA.

AND SIR BARTLE FRERE.

I.

WE noticed in our last week's issue that Sir Bartle Frere appeared to have been telling the Manchester men, that we ought to substitute direct taxation in India for the salt and opium taxes, and the import duties on cotton goods, and we said that it seemed impossible to make Sir Bartle understand the conditions under which we have to administer the finances of this country. We pointed out that we had broken down in an effort, maintained for years, to raise a single million of revenue in the way he proposes, and for the obvious reason that the only class upon which direct taxation can be levied to any purpose, has no existence in India. "Ever since," said Sir Bartle, "he went into the question with Mr. Wilson, his opinion on the subject had been fixed. If they wished to set the finance of India in order, they must do as they had done in England, namely, have in hand such a reserve as the income-tax would give them. An income-tax might be a bitter, but it was a necessary pill, and the sooner it was swallowed the better for the Indian constitution. There was not an atom of truth in the assertion that an income-tax was not adapted to the genius of the people of India. He asked if one single native State could be named in which direct taxation was not the rule." Let us now look at some facts.

Out of the £70,000,000 sterling then of revenue raised in England, the highest amount ever obtained within the last 50 years even in time of war from the income and property tax, was the £16,000,000 sterling raised in 1856 to meet the expenses of the Crimean war. But now mark the condition of things under which taxation by this direct method is levied at home. In England, to begin with, the ownership of the land has passed from the State into the hands of private persons. The result is that there is a large class of very wealthy families, living in graceful idleness upon the rental of the soil. The net value of the property belonging to the private landlords of the United Kingdom is estimated at £2,000,000,000 sterling. In the next place, there is the monied class, *i.e.*, the mortgagees, fund-holders and railway proprietors of the kingdom, the capitalized value of whose property is estimated at £2,700,000,000. And in the third place, there are the merchants, bankers, traders, and wealthy farmers of the kingdom, possessed of an estimated capital of £1,300,000,000 sterling. The estimated value of the real and personal property of the United Kingdom some years ago was £6,000,000,000 sterling. The estimate was based upon the income-tax returns, and was therefore considerably below the real amount. Now this vast property is held in comparatively few hands. There is first the small class of landlords, whose ancestors in the remote past obtained upon one pretext or other from the Crown, a right of ownership in all the land of the country. The class cannot be hidden, but stands out prominently, challenging attention as legitimate subjects of direct taxation. There is in the next place the monied class, standing as prominently out in the cities as the landlords do in the counties, challenging with them the notice of the tax gatherer. And lastly, there is the great body of merchants, capitalists, farmers, and wealthy tradesmen of the country, all men of mark in their neighbourhood, living in a certain style, and concerning whose means every one is able to make a very good guess.

Now, when we turn to India, what do we find the case. If there is one part of the Empire, in which it is of great importance that an income-tax should be levied with success, it is Bengal. For we cannot reach the masses of the province through the Custom House here, any more than in other parts of the empire, while we have abandoned to its zemindars, after the English example, the land revenue which the State was bound to retain in its own hands. If therefore there is any province of the country, in which we might hope that such a tax would be successful, it would be Bengal, with its landed proprietors, its rich and varied productions, and its vast commerce. Well, we have twice essayed the experiment within the last fifteen years—and what was the result? The tax was a deplorable failure. And when we look closely into the condition of the people, it is easy to see why it was a failure. Throughout the whole province, with its 60,000,000 of people, the general poverty is such that only 21,000 incomes were returned at above £100 a year to Mr. Wilson's income-tax, and only 64,000 at more than £50 a year. Under the certificate-tax, which went down to incomes of £50, the total number of assessees in 1869-1870 was less than 73,000, of whom only 44 (and 35 of them were Europeans) were assessed upon incomes of £1,250 a year and upwards. The returns for all India, with its 180,000,000 of people, under Mr. Wilson's income-tax, were :—

53,000	incomes of	£100	and upwards
141,500	„	50	to 100
and 500,000	„	20	to 50

The supporters of the tax in the Indian press have admitted that 'the fact seems established that no direct income-tax should touch incomes below Rupees 1,000 a year.' The advocates of the tax would thus have us confine its application to 50,000 persons out of a population of 180,000,000, and to reach even this small class we must go as low as incomes of £100 a year. But direct taxation founded on such exemptions is only another phrase for confiscation. Turn now to the United Kingdom from which the income tax was borrowed, and see the state of matters there. Out of its small population of 30,000,000—only one-sixth of our number—there were five years ago :—

995,688	persons with incomes of	£100 to	£300
173,036	„ „	300 to	1,000
47,228	„ „	1,000 to	5,000
8,048	„ „	5,000 to	£400,000
1,224,000			

Let us recal the figures is this country once more for immediate comparison.

141,500	persons with incomes of	£50 to £100	
53,000	„ „	£100 and upwards.	
194,500			

With figures like these staring us in the face, is it not strange that Sir Bartle should be harping on this income-tax notion. The tax is wholly unsuited to the circumstances of the country. It is possible only upon the principle of exempting 999 persons out of every 1,000. And this is the tax to which Sir Bartle has been looking for years as the backbone and mainstay of Indian finance, when we have got rid of the land revenue. Were we to strike out of the schedules at home every man who is there thought rich enough to be assessed at all, the exempted incomes alone would present a field for the levy of the tax infinitely more promising than we have in India. To begin with, there are 1,535,000 exempted incomes from actual property averaging £55 a year each, which the tax does not touch. Then there are 1,345,000 artizans, earning £50 a year each, whose incomes also are untouched. Thus there are three millions of exempted incomes of £50 to £55 a year each against 194,000 incomes of equal amount in India, three-fourths of which range from £50 to £100 only. The 3,000,000 exempted incomes at home, if subjected to Mr. Wilson's tax, would have yielded more than three times the amount which the tax yielded in all India. Below these exempted incomes in England, there were nearly 10,000,000 of incomes derived from wages averaging £27 a

year each. It is the fact that the incomes which we exempt at home as too low to be assessed at all, offer a far richer field for the levy of the tax than the incomes of all India taken together! As a matter of fact, the classes which at home pay the income-tax, have no existence here. We have individual men of such classes, here and there at wide intervals, but as classes they have yet to be created. Thus in England there are upwards of eight thousand men with incomes of from £5,000 to £400,000 a year each. Throughout the whole of the North-West Provinces with 24,000,000 of people, there were just 13 representatives of this class, the wealthiest of whom had not £40,000 a year. In England, we have nearly 50,000 men with incomes of from £1,000 to 5,000 a year each; in the North-West Provinces there were but 300 specimens of the class, of whom 23 are European officials. In England there is a vast class of 174,000 men with incomes from £300 to £1,000. While in the whole of the North-West Provinces there were not 2,000 men with such incomes. In England, there were a million of men with incomes of £100 to £300 a year each; in the whole of the North-West Provinces there were not 7,000 of such incomes. In England, finally, we have nearly three millions of exempted incomes above £50 a year each, and in the whole of the North-West Provinces not 25,000. If the income-tax at home went down as low as the certificate-tax did in India, it would reach more than 4,000,000 persons possessing an aggregate income of £512,000,000 sterling a year. In the North-West Provinces it reached just 34,294 persons, with an aggregate income of from twelve to fifteen millions sterling. In such circumstances an income-tax *cannot* be productive, for it touches only one in a thousand of the people, but you cannot make Sir Bartle see it. Direct taxes based upon the exemption of the many are simply confiscation, call them by what name you please. 'Every man of authority upon financial subjects,' says Mr. Gladstone, 'agrees that the odious features of the income-tax cannot by any means be removed or modified.' In India the special objection lies against it, that it is necessarily founded on the exemption of 999 persons out of every 1,000, making it but another phrase for confiscation. We have more to say on *the subject*.

GAME PRESERVATION IN INDIA.

THE difficulty of getting a day's fair shooting in the vicinity of Indian towns and cantonments is the constant subject of complaint, and a variety of causes is assigned for what is a serious loss to our gunners. The game, from deer to button quail, is shot down in and out of season, say some; the railways are to blame, is the opinion of others; a more extended area of cultivation is at the root of the matter, argues a third; but practically, all the reasons given resolve themselves into one—non-preservation. It would be ridiculous to look for good shooting, or indeed any shooting, on an English estate of which the owner was a non-preserver; while in India we expect game to abound under precisely similar conditions, and are disappointed, after a day's fag, if we see but two or three florikan, the same number of hares, and a brace or two of partridge, with as many snipe, in a beat extending over thousands of acres of promising land. India enjoys no immunity from natural laws, and we do not want Adam Smith to tell us that if we have the demand in this excess of the supply, our economy in the way of game is somewhat at fault. For India offers unusual facility to the sportsman. The natural features of the country, combining wood, water, and cultivation, are all that he can desire, and it is, indeed, lamentable, when beating a fine covert, or a fifteen-acre field of corn or oil-seeds, to turn out a single jackall perhaps from the one, and a few crows from the other, as all the fur and feather of what would be a hot corner at home, or a holocaust of partridges. All the country requires is preservation to produce an abundance of small game, and considering the exercise and enjoyment a few hours' sport with a gun affords, it is to be regretted that some systematic effort is not made for the protection of game in suitable localities. The native princes appear to be the only men in the country who do any thing in this direction, and there are one or two royal preserves in Hindoostan which have attempted to rival the great parks of our English nobility in the matter of game. At Hyderabad (Deccan), for instance, there is, or was, a considerable tract of country set apart for a royal chase, and called the "rumnah," but much more might have been made of the place than was the case when we saw it some years ago. It was unwalled, of course. It would be out of the question to enclose in any effective manner the extensive shooting grounds we have in India; but this "rumnah" was prodigiously poached by both man and beast, and with the exception of antelope, nearly as much game was outside its precincts as within them. The natives have at present little idea of what game preservation is; but they would probably soon learn everything appertaining to the art if they found their profit in it, which they probably would. To preserve game in any abundance in India, either for the gun, the market, or for both, a preliminary step would of necessity be a declaration of war without quarter against the "vermin" of every description with which the country is infested to a degree that would cause a Scotch keeper to swear at large. When we reflect on the immense number of snakes, kites, hawks, jackalls, pariah dogs, wild cats, rats, bandicoots, etc. etc, against which the small game has to contend, as well as on the wolves, panthers and even tigers that thin our deer, both grea and small, the magnitude of the task of preserving in India will be recognised; that is, if we were to preserve on a scale commensurate with the extent of land available and the resources in the way of indigenous game at the disposal of the preserver. But there is no need to strive to turn lands near stations into preserves like those of Dukes. Fairly stocked manors, with good rough shooting, in a general way, are all that is wanted here; and it would, we think, be easy to obtain this if the co-operation of the ryots and the landowners could be secured for the destruction of vermin, and the protection of feathered and ground game in certain close seasons defined by law. The game list of an Indian's gun is a handsome one in variety and quality: the pity is that in all the more civilised parts of the country the difficulty of making a bag is considerable, and it increases day by day. Antelope, spotted deer, florikan, painted and grey partridge, hares, snipe, ducks, quail and a variety of outsiders, good for the pot, but scarcely belonging to the game list, would be all abundant in places where they were properly protected, and they would afford excellent sport to the gunner, as well as profit to the landowner, if both could be brought to pull together, and consult their own interests in this matter. Just now, neither ryot nor the zemindar has much perception of the value of game as an article of food or sport. Looking upon birds and deer simply as foes of his unfenced and unwatched crops, the ryot endeavours to exterminate what we deem so valuable by all means in his power, while the zemindar, rarely hunts or shoots over the lands of his tenantry—probably because there is so little on them; no man, native or European, thinks it worth his while to toil for nothing, or next to nothing; but if the practice of preservation was once introduced into India, things would be different, and we should have more game with more shooting, hunting, and hawking than hitherto.

As regards the money value of our game, it is at present not in the hands of the owners of property, as in England, but in those of native *shikarries*, who are practically nothing but poachers, and of the worst type of that character too. The fraternity is notorious for producing thieves, liars, and loafers; and as no order, no method, is taken with their malpractices, their habit is not only to rob the ryot and landowner, of what is valuable property if they understood it, but further than this, to waste and even exterminate game by taking the animals in the breeding season, and even birds off their nests, for sale in the nearest markets. Then their deadly nets sweep all before them. How often do we see men staggering under baskets of partridges and quails in remote districts *en route* to the nearest railway station, and at a season when the partridges are rearing their young coveys—all swept into the detestable net with their parents. Hares have no chance whatever against these marauders, who have a hundred ways of circumventing poor puss by day and night, so that to course, or to shoot a hare anywhere near an Indian cantonment is now a matter of wonder, though with a little pains, coursing might be made a favorite Indian sport everywhere. It would be a queer thing if in England the poachers were permitted, nay, even encouraged, by the farmers and landowners, to have their own way with the pheasants, deer, and hares; yet this is precisely the situation in India, where Englishmen look on and admire without doing anything practical in the matter. Putting the claims of the landowners out of the question, as well as the waste of a valuable article of food-supply, we think Anglo-Indians might bestir themselves in the matter of game preservation simply for their own amusement. There are many stations in India where the surrounding country could be admirably preserved, and show peafowl, deer, wildfowl, partridge, hares, etc., in great

abundance, were some trouble taken in the affair by associations or individuals. The worst of it is, that in India no game, but one for high stakes, perhaps, is considered worth the candle, and our lack of energy even extends itself to what is a passion with us in England—preservation.

THE CHEWA SUCCESSION.

CIRCUMSTANCES of a somewhat peculiar and exceptional nature, yet highly interesting, are now transpiring in connection with the above State. Ramsing Rajah died about three weeks ago, rather suddenly; and it was announced twelve months since in the columns of this journal, that U. Borsing Sine (Rajah), the rightful heir, had embraced Christianity and joined the Mission Church, both he and his family. But for this step U. Borsing would have been proclaimed Sine by the twelve clans, the very day Ramsing died; for he has always been very popular with the people and still commands the profoundest respect, as a man of honest and upright principles, as well as unblemished character. The people appreciate principle in their chiefs.

Now the important question has arisen, whether it would not be a violation of the established usages of the country to allow a Christian prince to succeed to power and be their ruler? Christianity aside, his right is undisputed, and the people as well as the headmen are anxious that he should succeed. There are not two opinions as to the advantages likely to accrue were he to succeed his deceased brother, and the people are reluctant to forego those advantages by rejecting him because of his faith. The Sineship is hereditary and not elective. It is not elective in the "royal family" even at Cherrapoonjee, the very existence of a royal family implying this. We venture to make such a statement notwithstanding the opposite view which seems to obtain on the subject. If the question is at all of importance to determine, as we think it is, tradition runs that the twelve clans, into which the citizens properly so-called are divided, had, in days gone-by, sworn fealty to one particular house or family, the ancestors of the present ruling family. In so swearing they were guided, it is maintained, by Ka Blei, *the Goddess*, and their "house," "persons" and "office" were in consequence rendered inviolable. The proclamation of a new Chief in these hills, has always been attended by disturbances and considerable commotions, and before the arrival of the British Government, about forty years since, never without much bloodshed, as counter claims were always set up by agitators, the pretext invariably being a superior right of kinship. As the Khassias have to depend entirely on "facts" transmitted from mouth to mouth, which in two or three generations become uncertain and traditional, it is not difficult to set up rival claims, but it is for the same reason difficult to set them aside, on valid grounds. The entire absence of written documents leaves the history of the Hills a blank down to within a few generations back. The presence of British influences has of course done away with all blood-feuds and apprehensions now-a-days; and the Khassias certainly appreciate its presence, and perceive the advantages they derive therefrom as well as enjoy the accession of a new chief without the bloodshed of former times. Although the Chiefs themselves do not as yet seem fully to understand the policy of British rule in dealing with feudatory States, or altogether satisfied with the curtailment of their original administrative powers over their States in dealing, for instance, with criminal offences; still we think the statement warranted by facts, that they would elect to have things remain *in statu quo*, rather than witness a reversion to the old *régime*, when there was no Paramount power at hand to save villages and communities from being exterminated in a day. In former times it was a land eating up its own inhabitants, owing to the incessant and bloody feuds and jealousies between the petty chiefs. Evidence of this is not wanting in the ruins of extinct villages to be seen in all directions. Under the shadow of the paramount power they now thrive in more ways than one.

The 24th instant was fixed upon by the Deputy-Commissioner to meet the subjects of the Chewa State, with a view to knowing the wishes of the people, and to appoint U. Several *Durbars* have already been held, but nothing as yet has been done. U. Borsing Sine is earnestly asked to withdraw the step he has taken in embracing Christianity, and to become their chief; on the plea that Christianity and the functions of a Khassia Rajah cannot go consistently together. U. Borsing on the other hand, while firmly declining to renounce his faith, maintains in common with many others of the subjects, that the history of the Chewa as well as other States in the Khassia Hills during the last 40 or 50 years—more particularly subsequent to the arrival of the British in *Iskat* (Scott) Saheb's time—shows clearly that the rites and ceremonies observed in former times are not essential to the office of a Sine. Many rites and usages have within the memory of the present generation even become obsolete and practically abolished, while others are now actually on the wane, so that a short time hence nothing is likely to remain beyond the purely administrative duties which devolve on any other functionary in civilized communities. It is a crisis after a sort, at Chewa; and the gist of the matter is this: shall they reject U. Borsing on the score of his religious belief,—because he has renounced all observance of rites and usages, many of them obsolete and effete, rites and usages beyond their power to uphold? Or, shall they waive the question and uphold the house in which the right of accession lies? Borsing comes forward at the instance of the twelve clans; and points out to them a course by which his accession would by no means lead to complications or compromise his adoption of a new faith, and that course is, that he should exercise magisterial functions simply, and allow religious freedom to all. This course has to be adopted already when Christians are involved. In other words the Rajah decides according to evidence and without appealing to eggs and enchantments. It is hoped that things may be so over-ruled as to result in a satisfactory arrangement. The deceased Rajah is not yet burnt according to custom, and will remain encased in wood until his successor is appointed. U. Shandrai Sine, the late Rajah of Khad Sawphra, who died two years ago, also is still above ground, owing to similar reasons, *viz.*, disputes about the succession.

BENGAL IN THE OLDEN TIME.

Bengal: an account of the country from the earliest times, &c. &c. By I. A. G. Barton. William Blackwood and Sons, Edinburgh and London: 1874.

FIRST NOTICE.

IN spite of weekly mails, the triumphs of the electric telegraph, and the opening of the Suez Canal, the ideas Englishmen generally entertain of India are vague and hazy in the extreme. Notwithstanding the vast strides we have made in civilization, in the production of useful arts, and in effecting material improvements in various branches of industry and trade, the fact continues to stare us in the face that a great amount of ignorance and prejudice still prevails among the majority of our countrymen in regard to the greatest dependency of the British Crown. Although the steady influx of Englishmen to this country affords them ample opportunities of observing the manners, customs and religions of the people under our rule, they are yet in a great measure ignorant not only of the habits and daily occupations of the natives, but even of the nature and geography of the country. Every schoolboy knows the history of Alexander the Great and the progress of his arms in India, but few educated Englishmen are in a position to detect the anomaly to be met with in Goldsmith's "Traveller" in allusion to the modern river Sutlej, where the tidal wave of the Macedonian conquest of the East received its first check from King Porus.

"Fired at the sound my genius spreads its wings.
And flies where Britain courts the Western spring,
Where lawns extend that scorn Arcadean pride,
And brighter streams than famed Hydaspes glide."

The Hydaspes has been rendered memorable from the circumstance of a battle having been fought on its banks, and not from any peculiarity in the brightness of its waters, which, to the best of our knowledge, does not differ materially from that of any other river, whether in the Punjab or out of it. Inconsistencies of a similar description might be traced in the other English poets and prose writers of the same and subsequent period. These shortcomings which are pardonable in the mass of our countrymen removed from access to Indian literature, are certainly inexcusable in Members of Parliament and others who have ample opportunities of correcting erroneous impressions on subjects of such vital importance; but whose speeches and writings about Indian affairs, teeming with incorrect allusions, appal the stoutest hearts by the want of knowledge of the most commonplace incidents and occurrences which have happened within the memory of men still living. India is known to her conquerors as a large peninsula where the thermometer rarely falls below 70 degrees, and from English Nawabs returned home with fabulous wealth and enlarged livers. With regard to the rest of her history and internal condition, they continue as profoundly ignorant as if she lay in the heart of Africa. It is certainly not a matter for congratulation that we possess

more accurate knowledge of any other inhabited portion of the globe which our ships and travellers visit than of India, with the soil of which is mixed the blood of some of the best and bravest of England's sons. Stereotyped ideas of the country are inherited by one generation from the preceding as hier-looms to which they cling most pertinaciously. We remember being told by a Haileybury civilian that the last promise extracted from him by his half distracted mother on board a P. and O. steam vessel at Southampton, was not to expose himself beyond the precincts of his bungalow after nightfall, as she had heard dreadful accounts of people being torn up by wild beasts, who, in the opinion of the simple and credulous old lady, divided the possession of the empire with the British. She had also pressed on him a dozen letters of introduction to parties residing at Lahore, Delhi, Lucknow, Allahabad, and other cities of the north, whom he was expected to visit on his way to Calcutta. Of course, this was shortly before the introduction of railways. It was to have been expected that frequent intercourse between England and her dependency, assisted by the popular writings of such men as Chesney, Malleson, Dr. Hunter, Braddon, and a host of others, who followed in the same track, would have helped to extend our knowledge of the land of our adoption, and place it on a more satisfactory footing, but experience, which is a sure test of these matters, points to a different conclusion altogether. It would be foreign to our purpose to recount here the early history of English adventurers who obtained the first footing in India, together with the small strip of land which the Infanta of Spain brought as a dower to Charles II, and how subsequently, out of a small patch of territory granted to a Company of merchants, and for the purposes of trade, a splendid empire has grown up. We will accept this state of things as already established. The manners and customs of our countrymen in India a century back varied widely from what we find them at the present day. In those times, when a voyage to the East Indies ranged over a period of nine or even twelve months, the arrival in the Hooghly of a young lady or a consignment of 'Pale Ale' was considered of sufficient importance to entitle its announcement in a prominent column of the only newspaper in existence then; and not seldom it happened that the bride-elect was bespoken on the voyage out, and, in some instances, married before arriving at her destination. Few ladies were so adventurous as to forego the pleasures and comforts of an English home for a bad climate and indifferent society, with a wretched matrimonial market. Hence the Anglo-Indian of those days spurned the civilized chains of Hymen, and betook himself either to the barbarous fetters of zenanadom, or led a life of single blessedness. The influence of the former not only moulded his character, but directed his mode of living in a hundred ways. How many Englishmen after hoarding his millions of pagodas returned to their native land with altered habits of thought and action, and sighed once more to be back in the malarious and pestilential plains of India. The distance of the land of his exile, between which and his dear old country lay a dreary waste of sea, and the change of life he was compelled to adopt during the period of his sojourn contributed in no small degree to tear him away from English associations. In rare instances it was that European wives ruled their homes, and it might be asserted without fear of contradiction that the entire Bengal Presidency then could not return so many ladies as a single district of the province does now. Next to the society of the fair sex, an Englishman enjoys nothing so heartily as the outpourings of a free press, and of this with the exception of a dull journal called the *Calcutta Gazette*—the organ of a despotic administration—there was no local journal to beguile the monotony of his weary every-day existence. As for literature, there was not even the vestige of one; it ought not, therefore, to be a matter for wonder that those upon whose hands time hung so heavily should have yielded to the fascinations of the bottle to drown their perennial cares in a state of unconsciousness. The result, as might have been expected, was a ceaseless routine of riotous living, interrupted occasionally by a duel, which afforded food for talk for a time, and then gave place to some other exciting topic which helped for a while to dispel *ennui*. But times have greatly altered since, and he must be a pervert indeed who can in these days of progress complain of tediousness with the means at his disposal. This much by way of preface, now to the subject of our article.

Of the reasons assigned by Mr. Barton for writing a work on Bengal, the opening paragraph of the book will speak for itself:—"There is no readable account of Bengal that we know of. This is rather curious, as Bengal is one of the earliest of English possessions in India, and also the field where the pagoda-tree has thriven best from the commencement. It is, moreover, the cradle of much intelligence, and, at this moment, happens to be the focus from which all the political aspirations felt by the Hindus are radiating. No apology is therefore, necessary for drawing particular attention to the country now, and for endeavouring to give such an account of it as will make its past and present condition generally understood." There lurks a slight ambiguity in the above, or we are greatly mistaken. In so far as he means to affirm that there is no account of Bengal worthy of the name, containing a short *resumé* of its history, natural productions, antiquaries, characteristics of the people, &c. &c., compressed into a small and convenient form, such as the *brochure* under notice, he is partially correct in his estimate; but if he insinuates that there is no trustworthy or comprehensive account of any of the subjects, which he merely skims over, he launches a gratuitous assumption which we are not prepared to accept on trust. It would, moreover, be scarcely safe to infer that he has not heard of Dr. Hunter's admirable essay on Rural Bengal, or his exhaustive treatise on Orissa, or Braddon's "Life in India," and other similar contributions to Indian literature. In describing the natural features of the province, he alludes, by way of a side remark, to the insalubrity of the metropolis of British India: "Thus in Calcutta, ... the climate is excellent in the cold weather, but is unhealthy both during and after the rains, when the east winds sweep over the salt-water lakes, and the south winds over the wet jungles of the Soonderbuns, bringing with them malaria and fever." Now, it is an admitted fact that Calcutta has lately improved wonderfully in health, and although some of the causes which bring death to our very doors have not been removed, it will, on an average, bear a favorable comparison with most of the cities of Europe which are more advantageously situated, and where sanitary precautions on a larger scale are adopted to avert heavy mortality among the inhabitants. To whatever cause malaria and its concomitant fever, which lurk in some of the little cared-for parts of the town, may be attributed, there cannot be the shadow of doubt that it is quite unsafe to jump to a conclusion or to theorise on a subject which has baulked the researches of many eminent medical men in India. If with the present system of drainage the evils complained of had not been mitigated in form and severity, Mr. Barton might have been entitled to a hearing; but as the results are in a direct ratio to the cleanliness of the town, we must look elsewhere for the source of malarious fever. To cite only one instance out of many in disproof of the author's assertion, let us take that of Burdwan. Although removed at a distance of 60 miles or upwards from Calcutta, and the pestilential salt water lakes, it is yet the hot-bed of malarious fevers which have well-nigh depopulated the district.

A fruitful source of litigation in Bengal are *chur* lands, caused by the shifting of the beds of large rivers which change their course often during the short space of a decade and sometimes even less. The process is thus described: "It should be here mentioned that the rivers of Bengal generally, and particularly those of the eastern districts, are subject to constant changes, which render it difficult to trace them correctly, and produce a perplexing confusion of names. The soil is so light and the waters in descending from the mountains acquire such force, that the rivers not only change their places by wearing out different portions of their banks, but are often altogether swept away from one place to re-appear in another, several small channels sometimes combining to form one wide channel, or one wide channel splitting up into a number of small ones, each of which, of course, goes by a different name. This has been a source of great trouble to geographers, but the difficulty has only to be mentioned to be understood." Alluding to opium he says it is cultivated "to a considerable extent under the auspices of a Christian Government for the demoralisation of a heathen nation." This is exactly the language held by those who do not go beyond skin-deep in the matter, and who take exception to the conduct of the Indian Government without being at the trouble of enquiring for themselves. It would be out of place here to put forth a defence of the policy pursued by the English with regard to the trade in opium, neither are we prepared to believe in the assertion of interested parties, that this drug is eminently beneficial to the Chinese, and that the opium dealers themselves are, mere commercial considerations apart, philanthropic benefactors of the human race. Those who would advocate the introduction of a Maine liquor law in England for interdicting the manufacture and use of spirits, may consistently argue that we should not encourage the growth and manufacture of opium in this country, and the course which has been followed at home is exactly what is in practice done here with respect to opium, and that is, by putting on a very heavy duty to discourage its consumption. We levy a profit of from 200 to 300 per cent on the price of the article without suffering materially in the Eastern markets from the competition of

any other country, owing to the soil and climate of India being so favorable to the growth of this drug. Of course by raising the duty we might obtain an equal or perhaps greater revenue from a more restricted consumption, but unfortunately two insurmountable objections stand in our way. The first is the difficulty of preventing the smuggling of an article so valuable and of so little bulk ; and the second, that in regard to a foreign trade open to all the world there is a limit to an export tax. Supposing these two difficulties overcome, could we raise the price beyond a certain point, without bringing into the field Turkey and Persia, and other countries, to say nothing of the far more dangerous competition of a rapidly increasing production of opium in China itself? So far, then, the conduct of our Government is not open to censure. The really objectionable point is, that whereas in the Western Presidency the Government levies a simple export duty, in Bengal the manufacture is a Government monopoly, and it would be highly desirable if some measure could be devised by which Government would be relieved of its direct connection with the traffic without substantial injury to its own subjects in India.

The value of cotton exported from Bengal, where it is brought down by rail, is very large—amounting to nearly four millions sterling, but the quantity produced in the province itself is scarcely sufficient to meet its own requirements. The hand-looms of Bengal which in former times supplied the beauties of Rome and other Western capitals with far-famed silk and cotton fabrics, have been thrown completely into the shade by the spinning jennies of Manchester and Lyons. The exquisite quality and texture of muslins prepared at Dacca may be gathered from the fact that a whole dress-piece was conveniently packed in an empty beer bottle for the London Exhibition of 1851, and it is needless to add that the manufacturer obtained a medal for it.

The mineral productions of Bengal being few in number do not occupy a large portion of Mr. Barton's work. There are, however, some remarkable hot springs near Monghyr, to which Hindoos resort for pilgrimage and invalids for the purpose of bathing and drinking the water, which is supposed to be impregnated with medicinal matter. Their origin, attributed by natives to supernatural agency, is thus felicitously described by the author: "The story about the mineral springs is related by the inhabitants in their neighbourhood with great unction and earnestness. Sita, the wife of Rama, having been carried off by Ravana, King of Lanca, or Mahalanca (by some identified with Ceylon, by others with Malacca), Rama besieged Lanca, and succeeded in defeating and slaying the ravisher and in recovering his wife. But Ravana was a Brahman, and the law required that the crime of Brahman-murder should be expiated. The sages advised Rama to apply to the gods for purification, and he started in search of them, carrying his wife and brothers with him. The gods were met with at the site of the hot springs, and the offerings made to them by Rama and his brothers were accepted ; but those made by Sita were rejected, because they suspected that she had lost her virtue with Ravana. To allay a similar suspicion on the part of her husband, Sita had already undergone a fiery ordeal ; but the gods now demanded another, and the heroic lady at once threw herself into a pit of fire, from which she came forth unscathed, a spring of water coming out, as it does now, in her wake." The evidence is so clear and conclusive, that there can be possibly no demur on the part of our readers to accept the story.

(*To be continued.*)

GOSSIP.

NYNEE-TAL.

(FROM OUR OWN CORRESPONDENT.)

THE weather here is most unseasonable and extraordinary. I have indeed been so troubled by the constant storms and deluge, and generally so exercised on the subject, that I at last concluded that it was my duty to obtain an interview with "the Oldest Inhabitant ;" and I found that this venerable person, who received me with much affability, was apparently under the impression that the case, though certainly not usual, presented no real difficulty. It was not "the rains" : on *that* he was clear. When I proceeded respectfully to point out that it did not greatly signify to me what he called it, so long as a state of things existed which spoilt all my enjoyment of a brief holiday, he replied to the following effect. That it was his (the O. I's) experience that "the rains" came in June ; and that they were always preceded by a rise of temperature and a fall of the barometer. That in the present condition of affairs, his barometer was where it always stood—as if the drivelling old creature thought that before a storm it would tumble from its accustomed peg and lie upon the floor—and, as for the temperature, he found that the only way to keep himself warm was to sit by the fire. These were the reasons assigned by the O. I. for the opinion that the climatic peculiarities from which we are at present suffering, were not brought about by the S. W. monsoon. I hope they may appear to you sufficient and interesting ; to me, buckling my water-proof about me, or looking sadly out of the darkened windows of a leaky lodging, it is of small moment what is the cause of "the winter of my discontent."

The houses leak ; but I am bound to add that they do not leak so badly as they do at other hill-stations. The reason of this is that they are for the most part roofed with what a late distinguished veteran used to call "corruscated iron." And I can assure you that on the numerous occasions "when the rain is on the roof," the effect of the ceaseless, monotonous, and deafening file-fire caused by the impact, is such as to make one feel disposed to sigh for a soft and silent thatch and a good umbrella such as one might be enjoying at Simla or Mussoorie. In every other respect, the houses are deplorably inferior to those elsewhere in Himalayan watering-places. Neither shutters to the windows, nor fastenings to the doors ; rotten flooring and unfinished walls ; without cupboards, presses, sofas, arm-chairs, or bed-room crockery, they present human nature with a fine opportunity for the cultivation of simple habits. Perhaps Messieurs the Mountaineers are making hay while the sun shines ; let us hope that they will soon have an opportunity of enjoying the said hay in the peace that comes of solitude. When once your vision of a voyage home for £30 is verified, then, at least, their time will have surely come. In the meantime we must, I suppose, "grin and bear it," or bear it without grinning, as we may find most agreeable to ourselves.

I believe that I mentioned in my last, that the roads here were in a very dangerous and unprotected state. I may go farther, and say that I see no signs of any action whatever towards reform on the part of the Municipal Commissioners. There is an unpretending sheet, published once a week, under the style and title of *The Naini Tal Gazette* ; and it is a paper which, without being able to recommend it in its present form as a sensational serial, or even an important organ of political opinion, I can safely say is free from all scurrility or dangerous principles. Well, in this paper I find a report of the weekly proceedings of our Town Council ; and while I am able to testify to the energy with which they assess (and collect) our monthly imposts, I have been wholly unsuccessful in tracing any equivalent on their part. The chief subject which occupies these village Hampdens, is what is to be done with the site of a part of the bazar which was providentially—as some seem to think—destroyed by fire about a month ago. This great discussion—in which the two native members usually figure in a minority of two—is occasionally varied by a conflict with a gentleman who wants to cut down one of his own trees, and with another who desires to put up a hut for his pony upon his own land. But one looks in vain for any vote, or even for any adjourned debate, on the subject of railings being erected out of public money on the edges of the most breathless precipices. Perhaps when a Commissioner has lost his horse, or the Chairman been brought home in a set of fragments, this matter may attract its share of attention.

Au reste, the place is very stupid, though very pretty, like some young ladies in Calcutta last cold weather. Sir John and Lady Strachey are said to be charming personally ; but His Honor is not strong, and the state of his health is probably the cause of a good deal of social torpor. I am glad to say that there is, so I believe, no truth in the rumoured flight to the interior. In his eagerness for news, your Allahabad contemporary perhaps makes his items sometimes. It would be hard, indeed, if the baker could not have fresh bread.

MUSSOORIE.

(FROM OUR OWN CORRESPONDENT.)

RAMBLING round the Camel's Back this evening, just as the thunderstorm had passed away and its last growls were fitfully audible in the distance, I paused for a few minutes and beheld a stormy but withal beautiful sunset. The hill on which the Priory stands hid the sun itself from view, but the spaces visible between the hill and Banog on the left hand, and between it and hills somewhere near Simla on the right, were filled with that dazzling yellow light which a waning sunset always gives. The presence of clouds too, gave one the idea of an enormous conflagra-

tion going on behind the Priory Hills, the clouds having exactly the same appearance that smoke has when a very vivid light from the flame is thrown upon it. But the beautiful effect of the sunset was the light thrown on the opposite hill of Landour. The whole side of the hill from top to bottom was mellowed, as it were, by a soft rosy light, and in a few minutes the lower half of the arc of a magnificent rainbow shone out against the hill. Contrasting with this light, was the dark and sombre Nagtrabe range, standing well defined against the sky, which had cleared above and beyond it. The *tout ensemble* was in its way perfect, and I gazed till the cold chilly air of the evening warned me that I must be moving on, and with a sigh and shrug of the shoulders I betook myself to the dull realities of every-day life and the materialism of dinner. Since I last wrote there is not much to chronicle, but in my next, no doubt, shall have an *embarras de richesse*, as next week there are to be no end of gay doings, all of which of course I shall duly set down, so that it shall not be a case of "to-morrow and to-morrow and to-morrow." The events of late have been a dance at Landour given by the Officers of the depôt, which was a success, and the revival of the Bodyguard dispute at Dehra which was alluded to in my last. The matter is now fairly landed in the civil Court, and time will show who was wrong and who right in this pretty little squabble. There is a good story relating to it which, alas! I must not tell just yet, but "When, Sir, this little case is over, and when, Sir, this little case is done"—the parody on a well-kown comic song,—you shall have it in all its glory. There was at one time quite a panic about cholera as that disease was very rife at Dehra and Rajpore, but there has not been yet any case of cholera proper up here, and so intending visitors need not be alarmed. In the Dhoon, however, for about ten days it was very bad, and many natives fled for their lives into the wilds and fastnesses of the hills. And now to tell you what we are going to do during the next ten days. There is to be a dance on Friday next, the first of the three private subscription dances, and it and they should be successes, as there are a fair number of subscribers, and the management is very strong in such matters. The dancers and chaperons need not expect 'simkin' supper, however, and the dances will be pretty much in the same style as the reunions in the plains. On Tuesday the 25th, there are to be amateur theatricals, and the two pieces, 'Heads and Tails' and 'His Own Enemy' will be given by a strong cast. On Thursday and Saturday, the Fancy Fair in aid of the Haunt of Morpheus will be given, and on Friday there will be a ball at the Club in honour of Her Majesty's birth-day. To the steady-going man of business who is accustomed to go to bed regularly at 10 and rise at 7, the world will appear turned upside down, but we are inclined to the belief that a round of gaiety like the above does everybody good, and makes those who, owing to India, are getting laid too early on the shelf, more like their young selves again. Being of that class ourselves, we intend to dance and enjoy ourselves thoroughly during these ten days, and forget the lines and gray hairs the last lustrum in the plains of India has given us. Astonishing to relate, Mussoorie is badly off for dancing men ; and rotund forms which can cut capers and revolve, albeit somewhat slowly, in the mazy valse, are by no means despised by the fair. And now adieu till next fortnight, when you shall have a full budget of news about the gaieties, or as Paddy would say, 'lashings and lavings' of them.

BLAS EL MATADOR,

MADRAS.

(FROM OUR OWN CORRESPONDENT.)

MADRAS is as dull as possible. The Acting Governor and the Councillors have gone to the hills; the ladies of the upper ten thousand have followed the gubernatorial party with the avowed object of remaining queens of the fashion, and with the secret view of regaining the rosy cheeks that have vanished during their six months' residence in the plains. The Governor left us under the booming of the salute guns and of the *Mail's* sarcastic articles. Many certainly share the views of the editor, but I am afraid the cold climate of the hills will be too great an attraction to change matters, and the articles will have the fate of the encyclical letters of the Pope, that are read by everybody and then forgotten. All the papers have been speculating on the arrival of the new Governor. Madras is positively delighted with the prospect of possessing a "*real live Duke*," and of welcoming the heir to the British Crown. Bachelors are anxious to see the ladies who will grace Government-house, and ladies are full of dreams regarding the dresses and the headgear to be worn on State occasions.

The Gaekwar is quietly enjoying life in this city, and is to receive a monthly pension of rupees ten thousand. I dare say many a careworn potentate would gladly exchange places with the prisoner. He can now enjoy the *far niente* decreed by the Viceroy without the trouble of administration. As he has many wives, however, he cannot be said to be free from intestine wars. A local journal has inaugurated a new feature in the annals of Indian journalism by an *Exchange Column*, copied from a home paper. I would gladly for my part offer the exchange of my heart and liberty for the matrimonial chains in the shape of pretty arms, but the land wind makes me reluctant to abandon my cheroot and B. S. Loch, our sheriff, has left for England on account of ill-health, and we have no one to receive the rupees attached to the appointment. Great distress prevails in consequence, and I think the best way to settle the question would be to send the money to the Friend-in-Need Society. This would be far better than wasting it on some Government favorite. Some other officers of the court might do the duties which consist "in doing nothing" but receiving the salary. The death of the lamented Lord Hobart has been followed by the demise of the Karikal Governor, who died suddenly of heat apoplexy. Monsieur Faron, the Governor of Pondichery, has thought it prudent to leave, by the last French mail, these inhospitable shores. During his five years' tenure of office he did not give a single ball, on account of the misery of "Poor France" he said, but more likely in the interest of the daughters he has to provide for. He left Pondichery leaving no regrets behind, and besides the officials summoned to attend on his departure there were very few inhabitants present, and I am told they only wished to be sure the old man had really left them. The cost of the Prince of Wales's visit to India will be £5,000 a day. "I do not care to see the Prince," says the young Ramasamy, "if we are to pay so dear for it." This is one of the results of the native education Englishmen are so proud of. The education so liberally bestowed on the people of India will prove a knife with two edges—it will cut first the natives and afterwards the Europeans. High pressure education is the intoxicating draught, morality ought to be the counter poison. Teach them morality : they are in sad want of it; there will be plenty time to teach Latin and poetry. But I am afraid India will ever be the land of sin, corruption, and lies.

Colonel the Hon'ble J. E. Coleman appears to be the only man with brains in this presidency. He is Colonel of the Volunteer Guards, Member of the Legislative Council, and Acting President of the Municipality. The attempt made by our Acting Governor to confide the money of our tax-payers to a Civilian has been knocked on the head by the Government of India, and certainly with good reason.

BRAHMA.

EDITORIAL NOTES.

IT was announced by Proclamation at Baroda, on the 21st instant, in Durbar, that the Governor-General in Council had proposed to Her Highness Jumnabaee, the names of three boys from whom she might select a successor to the vacant *guddee*. The names were Gopalrao, and Sumputrao, sons of Kassirao, and Dadajeerao, son of Ookajeerao. Sir Richard Meade duly intimated that, after consultation with Her Highness, the one of them who might be considered the fittest, or whom Her Highness Jumnabaee might choose, would be elevated to the *guddee* of the Baroda State.

***

LORD NORTHBROOK is entitled to the praise of being a very laborious Viceroy, but is not fitted, it may be feared, by nature to fill the chair of men like Wellesley, Hastings, and Dalhousie. He has been particularly unfortunate moreover in that his own deficiencies are not supplemented by the qualities of those by whom he is advised. To take a very small example : What man of the world, having to ask a favour of native gentlemen, would have addressed them through the medium of the Deputy Commissioner of Police, as was done lately in this city in the case of the red liveries? The last instance of this awkward conduct that has come to our notice, is in connection with the officer who was assaulted by Sir Jung Bahadoor's nephew at the Howrah railway station. The circumstances were fully reported in the newspapers at the time, and need not be recapitulated. But what is not perhaps so generally known, is that the Governor-General employed the prestige of his position to endeavour to induce the officer in question to apologise to the offender, and distinctly as we are assured hinted at the loss of his commission as the alternative if he did not. The endeavour naturally failed. The officer replied that he was not conscious of any conduct requiring apology; that he had done no more than all Englishmen would do in defending himself when attacked ; and that, under the advice of his Colonel and

brother officers, he respectfully declined to comply with the Viceroy's directions. If the Viceroy could take his commission, it was there for His Excellency to take ; and he preferred losing it in that way to the risk of losing it by the sentence of a Court Martial for conduct unbecoming an officer and a gentleman. This, as we have stated, was the reply naturally to be expected ; but what is to be said of a ruler who lays himself open to rebuke in this way from the simple manliness of a Lieutenant in a marching regiment? The order was, we believe, immediately withdrawn, or reduced to a request that the officer would make some expression of regret for what had occurred, *if the Nepalese would first apologise for having assaulted him!*

We find it very difficult to credit this story, but it is sent to us on such high authority that we have no alternative but to publish it.

***

THE historian of the Popes, Von Ranke, has now produced, we see, a history of England in the 17th century. The work is printed at the Clarendon press, and is said to be exceptionally good.

***

MM. ERCKMANN-CHATRIAN have produced another of their charming Alsace and Lorraine novels, but the Reviewers tell us that after reading the tale, and admiring afresh the pathos and simplicity which characterize all the writings of these authors, they are deeply blameworthy. For, instead of using their great influence to soothe the extreme irritation in Alsace which, if fomented, is certain to break out into fresh war and misery, they are using their powerful pens to stir up wrath and to encourage their countrymen in turning away their eyes from the terrible errors which are at the real root of French disasters. "They picture the corrupt officials of a corrupt Government as conscientious simple men ; they hide the vice which had eaten up the strength of the nation ; while they curse the dead man as the sole cause of French misfortune." Alsace-Lorraine is a curious illustration of the fact that it is quite possible to stamp out a nationality, and that too in no very long period of time. It is noteworthy of our novelists that amidst all their bitterness of hatred towards the German troops, they do not hint at any of the crimes of personal brutality or of licentiousness which have been by some so freely attributed to the Germans in France. "Their habitual, conscientious, and "artistic truthfulness is always supreme, and this makes their "attitude of mind the more sad to onlookers, and the more "dangerous to France."

If any of our readers have not yet made acquaintance with the Erckmann-Chatrian tales, they should get the series at once. They are a most charming picture of peasant life in the midst of war, and throw a flood of light upon the state of France in the provinces, at the period of the revolution.

***

Greville's Memoirs have filled the *Reviews* with personal reminiscences of the great political leaders of the first half of the century. The relations between Peel and Stanley as colleagues, are thus described by Lord Dalling:—"Reckless in his language, aristocratic in his tendencies, rather courting than avoiding contention and strife ; above all haughty and domineering in character, though gay and playful in manner, it was impossible that he (Lord Derby) should move in comfort under the shadow of a leader, circumspect, sprung from the middle classes and having a certain sympathy with their thoughts and feelings, inclined to conciliate opponents, and accustomed to receive from his followers implicit obedience. But what was worse than all was the eternal habit of quizzing, or, to use the modern word, chaffing, which the inconsiderate noble indulged in, and which the somewhat prim and stately Commoner could not endure. If private stories are to be believed, the Premier indeed had determined at a shooting party at which the dignified calm of his countenance had been ruffled by a volley of bad jokes, which he could neither tolerate nor resent, to take the first opportunity of shaking himself free from a colleague whose familiarity had become insupportable to him."

Lord Derby was hardly perhaps an earnest man at any period of his life, but made a nearer approach to being so on the Slave question, under the influence of Wilberforce, Buxton, Lushington, and their followers, than on any other great debate in which he engaged. We were fortunate enough to hear the close of his great speech in 1846 in the Lords, in defence of the Corn Laws, and still more so in hearing Brougham's terrible reply between 1 and 2 in the morning. It is doubtful, we think, if Lord Derby himself ever really believed in protection, though he led the party from 1847 down to 1852.

MR. CARLYLE is fond of inculcating the cheerful belief that however bad things are, they are likely to become worse. *Vanity Fair* writes of the officers of the army to much the same effect. The writer discusses the personal, not the professional, character of our military friends, *àpropos* of the black sheep who from time to time are found among their number. Regarding the fact from a sympathetic point of view, he does not of course inflict upon us any maudlin moralising such as we occasionally meet with in minor journals, whose writers appear to have derived their ideas of the officers of the army from the stage and the streets, and believe that a gentleman holding Her Majesty's commission is usually either a booby, or a blackguard, when he is not a careful combination of the two. These are the censors who cannot hear of a Sub-Lieutenant of Infantry in a scrape without taunting all three arms of the service, staff, invalids and retired list, with a satirical view of their claim to be considered "Officers and Gentlemen." The fact is there are, as everybody knows, black sheep in all the professions. Bishops before this have been otherwise than they ought to have been ; and the frailties of the inferior clergy may be estimated with sad certainty from individual instances. The healing art is not undistinguished for social and moral obliquities among its professors, and it would be difficult to travel far on the road of life without meeting with a disreputable doctor. Even barristers are not immaculate, though it cannot be said that they have had among them many Edwin Jameses, and there is no record of a previous Kenealy.

***

MR. JUSTICE MARKBY'S "Elements of Law" has passed, we see, into a second edition. The work it is said may conveniently be read side by side with Mr. Austin's Lectures, being cast in the same logical mould, and in some respects, more organically complete in its conception. It is also enriched by a variety of interesting illustrations drawn from Mr. Markby's experience as a Judge of the High Court of Calcutta. It is noticed that both Mr. Austin's and Mr. Markby's view of their subject is exclusively logical, and leads, indirectly, to an undue suppression of the historical and ethical aspects of law.

***

THE remarks in a recent *Pioneer* on Sir W. Trevor's censure of the *Greville Diaries* are a droll instance of the tendency of popular journalists to echo, instead of directing, the opinion of their readers. To all who can look below the surface, it is notorious that Charles Greville was a man never famous for accuracy ; and this characteristic is even apparent from the numerous discrepancies and contradictions in the book itself. Yet, in spite of these things, our contemporary innocently accepts the book as a serious authority, and snubs Sir William for condemning the conduct of its editor and publisher.

***

MR. MACKENZIE would have the Prince of Wales's visit cost about £650,000, of which nearly half would probably be recouped in presents, and the incident of the "presents" simply puts a part of the expense into another form. Mr. Mackenzie's camp would be like an army of locusts, eating up all before them. The municipal towns are to have their triumphal arches, their fireworks, their illuminations ; highly paid officers are to be taken away for weeks, from their proper duties ; the administration of justice to be paralysed ; the manufactures and traffic of the country suspended, labour wasted, and produce wantonly consumed. The Laird of Kintail tells us that in his opinion and in that of his august friend Rajah Dhuleep Sing, the success of the Prince's visit to India will depend upon the amount of pomp exhibited in his progress, and it is particularly added that the Rajah "remembering his own court" attaches great political importance to the use of "red silk tents." This is certainly very amusing ; our own recollections of Dhuleep's "court" are not very awe inspiring. He was, if we remember right, a plain hobbledehoy, living in Dr. Login's bungalow at Futtehgurh. But this, it may be said, is irrelevant. And perhaps it is, except so far as it throws a doubt upon the value of Mr. Mackenzie's authority on sumptuary matters in the East, which it rather does.

The question, after all, is merely what will the thing cost, and is it worth the price? The people of India have no means of expressing their opinion on the subject, and those who undertake to speak for them are not agreed as to their views and feelings. One thing alone is certain. The people may like holidays, processions, and fire-works ; but no display of red silk tents will make them mistake a mild-spoken gentleman in knickerbockers for an Akbar or Shahjehan.

WE have shown in our leading columns that every pound of grain purchased by the Government for the relief of the famine cost us the average rate of 5 to 6 seers per rupee, laid down in the distressed districts, although the bulk of it was common Burmah and Saigon grain. Now it is instructive to compare with this figure the prices prevailing throughout the same districts from January to July 1874.

Average prices January to July, 1874.

	Rice.	Wheat.
Throughout Patna division	... 11⅛ seers	13 1/5 seers.
„ Benares „	... 10¾ „	14 1/5 „

Thus while private traders were able to sell at these prices throughout the famine, and to make a profit thereon, our own operations were so managed that our importations positively cost more than double these rates. How is it possible then to avoid the conclusion that in some way or other, we mismanaged matters badly? Had the Government prohibited export in October, and cast itself upon the resources of private trade for the supplies required in the famine tracts, does any one really believe that we should have had a disclosure of this kind to face when we came to make up accounts? The course that was followed instead of becoming a precedent for future guidance, must be marked out as something to be avoided, until we know a great deal more about it.

***

AN attempt is again being made to persuade the public that the failure of harvest in the North-West in 1873 was as bad as it was in Behar, and that there was, therefore, no excuse for the system of relief set on foot in the Lower Provinces, and the wasteful expenditure occasioned thereby. It is hard to say whether there is more vitality in truth or in lies: but we suppose the truth wins in the end. Here is what the Secretary to Government in the N.-W. Provinces wrote to the *Indian Economist* on this subject, on the 10th November 1873:—"The accounts from our Eastern Division tell of prospects of "scarcity and distress but not of famine, nor even of severe distress "for the most part. For one thing, the ryots there are very well "off for the most part. The rice crop has been a great failure, "but we don't depend very much on that. You will find what "I have written pretty well contained in the *N.-W. Gazette* of "Saturday. In future I shall issue it regularly every week." Now, this was written at the very period that reports were coming in from Behar, and Rajshahye, of the most alarming nature.

On the 22nd November, the Commissioner of Patna after exact enquiry reported of his division as follows:—*Patna.*—From very careful and systematic enquiries, it appears that the rice crop on the whole will be merely ⅓rd of an ordinary crop. About ⅓rd of the usual area only sown with rubbee. *Shahabad.*—With the exception of irrigated crop, the dhan has perished. *Tirhoot.*—The rice crop has been almost entirely lost,—outturn 1 to 2 annas and the people almost wholly dependent thereon; the prospect of the rubbee more gloomy day by day. *Chumparun.*—The outturn of the rice crop is estimated at but 2 annas, and but 6 annas of the rubbee land sown; the rest left uncultivated for want of moisture. Concerning Rajshahye, Mr. Robinson reported on the 2nd December. "During the last 10 days I have ridden over a tract of "country 45 miles long by 30 broad, and throughout the length and "breadth of it there will not be more than a four-anna crop of rice "in the best parts, dwindling down to none at all in the worst." It is hard to make men understand what this means: twenty millions of people were dependent in the main upon this harvest. The failure of harvests which the Bengal Government had to face was without precedent. The partial failure in the North-West was a bagatelle, but you will find the *Pioneer* asserting that the two situations were identical, for the next ten years.

***

THE ease with which the public, and even our publicists, forget the almost immediate events of the day, receives a very good illustration in the fact that the real history of the famine is already fading away from memory. Nothing would surprise us less than to be told that we were misrepresenting the attitude of the two Governments on the subject, and that there never was any difference of opinion between them. It is therefore worth while for a moment to recal the impressions of a very keen observer of the state of matters, so late even as February. On the 6th February Mr. Forbes, the correspondent of the London *Daily News*, wrote to that journal as follows:—

Calcutta, Feb. 6.

During the past week public opinion here seems to have undergone a great and wholesome change on the subject of the famine. When I came here, ten days ago, I found people broadly divided as to their opinions, into two extremes. One side pooh-poohed the famine altogether, were ready to point out to you the "*statistical nuisance*" who "*invented it*," declared that the natives were laughing at us for our solicitude, and roundly proclaimed that the supply and relief works were simply refuges for civil and military servants who were out of work. With this class Sir George Campbell was an excitable old woman, and if the Viceroy was spared from contumely, it was only because his apparent action did not indicate that his apprehensions were particularly gloomy.

Mr. Forbes had caught the precise tone of the two Governments. The one was full of anxiety and alarm, and if the other was so too, all we can say is that its members contrived very effectually to hide it. But they were not so. They did not oppose Sir George Campbell, but they gave him no sympathizing support, as Mr. Forbes found out very quickly. Who then ought now to have the honors that are to be bestowed?

We shall not grudge Lord Northbrook an Earldom, but should be glad to see him so rewarded. But the right man to honor is Sir George Campbell, who has been thrown into the shade altogether.

***

Is it not perhaps time, that the Legislative Councils of the country were once more opened to the judges. It is now just 16 years since the mistake was made of excluding these high functionaries from the Councils, in resentment of Sir Charles Jackson's onslaught on Mr. Harrington's license-tax, and the dispositon shown by Sir Barnes Peacock to make common cause with his colleague on the Bench. The resolution was as unfortunate and short-sighted as it well could be. "Who," exclaimed Macaulay in his well-known speech in the attempt to exclude Sir John Romilly from the House of Commons—"Who can be so well qualified to make laws and to mend laws, as a man whose business it is to interpret laws and to administer laws." Bentham goes the length of affirming that the best school for a legislator is the Judicial Bench; while we are to understand that in India we have so much talent at our command that we can afford to exclude the Judges from our Councils altogether. Any person in the country may at this moment be nominated a member of the Legislative Council, except the men most fitted to sit there. Is it not time that this folly had worn itself out, and that the Judges were brought back? "Nothing is so hateful," we are told, "as a political judge," but with curious perversity it is overlooked, that the Indian Judges were excluded from the Councils not for their subserviency to the Government, but for their independence of it. Is it not the very bathos of constitutionalism to be admitting into these Councils the editors of our newspapers, while we exclude the Judges, not because they are likely to become instruments of oppression in the hands of the Government, but that they may prove too powerful if they should chance to go into opposition. Verily we are a strange people. We shall probably go in for the next 20 years legislating as well as we can with the uneducated talent we can command, and eschewing the real power we might count upon for the task.

***

IF the Prince of Wales is really to visit India in the autumn, the question of the apportionment of the cost ought to be determined now: Should India bear the whole expense of the visit, or should it partly be shared by the mother country? There ought to be no difficulty, we think, in deciding the matter. The Prince is to be our guest, and the cost of entertaining him should therefore, be borne by ourselves. But then he should come, as every other guest comes, at his own expense. The outlay incident to the voyage in the way of outfit, retinue, flying squadron, and so on should be borne by England. And if any attempt is made to saddle the people of India with monies laid out at home in preparation for the voyage, it should be resisted. India will receive the Prince with a hearty welcome and entertain him royally, and that is all she can be expected to do.

The private income of the Prince is comparatively small. He has an annuity of £40,000, settled upon him by Parliament out of the Consolidated fund, in addition to which he gets £60,000 to £90,000 a year for the Duchy of Cornwall. The Princess of Wales has also £10,000 a year settled upon her by Parliament. The total income of the Prince is thus about £110,000 a year, and the amount is certainly not extravagant. The total private income of the Queen herself is very small. She has a privy purse allowance of £60,000 a year, and the revenues of the Duchy of Lancaster are about the same amount, while she receives any balance there may be of the Civil List of £400,000 after defraying the salaries of the royal household, also taxes, etc. The private income of the Queen does not exceed, we believe, £150,000 a year, and we are under the impression that she has to defray all the Royal living expenses out of the amount, but are not sure. It will surprise a good many of our native friends, we dare say, to learn that the

Queen's income is not more than 15 lakhs a year, and that of the Prince of Wales but ten or eleven lakhs. The latter has to defray everything out of this sum, and we are not sure but that the Queen has to pay her "butcher, baker, and candlestick maker" in the same way out of her 15 lakhs. Many noblemen in England and some Commoners have incomes two and three times as large as either the Queen's or the Prince's.

***

THE *Hindoo Patriot* assures us that "while Sir George Campbell "issued reams of papers of reports and instructions on the famine, "he could give no definite information as to the extent of the loss "of crops nor keep his own officers in proper discipline; that he "did not know the extent of old stores in the country, which seri- "ously affected the estimates of supplies; that he could not mature "plans for transport of food; and that while Sir George was bandy- "ing words with the Viceroy, the famine stole a march upon Tir- "hoot; the Patna Commissioner came in hot haste for succour; and "that Sir George went to Behar to see things with his own eyes, "but he was too weak to do active work."

Verily there is illusion somewhere.

***

THE same contemporary supplements our complaint that Sir George Campbell virtually suppressed the *Indian Observer*, as follows:— "To do justice to Sir George the fettering of the *Indian Observer* "did not commence with him. It originated, if we are informed "aright, with Lord Mayo and the Stracheys, for we believe a hint "was sent to certain officials supposed to be connected with that "paper that they should, as loyal servants of Government, sever "their connection with it. The *Observer* next fell into the hands "of some educational officers, and then commenced the crusade of "Sir George Campbell. Did he not actually take an undertaking "from certain officials both covenanted and uncovenanted that they "should not write for the press? We had it from some of these "officers themselves that Sir George took a solemn pledge from "them in this respect, and the country was thus deprived of their "valuable services in the ventilation of honest and intelligent "criticisms on public men and measures."

We are much obliged to the *Hindoo Patriot* for telling us all this. The wider the facts are known the better, and we wonder that public attention was not drawn to them earlier. The Government has been drifting for years into a policy towards the press, that can only be injurious to the country. "To learn the principles of a "man in office," says a recent home writer, "a single question will "suffice. If he will concur in putting matters on such a footing "with respect to the Press, that no man shall have more to "fear from writing against Government than for writing in its "favour, the Government which he desires to see established is "liberal and constitutional; if not, he is anxious to maintain a "despotic Government, however he may gloss the fact over to "others or himself." We appeal to every man to say which of these attitudes is the right one. Do we not all see the self-respect and conscious integrity which the one involves, and the essential littleness, if not immorality, of the other. A Government that feels that in its conduct and acts there is nothing to conceal, should challenge without anxiety, the opinion of all the world. "We may have been mistaken," it will say, "but we have acted from "conviction, and there has been no unworthy motive in what "we have done. We intended the public good. Being fallible "we may have erred, and we are quite willing that the error "should be demonstrated, if we really have erred. Let every "man tell us what he thinks, and let no one fear we shall "be so disloyal to the truth, as to resent what he says." This is the spirit in which public men, conscious of the purity of their motives, should cast themselves on the opinion of their fellows. The triumph of a statesman is not a verdict of approval from uninformed public opinion, but the approval of a public that understands all that has been attempted and accomplished.

***

IT seems that an important discovery of old official records has been made at the India Office. While the museum was being transferred to South Kensington, a box supposed to contain nothing, or simply rubbish, was found to hold important documents. They proved to be papers of considerable value relating to the affairs of the East India Company in Hindoostan between the reigns of James I. and George II. It is supposed that among the documents, which are numerous, several important fac-similes, or even originals, of treaties with the principal Hindoo and Mahomedan dynasties of the time will be found, which will afford a good deal of information about the historical entanglements of the period. In a letter to the *Pall Mall Gazette*, Sir John Kaye implies that every document of any value was rescued by him during the exodus from Leadenhall-street. He says that most of these papers were made over to the Assistant Librarian in Cannon Row, but that one box full of curious old records was removed to Sir John's own official quarters, where they remained until his resignation last year. It is much to be desired that all the archives of the old "Kumpani Bahadur" should be carefully registered and abstracted. The title-deeds of the Company to the Kallighatta villages (Calcutta) have long been supposed to be lost. We should not be in the least surprised, if they are found amongst these old records.

A detailed account of the documents will, it is said, shortly appear; in the meantime, the *Daily News* gives us the character of several of the MSS. Many of the papers are under the great seal of James I., Charles I., Oliver Cromwell, Charles II., James II., William and Mary, Anne, and George II. The MSS. are on vellum, and in very good condition, with the huge seals attached to them rarely even in part obliterated. The most interesting is a couple of feet broad, and several hundred feet long—a thick compact roll of fine vellum stitched so as to form a continuous manuscript, and containing the names of persons advancing the famous loan of £2,000,000 sterling which formed the original corpus of the East India Stock. The date of the document is 1698, which is about the date of our missing title deeds to Calcutta.

***

GENERAL MARGARY has supplied the public with some additional facts in connection with his son's murder. The deceased entered the town of Manwyne on the 19th or 20th of February, and during that and the following day, walked about the place chatting familiarly with the inhabitants. On the evening of the 21st a number of Chinese civilly invited him to accompany them to some hot springs a few miles off, which they wished to show him, and while in the act of mounting his pony he was cut down from behind, and despatched with swords and spears. Two of his servants were afterwards murdered in the house they occupied in the town, and the others on their way to draw water. The cook, it is said, escaped. General Margary adds: "The writer and head servant were Christians. There is no doubt in my mind, from what I learn, that the Chinese authorities of Momein instigated the murder and attack on the exploring party." Dr. Anderson gives the same account, but says Margary was cut down on the way to the springs, when sitting on his pony. Dr. Anderson himself had a narrow escape of being killed. "He was out some distance from his servants in search of plants and animals, when he lost his way and got to a hostile village, where he was surrounded by Kakzens with drawn swords, when his dog, which had been behind with the servants, came bounding to his master and scared the savages, and then guided him back to the collectors and servants, who were in hiding, and weeping, thinking they would all be killed, and fearing they would never see their master more."

***

THE *Challenger* is continuing her course round the world with success. Captain Chimmo's assertion that the China Sea is cut off by a barrier—which rises to a height of nine hundred fathoms below the water—from communication with the Antarctic basin has, amongst other things, been verified just before leaving Hong-Kong. Admiral Shadwell had received a telegram announcing the Proclamation of Don Alfonso as King of Spain, and the *Challenger* was the first to take the news to the Philippines. It did not cause much excitement, and no steps were taken by the Spanish authorities to make it public. The form of the Home Government seemed to be regarded as of little importance. What concerned the Philippiners more was the inconvenience to which they would be put by the probable dismissal of all the Government officials. Considerable information as to the habits and mode of life of that beautiful sponge known as the "Venus flower-basket" was obtained at Zebu. This curiosity is obtained by the natives in a most ingenious fashion. Two long strips of bamboo meet at an angle of 45 deg., and are fixed in that position by an elaborate system of stays of bamboo, which are attached to a piece of wood that runs back from the angle between the two arms or wings of the machine. This piece of wood is weighted with stones, and a line is attached to it, so that the machine is pulled along on the bottom with the angle in advance, and the two wings sloping backwards, one on either side. The outer edge of each of the bamboo rods is armed with between 30 and 40 large fish-hooks with their barbs set forwards towards the angle. The "regaderas," as the Spaniards call them, are found at a depth of about 100 fathoms. The Indian lets down his bamboo arrangement with a strong, fine line of Manilla hemp and pulls it slowly over the ground; every

LONDON LETTER.

[FROM OUR OWN CORRESPONDENT.]

LONDON, APRIL 30TH, 1875.

NO long time will now elapse before France will be subjected to the excitement of new elections. The Assembly will only meet again to be dissolved, and then will follow an appeal to the nation. So far as we can at present judge, the Republicans will obtain an overwhelming majority. The Legitimists will constitute a mere fraction of the next Assembly, and even in the Senate the Republicans will predominate. The Orleanists are as much out of the race as the followers of the elder branch of the absolute House of Bourbon, perhaps more so. Neither will the Bonapartists count for much at the beginning, though their time may come when the different shades of Republicanism disagree among themselves, and the extremes take to hating one another as fiercely as the Girondists were hated by the Mountain. And Prince Bismarck affects to apprehend danger from France thus disunited. It is only necessary to leave the French to themselves, to ensure their impotence for aggressive purposes. Let the country be invaded, and all differences will be blended in the patriotic rage that would rouse the entire nation and bind together the most discordant elements of the social system.

Could the old Emperor have been serious when he said the other day to the French Ambassador that attempts had been made to sow the seeds of discord between France and Germany, but had happily failed? Who was the sower of that evil seed but his own Chancellor? In working out his policy of antagonism to Rome, Prince Bismarck did not hesitate to kindle well-nigh into a flame the smouldering embers of national hatred. The Berlin *Post* was prompted to sound a false alarm, and in a moment the two peoples were on the alert, and ready to fly at one another's throats. True, his powerful will stilled the storm even as Neptune hushed the angry waves, and bade the truant winds hie back to their caverned king. But it is intolerable that all Europe should be disquieted, and that all trade, industry, and speculation should be checked, at the caprice of a single individual. Germany and its Bismarck are becoming "a bore."

M. Michel Chevallier, the consistent advocate of Free Trade principles in France, is just now the honoured guest of our great centres of manufacturing industry. From his speeches it becomes manifest, as indeed it has long been suspected, that the late Emperor forced the Commercial Treaty between England and France upon his unwilling subjects. The consequence was that both countries were compelled to have recourse to compromises which vitiated the whole spirit of the negotiation. As a fact, Free Trade is not thoroughly understood even in England, and the greatest blunders are made by the very men who profess to be its apostles. Mr. Bright talked at Birmingham of Mr. Pitt being convinced of the truth of Free Trade principles by the arguments of Adam Smith, and it is commonly asserted that the "heaven-born minister" was the first British statesman to whom was vouchsafed a glimmering of the light. This, however, is a mistake. In Lord Shelburne's parliamentary speeches, delivered while Pitt was a boy at school, these principles are clearly and strongly inculcated, but the soil was not then ready to receive the good seed, which was consequently wasted. The existence of customs duties is a proof of the half-hearted, tentative nature of our adoption of Free Trade even at the present day. When all commercial restrictions between "the peoples that on earth do dwell," are swept away, wars and international jealousies will become impossible, because no nation will endure direct taxation for the purpose of maintaining standing armies to work the evil will of military despots. And then farewell to "the right divine" and to all other similar "myths of the middle ages."

Among the mildest of these myths was the imaginary necessity for preventing the publication to the outer world of what passed within the walls of Parliament. This inconvenient and used-up fantasy will be abolished on Tuesday next, when the Marquis of Hartington will bring forward his motion for breaking down the ancient barriers, now as rotten as Mr. Walpole's Hyde Park railings. People often wonder why certain disagreeable insects should have been created, but we may now be sure it was for a good purpose, seeing that even a Biggar may be the cause of amendment and progress.

The summary deposition of the Gaekwar does not commend itself to the mind of the average Briton. If he was really so bad a ruler as he is now represented,—and that much we are quite ready to believe,—why was he not deposed months ago, instead of being allowed twelve months' grace? But as a whole year's period of probation was given to him wherein to bring forth fruits meet for repentance, on what grounds has that respite been shortened? According to Sir Lewis Pelly, the Maharajah had actually exhibited some symptoms of amendment before the Indian Government decided upon bringing him to trial on a charge of murder, and, therefore, exclusive of that charge, nothing has been laid to his door of a character to justify his sudden degradation and exile. It may be true, or it may be quite the reverse, that his Highness connived at the attempt to injure Colonel Phayre's health, but he is at least entitled to all the good as well as to all the evil consequences of the verdict,—which, in fact, amounts to our Scottish verdict "Not Proven." In the eye of the law he is not guilty, though many persons may still believe that he is, morally, not innocent. The idea, however, of any one being poisoned by diamond dust is here laughed to scorn, and a very skilful consulting chemist assured me the other day that a wineglassfull would produce no worse effect than a severe purgation. No inflammation whatever would ensue, and death was out of the question. Still, if the Maharajah had caused the least noxious ingredients to be administered to the Colonel under the conviction that they would prove fatal, or at all events highly deleterious, he would have been as guilty of murderous intent as if he had employed strychnine. But the evidence as to his complicity is clearly worthless, and a feeling of intense astonishment is everywhere expressed as to Lord Northbrook's infatuation in suffering such a charge to be proffered on such flimsy suspicions. As for the concurrence of the three English Commissioners, we are sorry and even ashamed that they had not the sagacity to detect the unsatisfactory nature of the evidence, or the manliness to record their dissent, from the apparently foregone conclusion arrived at by the Government. It is hard to believe that they were convinced in their own mind that Mulhar Rao sought to compass the death of Colonel Phayre. If they entertained the slightest doubt, they were bound to give him the benefit of that doubt. In any case, the Court being equally divided in opinion, the Maharajah was entitled to an acquittal, and the Government ought to have accepted with dignity the result of their unwise haste in bringing him to trial. That the native Commissioners will deeply resent the slight that has been passed upon them is inevitable, nor will their wounded pride find any solace in the maintenance of a native administration. It may, perchance, be some comfort to them to know that the British public heartily sympathises with them, and is no party to the affront of which they have so much reason to complain. We are, at the same time, sorry for Lord Northbrook, who appears to have governed India with equity up to this unfortunate incident. The first remark almost that was made was to the effect that Ministers would soon have a fat appointment to dispose of, as His Excellency would surely tender his resignation as soon as he discovered how much his Government is blamed for this high-handed proceeding. The fountain and origin of all this mischief is that impracticable Colonel Phayre with his dread of poison. Why Sir James Outram was in ten times greater danger at Lucknow as well as at Baroda, but *he* never thought of State trials, or of bothering the Government. He simply went on doing his duty *sans peur et sans réproche*, and his name will live for ever in Anglo-Indian story, while that of Colonel Phayre cannot be too soon forgotten. It is said here, I know not how truly, that he, Lord Northbrook, and Mr. Aitchison are all touched with a pietist fanaticism, and extreme-evangelical folk are terribly afraid of death, while towards the living they are pitiably uncharitable. I sincerely trust that I may be mistaken, but I confess to apprehending very evil consequences from this unfortunate blunder. I had fancied Lord Northbrook was endowed with real force of character, but only a weak and timid man could have been guilty of such vacillation, such indecision mingled with rashness, such violation of good faith. Even Lord Dalhousie's masterful injustice was preferable to this melancholy affectation of holding by the forms of justice while disregarding its very essence. It is not very likely that Mr. Sullivan's notice of a motion on this subject will do much good. The House of Commons is not strong on Indian questions, and the *Pall Mall Gazette* has submitted to the guidance of Mr. Fitzjames Stephen in upholding the action of the Indian Government. The *Times* also has been won over, though for a moment it seemed to hesitate as to which course it should take. It is said that Lord Salisbury and Lord Northbrook are personally the reverse of good friends, but the Marquis loves even the semblance of imperiousness and is tolerably certain to support the Viceroy.

There has been some excellent fooling in the Albert Hall. Upwards of 7,000 more or less rational beings assembled last Wednesday to play at calling one another silly names and making-believe. The game is called Free Masonry, and the fun

consisted in making Brother Albert, commonly called "The Coming K——," Worshipful Grand Master of all the Tomfools of Old England. As a spectacle the affair seems to have been wonderfully picturesque, and the details were so well managed that not a single hitch took place. Of course, there was a grand banquet at the Freemasons' Tavern in the evening, at which complimentary speeches were made and the world generally was congratulated on the auspicious event that had been consummated that day. The Grand Lodge of Sweden was represented in the flesh by no fewer than five distinguished individuals, while France and Italy were content to send written addresses. The latter was an amusing illustration of the force of the undercurrent in human affairs. It so happens that the *Daily News* has lately appointed as its special correspondent at Rome a gentleman who is a member of the Bard of Avon Lodge, of which Mr. J. C. Parkinson is the worthy Grand Master. At the recent opening of a Lodge in the Eternal City, the Bard of Avon Lodge represented England, and now this solitary member of that Lodge persuades the Roman Freemasons to forward an address through his Grand Master. How small the world is!

Taking it is a whole, last Friday night was perhaps the most exciting one this session has yet witnessed. Although the House actually consisted of no more than 438 members, the Peers' and the ordinary Strangers' galleries were crowded, and from the Ladies' cage glimpses of many colours were dimly and distractingly seen. The *lever du rideau* was a light farce in which the prominent part was borne by the late Lieutenant-Governor of Bengal. Owing to the carelessness of the returning officer, the new member for the Kirkcaldy burghs was presented to the Speaker as Sir George of Edenwood, K.C.S.I. On the assurance, however, of Mr. Anderson and Sir George Balfour, that the individual supported by them on either hand was the Sir George Campbell, K.C.S.I., whom the Fifeshire "bodies" had chosen as their representative, the Clerk of the House was directed to amend the return, and the new member was permitted to take his seat. Then, a sort of *entr'acte* ensued, in which the Marquis of Hartington announced his intention to bring in a measure, in the course of the present session, to define with greater exactitude the position of the Press towards Parliament—seeing that Ministers were not disposed to take up the subject. Mr. Disraeli, I may parenthetically remark, has been generally blamed for replying so curtly to Mr. Sullivan, and thereby not only giving idle offence, but also losing an opportunity of making himself popular with the journalistic portion of the Fourth Estate. In deference to the leader of the Opposition, Mr. Sullivan consented not to carry out his threat to demand the exclusion of strangers, the consequence of which would have been that Dr. Kenealy's admirers would never have known how baseless are his accusations of the Judges who tried the Tichborne case, or how inferior is his own moral and intellectual stature to that of the men whom he affects to contemn. His speech in support of his motion for the appointment of a Royal Commission was listened to with praiseworthy patience and forbearance, though it produced an almost universal sensation of disappointment. His arguments were so flimsy and disjointed, his alleged facts such mere gossip wrongly reported, his very denunciations so tame and pointless, that the inevitable conclusion was forced have upon the large majority of his hearers that his evil influence with the ignorant multitude is attributable not to any particular force of character on his own part, but to the malevolent, base, and envious feelings of the lower classes. Dr. Kenealy himself appears to be under the impression that Orton's conviction illustrates the insolence of rank and wealth towards the humbler strata of the social system, while Mr. Whalley, of course, believes that it is a fresh proof of the power of the Romish priesthood in these isles. Lady Tichborne's recognition of the claimant as her son naturally carries great weight with the uneducated masses, who refuse to accept any evidence of the craze that possessed her. For three mortal hours did Dr. Kenealy go over his "thrice-told tale," as Mr. Disraeli contemptuously called it, but without submitting a single new argument, or in any way strengthening the position he failed to hold before Judges and Jury. His tittle-tattle assertions that Chief Justice Cockburn had declared his intention of sentencing the claimant to 15 years' penal servitude, were shown to be utterly worthless. They are flatly contradicted by his two authorities, Mr. Milbanke and Lord Rivers, while Mr. S. Morley characterised as absolutely untrue certain words ascribed to himself, to the effect that Sir John Coleridge had declared that he did not believe the claimant to be Arthur Orton. What little argument there was in Dr. Kenealy's speech was shattered to fragments by the Advocate-General, and Sir Henry James, and specially by the latter, whose analysis was acutely searching. The Prime Minister's brilliant speech, dignified and yet pregnant with withering scorn and sarcasm, roused the House to enthusiasm, the Opposition cheering him quite as heartily as his own followers. The compliment was returned by the warm applause the latter bestowed upon Mr. Bright who seems to be assuming the *rôle* of the *vir pictate gravis*, but who introduced the troublesome precedent of reviewing in the House of Commons the evidence that had been given before a Court of Law. It is true that his motive was excellent, and the immediate result of the irregularity is likely to be most wholesome, but it may hereafter be very inconvenient should his example be followed in an opposite sense. The solitary *Aye* who gave employment to the two tellers, Dr. Kenealy and Mr. Whalley, was Major O'Gorman, who strode into his lobby waving his hat over his head, as though he were leading a forlorn hope. Setting aside the four tellers, the division was as 433 to 1, if the Major can be counted as only one, for he is not only big enough for two, but in the evening frequently acts as if he were beside himself. Lord Coleridge has since clearly vindicated himself from the aspersions cast upon him by Dr. Kenealy in reference to the Pittensdreigh forgeries; and in the House of Commons Sir Robert Peel has decried, with characteristic energy, that slanderous assertion that he told Mr. Whalley that Sir Alexander Cockburn had mentioned to him his intention to sentence the claimant to 15 years' penal servitude. To suppose, however, that all these denials and refutations have the slightest effect upon the leaden minds of those who believe that the Dartmoor convict is the real Sir Rogor Tichborne, would evince a strange ignorance of human nature. If possible, these infatuated people are more than ever convinced that there is a sort of tacit understanding on the part of the aristocratic classes to keep the claimant out of his rights. Dr. Kenealy himself is plainly resolved to adhere to his false gods. He refuses to accept the denial of Lord Coleridge, or the disclaimers of Mr. Milbank, Lord Rivers, and Sir Robert Peel. He believes in "Sir Roger" and Mr. Whalley, and intends to make his livelihood by the *Englishman* until outraged law brings down upon his head the punishment due to his abominable slanders.

Spring has come upon us suddenly in all its warmth and beauty. After such a long, dreary, pinching winter, with the weathercock apparently frozen while pointing to the N.-E., it is delightful to welcome back the soft westerly breeze and sunny sky.

"Of a' the airts the wind doth blaw, I dearly lo'e the West" even when there is no bonnie lassie dwelling in the quarter whence "the wind doth blaw." Fruit trees of all kinds are loaded with blossom and, barring the return of our easterly foe, there is every promise of an abundant fruit crop, while even the farmers are content with their wheat fields.

THE ENGLISH MAIL.

THE young King of Spain is in an uncomfortable position. Instead of the Carlists giving way before his generals, they are daily gaining in strength. Dorregaray is at the head of the troops in the Centre; a stirring, enterprising, unscrupulous man, leading, it is asserted, a force of 10,000 to 13,000 men, overrunning the Maestrazgo, and ravaging with his scattered bands the borders of Catalonia, Aragon, and Valencia, levying heavy contributions, making the war feed the war, bewildering the veteran Echague, his opponent, by the rapidity of his marches and counter-marches, and winding him, as it were, round his little finger. It is on this quarter, as it seems, that just now the storm clouds are gathering. From the mountains of Navarre or of Catalonia, the way lies through vast, bare open plains into which the Carlists, with their scanty cavalry and inferior artillery, may, perhaps, never be able to venture; but it is otherwise in the Centre, where not only does Dorregaray find a secure stronghold in the fastnesses of the Maestrazgo, but were also he can, unobserved, gather together a sufficient force to enable him either to overpower the Alfonsists or to give them the slip, and, stealing a march upon Cuenca, make his way into the unguarded provinces of La Mancha, and terrorize the country in the rear of Madrid, gaining possession of the railways and cutting off all lines of communication between the capital and the southern provinces. To account for the inaction of the Royal Army of the Centre, the pleasing fiction has been in circulation at Madrid that "a good understanding had sprung up between Dorregaray and Echague, and that a conference had even been held in which the terms on which the Carlist leader would consent to declare for King Alfonso were being discussed, and were almost agreed upon." But the delusion was not of long duration; the alleged interview turns out to have been a myth.

THE German press thinks it necessary that the position of Germany, in presence of the approaching complications, should be clearly defined in accordance with her real interests in the East. At present her position is that of "a mediator between Russia and Austria." The interests of those Powers in Servia are antagonistic, while the main interest of Germany in the regions on the Lower Danube is to favour the creation of new civilized States, "as the stream of German culture, which is about to open a new channel towards the East, will first have to flow through the territories in question." Germany cannot identify her interests on the Lower Danube with those of Austria, "for the latter might under certain conditions become less German than Austrian or Hungarian. Moreover, by so doing, Germany would place herself in opposition to Russia; and it is necessary for the maintenance of her power that she should be on good terms with Russia, not only on account of France, but also of those problems which Germany and Russia have to solve in common both on the Upper and on the Lower Danube." Germany is most interested, therefore, in preventing both Austria and Russia from exercising an active policy in the East, by acting as a mediator between them. While favouring the development of the vassal States of Turkey, she can secure Austria against the danger of the revolutionary movement spreading to her territories, and she can allay any anxiety on the part of Russia about Austrian annexations in the East. The Servian outbreak, which it is now impossible to avert according to a writer in the *Augsburger Allgemeine Zeitung*, would most nearly affect Austria, who would have to look after the security of her frontier. But the establishment of a great Servian State would be no real danger to Austria, for the Banat and the Bacska in Hungary do not possess the natural conditions for annexation to Servia, and in Croatia, Slavonia, and Dalmatia the Roman Catholic population is sufficiently large to keep the Servians of the Greek Church in check. As to Russia, who is said to be the secret originator of the Servian movement, she could not openly interfere unless Austria attempted to occupy Bosnia.

***

THE statements advanced by Dr. Kenealy before the House of Commons to show that his client had been wronged by his Judges were three, and they were immediately shown to be untrue. The first was, that Mr. Coleridge, during the first trial, had tendered to the Jury as evidence certain documents which he knew to be forged. Sir Henry James, in replying, proved that these documents had not been tendered at all. The second was, that Sir Robert Peel had told Mr. Whalley, while the second trial was yet undecided, that the Lord Chief Justice had informed him (Sir Robert Peel) that the Judges were convinced of the claimant's guilt and intended to give him fifteen years' penal servitude. This, Mr. Whalley said, had been told him by Sir Robert Peel in the presence of a Mr. Hendricks. But Mr. Whalley is the greatest marvel of the age. He has a perfect genius for making a fool of himself. He watches with the eye of a lynx for every opportunity of exhibiting himself in a ludicrous light, and never allows one to pass him unused. Dr. Kenealy's statement was no sooner in print than both Mr. Whalley's authorities came forward—the one to deny that he had ever told him anything of the kind; the other that he had ever been present when any such statement was made. The third assertion was, that the Lord Chief Justice had told Mrs. Milbank he intended to send the claimant into penal servitude. And it appears that the Lord Chief Justice did in jest say something that might be twisted by his enemies into this construction. Mrs. Milbank had said to him that a friend of hers (Lord Rivers) was so convinced of the justice of the claimant's pretensions that, even were he convicted of being an imposter, he would not part with him. "In that case," said Lord Cockburn, "your friend will have to follow the claimant into penal servitude." Mr. Disraeli's reply to this part of Dr. Kenealy's indictment was in his happiest vein:—"Is it," he said, "because the Chief Justice of England goes to a party and meets a lady—I regret that the name of the lady has been introduced, but we all know her to be a most charming lady, and I trust she will not feel mortified by the introduction of her name into this ruder arena—and because this lady presses him into a position which he at first attempted to avoid but at last yielded to, and expressed an opinion—is it for this that all England is to be agitated; that we are to be told we are living on a volcano, and that if a certain resolution be not carried to-night, to-morrow will be dark with fate, and probably this House will never assemble again? (Loud cheers and laughter.) Sir, this is one of the most preposterous charges that ever was made. I am not talking now of a trial which the country is not likely soon to forget, but of this second divertissement which I maintain is the most preposterous, the most absurd, and the most flimsy business that was ever brought before this House."

***

INSTEAD of the import of horses into France having increased, there has been a diminution in the number since the war, even were it true that a contract had been arranged for the purchase of ten thousand animals during this summer. In the three years preceding the war (1867-69) the horses imported from abroad amounted to 50,150; whereas during the three years following the war (1872-74) the number was no more than 35,433, or a decrease of not far short of one-third. It is true that during 1870 and 1871 the imports amounted to 50,362, or slightly more than during the three years immediately preceding. But when we remember the great loss of horses in the war by the capture of the armies of Sedan and Metz, by the provisioning of Paris, and in battle, and when we also bear in mind the pressing need there was for the means of mounting cavalry both in the armies of the Loire and in the army collected together by M. Thiers to reduce the Commune, we shall see that these purchases were really moderate and could certainly not have replaced the losses to which we have just referred. In the last three years there has been a decrease in the purchases of all kinds of horses. Thus in 1867-69 the stallions imported numbered 3,184; in 1872-74 only 1,638; in the former period the geldings numbered 28,665, and the brood mares 11,127; in the latter they numbered respectively 20,423 and 8,694. The stallions, brood mares, and colts are imported principally from Belgium, which country has usually supplied the greater number of geldings; but in 1870-71 there was a very large supply from the United Kingdom, and within the two last two years Germany has been drawn upon to a greatly increased extent. Turning to the other side of the account, we find that the sales to foreigners in the three years 1867-69 did not exceed 19,607, whereas in the three years 1872-74 they amounted to 62,456.

MAJOR OSBORNE thinks that the tendency of the new German Empire is retrogressive, and Bismarck's policy may possibly be attended with fatal consequences. In order to crush the German Catholics all Europe must be laid in chains. Or, reverse the case. Suppose Don Carlos becomes King of Spain, and puts in force in favor of the Catholic Church the same laws which Prince Bismarck is working against it, could he not appeal to precisely these principles? Could he, too, not demand the silence of Europe while he worked out the pacification of Spain in the way which seemed best to him? Russia, too, on exactly the same grounds, might proceed to exterminate the Poles without a voice being raised in their defence or her condemnation. For, the principle of suppression once admitted, it is impossible to affix a limit where it would cease to apply. And were Prince Bismarck perfectly candid, he would admit that his ideal of a Press would convert it into a department of the State through which the government of the country ventriloquised. The hands might remain, as before, the hands of Esau, but the voice would always be that of Jacob.

***

THERE is no want of commentary upon the Baroda case in the English journals just received. The *Times* condemns the course taken by the Government in a manner not the less decided for being somewhat measured and cautious. The main objection taken is, as might have been expected, the inconsistency of the course of action and the hopelessness of inducing the people of India ever to receive the decision as a fair one. In another article the same journal dwells with emphasis upon the fact that at the time of his arrest the Gaekwar was in a state of probation, and that his rule was said to be improving. And our contemporary goes on to say, "Of the courses open to the Government, the boldest was to uphold the opinion of the three European members of the Commission, who, as we believe we may state with authority, thought the guilt of the Gaekwar proved. The Viceroy might have declared that he had considered the report of the Commission and had come to the decision that the crime had been established. Or the Government might have treated the result of the enquiry as an acquittal, though only the Maharaja of Jeypore was for fully absolving the accused, Scindiah and Sir Dinkur Rao finding him guilty on minor points. The Gaekwar might then have been allowed to complete his term of probation, and after that the Government might have acted. As it is, the natives will be apt to say that the Government has palpably allowed itself to be swayed by an incident which it affects to put completely aside." The *World* pronounces itself still more strongly in condemnation of the Government for the false position in which it has placed itself;

and like the *Times* it urges the point apart from the merits of the case. The *Pall Mall Gazette* takes a similar view in a more severe tone. "Since no better solution could be devised," says our contemporary, "than that embodied in the Viceroy's Proclamation, we can now appreciate the magnitude of the difficulty in which Lord Northbrook involved himself. The best way out of it leads only to deeper discredit and disaster. The Viceroy cannot and does not act upon the report of the Commission, and yet he is obliged to act as though that Commission had reported against the Gaekwar. He attempts, but he attempts in vain, to go behind the Commission, and to argue that he is free to act as though he had never instituted any judicial proceedings against Mulharao at all. Technically he may be so, but morally he is not, for he can only so act by abandoning an attitude which, if taken up at all, should have been consistently maintained."

***

THE Belgian incident is by no means it seems at an end ; but on the contrary, threatens to assume the importance of a European question. The German note of April 15 complains of the answer of the Belgian Government, and points out that the grievance for which a remedy is asked is one that concerns, not only Germany's good understanding with Belgium, but also all European States. In order to avoid the charge of preaching what he did not practise, the Chancellor has caused inquiry to be made into the German code and finding there the very same deficiencies of which he complained to Belgium, he has given orders that bills should be prepared for submission to the next Parliament. This would, as was thought, remove the touchiness of the little kingdom, and prepare the way for reform when Germany sets her own house in order. It has been already reported that Russia and Austria back up the Chancellor's demands, and that Germany, rather taken aback at finding a gap in her own legislation, will shortly propose a European congress to discuss the matter. These despatches to Belgium should be taken, we are told, in connection with the representations made to the Italian Court respecting the licence allowed to the Pope. From Bismarck's point of view, this is right : if the Pope is determined to isolate Germany, and to refuse to Prussia concessions which are allowed to all other European States, Germany has a right to say, "Let none else meddle with me or try to tie my hands."

***

THE *Berlin Post* congratulates itself upon the quieting and pacifying effect produced by its recent leading article upon the chances of war. France, the *Post* says, will only go to war if she can find an ally. At present the Ultramontanes in and out of Germany are her only allies, and they, fortunately, have no soldiers. There are, certainly, a good many friends of the *ançien régime* on the Danube and elsewhere who would like to destroy the Empire ; but they are dangerous only while intriguing in the dark. Should this conspiracy continue their operations against the Government and the nation, Bismarck will again warn the public against the disturbers of European peace.

***

THE *Times* acknowledges that there are reasons for a practical acquiescence in the Viceroy's decision, but sees that it has features which are eminently unsatisfactory. "The grave "mistake committed in issuing the late Commission is now fully "demonstrated. The Government placed Mulhar Rao on his trial "for attempting to poison Colonel Phayre, and called the attention "of all India to his alleged crime by constituting a tribunal of "the highest dignity to pronounce upon it. The Gaekwar was "charged before the Commission not with general misconduct, not "with incapacity to govern, not with indifference to the welfare "of his subjects, but with an attempt to poison."

It was undoubtedly a grave mistake in trying the Prince on so narrow an indictment. He should have been indicted for his general misrule culminating in this attempt, or not at all.

***

ONE of the most hopeful signs of the times in France, is the fact that Gambetta appears to believe in the new Republic. He says that it may fall short of what it ought to be ; but it is better than could have been expected from the circumstances amid which it was founded, and by a steady effort could perhaps be made strong and powerful. The Senate is meant, he says, to serve the cause of reaction, but he thinks it will prove to be essentially democratic in its tendencies. M. Gambetta's views are deemed too sanguine by many of his party. Louis Blanc, Peyot, and others are afraid that the Senate may endeavour to overthrow the Republic. M. Grévy is said to share this apprehension.

THE aim and the justification of the new Arctic expedition are declared by the *Edinburgh Review* to be as follows : First, and foremost of these objects is geographical discovery. Within the polar circle there is an enormous area, comprising at least two million square miles, of which we know simply nothing. It is enough to say that we do not know anything whatever about it. Whether it is land, water, or ice ; whether the climate is cold or warm ; whether there are inhabitants, animals, plants, or whether it is a howling wilderness—speculation has included almost every possibility, and almost every absurdity ; but of knowledge, such as alone intelligent men can be content with, we have absolutely none. To attain some such knowledge is the first object now proposed in Arctic exploration. It is considered unfitting and unseemly, in the present state of scientific progress, that there should be this large area of our own earth's surface still so utterly unknown. The examination of it is loudly called for; it is a problem of universal interest, the solution of which appeals not to commercial profits, pecuniary advantage, and increased facility of transport or communication, but simply, in the first instance, to those higher feelings and yearnings which, whatever our remote ancestry, now distinguish us from the brutes. We want to traverse this unknown space, and see and know what it is.

***

THE world at last knows the story of the Pittendreigh forgeries from the lips of Lord Coleridge himself. The facts, as he relates them to the House of Lords, are these : "There was a certain Mrs. Pittendreigh, who was the wife of a copying clerk in the office of Messrs. Dobinson and Geare, the attorneys for young Sir Henry Tichborne in the civil action. The solicitors were Sir John Coleridge's clients. Mrs. Pittendreigh got into communication with the claimant's wife ; how, says Sir John, I don't know, nor is it material to the inquiry. She brought to Mr. Dobinson what purported to be a correspondence between herself and the claimant consisting of four apparently genuine letters from the claimant himself, and a number of copies of letters which she said she had addressed to him, the originals of these being in the claimant's possession. The correspondence represented a simple, natural, and harmonious whole, and if the letters of the claimant were genuine they were important, because they showed an unmistakable knowledge of and interest in the Orton family. The claimant's portion of the correspondence was submitted to the examination of Mr. Chabot, who, I believe, made a written report on them. That report I never saw, but Mr. Dobinson told me the purport of it. He was a man of great honour and great intelligence ; and no doubt what he told me was true. The substance of it was this, that as to two of the letters Mr. Chabot was satisfied they were in the claimant's handwriting ; that as to a third he had considerable doubt ; and that as to the fourth it had been written over pencil, the pencil writing remaining in many places, and who had written the pencil writing it was impossible for him or any one else to say. At that time there was no suspicion of Mrs. Pittendreigh's part of the correspondence. Her copies of her letters and the supposed originals of the claimant presented a harmonious and intelligible whole, and there was much similarity between the handwriting in the letters which Mr. Chabot believed to have been written by the claimant and those which were doubtful. Besides this, we had to do with a person who had before admitted that on other occasions he had written in a feigned hand and under a feigned name. Under those circumstances I formed the opinion that it was at least likely that all the letters might be genuine. * * It became at last plain that Mrs. Pittendreigh had deceived us : that she was a person on whom no reliance could be placed, and when I came to address the jury I withdrew every letter I had put in because they came from a tainted source."

FOREIGN NEWS.

GERMANY.

THE account of a recent conversation between the German Emperor and the French Ambassador contained in the French papers is confirmed at Berlin. The Emperor is stated to have said that the endeavours to sow discord between France and Germany have fortunately failed.

IT is announced from Berlin that the German war vessels, *Albatross* and *Augusta*, are to be recalled from Spanish waters. This will be done to indicate the satisfaction of the German Government at the reparation it has received for the *Gustav* outrage.

THE *North German Gazette*, discussing an article published in the Vienna *Presse*, says : It is certainly correct that Prince Bismarck addressed himself to the Pope during the Franco-German war, and endeavoured to bring about peace by the mediation of His Holiness with the Gambetta government. Nevertheless, the

assertion that the Pope's intervention in the interests of peace had suggested to Prince Bismarck the idea of availing himself of the Holy Father's good offices for other purposes in Prussia requires absolute contradiction. The Prince had convinced himself on that occasion of the complete powerlessness of the Pope with regard to influencing the French people. Concerning the Centre party, there have been no letters exchanged between the Imperial Chancellor and the Vatican beyond the communications published by the *North German Gazette*. All other statements of the *Presse* upon that subject are unfounded.

ACCORDING to the semi-official *Magdeburg Gazette*, the Berlin Court and Ministry are more determined than ever to persevere in the conflict with Ultramontanism, and every lawful means will be had recourse to. Prince Bismarck, it is said, has expressed surprise to a leading member of the Liberal Party that the Liberals should continue on a good footing with the Ultramontanes socially. On the other hand, the Emperor's approval of the Bill for the Abolition of Monastic Institutions is declared doubtful, and the *Frankfort Gazette* states that he has sent from Wiesbaden for additional documents on the subject. The Empress, it adds, wishes the Sisters of Mercy and other orders devoting themselves to the sick to be exempted from the measure, and military men who witnessed their devotion in the last war are loud in their praise. The wounded who were quartered in the Palace of Versailles were warm in their eulogiums of the Catholic Sisters. In the large towns, moreover, there are Catholic hospitals, which are among the best and most celebrated of such institutions, one in Berlin having a world-wide fame. All these things were naturally forgotten in the heat of the struggle in the framing of the bill. Prince Bismarck, however, threatens to resign in the event of the Bill not becoming law this session.

THE *New Frankfort Press* denies the reported alarming increase of suicide in the German Army. It states that between 1867 and 1870 the monthly number of cases among the Prussian troops varied from 9 to 12, and that last year the monthly number averaged 16 ; while last January there were 12, and in February 15. These figures, it contends, show a stationary or rather decreasing than increasing tendency ; but they appear to indicate a certain increase, though is is not stated whether the strength of the Army was equal in the periods under comparison. Excluding Bavaria, the aggregate cases, it says, in the German armies were 193 in 1874, equivalent on a peace footing of 355,000 men to ·54 per 1,000 ; while in Austria the proportion is ·85, in France ·51 in Belgium ·45, and in the highly paid and luxuriously provided English army ·38.

FRANCE.

THE *Times* correspondent at Paris sends the following translation of a semi-official note which appeared in some of the Paris papers :—"Some foreign journals still express surprise at the measures which are now being taken to reorganise the army according to the bases determined by the recent passing of the Cadres Bill, and it is even said in certain publications that there is a desire to carry out all these changes simultaneously so as to be able to make them pass by surprise. It seems necessary, again, to correct this view, which rests on entirely false data. Everybody knows that the recruiting law is dated July 27, 1872, the Organisation Law July 24, 1873, and that both remained without immediate effect because they were subject to the passing of the Cadres Bill, which only happened on March 13 last. Every preparation had, of course, been made so as to be able to apply the new legislative enactments as promptly as possible in order to put an end to the state of uncertainty in which the army had been placed for several years, and particularly in order to suspend the nominations which must have been made to posts abolished by the suppression of 453 infantry companies. Does not this suppression of 453 company cadres plainly show how little the work of reorganisation, at present going on in the French army, contemplates anticipations of war which all Governments are bent on avoiding? Several papers, however, state that the French army, under the pretence of reorganisation, is almost mobilised at this moment, and that the whole mass of its cavalry, which has just been advanced towards the German frontier, are infantry mobilised by reducing their cadres in order to comply with the text of the law. None conversant with military matters will credit this. As to the cavalry, it is easy for people to satisfy themselves that no regiment of this arm of the service has changed garrison for three years, with the exception of the regiments of the First Brigade of Hussars, who have relieved in Algeria those of the Third Brigade of the same arm stationed there since 1871. It is easy, moreover, to ascertain that nothing has been done beyond the occupation by the cavalry in the east of the barracks they previously held, and that by virtue of the new organisation several regiments have been or are to be sent to the west as soon as the barracks being built can receive them."

AT a recent meeting of the Academy of Sciences, M. Gaston Tissandier, the sole survivor of the late fatal balloon ascent, read a report of that expedition. He stated that the greatest altitude attained was from 8400 to 8600 metres (5 miles 440 yards to 5 miles 650 yards). He ascribed the death of his companions to the rarefaction of the atmosphere, and held that if they had had a better apparatus to supply them with oxygen they would have escaped unscathed. He was of opinion that life could not be supported beyond the height which the Zenith attained, and expressed an opinion that Mr. Glaisher must have been mistaken when he said he rose seven miles.

A FEW weeks ago a Parisian jeweller was the victim of a robbery to the amount of 106,000 frs., organised with rare audacity and persistency. A well-dressed gentleman, accompanied by a young lady, followed by a man-servant, installed themselves in apartments on the *entresol* of an apparently very respectable house in the Avenue d'Eylau. The rooms were completely furnished, the rent 650 frs. a month paid in advance, and they were let for two months. The gentleman, lady, and servant affected a marked English accent. Costumes, manners, gait, and mode of saluting corresponded to their accent. They brought with them numerous trunks, conducting themselves as if they meant to make a long stay. The servant, who expressed himself with difficulty in French, took his meals with the *concierge*, and soon become friendly with everybody. Monsieur and Madame went out a good deal. Shopmen almost every day brought articles which they had bought and paid cash for. Among these was a jeweller's *employé*, who brought something or other nearly every day, sometimes a ring, at other times earrings, studs, pins, &c. The *concierge* was more and more deferential to his wealthy tenants. He calculated that within a week they must have spent about 8,000 frs. The jeweller alone had supplied them with articles worth 6,000 frs. As however, the old servant, with his large blond whiskers and his prepossessing air, always stood at the door, as soon as the shopman arrived, he politely conducted him to the *entresol* so as to save people the trouble of accosting the *concierge*. Thanks to this, the tradesmen—above all, the jeweller—did not know but that their customers occupied rooms furnished by themselves. A few days ago Monsieur and Madame treated for a set of diamonds, for which the jeweller asked 112,000 frs., and for which they offered him 100,000 frs. After several visits, Monsieur called and offered 106,000 frs., which was accepted. He wished to surprise Madame by giving the extra 6,000 frs., for she was ill, and he asked the jeweller to send the casket and bill to the Avenue d'Eylau. When the shopman arrived the servant was at the door, and hastened to usher him to the *entresol*. Monsieur was in the drawing-room, which bore traces of Madame having been in it. An old shawl was thrown on a chair, a work-basket was placed near the window, and on a table in the corner bundles apparently of bank notes were in readiness for settling the bill. The shopman entered, Monsieur took the casket, and begging the shopman to wait, carried it to Madame, who was in bed. The shopman waited for three-quarters of an hour. He instinctively rushed to the table containing the bank notes. He began to count them, but perceived that they were only prospectuses. He hurried to the door leading to Madame's room ; it was locked. He went from one door of the drawing-room to the other ; all were locked. He tried to ring. The bell-pull fell off in his hand. He opened the window, and called the *concierge*. The *concierge* had been sent to the Boulevard Malesherbes by the domestic to get a pormanteau repaired, and his lodge was entrusted to a little girl. Three-quarters of an hour elapsed before the *concierge* arrived. The stairs were ascended with some precaution ; the unfortunate man was found locked in. A thorough search was made. The occupants had disappeared. The neighbours saw them quietly going out with boxes under their arms, bowing politely and getting into a cab waiting at the corner. They had been gone two hours. The police commissary of the district was sent for. Trunks were found entirely empty, and a little dirty linen without any mark ; in a closet there was a man's hat, without a hatter's address, some false light chestnut tufts of hair, two or three pairs of whiskers of various shades, a beggar's dress, a workman's ditto, a lady's old dress, an old shawl, carpeting, and the famous bundles of bank notes. Everything else had disappeared, and the unfortunate jeweller swells the list of victims of his class to similar enterprises.

TURKEY.

THE question of the Turkish railway lines seems to be getting almost every day into a new phase. The last is that the Porte will hear for the present only of the construction of the line from Shumla to Philipopoli, which it considers of strategic importance, but not of the junction with the Servian and Austrian lines. As the Austrian company, represented by Hirsch, refused to form this line alone, as too costly and unproductive, the negotiations about the scheme are going on with the Franco-Italian company. The Austrian Company has, it seems, given up all hope for that. While the question seemed to resolve itself into a competition between the two companies, there was little or no room for direct diplomatic interference on the part of England ; but now that the question seems to be again whether the junction of the Turkish lines with the Austrian and, through them, with the European lines, should be put off for an indefinite time, the Austrian company, which offers to construct the junction lines, reckons on more energetic diplomatic support.

ACCORDING to the *Levant Herald* the negotiations for the conclusion of a commercial convention between Turkey and Persia have not been successful. The Ottoman delegates stated to the Commission appointed to consider the subject, that their Government had declared its intention of terminating all commercial treaties now in force with other countries, in order to draw up a new tariff. The question of a convention between Turkey and Persia would thus have to stand over until the treaties with other Powers had been revised and renewed.

A CONSTANTINOPLE telegram says that the Turkish deficit is stated to amount to £5,000,000. The Sultan has dismissed Hussein Pasha from the post of Grand Vizier, and reappointed Essad Pasha, a former Grand Vizier, who had acquired the reputation of being a prudent and an enlightened statesman. Ali Saib, Kaimakan of the War Department, has been entrusted with the portfolio of Minister of War, and Raouf Pasha with that of Minister of Marine. Further ministerial changes are said to be expected. The dismissal of Hussein Avni Pasha is said to have made a favourable impression at Vienna. His successor, Essad Pasha, is considered there to be well disposed towards Austria.

SPAIN.

SOME of the Spanish papers mention as probable that King Alphonso is about to again take part in the operations against the Carlists. The *Tiempo* says that, although the question has not been discussed, the King, when he deems opportune, will go forth and brave the dangers of the campaign, where his presence may serve to stimulate the valour of his soldiers. A military paper says that in a short time the war will probably assume an entirely different character from that which it has hitherto had. It hopes to see the enemy defeated, both morally and physically, agree at last to the peace which is so much desired.

A MADRID paper having stated that the Spanish Government had not paid the *Gustav* indemnity to the German Government, the statement is declared by a Berlin telegram to be utterly unfounded. The German squadron was to receive a salute of twenty-one guns at Guetaria on April 29, when the matter would be finally settled.

TELEGRAMS from Vienna announce a series of demonstrations at Gratz against Don Alfonso, brother of Don Carlos, and his consort Dona Blanca, who were lately staying at that town. The intervention of the police and the arrest of several of the ringleaders not having sufficed to quell the disturbances, the interference of the military was necessitated. A large crowd which had assembled in the neighbourhood of Don Alfonso's residence, consisting chiefly of persons of a low class, had to be dispersed by a battalion of infantry and strong patrols of Hussars. Many of the rioters were wounded and a large number of arrests were made. A decided feeling is expressed against the further sojourn of the Prince in Austrian territory. A very painful impression has been created in court circles by these occurrences.

RUSSIA.

THE Russian army has been found on examination to be, in spite of its appearance on paper, in a very unready condition. Above all there is a great lack of equipment and *matériel*. Thus it has been discovered that there are not more than 800,000 rifles, good, bad and indifferent, available for the whole Russian army, which gives one rifle to about every three men.

ITALY.

KING VICTOR EMMANUEL has received the Crown Prince of Germany at Naples. During his stay in that city the Prince, by invitation of His Majesty, resided in the Royal Palace. The *Opinione* says that the Prince was entrusted with a mission of a political character, and adds: "In two long interviews between His Majesty and the Prince, politics formed partly the topic of conversation. If, as we have no reason to doubt, the news furnished to us is correct, the existence of a complete understanding and mutual confidence was made manifest at these interviews."

HOME NEWS.

LORD CAMPBELL has been raising, we see, the Eastern Question —that is to say, he has called the attention of the House of Lords to the treaty between England, France, and Austria, by which they guarantee the Treaty of Paris, 1856, and agree to consider any infractions of the stipulations of that treaty as a *casus belli*. Nothing is more painful than to hear any man who desires to act in good faith talk about England's treaty obligations towards Turkey. Lord Campbell does Austria only justice when he says that from the days of Metternich till now she has been well disposed towards Turkey. But when he says that she is the only ally on whom we can reckon in this sense, he implies that England has observed this Treaty of Guarantee. England has never taken notice of the infractions of the Treaty of Paris. From 1856 to 1863, Russia, having by that treaty kept the Turkish navy out of the Black Sea, destroyed the trade with Circassia by arming her merchant vessels, seizing the cargoes and the ships, and sending the crews to Siberia. England has not treated as an infraction of the Treaty of Paris the union of the Principalities into one kingdom under a Prussian prince; nor has she so treated the continuance of the Danubian Commission beyond the term of two years prescribed by the eighteenth article of the Treaty of 1856. The Treaty of Guarantee, which Lord Campbell invokes, provides that the three Contracting Powers shall "come to an "understanding with the Sublime Porte as to the measures which "have become necessary, and will without delay determine among "themselves as to the employment of their military and naval "forces."

THE Prince of Wales will be conveyed to India in H.M's troopship *Malabar*, Captain Kelly.

LORD CARNARVON has received a numerous deputation, which urged the Government to annex the Island of New Guinea to the British Crown. The noble earl pointed out that the acquisition of fresh territory was a very serious step, and one which no minister would be justified in taking without carefully weighing the attendant circumstances. While there were many arguments in favour of the course recommended, on the other hand there were considerations respecting the character of the climate and the savage nature of the people, which raised grave questions of doubt, and these must have their influence in guiding the Government to a decision.

THE following is an extract from a letter written from Singapore March 21, 1875, by a married lady to her parents in Penzance, and published in the *Cornish Telegraph*:—"We dined the other evening at Mr. W's with Mr. Orton, a brother to the claimant. He is so like him, the same heavy-looking head. If I had believed in him until then, I should have done so no longer. They are almost exactly alike, but this one is not so stout. He would have come to the trial, but they would not give him sufficient money to make it pay him to come home. He is a captain of a vessel."

ANOTHER scene has taken place in the House of Commons, when the galleries were filled by "strangers" anxious to hear the debate on Mr. Chaplin's motion deprecating the export of horses. The Prince of Wales and a number of peers had just entered the gallery reserved for members of the Upper House, when Mr. Biggar (one of the members returned at the last general election for the county of Cavan) rose from a bench below the gangway at the Opposition side of the House and said, "Mr. Speaker, I see strangers." Loud cries of "Oh, oh!" followed. The Speaker, rising, said, "Am I to understand that the hon. gentleman, the member for Cavan, wishes me to take notice that strangers are present?" Mr. Biggar replied, "If you please, Sir," upon which he was met with very audible hisses. The Speaker again rose, and (evidently with much reluctance) said, "Then I have no alternative but to order strangers to withdraw." The "strangers" themselves did not appear at the moment to appreciate their position, and were slow to act upon the injunction of the right hon. gentleman; but, upon a second hint, expedited their movement towards the doors. The Prince of Wales, the Duke of Westminster, and other peers, retired; and a discussion took place on the propriety of Mr. Biggar's acting upon the standing order of the House respecting the presence of strangers. Mr. Disraeli protested emphatically against the annoying and offensive action of Mr. Biggar, observing that he hoped that, with few exceptions, the members of the House of Commons were still gentlemen. The motion made by the Premier that the order be rescinded for that evening was seconded by the Marquis of Hartington and supported by Mr. Lowe, and being carried without a single dissentient voice, after twenty minutes' absence the "strangers," including the Prince of Wales and the other peers, returned to their places. The ladies behind the *grille*, however, were not "discovered," and remained during the debate. They were not supposed to be present, but, says one account, they were certainly audible.

A WRITER in the *World* asks, Can it be that Dr. Kenealy's client is both an Orton and a Tichborne? and then proceeds to tell a strange story, for whose authenticity he vouches. "Somewhere about the time when the true and original R.C.T.D. should have been born, the old Sir Roger Tichborne, his father, was living at Bath. His cook was a young woman possessed, in the language of the liner, of 'considerable personal attractions,' and the elderly Catholic baronet somewhat too literally accepted the Horatian maxim, *ne sit ancillæ tibi amor pudori*. In the course of time a contraband baby made its appearance. Who that baby was, I do not pretend to say; but there are three things which are indisputable—first, the fact that the mother of the luckless little mortal was Sir Roger Tichborne's cook; secondly, that the father was Sir Roger Tichborne himself; thirdly, that the surname of this cook was Orton. It is possible enough that the inferences drawn from this episode may be false; but I can pledge my veracity that the episode itself is of evangelical truth."

ONE of the most noteworthy incidents of home news has been the installation of the Prince of Wales as Grand Master of the Freemasons of England. The ceremony took place at the Albert Hall, and is described as having been the most imposing Masonic ceremony ever held in England. Between 7,000 and 8,000 members of the craft were present, including the Duke of Connaught, who was raised to the degree of a Master Mason on the previous evening. The Grand Lodge was opened by the Earl of Carnarvon, and after the minutes of the last quarterly communication had been read and confirmed, a deputation was formed for the purpose of introducing his Royal Highness to the assembled Masons, several thousands in number. The Prince was received with enthusiastic cheers. Lord Carnarvon then delivered an address, to which the new Grand Master replied, pointing out that the chief watchwords of Masonry were "loyalty and charity;" that, as a non-political institution, it exercised an influence in this country far greater that it had enjoyed in countries where it had dabbled in politics, and that on this ground as well as for other reasons he regarded the order as a guarantee for the "integrity of the Throne and of this great Empire." The March from "Eli" was performed upon the organ, and then a telegraphic address of congratulation from the Grand Lodge at Genoa having previously been read, deputations from the Grand Lodges of Scotland, Ireland, Sweden, and Denmark were successively introduced. The Grand Master next appointed the Earl of Carnarvon to be Pro-Grand Master, Lord Skelmersdale to be Deputy Grand Master, and the Marquis of Hamilton and the Lord Mayor to fill two chief offices in Grand Lodge. The other grand officers were then appointed, and the ceremony, which had lasted about two hours, was closed by the Prince being conducted to his retiring-room by a procession of the principal brethren. In the evening a grand banquet was held in the great hall in Queen-street. The Prince of Wales, the Most Worshipful Grand Master, presided, on his right being the Duke of Connaught, and on the left Lord Skelmersdale, the Deputy Grand Master. The Earl of Carnarvon, Pro-Grand Master, was not present on account of domestic affliction. The Most Worshipful Grand Master, the Prince of Wales, proposed the toast of the Queen; and then the Duke of Manchester proposed the health of the Princess of Wales, for which the Duke of Connaught returned thanks, observing that he spoke with some nervousness, as being the Junior Master Mason in England. He proposed the health of the Most Worshipful Grand Master, who replied, and proposed "The Health of our illustrious brother the Most Worshipful Grand Master of Sweden, his Majesty the King of Sweden and Norway." The toast was replied to in French by Count Salcza, and the Prince of Wales then

proposed the Grand Lodges of Scotland, Ireland, and Sweden. The toast was acknowledged successively by Lord Rosslyn, Mr. Shekleton, and Admiral Oscar Dickson. In proposing the toast of "The Pro-Grand Master, the Deputy Grand Masters, the Provincial Grand Masters, and the Grand Officers," the Prince of Wales expressed his deep regret at the absence of Lord Carnarvon and its cause. His Royal Highness added that from a report which he had just received from Mr. Cole, he was enabled to state that there were between 7,000 and 8,000 brethren in the Albert Hall, and they all entered and left it without accident, which was a great thing to be able to say. After dinner the company retired to the Temple, where a splendid concert was given to the brethren and the ladies. The Prince remained for some time.

DR. SAMUEL TREGELLES, of Plymouth, one of our ablest Biblical critics, died a few weeks ago at the early age of sixty-two. By early training, association, and marriage he was connected with the Society of Friends and the Plymouth Brethren, but his sympathies were too wide for him to join either of these, or, indeed, any religious communion. He was one of those who have been described as "Christians unattached," and devoted himself to his special work with great assiduity. It was in 1830 that he conceived the plan of publishing a revised edition of the Greek Testament, and on this work he was engaged for thirty years, during which he visited all the libraries in Europe where the most important MSS. were to be found. Dr. Tregelles was also a prolific writer. The degree of LL.D. was conferred upon him in recognition of his attainments, and he held a double pension from the Civil List of £200 a year. His widow survives him, but he leaves no children.

THE *Morning Post* has been requested to state that the Home Rule members of the House of Commons repudiate in the most emphatic manner the offensive and necessary intervention of Mr. Biggar, by which "strangers," including some of the highest personages in the land, were excluded from the House of Commons lately, and that they deeply regret that any member of the political party to which they belong should have strained the privilege of individual members to such an extent. Mr. Biggar's action was taken without the knowledge or consent of the Home Rule party, who were in total ignorance of his intention to adopt a course which they are unanimous in reprobating.

SIR JAMES M. HOGG, M.P., chairman of the Metropolitan Board of Works, has entertained his colleagues and a number of distinguished guests, among whom were the Prince of Wales and the Duke of Cambridge, at dinner at Willis's Rooms. The Prince of Wales, in responding to the toast of his health, spoke of his approaching visit to India, to which Sir James Hogg had referred. His Royal Highness said: "I look forward to that visit with the greatest possible interest and with the greatest possible pleasure. It is a visit I have long wished to make—I may say it has been the dream of my life. I sincerely hope it will be accomplished, and that I shall return to the shores of my native land, having gathered much valuable information about that interesting country, which is, I may say, the pride of England, and which has filled so prominent a place in history. I trust I shall return in good health, and have again the pleasure on many occasions of meeting my countrymen." The Duke of Cambridge, in acknowledging the toast of the army, said: "I must confess I have been somewhat staggered by many of the assertions which have been brought to my notice, and on this point I may be permitted, very cursorily, to remark that yesterday, in the course of my professional duties, I had an opportunity of going to see as much as I could of the troops at Aldershot, and all I can say is, that while deprecating war and hoping the necessity may not arise, I am perfectly prepared to-morrow at five minutes' notice to take every man of that force with me and to go anywhere without seeing any reason why they should not perform their duty just as well as the British Army has ever done in times past. I cannot deny that when I see regiments which are not very strong in point of numbers, it would be very acceptable to me, as to all military men, to see their ranks better filled, but you must allow me to tell you—and I am glad to see that there are many members of Parliament present—that that is a question which rests with the House of Commons and the electoral constituencies. If they will have the goodness to vote larger estimates, there will be no great difficulty in providing additional numbers in the army, and, so far as I am concerned, nothing would give me greater satisfaction. We have heard a good deal lately of our recruits, and perhaps I may be permitted to say a word on that subject. A man goes into our service, which, recollect, is a volunteer service, at the time which suits his convenience, not when it suits ours. Now, I freely admit that I decidedly prefer men of twenty years of age as recruits to younger men. There cannot be two opinions on that point. But you must recollect that, as a rule, men of twenty have entered upon the course of life which they intend to pursue to the end of the chapter if they are successful. If they are not successful and break down, a few of them may enlist. But a lad at eighteen or nineteen has not made up his mind, and he says, instead of taking any other line, I will become a soldier. That is the recruit you generally get, and a very good soldier he makes after a time; but you must get him, feed him, clothe him, and instruct him before he becomes a good soldier. Another thing. I am always hearing that we are much worse off than we used to be in this matter. I have been, I am sorry to say, now a great many years in the service, and I can only express my opinion that in former times we got very much the same sort of men as now; but we had thirty or forty men as recruits, where we now have 100 or 150, because we have short service. The country wished to have short service and they have got it, and they must accustom their eyes to see very young instead of older men. I should very much prefer to see a regiment composed entirely of old seasoned men; but we cannot expect to see that under a short service system."

A CATECHISM ON THE EASTERN QUESTION.

THE Eastern Question which—like the Danish Question, the Spanish Question, and many others—has a periodicity resembling that of the comets which are continually visiting the earth, is now once more coming within the horizon. In order that politicians who wish to talk of it may be able to do so without exposing their ignorance, it is very desirable that a catechism should be published for their instruction. It might begin as follows:—

Q. What is the Eastern Question?

A. It is the question how Russia can get to Constantinople.

Q. How is that object to be obtained?

A. By the aid of England and France, acting as allies of Turkey, and protecting Russia from Turkey's attacks.

Q. I am told that Russia is stronger than Turkey; if, then, England and France help her by holding back Turkey, how is it that Russia is not already at Constantinople?

A. Russia has not got to Constantinople because, so far from being stronger than Turkey alone, she is weaker than Turkey, even when Turkey is held back by England and France.

Q. If Russia is weaker than Turkey, why did she invade the Danubian Principalities in 1853?

A. Because she had previously secured the aid of England to persuade the Sultan not to consider the invasion as a *casus belli*.

Q. But did not the Sultan go to war with Russia?

A. Yes; his people threatened to rebel, and he declared war.

Q. Did not the Russian army in the Principalities punish the Turks for their temerity?

A. No; the Turks defeated the Russians in three pitched battles, and made them withdraw from the Principalities.

Q. How can an Englishman help Turkey?

A. By persuading her to manage her affairs herself, and not to ask help from Europeans.

Q. Has any English Minister ever really helped Turkey?

A. Yes; the present Lord Derby.

Q. How did he do this?

A. He made a speech, in which he described Turkey as hopelessly weak.

Q. What followed?

A. The Sultan immediately put down the insurrection in Candia, which he had previously been unable to do.

Q. Why had he been unable to do this before?

A. Because he had relied upon the diplomacy of his allies, and had not punished the foreigners who had invaded his territory.

Q. In what way did he punish these foreigners?

A. He threatened to treat them as priates, whereupon they immediately decamped.

Q. Were these men priates?

A. Certainly. Every man is a pirate if he makes war upon a State with which his own Sovereign is at peace. At the time of the rebellion in Candia all the States in the world were at peace with Turkey.—*Vanity Fair.*

A FRENCHMAN ON THE MUTINY.

WE recently gave a few passages from a history of the Indian Mutiny by M. de Valbesen, a distinguished contributor to the *Revue des Deux Mondes*. It may be interesting to cite the eulogium passed by the author on Sir James Outram; concluding as it does with an anecdote to which the trial of the Gaekwar imparts peculiar point:—

"In bidding a last adieu to this noble figure of the contemporary history of English India it is important to remark that, while a champion *sans peur et sans reproche* of right and justice wherever he found them oppressed, Outram never allowed himself to be led away by the theorists who demand the government of India by India, the assimilation of the conquered to the conquered, the equality of the black skin and the white skin. A proconsul of the Government of conquest, an Englishman, and a good Englishman, Outram loved the natives as a good master loves his servants, a great king his subjects. England, so parsimonious in gratitude to Indian men, discharged its debt towards Sir James Outram, and he received successively the rank of Lieutenant-General, the title of Baronet, and a pension descending to his wife and son. Finally, in one of the public gardens near those fine quays which have metamorphosed the aspect of the Thames, rises the bronze statue of the *preux chevalier* worthy to have inspired Macaulay when his pen traced these noble expressions:—'He was among those who, proud of an honourable poverty, after having made and dethroned kings, find their reward in the thought that their name is not only placed high on the list of warriors, but on a yet better list in the golden book of those who have acted and suffered for the good of humanity.' The author had the honour of personally knowing General Outram, and must pay a just tribute of homage to his amiable private qualities, to a mind shrewd and full of humour. On this point a little anecdote illustrates pretty faithfully the life of English residents at native courts. In March, 1855, I was General Outram's guest at Lucknow, and the first time I had the honour of sitting at his table, with a half serious half comic air he put me the question, 'Well, would you have any objection to be poisoned?' 'Undoubtedly I would, Sir James,' I replied, rather taken aback. 'Then mind what you are at here, for they have tried it already on me more than once.' The water, in fact, was padlocked in a tin case. This visible precaution made me understand that the General's words were not random ones, and, in spite of the abundance and delicacy of the food, I will not venture to say that I gave full rein to my appetite."

While approving the abolition of the East India Company's rule, M. Valbesen says: "The humble corporation of merchants who by the spirit of enterprise and the political and military genius of its agents created beyond the seas in

the centre of Asia an Empire of 200,000,000 subject has none the less acquired eternal rights to the gratitude of England, and, let us add, of India. Its rigid but honest and civilizing law for more than half a century preserved peace between an exclusive and an exterminating creed, harmonized, if not reconciled, hereditary sects of priests, soldiers, robbers, assassins, and gave the fullest religious liberty to that India literally given up to wars of orthodoxy and religious persecutions. By a last favour, fortune prolonged the law of the old Company long enough for the work of repression to be victoriously if not radically accomplished under its reign and almost without any help having arrived from Europe. On all these grounds the company of merchants whose splendid inheritance Queen Victoria reaped in 1858 will hold an exalted place in modern history. The work of the great politicians and illustrious warriors whose labours made the glory and fortune of Old John Company, to give it a last time its familiar nickname, yields in no way to that of Cæsars, Charlemagnes, and Napoleons. The rare good fortune which protected the founders of English greatness in India remains faithful to their memory. Time, which has not consecrated the work of the great conquerors of history, seems bound to respect the Anglo-Indian Empire, and, at present, at least, there is no indication that it can be imperilled in the hands of the powerful Queen of Great Britain."

IN TOWN.

THE London Season is so remarkably backward this year that I begin to believe Brothers Moody and Sankey are having a greater success than has hitherto been suspected, and that they have really brought some of the sinners to renounce the pomps and vanities. They have hit upon a new method, which consists in calling upon people at their houses, and refusing to leave till they have regenerated them. I suspect that some of their friends have handed them their visiting lists with the bad cases marked. Dolly tells me that one of the band called on her the other day and would'nt go away till she told him how her soul was. These are searching times indeed. I go about in fear of being converted myself, not but what I should be very glad, only I should be very soon such a desperate example of backsliding that I am sure I should bring discredit on the work. The fact of the Princess having gone to hear the brethren has, I observe, had a very edifying effect, and the most acceptable thing you can now offer a lady is a private box for their performance.

There is to be quite a smart performance next week at the Pavilion Music Hall in the Haymarket where Lord and Lady Hinton are to make their *debut* as comic singers. The lad (for he is no more) shows a spirit in his determination to earn an honest living for himself which seems to me not only distressing but subversive of all proper principles. It is so manifestly the duty of a viscount not his own father either to live on an allowance from his family, or else quietly not live at all—and that in the interests of his order, which are of course superier to any mere right to existence—that I look with dismay on the prospect of such a one doing anything of a remunerative character. The new singer is well supported, however, and the one duchess who has carefully preserved the traditions of gentlewomen has gone security for his wardrobe. I shall go to see him.

Major Baccarat has inherited a wife and fifteen thousand a year, and came within three hours of sixty thousand pounds more. Some men seem to be pursued by ill-fortune, and nobody is more sorry for them than I.

A piece of intelligence which ought to surprise nobody, but which has neverthless been advertised all over the country, is that Sir Samuel Baker has been added to the Chamber of Horrors at Madame Tussaud's.

From Paris I hear that the "Affaire Coverley," as the dramatic censor has rebaptised "L'Affaire Tichborne," produced on Tuesday, was chiefly remarkable for the protean of changes of dress by Deshays, who played the "butcher and the baronet," for the excellent acting of Mdlle. Deguerret as Mrs. Orton—I mean Gordon—and for a wondrous steam-engine, which, or rather who, completely eclipsed the human performers. Meanwhile the *affaire* or trial was not even mentioned during the piece. After all, the name is everything.

Dr. Kenealy does not appear to be so absolutely ruined as his friends claim for him. It appears that he is earning at the rate of £12,000 a year, £3000 of which arises from the profits of the *Englishman*, while the remainder represents the proceeds of the meetings he holds in the country. It will be a consolation to the House of Commons to know that he represents property as well as Orton.

A touching meeting took place a few nights ago at dinner between Sir Henry James and "a member of Mr. Bischoffsheim's family," who not only bore the presence of the anti-loanmonger with equanimity, but was generous enough to feel hurt that he did not display that lively remembrance of past hospitality which we always expect.—*Vanity Fair.*

"ARE YOU A MASON?"

ANY person may attempt to imagine, but few, we believe, are correctly informed of the extraordinary precautions that will be taken to prevent the intrusion of any unauthorised person into the Albert Hall on the day of the Installation of His Royal Highness the Grand Master. Each Mason, as he arrives, after being blindfolded and shod with carpet slippers, will be required to produce his certificate of baptism, calling card, photograph, and handkerchief marked with his name in full, together with a specimen of his ordinary handwriting and signature,—all countersigned by his Lodge, and duly attested by two Justices of the Peace for the town or county in which he habitually resides. He will then be adjured to bare his right arm, to prove that it is branded with the letters which denote his rank in the Craft; and having passed this ordeal, and shown that his name is written inside his hat, his claim to be present at the ceremony will be put to no further test.

Any attempt at imposture will be instantly punished by the removal of the offender from the inside of the Hall to the outside of the roof, where he will be left with a bottle of Apollinaris Water and all the best works on Masonry, but without food, firing, or the means of smoking, until the conclusion of the ceremony. Should he prove refractory, Cardinal Manning will be sent for. When the Installation is over, the erring man will be tried and sentenced by a tribunal composed exclusively of G A's (Grand Aprons) and P G A's (Past Grand Aprons), but their finding will not be made known until the National Gallery has been rebuilt.

When all the brethren are assembled, the doors will be locked, barred, bolted, and hermetically sealed, the keyholes carefully plugged, and two Master Masons posted as warders at each entrance, armed with drawn swords and loaded revolvers, and carrying fog-signals in their pockets, to be exploded in the event of any attempt being made to interrupt the proceedings in the arena.

Previous to the Installation, a party of the brethren, carrying safety lanterns and alarums, will thoroughly search every nook and corner of the Hall, including the cellars, the valarium, the ventilators, the roof, and the pipes and bellows of the great organ; and will look under the seat of each chair and behind the curtains of all the private boxes, to satisfy themselves that no person is in the building except those who have a right to be present.

Strange rumours are current as to the enormous sums which ladies have expressed their willingness to bestow on Masonic charities, if they might only be permitted to view the proceedings from an aperture in the roof of the Hall. For further information respecting Freemasonry, its signs and secrets, its insignia and rites, and its excellent dinners, consult the works of Sanchoniathon (the cheap edition), Trismegistus Thaumaturgus (the reprint in a popular form), Rhadamanthus, Hermesianax, or Pythagoras, and go early to the British Museum, as these authors are, at this momentous crisis in the history of the Craft, in great request.—*Punch.*

AMONGST the deaths recorded this week are:—General the Earl of Carnwath; Lieut.-Gen. M. Smith, C.B.; Major-Gen. J. C. Brooke, C.B.; Col. R. S. Tickell, Bengal Retired; Lieut.-Col. Lodder, late 47th Regt.; Capt. T. S. Clay, late Bombay Fusiliers; Rev. E. Mooyaart, late Archdeacon of Colombo; Mr. C. K. Dove, late Postmaster of Bengal; Mr. H. W. Pickersgill, R.A.; Mr. J. Ransome; and Mr. Winwood Reade.

SHIPPING.

List of persons who have engaged passages by the Peninsular and Oriental Company's Steamers during April and May:—

April 20, viâ Southampton, per Bokhara; May 10, viâ Brindisi.

SOUTHAMPTON TO SUEZ—Mr. L. Mathewson.

SOUTHAMPTON TO BOMBAY—Surg. B. W. Willing, Mrs. Cole, two Misses Cole, Capt. Wyndham, two Misses Harrison, Surg. R. Smith, Surg. F. W. Trevor, Lieut. Wyatt, and Lieut. Simpson.

BRINDISI TO BOMBAY—Mr. R. H. Froude, Rev. J. P. Knaresboro, Capt. G. D. Pitcher, Mr. Eastwick, and Col. *Haig.*

VENICE TO BOMBAY—Mr. N. Fox, Major G. C. Grant, and Mr. A. Tyabjee.

BRINDISI TO KURRACHEE—Mr. Froude.

SOUTHAMPTON TO ZANZIBAR—Miss Graves and friend, and Mr. C. A. James.

May 6, viâ Southampton; May 17, viâ Brindisi.

SOUTHAMPTON TO CALCUTTA—Miss A. C. Matthews.

SOUTHAMPTON TO MADRAS—Lieut.-Col. Hudlestone, Paymaster Patterson, and Mr. H. B. White.

SOUTHAMPTON TO BOMBAY—Mr. P. Carnegy, and Col. A. Carnegy.

BRINDISI TO BOMBAY—Mr. G. Macfie.

VENICE TO BOMBAY—Sir A. Arbuthnot, Mr. T. Parsons, and Mr. C. D. Maclean.

SOUTHAMPTON TO GALLE—Mr. A. Young Adams.

VENICE TO GALLE—Mr. Bilbrough.

SOUTHAMPTON TO HONG-KONG—Rev. J. Walker.

SOUTHAMPTON TO YOKOHAMA—Rev. Mr. and Mrs. H. Maundrell.

VENICE TO SHANGHAI—Mr. T. Smith.

May 13, viâ Southampton; May 24, viâ Brindisi.

SOUTHAMPTON TO BOMBAY—Surg. A. Adams.

BRINDISI TO BOMBAY—Capt. Daniell.

VENICE TO BOMBAY—Capt. W. J. Macdougall.

May 20, viâ Southampton; May 31, viâ Brindisi.

SOUTHAMPTON TO CALCUTTA—Mr. R. Garth, Mrs. Homfrey, Mr. and Mrs. J. J. Cogswell, and Mr. Bell.

SOUTHAMPTON TO BOMBAY—Mrs. Henry, Mr. F. W. Peterson, and Mr. and Mrs. Hughes.

now and then he feels a slight tug, and at the end of an hour or so he pulls it in, with usually from five to ten "regarderas" entangled on the hooks. *Euplectella* has a very different appearance, under these circumstances, from the cones of glassy network in the British Museum. Its silver beard is clogged with the dark-gray mud in which it lives, buried to about one-third of its height, and the network of the remainder of the tube is covered with a pall of yellowish fleshy matter, which gives it a heavy look and greatly diminishes its beauty.

***

THE forthcoming book of Lieutenant Stumm on the Khivan Campaign is looked forward to with much interest. He praises highly the character of the Russian soldiery, and gives every detail which could bear on the expedition, even to the number of camels lost in each column.

***

IT has been discovered that the Amoo-Daria is not suitable to steam navigation, and it has also been found that the direction of its present channel into the old bed of the river, so as to make it flow into the Caspain, is an impossibility. More powerful ships than the "Perovski"—used by the Commission appointed to report on the stream—would not perhaps be hindered so much in their progress by the current, but the varying depth of the river, the rapids in its mid-channel, and the immense accumulations of rubbish in its upper course, make any regular navigation impossible. The plan of diverting the channel into the Caspian Sea presents even greater difficulties. It appears from the researches made by the commission that the Amoo-Daria did really once flow into the Caspian at a point near Krasnovodsk, but that its course was not diverted, as some suppose, by human agency, but by natural causes, such as landslips and upheavals of the soil. It was found, however, that the dry bed of the river was admirably adapted for use as a road between the Caspian and the Sea of Aral. The clay banks rise to a height of twenty metres, and there is a plentiful supply of drinking water along the whole distance, and the time occupied in the journey is less than one-half of that by the Orenburg route through the Kirghiz steppe. Orders have been given for the construction of a military road along the route opened up last year between the two seas, and the Russian naval station at Adjurade, on the south-eastern shore of the Caspian, has at the same time been transferred to Krasnovodsk, which will be the starting-point of the new road. Steps are also being taken for facilitating the communication between Turkestan and the Caucasus. In the steppe between Tchinas and Djisak, where the Russian troops suffered greatly from want of drinking water in 1873, a canal, five kilometres long and twenty-five metres broad, has been dug from the river Syr-Darya, so as to fertilize about 150,000 acres of steppe land. Measurements have also been made on the right bank of the Amoo-Darya, in order to distribute the waters of that stream by means of canals over a larger extent of territory; and there is a project for refilling the dry bed of the Yani-Darya and the canals which proceed from it. "The time has arrived," concludes the report of the Commission, "to decide what system Russia is to adopt with regard to Central Assia: whether to direct her chief efforts to the establishment of steam communication on the rivers and lakes, which would probably be a work of doutful utility, or to make her main object the utilization of those waters in order to irrigate the steppes, so as to convert the latter by degrees into fertile oases, and thereby to increase the productive power of the country and the prosperity of its inhabitants. . . . In order to appease the Turkomans it is not sufficient to conquer them; they must be enabled to attain a certain amount of prosperity as settlers instead of wasting their lives in plunder and the slave trade. Then only will Russian trade and industry enjoy the fruits of the victories which our army gained in Khiva."

IT is only natural that the English public should know little about India and its people when a leading London journal calls Mulharao a "popular ruler." He is said to have liked many pearls, many horses, and many concubines. "Mulharao scattered all the rupees he had left him, after giving freely to nautch girls or actors, amongst the holiest priests, the dirtiest ascetics, or the loudest-lunged temple minstrels, who swarmed around his palace doors day and night. Moreover, Mulharao constantly paid state visits, attended with great ceremonial, to the chief shrines in his extensive territory. His subjects fully appreciated all this religion, and especially all this display and expenditure." Of course they did, but it is strange that when he left Baroda, men had to be impressed to serve him in his exile,

Now that he is dead, Lord Hobart will no doubt easily obtain the praise which he merited in life, but seldom had. The English press is of opinion that the *régime* of the late Governor of Madras was notable for four things, on each of which something ought to be said. Lord Hobart was a very quiet, unostentatious, retiring man by nature, and his government partook in great part of the character of its head. In his writings he was rather pompous, grandiose, and ambitious; in his actions he was subdued, though practical, and, when occasion demanded, very stubborn. Ere he arrived as Governor at Madras an extraordinary opinion had been formed of his character by his writings. The principal of these was an article on the International, which attracted at the time considerable attention, both from the fact of the writer being a pronounced Liberal, and from the emphatic phraseology in which the article was couched. But when Lord Hobart arrived *in personâ* in Madras he was found to be a somewhat silent gentleman, very retiring and unobstrusive, most courteous, somewhat pensive, a lover of the "soft half-English Neilgherry air," as Tennyson calls it; as a statesman with a stubborn policy in favour of Mahomedans and an abhorrence for sudden and sensational legislation, and one who, making few friends, stuck to the few he made very closely. One of these friends was the well-known London physician, Dr. Druitt, whose charming work on the wines of the world is in the hands of every lover of viniculture. In India everybody drives or rides about: in the hotter hours of the day this is, in truth, imperative on all Europeans; but Lord Hobart, whenever he could safely do so, preferred walking. Simple and unaffected, he liked the lanes and the wonderful open country of the tropics. He is compared to that "darling of society" Lord Napier rather disparagingly, but Lord Hobart never so far forgot himself in a garden party as to attract the attention of a lady by playfully touching her with a six-inch rose tree stalk.

THE *Daily Telegraph* has been at last beaten out of the field of Oriental metaphor, by several of its London contemporaries. The *Times* at first made all the best running, but the *Daily News* has now entered the race and won. Who can grasp a complete idea of the numberless races that live, tribe beneath tribe, on the surface of the great continent between the Himalayas and the Gulf of Manaar—asks our contemporary. "The Pax Anglica, as our English rule might be styled after the famous Pax Romana, keeps a thousand hatreds of conqueror and conquered, and of the slaves even of the conquered, subdued in demure repose. Descendants of mythic Kings, named from the Sun and Moon; Santals and Khonds; children of the accursed black seed, that the ancient Aryans implored Indra to drive out before the face of the conquering whites; Mongols, Persians, Sikhs, are all, with their varying jargons and languages, merged in the peoples about whose Oriental character we talk so glibly. The worshippers of Siva and of Kali, the sacrificers of children to the powers of evil, the savages who tremble before painted stones, the dreamy aspirants to an unconscious paradise, the fanatics for the Prophet, and his indefeasible claim to universal empire, blend their warring creeds in the confused current of Indian thought. Out of the undistinguishable mass of nations, and murmur of many beliefs, distant Europeans can yet discern at least one common creed. The Oriental, from the Sikh and the Rajpoot, to the Bheel and the Khond is a convinced believer in Power." Where this striking difference between the Sikh and the Rajpoot, and the Bheel and Khond lies, we cannot discover. There is a twin likeness between the two in both cases, but the *Daily News* accords them the same amount of dissimilarity as there is between a Hottentot and a Turk. Referring to the intended visit of the Prince to India, the same journal does not think it necessary that the mild Hindoo should suppose that the Prince of Wales could send the Viceroy a bowstring to be used at sight, or that her Majesty could adopt the same stern measures in regard to the Prince. But "it is just as well in view of late events that his mind should be induced to give what Oriental colouring it pleases to the fact, that there is a power behind, and superior to that of the Viceroy."

***

WE have noticed in our leading columns the existence of a sort of crisis in the Chewa State (Khassia Hills). The heir-apparent is a native Christian, and his conversion is endangering his right to the throne. The last Rajah was Ramsing, who died a few weeks ago, and has not yet been burnt; the custom in that part of the world being, that dead Kings must remain encased in wood till a successor has been appointed. The late Rajah of an adjacent State, who died two years ago, is still above ground, owing to disputes about the succession.

THE WEEK.

THERE is no news of any importance from Burmah. Rumours are plentiful enough in the Rangoon bazaar, but they have no foundation on fact. For instance, it is gravely asserted that two thousand Chinese have assembled at Manwyne, that the King has imprisoned all Europeans in his territory, that his treasure and harem have been sent into the interior, that he has raised a large cavalry force, armed ten thousand men with Sniders, and intends to attack Bassein immediately. There have been several urban disturbances in this district, and the country altogether is in a very unsettled state. Large quantities of ammunition and stores are being sent by our Government in the Irrawaddy steamers to the frontier towards Thyetmyo. They are said to be conveyed with that secresy which has characterised everything done by the authorities since there was a probability of war. It appears that not even the agent for the Irrawaddy Company knew anything about the last instalment of stores sent to the frontier, until the vans were ready to unload at the wharf. The news from Mandalay is very contradictory. One day, we hear of an imaginary conversation between the King and his confidential advisers, in which his Majesty expresses his belief that he is not only powerful enough to drive us into the sea, but that he has it in contemplation, after effecting this little matter, to add to his territorial possessions. Another day we are told that his Majesty is anxious for peace at any price, and that, in proof of his good-will towards us, he intends to open the wood market again and dispose of timber which, it is supposed, he had reserved for stockade purposes.

UPPER Burmah is still in a state of fright. The King has issued a most peculiar proclamation, in which he denies absolutely any intention on his part to decide the Karennee boundary question by force of arms. He tells his subjects to fear nothing, as the Viceroy and himself are the best of friends. This "friendship has existed for a long time between the two countries. The qualities of His present Majesty of the Kingdom of the Rising Sun in observing the Regal Laws practised by the former Phralaongs or *To be Gods* and good and excellent Kings, and looking upon His subjects as his own sons and having mercy on them ; the King's not desiring to plunder other people's countries ; his desire to continue the friendship which has been contracted ; his endeavour to procure that which has not been contracted ; the King's appointing Woondouk Maha Minhla Zayathoo, ambassador, and sending him to the Governor-General of India to settle the Karennee question ; the Governor-General's believing that the two countries would be on friendly terms and his intention to send the far-sighted and clever Sir Douglas Forsyth to settle that question ; the frequent despatch of Embassies between the two countries ; for these and many other reasons you should believe that there cannot be any war between the two nations which are so friendly to each other on account of that valueless Karennee affair, and you should, without paying any further attention to the words of those unintelligent people who instigate war between the two countries, try to promote the interests of trade and you should go and come wherever you please." The troops despatched to Minhla have been recalled, rumours of treason being rife in the capital. A thousand Europeans, it is said, might capture every town in the country.

THE China press urges the British Government to take up a stronger position than it has hitherto done at Mandalay, and is generally of opinion that the political advantage of occupying Burmese territory would not be confined to India. The contiguity of the British Indian frontier with that of Yunnan would mean a pressure on China that could hardly fail to be felt at Pekin as much as that of Russia upon Chinese Tartary is felt in the North. And there seems every likelihood that, before long, China will incur the neighbourhood of a third European power to increase her discomfort. There can be little doubt that the proceedings of the French in Tonquin will end in annexation. There is a rumour that arrangements have been made by the Government of Cochin China to pay off a loan of $300,000 contracted by the Tonquin Government from Manila, on the understanding that France shall exercise a protectorate over Tonquin, which will of course mean a real sovereignty and the presence of French troops upon the southern frontier of Yunnan. If, therefore, we annex Burmah, China will have neighbors in the South and West, very much less amenable than the tributary barbarians to whom she has been hitherto able to dictate. The facts that the attack occurred in a Chinese prefecture, and that Margary was murdered in a Chinese town, are sufficient to make the Pekin Government legally responsible. If the report is true that news of the intended opposition to Colonel Browne's party had reached the French missionaries in Hankow, the evidence of premeditation would be absolute. The Chinese Government has appointed Sung Paou-hwa to accompany the two English officials to Manwyne to investigate the murder of Mr. Margary. The appointment of this man cannot be condemned too strongly. He possesses no official standing, and in his selection it appears that the Pekin authorities have attempted, as usual, to insult us. Mr. Wade, will doubtless insist on the substitution of an official who ranks much higher than Sung Paou-hwa.

IN a Proclamation dated the 21st May, the Viceroy informs the Sirdars of Baroda that he has instituted a most careful inquiry regarding every person connected with the branches of the Gaekwar's family who might be deemed worthy of selection by the Government of India; and "bearing in mind all the circumstances connected with the case of each person ; also the high importance of choosing one whose selection would give the surest hope of benefit to the State, the Governor-General is Council" has come to the conclusion that the selection should be made out of the descendants of Pratap Rao, the son of Peelajee Rao, Gaekwar of the Baroda State. From this branch the following have been been selected as "the fittest and most worthy :" Gopal Rao, and Sumput Rao, sons of Kassi Rao, and Dadajee Rao, son of Ookajee Rao. The eldest of the three Khandeish claimants to the throne has been selected by Jumnabaee. The installation took place on the 20th, the earliest day considered propitious by the local astrologers. A durbar of the Sirdars was called on the 22nd, when the proclamation settling the matter was read and received in silence. In the course of an address, Sir Madhava Rao said that the British Government desired to maintain the raj in its integrity. Most careful enquiries had been made regarding the legitimacy of the Khandeish princes, and no doubt remained that they were of Gaekwaree descent. He also said that Ranee Jumnabaee had expressed herself desirous of adopting one of the Khandeish children in preference to any other. A brother of one of the other claimants, when he heard the decision shot himself with a pistol. There is a political movement in the city, which the authorities are watching carefully.

DAMODHUR PUNT is almost to be pitied. Baroda was found too hot for him, "and his presence in that city was considered inseparable from the danger of a future disturbance of the public peace." The authorities, therefore, wished him to return to Rutnagherry, the place of his birth. He was escorted to Bombay by special constables, and arrangements have been made for his further safe transport. But even the people of Rutnagherry decline to do honor to their eminent townsman, or even to receive him in peace. He is, consequently, "without a friend and without a home." There is said to have been a "scene" between Mulharao and his Rances, when the latter reached Madras. He had, up to that time, believed that his residence in the Southern capital, would be of short duration.

HERAT is being governed by the Ameer's lieutenants with a high hand. Half-a-dozen colonels, who had supported the cause of Yakoob Khan, have been blown away from guns, and Shere Ali has ordered "all rebels to be punished severely and liberal rewards to be given to those who are loyal." The families and friends of Yakoob and Ayoob have arrived at Cabul : the friends of the unfortunates have been dismissed to their homes and the camels and mules which carried them to the capital confiseated. There is a report that at the instigation of the Meer of Maimena, Abdool Rahman Khan has asked permission from the Russians to attack Turkestan, and sent one of his generals, Nasur Khan, to Sherabad on the Oxus. The Russians replied that the Sirdar might do as he pleased, but in the event of his being unsuccessful, he would not be allowed to return to their protection. The Ameer has been indisposed lately, but he does not appear to have lost any of his usual vigour. He is evidently much annoyed at the misappropriations of Government revenue which have recently come to light. Nowroz Khan is at Bajour, and is said to have given his followers strict orders to avoid any complications with the British Government. There is a report that his friends are deserting him. It is likely that the Khyber will again be open to trade, the Mullicks of the adjacent districts having gone to Cabul at the invitation of the Ameer, who intends offering them subsidies for the peace of the pass.

DURING the Civil War in America, a satirist of the day remarked that it was a work of supererogation to praise a Brigadier-General. It would be well if some understanding of the kind were come to in India, for the habit of official laudation has reached a point at which praise from high quarters is becoming a very qualified distinction. The *Madras Times* notices a case in point, in that of the two regiments at Baroda which Sir Lewis

Pelly neglected to include in the grand distribution of praises distinguishing his departure. As all the other troops, and everybody officially engaged under the Governor-General's Agent, were thanked and applauded, the omission had an invidious appearance, and the neglected regiments naturally took it to heart. The matter was represented to Sir Lewis Pelly, who apologised for his forgetfulness and found time at the last moment to leave an addition to his notification, in which he made a satisfactory acknowledgment of the services of the regiments in question. Thus far these corps are relieved from any inference that might be drawn through their being passed over; but the fact is sufficiently absurd, as showing the distribution to be so general, that an inference would be suggested by the *circumstance*.

RARELY during the last hundred years has an Indian city been visited by a calamity like the late fire at Peshawur. Nearly eleven hundred private dwellings and nine hundred shops were destroyed. The streets were so narrow that fire-engines could not pass along them. An eye-witness tells us that it was curious to see the apathetic stoicism with which strong, able-bodied men calmly sat in the verandahs of their houses while the flames came nearer and nearer; and when urged to do something to help in preventing their spread, the invariable answer was, "If it is the will of Providence that my house is to be burnt, it will be burnt, and I may as well be burnt with it. *Bus*." One old woman was dragged out of her hut much against her will, although part of the building was actually on fire, and as soon as her preserver's back was turned, she darted back again. The Sappers were helped by a large number of elephants in breaking the panneling of the shop-fronts and tearing down wood-work generally. Ten thousand pounds of powder were used in making the broad band of clear ground which at last stopped the progress of the conflagration. The total loss is estimated at twenty-five lakhs of rupees. The Municipal Committee at Lahore have unanimously voted 1,000 rupees towards a fund for the assistance of the sufferers. The calamity is one demanding public sympathy and aid, and it is suggested that other Municipal Committees should follow the example.

ANOTHER mutineer of '57 has been discovered near Patna and found guilty. He is named Daleel Khan, and belonged to the old 12th Cavalry, under the command of Colonel Holmes, at Segowlee. One evening while Colonel and Mrs. Holmes were out driving, Daleel Khan, with five other comrades followed and foully murdered them. They cut off the Major's head, and threw the bodies into a ditch, and on return to the station Daleel took command of the regiment, turned it out on parade, and exhibited the Major's head to the men. He then set fire to the bungalow of Dr. Gardner, the medical officer of the regiment, and murdered him, his wife, and one of his children. Another child, a girl, was saved by a jemadar of the regiment, who took her to the Magistrate at Motiharee.

THE past week has seen the creation of several new native nobles. The title of "Nawab" on Khajeh Abdool Gunny, C.S.I., of Dacca, "has been conferred in recognition of the public spirit and munificence which have been displayed on many occasions" by him, "and as a mark of the esteem of Government." His son, Khajeh Ahsanoollah, who has made himself equally conspicuous in a career of public beneficence," has received the title of "Khan Bahadoor." We also notice that Baboo Shamanando De, of Balasore, has been created a "Rai Bahadoor" for "several acts of public and private charity;" and that Koomar Narendra Krishna, of Sobha Bazar, has been made a Rajah "in recognition of his consistent efforts in matters of public progress and improvement."

THE Viceroy has published a well-deserved recognition of the gallant conduct of the small party of Sikhs who bravely repulsed the attack made by the Chinese troops on Colonel Horace Browne's expedition. His Excellency, to mark the sense entertained by the Government of India of the good service rendered by all the party on that occasion under very trying circumstances, and especially by the Havildar and two Naicks who are reported to have carried out every order they received most promptly, has directed their promotions to the next higher grades, and their admission specially to the Third Class of the Order of Merit. Each sepoy of the detachment has been granted a donation of one year's batta. Spurs are, it appears, still to be won by valour and loyalty.

TROUBLE seems to be threatening among the wild tribes of the North-Western Frontier. The reported approaching demise of the aged Akhoond of Swat will leave these people without the guidance of a revered ruler. It is apprehended that his legitimate successors will be unequal to the task of ruling in his place, as they are men of a very different type to their father.

MADRAS is still without a Sheriff, and the appointment is going a-begging. The new Governor will arrive about the end of July or the beginning of August. It is not yet fixed whether His Grace will assume office at Madras or Ootacamund, but there is a general belief that he will remain, for this year at least, in the capital. Lady Hobart has expressed her intention of residing permanently on the Neilgherries.

OUR LIBRARY TABLE.

The Gujranwalla Settlement.—As local tradition alone, always more or less exaggerated, is the only source from which in India the events of one generation are handed down to the succeeding one, it is impossible to give any accurate history of the Gujranwalla district previous to a century ago, or the times of the Sikh commonwealth. The traces of violent struggles and convulsions are everywhere found in the ruined cities, the deserted village sites, and broken wells, which abound in the district, more particularly in the Hafizabad tahsil. These evidences of civil war and party strife belong probably to the Mahomedan era, and tell of races who have passed away, and prove that the present colonization is of comparatively modern date. But leaving these mythical annals, when we come to the period of Sikh acquisitions, the history of Gujranwalla becomes that of the whole Sikh era. The district was broken up into taluquas, called after a township or village in which some powerful Sikh chief established his authority, and extended his conquests as he felt strong enough to attack his neighbours, until Runjeet Singh overcame them all and established a Sikh monarchy.

In each village a sarpanch or head lumbardar was elected from the existing lumbardars by the votes of persons actually shareholders in the village, regard being had to his general fitness. In no part of this district are the lumbardars in villages numerous, and the election of a sarpanch was not easy, as where the lumbardars are few and powerful, each can advance claims almost equal to his rivals. In very large villages, divided perhaps between the two races, and where there was no hope of one man being able to hold his own as head lumbardar, a sarpanch was appointed for the Hindoo and one for the Mahomedan element, and thus great heart-burning and bitterness were avoided; there were not 40 villages in the whole district, however, where this was found necessary. The appointment of sarpanch is not necessarily hereditary, but once appointed he cannot be removed except for gross neglect or incompetency. The putwarees in this district are a fairly educated and intelligent body of men. In the Hafizabad tasheel, where the former jumma was very low and the percentage for putwarees equally so, they were found inefficient, many of them Hindoo writers only, combining some other profession with that of village accountant, and non-resident. Bearing in mind how much the happiness of the agricultural community and the successful working of the settlement must depend on the efficiency and ability of this class, while interfering as little as possible with the distribution of putwarees' circles hitherto obtaining, such arrangements have been made regarding remuneration and jurisdiction as to secure proper efficiency and supervision. Where it has been found necessary to remove incompetent men who having been allowed two years, while settlement was in progress, to acquaint themselves with their duties, and who either could not or would not learn, their place has been supplied by a better educated relative of their own. The putwarees as a body appeared to resent any subordination to, and to consider themselves independent of, the lumbardars and malguzars, and by the latter the putwaree was considered a powerful incarnation of good or evil to be caressed and deferred to in a most mischievous degree. Nothing, however, has tended more to bring the putwaree to his proper level as the servant of proprietors than the appointment of the zaildar over a certain number of putwarees' circles and making him in a measure responsible that the latter perform their duties properly; and again, the distribution to every head lumbardar of copies of the most important papers contained in the settlement misl which are, for general information, stuck up on boards in the village "chowkee," that whoever runs may read. Where there is no village record room, the head lumbardar, the custodian of these papers, is bound to show them to all applicants; the putwaree therefore is no longer the sole and dread repository of all information affecting the proprietary or cultivating rights of those whose paid servant he is, and who rejoice to see the putwaree's "raj" passing away.

Education in Bombay.—The most interesting portion of the last annual report on public instruction in Bombay relates to technical schools. In the School of Art considerable progress has been made. Mr. Griffiths reports that the attendance in his atelier has been irregular, as several of the men employed in the Ajunta expedition have since suffered from fever. But the art experience gained has been of great practical value to the students who have been employed in copying and restoring some of the copies made of the Ajunta paintings. All the paintings brought from this place were photographed, and the originals, after exhibition at the Town Hall and the Victoria Museum, sent home to the Indian Museum. The Government of India has now sanctioned a repetition of the expedition, at a cost of Rs. 5,000 yearly until the work is finished; and Mr. Griffiths has been sent to England on duty in order to study the latest processes for the restoration of the paintings, and to make

inquiries as to the possibility of removing those already partly detached or which could be easily detached. In Architectural Sculpture, Mr. Kipling had 6 scholars and 5 workmen, and his atelier appears to be fully employed: "During the year we have been engaged on various works, among which may be noted the sculptured details of the new building for the Sailors' Home and details of the new High and Small Cause Courts. These are principally devices for capitals, corbels, gurgoyles, bosses, &c.; but in the higher branches of art I may mention a marble head of the late Gaekwar of Baroda of heroic size in high relief, and a marble figure of Justice, and two figures of Angels for the monument of Mr. Justice Norman to be erected in the Calcutta Cathedral." Mr. Kipling is confirmed in his belief that the natives of this country only need encouragement to do something really creditable in sculpture. Four colossal heads of types of Native races carved in stone for the tower of the new Native General Hospital, both modelled and carved by Balla Hira, are also among the year's work. This same man has also made in his hours of leisure, when working on his own account, models and designs for the sculpture, especially the heads of natives, in the new University Hall.

On the work of the scholars Mr. Kipling's report is not favourable, as he complains that under existing arrangements he cannot obtain from them the undivided attention which must be given for the effectual study of a difficult art, and that he cannot separate those who really wish to devote themselves to his special subject from the amateur class who look to a knowledge of form and the art of modelling as merely auxiliary to the ordinary studies of draughtsmen and painters. Mr. Griffiths makes a similar complaint with regard to his pupils—and the Report of the Examiners pointed out the same defect in the present system. It has therefore been decided that the course of the elementary school should be more precisely fixed and be re-arranged so as to occupy two years of study; and that when on completion of this course the pupils have been drafted off to the practical departments, the heads of these departments should have full and sole power over the pupils attached to their respective ateliers.

Of the pottery department Mr. Terry reports that he has had much success in turning out glazed pots in imitation of China ware "used by the natives for the preservation of ghee, honey, milk, oil, &c.; in fact, for such articles as are damaged by remaining long in contact with copper vessels or which would ooze through unglazed pottery." The results have proved most satisfactory, and Mr. Terry remarks that he is "unable to meet the constantly increasing demand for these glazed pots"; and that the only difficulty at present is the erection of a permanent kiln.

Cochin in 1874.—The revenue of this State is gradually increasing under careful management, the surplus last year amounting to nearly two lakhs of rupees. The revenue settlement has not been disturbed for a long period and consequently there is no room for any considerable alterations in this branch of income. One of the chief sources of fluctuation is the extent of cultivation carried on in the Trichoor lake. The area of agricultural operations there, as well as the out-turn of the year, are peculiarly liable to be influenced by the quantity and seasonableness of the rainfall, and in unpropitious times it has been the practice of the Sirkar to allow the ryot to defer the payment of the land tax till the succeeding year. The favorable conditions under which the lake was cultivated last year account, in a great measure, for the increased receipts, and it may be added that some tracts of waste land that came on the revenue roll recently have contributed towards this satisfactory result. The coffee enterprise on the Nelliampathy hills did not for some time realize the hopes of the Government, and there have been many discouragements. Many of the estates originally granted were not opened up, or were abandoned after partial operations. Some of the lessees surrendered their titles and others left the country, so that the prospects of the development of the forests of Cochin were very unsatisfactory. It is gratifying now to read that almost all the estates hitherto unworked or neglected have been taken up by more enterprising competitors, and there is every hope of the forest resources of the country being extensively utilized through the means of European capital. The coffee industry has, from the first, engaged the earnest attention of the Cochin Administration. The terms offered to planters were exceedingly liberal and well calculated to invite enterprise. Rent-free occupancy for the first three years; a quit rent of 12 annas and 4 pies per acre for the next nine years; and a permanent assessment thereafter of Re. 1-8 per acre were the conditions of holding. Although an "excise or export duty," at the option of the Government, is stipulated in the existing leases, no impost has yet been exacted on produce leaving the estates, or on its exportation from a Sirkar port. In justice, however, to the interests of the Sirkar under altered circumstances, and in accordance with the course obtaining in the neighbouring State of Travancore, it has been resolved to modify the present rules for the grant of forest land for coffee cultivation, and the question is under the consideration of the Rajah. The new rules will principally have for their object the sale of waste land at a moderate upset price, and the securing of an accurate survey. There are, in all, fifteen estates at present aggregating 7,310 acres, and of these eight pay revenue to the State.

The Famine in Asia Minor—Editor of the *Levant Herald*. We have here the history of one of the most dreadful famines ever known. Close upon thirty thousand souls have been allowed to die of starvation and the list is still increasing. The incidents set forth in this pamphlet owe their colour and unsightliness neither to the art of the special reporter nor to the *naïveté* of the bookmaking tourist. They have been recorded from day to day by residents in the districts where they occurred; men well versed in local languages and customs, and able to understand and reason upon the events that were passing around them. Every statement issuing from these sources has received subsequent confirmation, and the previsions of a prolonged period of suffering are verified as the famine uncoils itself and already reaches far into its second year. Moreover, the difficulties which beset the telling of the story afforded a guarantee against exaggerated statements. The Government holds a hard rein upon the press, and it is not in consonance with the views of the Porte that the adversities which may fall upon the country should find a prominent place in the newspapers published in Turkey. And this was more especially the case as regards the famine, which came to the front at the very time the Government was strenuously endeavouring to revive that confidence in its finances, which the crisis of last year had brought to the extremity of weakness. The publication of news which does not redound to the honour of the administration and the glory of the Empire, is held, according to the traditions of the *Bureau de la Presse*, to argue a spirit of disparagement on the part of the publisher and to call for repression. Further, editors of newspapers are held responsible for the accuracy of the news they publish, and good faith is no defence against inaccuracy, when the incriminated statement is displeasing to the Porte. In fact, in a charge of inaccuracy, as of any other press offence, accusation, condemnation, and punishment are simultaneous, and an unsuspecting editor is liable to find his paper suppressed or suspended without appeal, for a statement in the truth of which he had sufficient reason to place confidence. The subject, then, of the famine, being exceedingly distasteful to the Porte, it was necessary to approach it in the most guarded manner; to eliminate all that was sensational from the reports, and to give the mildest possible form to comments upon them. Notwithstanding all this care, the expostulations of the Porte at the outset were frequent; but it is satisfactory to be able to state that when the Porte became convinced that there was no desire on the part of the management of the *Levant Herald* to treat the subject in an exaggerated or sensational manner, but that its objects were first to promote a charitable movement, and, secondly, to discover some practicable means of mending the wretched conditions under which the provincial population of Asia Minor exists, the Porte virtually recognised the usefulness of the position taken by the *Levant Herald*, abstained from further warnings, and communicated much useful information on the subject to that journal. This information fully bore out the news which the paper had previously obtained from its own correspondents. It may be hoped, from this fact, that the Porte may come ultimately to vouchsafe to the native press emancipation from the tax of wholesale adulation of authorities, and such a measure of liberty in dealing with current truths as may enable it to take equal rank in point of dignity and utility with that of other countries.

The winter of 1873-4 was more than usually severe in the centre of Asia Minor. The rains fell in a deluge in November and December, and in January and February the snow scarcely ceased. The crops had been a general failure; murrain had fallen upon the flocks and herds; the working oxen also suffered severely. It now becomes apparent that the famine was first felt in the outlying villages where the reserves of food were smallest. But each one of these villages was separated from its neighbour by an almost impenetrable barrier of snow, and there was no inducement to make the effort to break through this barrier. Money to send abroad to buy food there was none, and if food could have been bought, there was no means of conveying it across the country. So the villagers remained locked up in starvation. They ate the little grain they had saved to sow; the few working oxen they had, died from want of tending; and the first news heard of their pitiable condition was that they had nothing to eat but cotton seed, and that whole villages were depopulated. It may fairly be assumed that in none of the villages existed any idea that the famine was general, that the inhabitants of each hoped to struggle on till the snows melted, and then to seek assistance. But the snows lay deep far on into March, and then it was too late. In the larger towns some reserves of food existed, and the population included a middle class possessed of some means and affording a market for the utensils, implements, and furniture of the lowest class. In the towns, therefore, this class sold everything that was moveable, and with the proceeds staved off starvation to some extent. The distress, although very great, was not of the desperate character of that which fell upon the villages. These towns are, however, mostly in telegraphic communication with the capital, and are the seat of a provincial government. It is true that this communication was, during the depth of winter, very precarious and subject to frequent and prolonged interruption. But still it would be interesting to know what use was made of the telegraph by the local authorities to inform the central government of the state of affairs. It is impossible to ascertain this; but a knowledge of the character of the lower ranks of provincial governors would lead to the belief that they would be in no haste to place the full truth before the Porte. Probably, owing to the isolation above mentioned, even they were unaware of the full extent of the calamity; they would have hoped that an early spring might bring easier times, and would have argued that even if the worst were told, then the Porte could render no assistance, for the roads were closed, and Constantinople, two hundred miles distant, might, for all practical purposes, as well have been at the North Pole. *A posteriori*, this hypothesis is sustained by the fact that the Porte did not, immediately on the break up of the winter, despatch succour to the afflicted districts; for it cannot be admitted that, if the Porte had been in full possession of all the terrible facts of the case, it would have overlooked the peremptory duty of organising adequate measures of relief in the winter, to be put into execution the first day the roads were open. It is true that the Porte at that period was deeply engrossed in combining arrangements for a new loan, but one would be very loath to conclude that the whole

power of the Government was absorbed in this one object, attractive as it might have been, in comparison with the sombre duty of battling with a national affliction. It is, however, evident either that the Porte was imperfectly informed of the state of affairs in provinces 200 miles distant, or that, if duly informed, it omitted to take action upon the information. The one supposition is, as we have shown above, just explicable; the other is not.

POETRY.

MARGARET.

1.

Into the garden I walked; ne'er had I seen her before:
Under a budding white rose she stood in the shade of the door.
Quiet and pale was her face, but maidenly bright were her eyes,
Fair as the newly-born moon when low in the easterly skies.
There as I stood by her side my spirit grew happy and free;
Would I had said what I thought, that "none will I marry but thee!"
The far-off bells were tolling, for 'twas some one's funeral-day,
And in the meadows close by, the mowers were mowing the hay.

2.

Into the garden I walked: but once had I seen her before:
Vacant and still was the house, wide open was standing the door.
Then silent and listening I went up to the curtainless bed,
Where she lay shrouded in white, all winterly, lonely, and dead;
There was a look on her face as if she'd been thinking of me.
"Dear Margaret," then whispered I, "none will I marry but thee!"
And the far-off bells were ringing, for 'twas some one's wedding-day,
And in the meadows close by, the mowers were mowing the hay.

3.

Silent and dark was yon lake; as under the desolate hill,
Lit by no gleam from the sky, it slumbered there, dreary and still,
Till, with its swallow-like wing, the wind in its wondering flight
Touched into music the reeds, and broke it in ripples of light.
Silent and dark was my heart, till suddenly thrilled by the tone,
Tender and pure of the voice which told me I was not alone.
Yet how I long to be dead, whene'er, on a calm summer day,
The far-off *bells* are ringing and the mowers are mowing the hay!

AUGUSTUS TAYLOR.

LETTER TO THE EDITOR.

COFFEE IN COORG.

To the Editor of the Friend of India.

SIR,—Would your correspondent from Mercara, who writes about coffee-planting in Coorg, be so kind as as to give us a little more information on the subject? I believe coffee was tried several years ago in Lower Bengal, but failed; why, I do not know. I have, however, seen coffee plants thriving in private gardens in Bengal. Mr. Yule, Commissioner of Bhaugulpore, was of opinion that coffee would grow in the Sonthal Hills. I have heard it stated that coffee will grow where tea will. Are there any tea plantations in Coorg? From recent accounts received, it appears that tea will be a great success in Ceylon. In a recent article in the *Revue des Deux Mondes* upon the introduction of the *Eucalyptus globulus* into Algeria, the writer says, "Plants are in many cases supposed to "adapt themselves readily to new conditions of life, and it has been "seriously proposed to the French Government to introduce tea and "cinchona in our Algerine colony." The writer thinks that the idea of growing tea in Algeria is highly absurd, as everything is not settled by a simple question of the temperature. It is not only heat that is wanted, but a combination of heat with a certain hygrometric condition of the atmosphere, and the writer concludes that tea would be more likely to succeed in Western France, at Brest or Cherboug, than in Southern France. Tea is not afraid of the moderate cold of winter, but it absolutely wants a moist summer, or at least a saturated atmosphere. The summer heats of the Mediterranean littoral and of the hills of Algeria would most likely prove destructive to the tea-plant. In spite of this opinion of a scientific man, an experiment in tea culture is to be tried in Southern France and in Italy.

But to revert to coffee, on which point a little information from your Mercara correspondent would be thankfully received. What is the climate of the coffee-growing districts of the Madras presidency? What is their elevation above the sea, the average rainfall, average temperature, summer and winter? Is the atmosphere saturated with moisture? Are there any hot summer winds? If he has any experience of Bengal, does he think that coffee would grow in Bengal? I take a great deal of interest in experimental farming, and I should like to have sufficient information about coffee-planting, to be able to give it a fair trial in Upper Bengal.

A FARMER.

NOTE.—We should be glad if our Mercara correspondent would kindly reply to this appeal.—ED., *F. of I.*

INDIAN INTELLIGENCE.

BENGAL.

THE Viceroy returns to Calcutta early in October to make arrangements for the Prince's visit. Lord Napier will also return earlier than usual this year, and will stay some time at Umballa. It has been decided to make Dehli the head-quarters of the entertainments of the Prince in Upper India. He will visit Simla and Cashmere towards the close of his visit in India.

ON the 15th of this month the British India Steam Navigation Company, under separate contracts entered into with the French and Portuguese Governments and with the Government of India, began a regular monthly service of steamers from London *viâ* Lisbon and Algiers, to ports of the Red Sea, Aden, Kurrachee, and the Persian Gulf. This line will exchange traffic at Aden with the company's steamers to Zanzibar, Mayottee, Nossi Bi, Mozambique, and other East African ports; at Kurrachee the steamers plying on the coasts of India, and at Bussorah for Baghdad.

THE question of the abolition, at least in part, of competitive examinations for the Indian Civil Service is said to be the subject of important official communications between the Secretary of State for India and the Calcutta authorities. It is believed that competitive examination will be totally abolished in the case of Hindoos, but temporarily retained in the case of Europeans. A Hindoo's horoscope has frequently much to do with his age, and under the present system it is feared that some unscrupulous natives may endeavour to deceive the Commissioners as to their real age. At the same time, another alteration has been suggested, and it is understood Lord Salisbury is in favour of both proposals, namely, the abolition of competitive examinations in the case of Hindoos and the raising of the age up to which European candidates will be allowed to compete to about twenty-five. In the case of Hindoos the advocates of change hope by the alteration to introduce men of experience and station, instead of those possessing mere capacity for being crammed, into the Civil Service in the East; and, in the case of Europeans, they hope that in future men will be able to take their degrees at Oxford or Cambridge before being hurried off to their spheres of labour in India.

WE deeply regret to hear that Mr. Fagan, Judge of the Calcutta Small Cause Court, died at Suez while on his way to England.

Apropos of the appointment of persons to fill offices in the several classes of Government schools, the rule that all masters receiving Rs. 200 and upwards are to be appointed by Government on the nomination of the Director of Public Instruction is, Sir Richard Temple states in a recent Minute on the subject, to be "fully maintained." With respect to appointments ranging from Rs. 100 to 200, the Lieutenant-Governor proposes that the Director of Public Instruction should fill vacancies "from a general list of native gentlemen possessing certain qualifications." Below Rs. 100 and above Rs. 50 per mensem, the Circle Inspectors are to nominate, and the District Committees to appoint accordingly. "For Masterships below Rs. 50 the Committees will appoint absolutely, that is, without any nomination of the Circle Inspector, though of course the Committee can, if they choose, consult the Circle Inspector, who will always afford them the best advice he can." The cream of the joke, as regards this Minute, is contained in the following sentence: "On the other hand, it is desirable that some considerable degree of patronage should be left in the hands of the District Committees, in order to maintain their position, which carries so much responsibility with it, and to keep alive the interest of the inhabitants in their local schools." Considering that the Lieutenant-Governor has himself told us that the native members of District Committees are mere dummies; that the Collector is in his own person the real "District Committee," and that although native members are occasionally to be encouraged to "sit alone," the Collector, in his own absence for meetings, is to nominate his deputy; that for all appointments ranging from Rs. 50 to 200 the nominations are to be made by either the Director of Public Instruction or the Circle Inspector of School; and that the Committees, although empowered to deal with salaries under Rs. 50, are recommended to act on the advice of the Circle Inspector, it seems to us that the powers and patronage of the District Committees are infinitesimal; and if we except the presiding Collector, that the position and responsibilities of the remaining members may be represented by a zero. Sir Richard Temple must be a very able man, for no one within our "ken" is better able to clothe the substance of a restrictive policy in language which gives it the fictitious appearance of a liberal concession.

A MEETING of landlords took place at Dacca on the 14th instant at the residence of Nawab Abdool Gunny, C.S.I., for the purpose of taking into consideration the present law of landlord and tenant, and of petitioning the Lieutenant-Governor to provide means for the better protection of the rights of zemindars, which are well known to be imperilled by the obstinacy with which the ryots are beginning to resist the imposition of illegal cesses and the unlawful enhancement of the rents of "occupancy" tenants. The "public benefactor," Khan Bahadoor Ashanoolla, took the chair on the occasion. The petitions, in their address to Sir Richard Temple, stated that "the jumma paid to Government by the zemindar for his tenure is similar to the payment made to him by his dependent talookdars and ryots," but accidentally omitted to mention that the Government demand on the zemindars represent a mere fraction of their own claims on the ryots. They also pointed out that the laws which the Government, "with the best of intentions," had passed for the protection of ryots from the zemindars, had led to a general estrangement of the ryots from the zemindars, and they gently hinted at the necessity for the repeal of those inconvenient enactments. "The gradual increase of the value of produce, and the

consequent reduction of the value of money, have made the zemindar poorer than he was," *ergo*, the zemindar ought, in justice, to be allowed to make the ryot poorer than he *is*, if that were possible. Owing to very unsatisfactory "technical rules laid down by the High Court" about enhancements, "the difficulty of proving enhanced rates where the ryots are refractory," and the deplorable "bias of most of the Courts against enchancement suits," the poor zemindars find that a very "small percentage of such suits is decreed" in their favour.

NORTHERN INDIA.

THE fire at Peshawur is said to have originated in the hut of a Moulvie. A few sparks flew from the fire into a heap of straw, and a strong hot wind soon carried the flames far and near. A writer in the *Pioneer* states that the news never reached the police till two hours later, when some twenty or thirty houses were in ashes. Then only did the Deputy Commissioner, seeing the smoke from the cantonments, suspect danger, and hurry off to the city. The fire had everything in its favor: a strong breeze, and a previous fortnight of unusually dry hot weather. A fair start was only required to enable it to have its own way in the race against water. Having secured this, the fire kept well a-head of all efforts to extinguish it, until Saturday evening, when that fickle ally the wind went over to the enemy and there was nothing left but to succumb. The Deputy Commissioner on arrival lost no time in sending for assistance to cantonments, and it was freely given. When the calamity was fully appreciated a council was held and the engineer officers present strongly advised that a certain portion of the city should be abandoned to its fate, and an effort made to save the rest by cutting a broad street through a net work of narrow lanes and small houses. The defenders would then take up their position on the edge of this line and battle with all sparks or fire which might be driven across. Measures were promptly taken to carry out this project, and quite an army of sepoys, including the Sappers and Miners, who worked like slaves throughout, was gathered together to demolish with pick and shovel. Gunpowder had been procured from the fort arsenal. It was carried through sparks and flames in leather *mussuks* wetted outside, and when these failed the bags were placed on wetted *tatties* and daubed over with mud. Soon the Sappers were in their element, mining and exploding. Houses came down rapidly in most instances, though there were some tough ones of brick which defeated more attempts than one. Unhappily when the work of destruction was nearly completed it was discovered that the line taken was much too near the line of fire, which, in fact, broke bounds in two or three places and invaded the portion it was intended to defend, with too much force to be thrust back. There was now nothing for it but to take up another line further back and make it broader than the former one. Accordingly the explosions of gunpowder were again commenced and by Saturday evening a very fine new street had been prepared. Had the fire come up to this, it is calculated one-half the city would have been sacrificed. Large open spaces outside the walls are being marked off in camps for those who can find no shelter elsewhere, and these will be properly looked after and cared for by the Deputy Commissioner through the Municipal Committee. About twelve thousand people now find themselves deprived of their dwellings. Some have taken refuge with friends in other parts of the city, and many have sought shelter in the villages around, where they will doubtless be well cared for, the Pathans being hospitable even to a fault. Yet a large portion of them must dwell in the streets for many months to come, and most of those thus summarily ousted will need assistance to rebuild. Only four persons were killed notwithstanding the rapidity of the conflagration and the large number of mines exploded.

TWO of the leading princes of the royal family of Lucknow, Nawab Mumtaz-ood-Dowlah and Nawab Wazir Mirza, have seven of their sons in regular attendance at Canning College, thus setting a good example to Mahomedans generally.

THERE has been a violent hail-storm at Kussowlie. The stones lay like snow on the ground to a depth of six inches. Considerable damage was done to trees, fruit, and other property.

SIR HENRY DAVIES' term of office will be extended another year, from December next, on account of the inconvenience of a change of Lieutenant-Governors about the time of the Prince of Wales' visit.

CHOLERA has decreased in some parts of Oudh; but as the total deaths in the province, notified in previous *Gazettes*, have not been given for last week, we are left to guess what the actual decrease amounts to. It was perhaps considered "inconvenient" to give newspapers an opportunity of publishing gloomy paragraphs, based on the actual figures of provincial mortality from cholera. As the disease is popularly, but perhaps erroneously, supposed to thrive best in pauperised localities, there may be some very excusable objection to the publication of details, which might lead ill-informed people to infer that Oudh was not the prosperous, well-governed province it really is.

THE *Delhi Gazette* appears to have been misinformed as to the conversion and death of Abdool Rahman—*né* Melvill. The interesting Mahomedan is reported to be alive and well, having lately recovered from an attack of sickness. The widowhood of the khansamah's daughter has, therefore, been postponed indefinitely.

THE fire at Murree on the 18th began about eight in the evening, and in five hours two of the main streets in the bazaar, containing three hundred houses, were completely destroyed.

THE Anglo-Oriental Fund Committee held the opening ceremony of their College at Allygurh on the 24th. Sir Salar Jung has contributed a *rozina* affording an annual income of Rs. 4,800, which represents a capital of Rs. 1,20,000, invested in Government stock. The entire capital of the fund now paid up exceeds three lakhs.

BOMBAY.

SEVEN feet of water lately appeared in the hold of the steamer *King Arthur*, in Bombay harbour, and as it was supposed she had sprung a leak, great efforts were made to save her from foundering. She was docked, her cargo was taken out, etc. etc., and finally it appears that she had no leak whatever, but that a quantity of water intended for the boilers had found its way into the hold.

THE Town Council of Bombay has resolved to take the prudent course of throwing upon to the general public the responsibility of giving the Prince of Wales a hearty and splendid welcome when he lands here next November; and the Corporation will be invited to consider the propriety of calling a public meeting of the inhabitants of Bombay to concert measures to this end.

THERE are seventeen cotton mills now working in Bombay Island and yielding an outturn of about 110,000 lbs. per day. Besides this, there are eight working factories in the mofussil, of which one is in Surat, two at Broach, two at Ahmedabad, one at Jalgaum, one in the native State of Bhownuggur, and one in the sister presidency of Madras. Altogether there are twenty-five cotton mills, having about 600,000 spindles and 7,000 looms at work. The total outturn of the spindles is about 130,000 lbs. a day, of which about 50,000 lbs. are used in the production of cloth.

THE following particulars of a recent attack on an engineer of the Indus Valley Railway have been telegraphed from Kurrachee to the *Times of India*, under date 21st instant: "A week ago Mr. Keene, of the Indus Valley Railway, while asleep in his bungalow at Bahan, near Sehwan, was suddenly awoke by the falling of a huge stone, weighing about ninety pounds, on his bed. He leapt off the cot and cried to his humaul, who immediately signalised his hatred of his master by striking him over the head with a sword, nearly cutting the ear off and dividing two arteries. He then cut him across the chest and severed two fingers of his hand with which Keene tried to ward off the blows. Keene was severely wounded in the chest and also in the kneecap. His cries drew the neighbours to the house, on seeing whom the scoundrel bolted, and up to this moment has not been apprehended. He is a native of Nawabgunge. An hospital assistant having been summoned, immediately attended to the wounds and saved Keene from bleeding to death." This is the second instance of a murderous attack by a servant on his master recorded within the past few months. It is to be hoped the disorder will not become epidemic, for we think that under ordinary circumstances Indian domestics are quite enough of a nuisance; but if they are to add murder and manslaughter to lying, pilfering, and other pleasant vices, the burden will assuredly break the much-enduring camel's back, and we shall take, in sober earnest, to waiting on ourselves. Fortunately the most really indispensable domestics such as bhistees and sweepers, are also by far the best behaved. Mr. Keene, who is only 21 years of age, is doing well. The would-be murderer has been traced to a place forty miles from Sehwan, but he is still at large.

DAMODHUR PUNT is still busily employed in the detection of traitors at Bombay. Several Government clerks have been pointed out by him as the betrayers of governmental secrets to the late ruler of Baroda, and other people connected with the pure native administration of that State have been sent for to corroborate his evidence in the matter.

MADRAS.

THE inhabitants of Karikal have lost a good Governor in M. Edouard Gustave Romieut, whose death we announced in our last. The day before his death he wrote eleven letters, some of which were very long ones. During the night he was attacked with fever, which even next morning caused no apprehension. But at noon delirium suddenly supervened; and in two hours and-a-half he had sunk into that sleep which knows no waking. His remains were conducted to their last resting place with military honours. The coffin, covered with a richly worked pall, on which rested the sword, cocked hat, and uniform of the deceased, was placed on a car, and escorted on either side by troops. At the head, chanting the prayers for the repose of the dead, walked the venerable *Curé* of Karikal, and a cluster of priests. M. Romieut, like the late Governor of Madras, was one of those men who require to be known to be appreciated.

THE lady to whom the new Governor of Madras, the Duke of Buckingham, is about to be married, the Hon'ble Emily Freemantle, is the fourth and youngest daughter of Lord Cottesloe, who is better known as Sir Thomas Freemantle, and represented Buckingham in the Conservative interest from 1826 to 1846. He was Secretary to the Treasury in 1844-45, and Chief Secretary for Ireland in 1845-46, he is a Baron of the Austrian empire and was created a Baron of the United Kingdom in 1874. Lord Cottesloe is 77 years of age, and his daughter Emily must be a good deal younger than the Duke who is 52 years of age.

THE Madras public has, during the past week, had the names of candidates, or supposed nominees, for the vacant office of Sheriff thrust upon them *ad nauseam*; and if the Government does not soon fill up the vacancy, the matter will become a public nuisance. It is a curious illustration of the mode in which this kind of patronage is distributed in Madras, that the name of no private citizen has been mentioned in connection with the office. All the candidates, or supposed nominees, have, according to the local *Times*, been Government servants, or pensioners, from which fact it would appear that an appointment in the public service is deemed to be the primary qualification for this office of honour and emolument. And the practice of the Madras Government hitherto warrants such a theory. It has been the recent practice to appoint some one

to fill the office of Sheriff, with an additional salary, whose time and energies have already been purchased by Government for the public service on adequate pay, so that the doctrine of "unto him only that hath shall be given," seems to be fully established in this case.

DURING the recent cholera epidemic in Colombo, the state of the town was such that it was absolutely impossible to reduce it to a sanitary condition by enforcing cleanliness; and the only effectual way of going to work was by "oxodizing or rendering innocuous the specific poison already in the air." It was by the burning of tar and a liberal use of disinfectants more than by any other measures that the epidemic was kept within bounds. Tar was burned for the first time in Slave Island on 16th March, and produced very marked effects upon the infected houses in the vicinity. During the week in which the tar was burned, there were, the Sanitary officer tells us, 42 new cases of which 39 terminated fatally. Next week immediately following the tar burning there were only 28 new cases and 18 deaths, the number of cases thus decreasing to rather over one-half of the former number, and the number of deaths to less than half. The proportion of deaths to cases in the week when the tar was burnt was 93 per cent, and in the next, only 18 per cent, a decrease of 15 in the percentage. "The tar burning was continued," says the Sanitary officer, "and in the following week there was a complete cessation of the ravages of cholera in that district."

BURMA.

THE steamers *Nemesis* and *Talifoo* left Rangoon for Mandalay on the 27th with Sir Douglas Forsyth, Colonel Duncan, and Captain Forsyth on board. The Mission is accompanied by four officers and eighty-four European soldiers. It is expected that the steamers will reach Mandalay in about fifteen days.

AN account of the Khyeng people, by Major G. E. Fryer, was read at the last meeting of the Asiatic Society of Bengal. According to the census of 1872, there were in Akyab, Ramree, and Sandaway, 18,956 Khyengs, living in 228 villages, containing 4,206 houses. The average number of houses in a Khyeng village is fourteen, and in each of these little communities there is a head called *Tayi* or *Nundayi*. The office passes from father to any son he considers best qualified for it; in default of such a successor, the office may be held by the father's brothers; but it never passes out of the family; when extinct, the village has to join another community. The *Nundayi* presides at all festivals, settles disputes, and acts as a priest in conjunction with the elders of the village. There is another person, however, who ranks higher than the individual just named; he is the *Dek mo tayi*, *i.e.*, land-proprietor's tayi. Tradition says these men formerly received grants of land from the kings of Arakan, and were invested with supreme authority over all offenders within the limits of their respective grants; they received a share in the produce of the soil, and enjoyed the taxes levied upon all tabooed persons. Though no longer enjoying these rights and privileges, they are held in much respect. Marriage is a contract dissoluble at the will of either party; no dowry is given. On the death of the parents, two-thirds of the property pass to the eldest son, the remainder is divided among the other sons; women are deemed incapable of holding or transmitting property. Adoption is considered proper, even if there be children by marriage. If a husband take an adulterer in the act, he claims a gong and buffalo from him; he may also chastise his wife, but she is not divorced. Nor will a Khyeng divorce his wife if she is barren; those that can afford it, sometimes, under such circumstances, take a second wife. When a dispute has been settled, the reconciliation is effected in the following manner;—the parties and their witnesses assemble before the elders, and a cup of water is placed before them into which a spear, dagger, or celt, has been dipped, the disputants each take a sip of the water, and agree to pay a fine if they continue the quarrel. Trial by water ordeal is practised; the person who keeps his head longest under water is adjudged innocent. The principal parties may either perform the ordeal themselves or hire persons to do so. The Khyengs call themselves Hiou or Shou, and state that the Shindoos, Khumis, and Lungkhes, are members of the same race. They have a tradition that they came down many years ago from the sources of the Kyendweng river, but they possess no written record of their descent; they are fond, however, of singing rude ballads, which portray the delights of their ancient country.

THE Chinese general Leesheetahee, who interfered with our first Yeman expedition, reached Bhamo on the 7th. He left in the King's steamer for Mandalay under a salute of two guns, and arrived at Mandalay on the 13th, when he had a royal reception.

MR. DAVIDSON, Superintendent of the Rangoon district police, has been shot and severely wounded by dacoits, seventy miles from Rangoon. He is progressing favorably. Violent crime is increasing in Burmah, probably because of the apprehensions of war.

CAPTAIN PROTHERO, Deputy Superintendent, Port Blair, officiates temporarily as Chief Commissioner of the Andamans; Captain Wimberley, First Assistant Superintendent, officiates for Captain Prothero; Captain Birch, Second Assistant, for Captain Wimberley, and Captain Grimes for Captain Birch.

THERE is a report that the Burmese troops which were lately concentrating on the frontier of the Shan states have been attacked by the Shans and repulsed.

A SHORT time ago nine Boodhist priests of Ceylon visited Mandalay. They met with a kind reception from the King, who, according to their report, depends more on priests than soldiers: supporting no fewer than 20,000 of the former.

ASIA.

THE Akhoond of Swat is reported to be dying. He is an old man of nearly eighty years, and possesses enormous influence over the tribes bordering on our North-Western frontier as well as over the people within our own border.

A LETTER from Yokohama in the *Débats* gives an account of the departure of the English and French Occupation Corps, the former consisting of 250 Marines, with a Colonel and 18 officers, and the latter of 88 soldiers and 11 officers. The English force embarked in the *Adventure* for Natal, and the French in the *Tanais* for Saigon and thence to France. The whole population collected to witness the embarcation, displaying the most friendly feeling; and the next morning, though the hour of departure was early, a number of foreign residents accompanied the troops to the mouth of the bay. The officers had been invited to dine with the Minister of War and had been presented to the Mikado, who gave each of them photographs of himself and the Empress, a great favour in a country where the sale of Royal likenesses is prohibited. The diplomatic body and the chief native functionaries attended a ball given in honour of the officers, and a dinner was given to the privates. It is believed that both England and France will retain the ground hitherto occupied by their barracks and other buildings on a hill commanding the town and harbour. The evacuation was a concession to the solicitations of the Government, supported by the Russian, German, and American Ministers. The writer sees no reason to doubt the security of the foreign residents, who would, if necessary, be protected by the men-of-war in the roads, and thinks there is a fair prospect of the opening of additional ports and an extension of the area accessible to foreigners at the ports already open.

MAHOMED NIAS, the first Minister of the Khan of Khiva, who was staying at St. Petersburg on a special mission, died a few weeks ago at the Russian capital in consequence of an operation of lithotomy. Sofi Khan, a leading chieftain of the Kuren Dhag Tekke tribes, has arrived at Krasnowodsk to announce to General Lamakine the subjection of his countrymen. He and his suite of thirty horsemen were decorated with medals and caftans of honour by the Russian General. Sofi Khan, whose tribe "nomadizes" about a hundred miles east of the mouth of the Attreck near the new Russian forts, expressed himself highly gratified by the friendly reception given him.

THE March number of a Chinese Review contains an article on a very important matter. According to the writer, Li Hung-chang has memorialised the Throne, asking that foreign learning and the sciences may be placed on a par with the standard subjects in the literary examinations of the Empire; and a correspondent writes that he has reason to believe the memorial will receive the sanction of Government. The importance of such an innovation is great, and if it be really carried out, good results will follow.

THE *Pekin Gazette* of the 27th March contains an edict announcing the death of the young Empress, widow of the Emperor Tunche, and extolling her virtues. Another edict, in the *Gazette* of the 29th, adopts the recommendation of officials deputed to select a site for the mausoleum of the late Emperor. A spot near the Eastern Hills has been selected.

A SHANGHAI paper gives currency to a curious piece of information respecting Mr. Margary's murder. It is stated that the French missionaries who reside in the neighbourhood of Hankow received information—most probably from their colleagues in Szechuan—that the authorities of Manwyne had previously declared their intention of putting a stop to the progress of the Burmo-Chinese Expedition, and only awaited its arrival at that city to carry their threats into effect. The same journal further states that information of the threatened danger was communicated of the Consul for France at Hankow. Of course he was powerless to take any precautionary measures, but it seems strange that he did not at once inform his English colleague, or if he did so that a telegram was not sent from Shanghai to Rangoon so as to at least let the British authorities there know that the attack was preconcerted.

THE attempted subjugation of the Formosan aborigines has proved rather tough work for the Imperialists, and reinforcements are being sent from Foochow.

THE Russian *Invalide* has published the following interesting details with reference to the stay at Hangkow of the Russian expedition authorised by the Pekin Government to go through China with a small convoy of soldiers and topographers. On his arrival at Hangkow it was incumbent upon Captain Sosnovsky, the chief of the expedition, to obtain the co-operation of the local authorities. Fortunately the Vice-King of Hoo-bay and Hanag was the brother of the Chancellor Lee-hun-Chjang, a great friend of Russia. He had previously seen the Russian Captain in Tieu-tsing, and had asked him to execute a map of Western China and forward it to him. In order to render this commission easy, the Vice-King of Hoo-bay gave the necessary orders to the authorities of the country between Hangkow and Lang-Chjow for granting to the expedition all possible aid and assistance. At the same time the Vice-King furnished the expedition with an escort and a Government long-boat. The sojourn of the expedition in Hangkow was characterised by unusual attention and kindness on the part of the Chinese authorities. The Russians were allowed to go all over the town, and to see and even photograph places strictly forbidden to ordinary foreigners. The members of the expedition were daily received with a military salute from a guard of honour. In regard to the Chinese troops which he saw, Capain Sosnovsky thinks they present a very beautiful theatrical spectacle, thanks to the great number of flags which are *de rigueur*, but they have neither a military look nor the smallest likeness to what Europeans understand by the word troops.

PEOPLE in China are beginning to talk about the next tea race. As regards the Hankow trade, Holt's steamer *Agamemnon*, which made a very good passage last year—less than a day, if we remember rightly, behind the winner—will again enter the lists. Mr. Holt, however, is reported to be building a steamer to take home the first teas against all comers, and this new vessel may of course turn up. Meanwhile the *Glenartney* (of Messrs. MacGregor, Gow & Co's line) the winner of the last year's race, will do her best to keep the championship. She is said to be in better trim even than last year and to have a fair chance against existing competitors; amongst these will be the *Hankow*, and the *Glenfinlas* and *Gordon Castle* also. From Foochow the *Glenearn* and *Braemar Castle*, with doubtless one of Holt's and one of Watts Milburn's steamers, will carry away the first teas. The *Glenearn* was two days ahead last year when she met with an accident near Aden, which put her out of the race.

LITERARY.

THE following is a translation of one of the sweetest of love-songs in Japanese poetry:—

The woods are green in summer time,
And bright with blossoms gay:
The murmur of the happy leaves
Sounds all the golden day.

But here a tree, by lightning struck,
Is black, and bent, and bare;
It lifts its arms like phantom fell,
And dims the sunny air.

A bird, that built its dainty nest
'Mong branches blossomed-o'er,
Still sings upon the withered bough
As blithely as before.

O fond and faithful as the bird
That haunts the leafless tree,
Though darkest clouds of sorrow came,
My sweet love stayed with me!

BABOO RAJENDRALA MITRA has found that Sanscrit MSS. are mostly written on country paper sized with yellow arsenic and an emulsion of tamarind seeds, and then polished by rubbing with a conch-shell. A few are on white Kasmeeree paper, and some on palm-leaf. White arsenic is rarely used for the size, but he has seen a few codices sized with it, the mucilage employed in such cases being acacia gum. The surface of ordinary country paper being rough, a thick coating of size is necessary for easy writing, and the tamarind-seed emulsion affords this admirably. The paper used for ordinary writing is sized with rice gruel, but such paper attracts damp and vermin of all kinds, and that great pest of literature, "the silver-fish," thrives luxuriantly on it. The object of the arsenic is to keep off this insect, and it serves the purpose most effectually. No insect or worm of any kind will attack arsenicised paper; and so far the MSS. are perfectly secure against is ravages. The superior appearance and cheapness of European paper has of late induced many persons to use it instead of the country arsenicised paper in writing puthis; but this is a great mistake, as the latter is not near so durable as the former, and is liable to be rapidly destroyed by insects. We cannot better illustrate this than by referring to some of the MSS. in the library of the Asiatic Society. There are among them several volumes written on foolscap paper, which date from 1820 to 1830, and they already look decayed, mouldering, and touched in several place by silver-fish. Others on John-letter paper, which is thicker, larger, and stouter, are already so far injured that the ink has quite faded, and become in many places illegible; whereas the MSS. which were originally copied on arsenicated paper for the College of Fort William in the first decade of this century are now quite as fresh as they were when first written. There are many MSS. in private collections which are much older, and still quite as fresh. The fact would suggest the propriety of Government records in Mofussil Courts being written on arsenicised paper instead of the ordinary English foolscap, which is so rapidly destroyed both by the climate and also by the white-ants. To guard against mistakes, the ordinary yellow paper sold in the bazar is dyed with turmeric, and not at all proof against the attack of insects. The oldest MS. Baboo Rajendrala Mitra has examined is a copy of the Bhagavata Purana, bearing date Samvat 1367, or A.D. 1310. It is consequently 565 years old. It is written on paper of very good quality, showing that the people of the country had already at that time attained to great proficiency in the art of paper-making. The oldest palm leaf MS. seen bears date Samvat 1189, or A.D. 1132; but "such records are extremely rare, and the general run is from 150 to 250 years."

ECCLESIASTICAL.

AT the annual meeting of the Indian Female Normal Society, held recently in Willis's Rooms, General Sir William Hill, the hon. secretary, read a report which gave a satisfactory statement of the progress the society had made in various parts of India. It stated that the society's most devoted missionaries felt that until the women were reached the hindrances to the free course of the "Word of the Lord" were unspeakably great. There were about fifty millions of high caste women shut up in their zenanas, and only women could obtain admission to them. The society had 131 agents in India, namely, twenty-eight English ladies, sixty native and Eurasian Christian teachers, eight native Christian ladies employed in zenanas, thirty-five native Bible women; 622 zenanas are visited in which there are 1,043 pupils, and in the schools there are 1,437 female scholars. The report further stated that the educated men of India were beginning earnestly to desire reformation. The first resolution, which was to the following effect, was moved by the Rev. J. Vaughan, of the Church Missionary Society:—'That in the greatly extended desire for native female education, in India and the facilities afforded to the missionaries, this meeting recognises an additional obligation resting on the Church at home to respond to the calls made, and thus to carry to the hitherto secluded females in that land the knowledge of that Gospel the power of which has been so increasingly manifested among all classes in India." In an interesting address, full of practical knowledge, the chairman recommended the objects of the society, and showed how it had progressed since the time when fifty-five years ago he went out to India. He added that two ladies who were present had volunteered to go out to India in order to promote the operations of the society. The resolution was seconded by Mr. James, of Masulipatam, who gave a history of the progress of Christianity in India, and made a declaration from his own experience that the modesty and virtue which now prevailed in his vast territory were entirely attributable to Christian instruction. The resolution was unanimously adopted.

THE Wesleyan ministers and missionaries of Ceylon have petitioned the Secretary of State against the ecclesiastical policy of the Colonial Government. It is, they allege, highly objectionable as Government thus directly enters upon missionary work; it is unfair to the Wesleyan society to be subjected to the rivalry of Government competition; and their efforts to induce the Wesleyans to support their own ministers are greatly hindered by the Government support of Episcopalians.

THE religious interest in Bangalore and Madras continues. "In the former place twenty-one lately sought the Lord in twelve days."

COMMERCE AND FINANCE.

FRIDAY NIGHT.

THE anticipation of easier rates for money which we expressed last week, have already begun to show signs of fulfillment, and a considerable improvement is noticeable in the market. From Bombay the reports continue to be re-assuring, although no change has yet been made in the Bank's charges, but in Calcutta the statement of the Bank of Bengal, published yesterday, evidences a very large influx of money, and a reduction of one per cent in the rate all round was announced. It is said that the reduction would have been two per cent. had it not been for the circumstance that the Treasury balances stand at a very high figure, in comparison with the public funds. The minimum rate is now eight per cent. Considerable sums of money continue to flow into the Bank, and a further fall next week is confidently looked for. The effect of this reduction has not yet been felt to any very great extent in the market, and it is probable that business will still be restricted until the turn of the tide has set in more decidedly, and accommodation can be obtained at considerably lower rates than at present. The bazaar is an indication that this will not be long delayed, the tone being very much easier, and more certain.

Exchange on London has been weaker, since last mail, owing to the reduced quotation of the Council drawings reported last week, and may now be quoted at about a sixteenth lower all round. The bulk of the business in Bank Bills, for this mail, has been done at the following rates, which are the closing quotations:—

	s. d.
Bank Bills at 6 months' sight	1-10 3/16
Do. do. at 3 months' sight	1-9 15/16
Do. do. on demand	1-9 11/16

The market is weak and has a lower tendency.

Business in the share market has been very depressed, and the daily transactions reported have been very inconsiderable throughout, until yesterday, when a marked improvement was discernible consequent upon the lowering of the rate at the Bank. Prices are well maintained, and there is every prospect that, with the share list quotations healthy as they are at the present moment, a good and sound business may be looked forward to. Buyers are now encouraged to come into the market at better rates, and sellers will be able to realize fair prices, still leaving a margin of profit for purchasers. There is nothing new to report with regard to any particular stocks, quotations generally being much the same as last week.

In Government paper there has been a considerable amount of business, and the higher rates we anticipated last week have been obtained, 4 per cents having advanced to Rs. 102-14, which is a rise of $\frac{7}{8}$ per cent. There has been but little done in $4\frac{1}{2}$, or $5\frac{1}{2}$ per cent Securities, transactions having been almost entirely confined to 4 per cents, which are looked upon as more certain in regard to the future than the other descriptions. Rates close as follow—

4 per cents	...	102-12 to 103
$4\frac{1}{2}$ per cents 1872	...	103-12
$5\frac{1}{2}$ per cents	...	109-12

The following is a list of the transactions reported during the week:—

GOVERNMENT SECURITIES—

4 per cent., at Rs. 102 to 103.
$4\frac{1}{2}$ per cent., at Rs. 103 to 103-10.

SHARES—

Bank of Bengal, at Rs. 1,420 to 1,430.
National Bank, at Rs. 107 to 109-8.
Punjab Bank, at Rs. 74 to 75.
Goosery Cotton Mills Co., at Rs. 225.
Bowreah Cotton Mills Co., at Rs. 90.
Raneegunge Coal Co., at Rs. 91 cash, and Rs. 93-8 delivery in 1 month.
New Beerbhoom Coal Co., at Rs. 120 to 123.
Barnagore Jute Mills Co., at Rs. 95 to 97-8.
Oriental Jute Mills Co., at Rs. 60.

Budge Budge Jute Mills Co., at Rs. 52 to 59, new shares at Rs. 19 to 20-8.
Calcutta Jute Mills Co., at Rs. 110 to 111.
Seebpore Jute Mills Co., at Rs. 58.
Fort Gloster Jute Mills Co., at Rs. 58 to 60.
India General Steam Navigation Co., at Rs. 405.
Nauthpore Indigo Co., at Rs. 115.
East India Tea Co., at Rs. 85 to 86.
Singell Tea Co., at Rs. 139.
Burkhola Tea Co., at Rs. 104.
Eastern Cachar Tea Co., at Rs. 195.
Lower Assam Tea Co., at Rs. 43 to 45.
Central Cachar Tea Co., at Rs. 163.
Tuckvar Tea Co., at Rs. 135.
Majagram Tea Co., at Rs. 116.
Punkabaree Tea Co., at Rs. 115.

MILITARY ORDERS.

BIRD, Lieut. W. J. B., to be Wing Subaltern, 3rd Infantry Hyderabad Contingent.
BODDAM, Major W. W., furlough for six months.
CLARKE, Major S. de A. C., to remain in England, to the 30th November, in extension.
CORY, Lieut.-Col. A., furlough for two years.
DOHERTY, Surgn.-Major D. J., to Simla, to the 3rd November.
FOSBERY, Lieut. E. H., to England, to appear before a medical board.
GARRET, Lieut. A. J., furlough for four months.
HICKS, Major W., Bombay Staff Corps, placed on the list of Lieut.-Cols.
HAWKES, Major H. P., Madras Staff Corps, placed on the list of Lieut. Cols. on the Indian Gradation List.
HORSFORD, Lieut-Col. E. O'B., furlough for one year.
JERVOIS, Lieut. H. N., to be Subaltern, No. 3 Horse Light field Battery, P. F. F.
LANGMORE, Lieut.-Col. E. G., furlough for two years.
MACCALL, Capt. G., to remain at Mussoorie, to the 9th November.
MORGAN, Lieut.-Col. W. D., furlough for two years.
MILLER, Lieut.-Col. J. C., furlough for eighteen months.
MCNAIR, Lieut.-Col. E. J., furlough for six months.
NOLAN, Lieut. G., furlough for two years.
ROBERTSON, Lieut. D. K., to England, to appear before a medical board.
RAMSDEN, Capt. W. C., to officiate as Adjutant, 3rd Sikh Infantry.
RUSSELL, Col. G. W., Madras Staff Corps, placed on the list of Major-Generals.
REID, Major-General Sir C., placed on the list of Lieut.-Generals.
SMITH, C. H. M., to officiate as Quartermaster, 3rd Sikh Infantry.
SPOTTISWOODE, Col. M. C., Madras Staff Corps, placed on the list of Major-Generals.
THOMPSON, Capt. D. H., leave to the 10th October.
WRIGHT, Major H. C., placed on the list of Majors on the Indian Gradation List.
WEMYSS, Major-General W. B., Bengal Cavalry, placed on the list of Lieut.-Generals.

CIVIL GAZETTE.

IMPERIAL.

AYLMER, Mr. A. P., Assistant Conservator of Forests in Assam, leave to Europe for one year.
BIRCH, Capt. W. B., to officiate as 1st Assistant Superintendent of Port Blair and the Nicobars.
BARRON, Capt. W., Deputy Superintendent, Revenue Survey, to officiate in the 2nd Grade.
CHUNDRA, Surgn.-Major R. C., to conduct the medical examination of candidates for employment in the public service in Calcutta.
GRIMES, Mr. G. D., to officiate as 2nd Assistant Superintendent of Port Blair and the Nicobars.
PROTHEROE, Capt. M., to officiate temporarily as Chief Commissioner of the Andaman and Nicobar Islands.
SAMUELLS, Capt. E. W., Assistant Superintendent, Revenue Survey, to officiate as Deputy Superintendent, 3rd Grade.
WIMBERLY, Capt. R. J., to officiate as Deputy Superintendent of Port Blair and the Nicobars.

PUBLIC WORKS.

CHRYSTIE, Major W., promoted to temporary Superintending Engineer, 2nd Grade.
GALLOTT, Mr. J. L., promoted to temporary Superintending Engineer, 3rd Grade.
O'TOOLE, Mr. L., Assistant Engineer, transferred to the Establishment under the Director of State Railways.
PARKER, Mr. W. H., promoted to officiate as Superintending Engineer, 3rd Grade.
RAYNE, Mr. M., to officiate as a Engineer-in-Chief of the Indus Valley State Railway.
SIMON, Mr. F., Executive Engineer, permanently transferred to Bengal.
SCOTLAND, Mr. J. P., Assistant Engineer, permanently transferred to Bengal.
TREVER, Major S. T., promoted to temporary Superintending Engineer, 1st Grade.
VANSITTART, Mr. J. P., Assistant Engineer, transferred to British Burmah for employment on the Rangoon and Irrawaddy Valley State Railway.
WHISH, Major H. E., to officiate as Secretary to the Chief Commissioner of Oudh in the P.W.D.

BENGAL.

AYKAT, Baboo N. C., Extra Assistant Commissioner, transferred to Lohardugga.
BLYTH, Mr. W. D., Assistant Magistrate, transferred to Malda.
BENSLEY, Surgn.-Major C. E. W., leave for three months.
FENTIMAN, Rev. A., to be a Marriage Registrar for Calcutta.
GUISE, Mr. R. F., Officiating Assistant Superintendent of Police, transferred to Rungpore.
MACMICHAEL, Mr. N., to be a Commissioner for making Improvements in the Port of Calcutta.
NUND, Moonshee S., Extra Assistant Commissioner, transferred to Hazareebagh.
NUGENT, Mr. J., Assistant Magistrate, leave for two months and-a-half.
SAVAGE, Mr. H., Assistant Magistrate, transferred to Beerbhoom.

MADRAS.

ARBUTHNOTT, Mr. L., to act as Assistant Superintendent of Police, Nellore.
COURT, Captain H. S., to act as Cantonment Magistrate, Cannanore.
DEANE, Rev. B. O'M., Chaplain of North Black Town, furlough for two years.
HOPE, Mr. E., to act as Assistant Superintendent of Police, Cuddapah.
HODGES, Captain W. H., to act as Superintendent of Police, 1st grade.
KIDD, Rev. D. W., to act as Chaplain of Saint John's District, Bangalore.
LEFANU, Mr. W. J. H., Acting Sub-Collector, Salem, leave for three months.
MILLET, Mr. T. T., to act as Assistant Superintendent of Police, Tanjore.
PUCKLE, Mr. R. K., to act as Third Member of the Board of Revenue.
SULLIVAN, Mr. J. F., to act as Assistant Superintendent of Police, Malabar.
WHITLOCK, Captain C. J. T., to act as Superintendent of Police, Cuddapah.

OUDH.

GHOSE, Surgeon F. C., posted to Oonao.
INNES, Extra Assistant Commissioner, Kheeree, leave for two months and twenty-three days.
KING, Mr. R. M., Deputy Commissioner, Fyzabad, leave for two months and twenty-four days.
MULVANY, Surgeon E., posted to Baraitch.
NOBLE, Captain C. S., to officiate as Deputy Commissioner of Fyzabad.
PONSONBY, Mr. J. C., Officiating Conservator of Forests, Baraitch and Gonda Division, three months' leave.

NORTH-WESTERN PROVINCES.

CASTLE, C. T., District Superintendent of Police, from the 4th to the 3rd grade.
FOSTER, Mr. E., Assistant District Superintendent of Police, from the 2nd to the 1st grade.
GROWSE, Mr. F. S., to officiate as Magistrate, Muttra.
HOLDERNESS, Mr. T. W., Assistant Magistrate and Collector, to Mozuffurnuggur.
IRVINE, Mr. W., Officiating Joint Magistrate, to Furruckabad.
KEENE, Mr. H. G., District and Sessions Judge, Agra, two months' leave.
MULOCK, Mr. H. P., Officiating Joint Magistrate, to Allygurh.
OGILVIE, Mr. J., Officiating Assistant District Superintendent of Police, from Furruckabad to Agra.
SHARP, Rev. B., Chaplain of Muttra, three months' leave.
WILLIAMS, Mr. J. C., to be a Magistrate of the 1st class.
WYER, Mr. T. R., to be an Assistant Settlement Officer, 3rd grade Moradabad.
WIGRAM, Mr. P., to officiate as District and Sessions Judge, Agra.
WILLIAMS, Mr. J. C., posted as Assistant Magistrate to the Saharunpore District.
YOUNG, Rev. J. W., Chaplain of Chunar, three months' leave.
YOUNG, Local Lieut. R. J., District Superintendent of Police, from the 5th to the 4th grade.
YEATMAN, Mr. C. E., to be District Superintendent of Police, 5th grade.

PUNJAB.

BURNEY, Mr. R. T., to be Deputy Commissioner, 3rd Class.
BIRCH, Major F. M., ditto.
BEAMISH, Rev. S. H., Chaplain of Jullundhur, leave for ninety-one days.
DAVIES, Lieut.-Col. W. G., to officiate as Commissioner and Superintendent of the Delhi Division.
ELSMIE, Mr. G. R., to be Deputy Commissioner, 2nd Class.
FRIZELLE, Mr. J., to be Assistant Commissioner, 1st Class.
FORSTER, Lieut.-Col. T. F., to be Deputy Commissioner, 2nd Class.
GARDINER, Mr. J. W., to be Assistant Commissioner, 2nd Class.
HARRISON, Mr. E. H., Officiating Registrar, Chief Court, leave for ninety days.
MERCER, Colonel T. W., to be Deputy Commissioner, 1st Class.
TRAFFORD, Mr. R. W., to be Assistant Commissioner, 2nd Class.
YOUNG, Mr. W. M., ditto, 1st Class.

LATEST TELEGRAPHIC NEWS.

24TH.

London, 18th May.

THE Homeward Mails, *viâ* Brindisi, which left Calcutta, 23rd April, and Bombay 26th idem, were delivered in London on the 15th instant. The Heavy Mails *viâ* Southampton from Calcutta, 16th April, arrived yesterday.

London, 22nd May.

MR. GRANT DUFF yesterday addressed his constituents at Elgin. Describing his visit to India, he said he considered the civil and military organization immensely strong; he had discussed the Army efficiency with Lord Napier and other military authorities, who thought the Native Army never more fit than now for the uses for which it was intended. He further said he was persuaded that the competitive system had given men of higher average to the Civil Service than formerly were obtained from Haileybury. In conclusion, he alluded to the notorious misconduct of the Gaekwar of Baroda, which had necessitated his removal.

25TH.

London, 24th May.

THE half-yearly report of the Peninsular and Oriental Company announces that owing to the reduction of mail subsidies and decrease of receipts, the profits are insufficient to pay an interim dividend.

Mr. Lowe, Professor Rogers, and the majority of the press oppose the proposed scheme to establish a special College at Oxford for Indian Civil Service candidates.

The *Observer* states that Lord Cadogan succeeds the Earl of Pembroke as Under-Secretary for War.

Madrid, 23rd May.

MEETINGS have been held by former senators and deputies resulting in a coalition between the Monarchists and Liberals, to support the present Government.

Brussels, 23rd May.

THE Liege tribunal has dismissed the charges of complicity in the attempted assassination of Bismarck brought against the Belgian, Duchesne. This result has created a sensation at Berlin.

Frequent religious disturbances are occurring throughout Belgium. The populace are assaulting pilgrims.

26TH.

London, 24th May.

THE Homeward Mails *viâ* Brindisi, which left Calcutta 30th April, and Bombay 3rd May, were delivered in London to-day.

London, 25th May.

LATEST betting on the Derby: seventy-five to forty against Galopin, nine to one against Camballo; nine to one against Claremont; ten to one against Repentance Colt; hundred to eight against Woodlands, hundred to seven against Balfe.

The Commons have rejected by 249 votes against 175 the motion, put forward by Mr. Fawcett, condemning the insufficiency of the Government proposal to reform local taxation.

Lord Hamilton replying to Mr. Lowe said that Lord Salisbury fully concurred in the remedies proposed for the grievances of civilians in the North-Western Provinces, and had no reason to believe they were inadequate, and until insufficiency is proved he will not take any special action in the matter.

The following is the result of the Derby:—Galopin first, Claremont second, Repentance colt third.

General Henry Hope Graham, who has been gazetted Colonel of the 77th Foot, *vice* Rokeby, has been transferred to the Coloneloy of the Scots Fusiliers.

27TH.

Singapore, 26th May.

SIR ANDREW CLARKE, the Member of Council for Public Works, leaves here to-day for Calcutta.

28TH.

London, 27th May.

A LETTER published by Sir W. G. Romaine defends Lord Northbrook's policy in respect to the recent deposition of the Gaekwar. The writer points out that the critics have failed to indicate any other course than that adopted.

Paris, 26th May.

THE Assembly has appointed a new Committee of Thirty, containing twenty members of the Left, who favour elections by departments. The Ministry insist on elections by arrondissement.

Brussels, 26th May.

IN consequence of the failure of the prosecution of Duchesne for alleged complicity in the attempt on Bismarck's life, the Belgian Government has announced its intention to introduce a bill to render penal all attempts at assassination.

CALCUTTA: PUBLISHED AT 3, CHOWRINGHEE ROAD.

ADVERTISEMENT.

To Parents and Guardians of Children requiring the beneficial change to a British Climate.

A LADY residing in a quite healthful country place in Ireland, having a good roomy house and extensive grounds, wishes to receive three or four young children to board and educate with her own. Having been for many years a resident in India, she especially understands the constitution and requirements of children coming from that climate, and can confidently warrant every comfort and happiness for children committed to her care, as well as the strictest personal attention to habit and manners, physical and mental training. Highest references given and required. Terms moderate.

Please address Mrs. D. E., care of Messrs. King, Hamilton & Co., 7, Hare Street, Calcutta, who will kindly furnish prospectus.

ADMINISTRATOR-GENERAL'S OFFICE.

THE undermentioned Estates having come under charge of this Office, all persons having claims upon, being indebted to, or holding property belonging to the said Estates, are requested to place themselves in immediate communication with the undersigned:—

William DIXON, of Calcutta, an Officer in the Preventive Service of Government, died at Calcutta on the 13th May, 1875.

George SAUNDERS, of Aligurh, in the North-Western Provinces of India, an Indigo Planter, died at Aligurh on the 14th November, 1867.

George INGLIS, a British subject residing at Sylhet, died at Sylhet on the 9th January, 1850.

Esther YOUNG, formerly Esther MOORE, of Umballa in the Punjab, died on the 25th September, 1874.

T. C. DALE, Chief Officer, Floating Light Vessel "Star," died at Calcutta on the 8th April, 1875. Certificate granted under Sec. 37 Act II. of 1874 to Edward James Butler as a creditor of the deceased.

Edward PINTO, of Calcutta, a Government Pensioner, died at Calcutta on the 30th March 1875. Certificate granted under Sec. 36 Act II. of 1874 to Mary Anne Pinto as widow of the deceased.

LIFE DEPARTMENT.

The Life Funds are free from any liability to the Fire Department by the Company's Acts 33 and 34 Victoria. Session 1869-70,

Accumulated Funds irrespective of the Paid-up Capital £2,551,589-16-7

Annual Revenue from Premiums and Interest 360,625-18-9

At the last Quinquennial Investigation and Division of Profits for the period ending 31st December 1870, the Surplus Fund divided amounted to £182,274 5 2

The value of the loading reserved for Future Profits and Expenses amounted to £601,554 0 0
Besides which there were reserved for Contingencies, &c. .. 33,925 6 2

Making a Total Reserve of £635,479 6 2

During the five years preceding 1870, the Company transacted the following new business:—

NO. OF POLICIES ISSUED.	SUMS ASSURED.	PREMIUMS.
£4,567.	£4,132,141.	£133,279 16 5.

A Bonus was declared upon the Policies of the Company on the Participating Scale, at the rate of £1 5s. per cent. per annum, which in many instances was equal to £1-19s. per cent. per annum, on the original sum assured, the principle of division being to declare the Bonus not only on the original sum assured, but also on all previous Bonus additions.

THE RATES OF PREMIUM are moderate and generally LOWER than those of other Offices.

REDUCTION TO ENGLISH RATES without Medical Certificate or fresh examination, *from the date of leaving Alexandria, or Port Said for Europe.*

NINE-TENTHS OF THE WHOLE PROFITS in the Life Business are divided amongst the assured in the Participating Scale every FIVE YEARS.

THE NEXT DIVISION OF PROFITS WILL BE MADE AT 31ST DECEMBER 1875.

All Policies on the Participating Scale opened on or before that date, will share in the Fund then to be divided, which will consist of the Profits made during the previous Five Years.

The following Gentlemen have been appointed, with all the usual powers, as

Local Board of Directors:

F. S. Collis, Esq., Officiating Administrator-General.
Capt. H. P. Lovell, Supdt., P. & O. S. N. Co.
R. A. Lyall, Esq., of Messrs. Lyall, Rennie & Co.
E. T. Roberts, Esq., Solicitor.

MEDICAL OFFICER.—Dr. J. Ewart, Surgeon to the General Hospital.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼ lb. and 1 lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, & 170, PICCADILLY.

Works—EUSTON ROAD, AND CAMDEN TOWN.

(Makers of Epps's Milky Cocoa and Cocoa Condensed Milk.)

REMEDY FOR INSURANCE PANIC.

THE NEW SYSTEM OF RESERVING & INVESTING FOR POLICY-HOLDERS IN GOVERNMENT SECURITIES THE ENTIRE NET PREMIUMS.

THE ONLY EQUITABLE SYSTEM OF LIFE ASSURANCE.

THE POSITIVE GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, "LIMITED."

CHIEF OFFICE: 53, BEDFORD SQUARE, LONDON.
CALCUTTA OFFICE: 6, OLD COURT HOUSE STREET.

This Company has passed the probationary period of development, and has now become a well-established office, doing a larger business than was ever before transacted in the same period of time by any Life Assurance Institution, and possesses a current annual premium income of £50,000.

THE GREAT QUESTION OF THE DAY IS—

How can I assure my life with a certainty of the policy being paid at death?

THE ANSWER IS SIMPLE—

Only let the net premiums be reserved and safely invested at compound interest, exclusively to meet claims under policies, and the fund will so rapidly and enormously accumulate as to make the provision for payment as certain as is death itself.

AN EMINENT ACTUARY SAYS:

"To make the system of Life Assurance complete, *it has yet to be recognised that an Assurance Society is, in its very essence, less a* "trading company for profit to shareholders, than an institution with purposes of trust for policy-holders, the trust being to receive and "husband the premiums until such time as, by the discharge of the member's claim, the trust is ended as far as such member is concerned. "To this end it should be enacted that *every* office shall each year put apart in a 'Trust Fund' *a proper proportion* of its annual premiums, to "meet assurance, risks, and claims only, and not to be touched in any way for expenses, which, if need be, should come out of the share-"holders' capital. The Trustees of the Fund would take care that it is productively invested, so as to obtain the best rate of interest con-"sistent with safety."

This is exactly the system adopted by the 'Positive,' THE ENTIRE NET PREMIUMS being invested at compound interest in trust for policy-holders, and hypothecated exclusively for the purpose of paying claims under policies. The investments are made, in England, in Consols, yielding interest at the rate of about 3¼ per cent. per annum; in India, in Indian Government securities, yielding about 4 per cent.; in Canada, in Dominion Stock, yielding fully 5 per cent.

POLICY-HOLDERS IN THE 'POSITIVE' HAVE THREE DISTINCT LINES OF SECURITY:

1. The Guarantee Fund of over £51,000 Consols (one-fifth part of the paid-up capital).
2. The Net Premiums invested at compound interest as above.
3. The Capital and other property of the Company.

THE POLICY-HOLDERS' FUNDS

AMOUNTED, ON THE 31st OCTOBER 1874, TO OVER £125,000.

(ACCUMULATED SINCE COMMENCEMENT OF LIFE BUSINESS IN 1872.*)*

FURTHER ADVANTAGES OF THE POSITIVE SYSTEM.

POSITIVE POLICIES ARE UNCONDITIONAL, INDISPUTABLE, AND NON-FORFEITTALE.

1. Unconditional, being free from all conditions of every kind restrictive of the assured, except the due payment of premiums.
2. Indisputable, as no objection whatever can be raised on any ground after the Policy has been issued.
3. Non-forfeitable, because every premium purchases a fully paid-up Policy, or Positive note, for the relative proportion that the premium bears to the sum assured, which Positive note never lapses, but remains in force till death, whether subsequent premiums are paid or not.

SURRENDER VALUE AND NEGOTIABILITY OF POSITIVE NOTES.

The Positive note is a negotiable document, payable 'to bearer,' and bears a cash value of 40 per cent of the premium paid, which may be obtained at any time on surrender of the note, without forfeiting the balance of the sum assured, or may be taken as a loan bearing interest. The cost of probate or legacy duty is avoided by the Positive system.

PROSPECTUSES, AND ALL INFORMATION REGARDING THE COMPANY, MAY BE HAD ON APPLICATION TO

THE MANAGER,

6, *OLD COURT HOUSE STREET, CALCUTTA.*

CALCUTTA METAL MART.

THE undersigned have a large stock of Machinery, Metals, and Miscellaneous Articles of all descriptions, and are prepared to give estimates, or contract for the supply of any materials which they have not in their godowns.

They are also prepared, for a moderate commission, to import any articles from England at actual cost, and are in a position to get the best quality at the lowest possible price.

The following are generally in stock or on the way :—

Portable Engines.

Clayton & Shuttleworth's

		4 H. P.	6 H. P.	8 H. P.	10 H. P.
Prices, with Single Cylinder	Rs.	2,700	3,250	3,900	4,600
		10 H. P.	12 H. P.	16 H. P.	20 H. P.
Do., with Double Cylinder	Rs.	4,750	5,000	6,250	7,500

Reversing Gear.

Extra, at Rs. 200 to Rs. 400, according to size.

Stationary Engines.

Tangye's (suited for Tea Gardens), with vertical boiler mounted on base plates, occupy little room, and are well adapted for use with Tea or other machinery roquiring small power. Fire-places are constructed to burn either wood or coal.

		2 H. P.	3 H. P.	4 H. P.
Prices	Rs.	1,400	1,500	1,650

Fire Engines.

Holman's, with suction and delivery hose complete.

Centrifugal Pumps.

Gwynne's—are largely used all over the world where a rapid discharge of water is wanted.
A 6-inch pump worked by a 6 H.P. Portable Engine will discharge about 700 gallons of water per minute.
A 7-inch pump worked by an 8 H.P. Portable Engine will discharge about 900 gallons per minute.
An 8-inch pump worked by a 10 H.P. Portable Engine, will discharge about 1,100 gallons per minute.
Prices, with pipes and other fittings complete.

	4 in.	5 in.	6 in.	7 in.	8 in.	10 in.	12 in.
Rs.	460	600	750	900	1,050.	1,300	1,500.

Centrifugal Pumps.

The same sizes, but of slightly different shape, may be had mounted on wheels, and will be found useful by Contractors and Engineers who require Portable Pumps.

Special Steam Pumps.

Tangye's, are very compact and simple in construction.

Disintegrators.

Norton and Hawksley's for grinding to a fine powder artificial manures, ores of all kinds, shale, asphalte, lime, chalk, coal, coke, clays, barks, myrobalans, leather, drugs, sugar, seeds, and grains of all descriptions, besides many other articles.

Prices.

No. 1, Rs. 450; No. 2, Rs. 1,050.

Extinctures.

Dick's—can be carried by one man, and always kept ready for instant use in case of fire. They have proved very efficacious at Home; and in Warehouses, Mills, and Ships; as well as for Private Dwellings, they form a great safeguard against damage by fire.

Prices.

No. 4, Rs. 100; No. 5, Rs. 125.

Charges for ditto supplied extra, at Rs. 4 per tin.

Steam Road Rollers.

Aveling and Porter's, 5 ton and 8 ton.

Stone Breakers,

Marsden's	Rs.	3,000
ALBION DRILLING MACHINES	„	325

Steam Hammers,

3 cwt., with fittings complete	„	1,250

Soorkee Mills,

with 6-feet pan and rollers complete	„	1,025

Injectors.

Giffard's—are much superior to Pumps as Boiler feeders, and are very simple in their construction.

		No. 4.	No. 6.	No. 8.
Prices	Rs.	70.	90.	135.

Wire Tramway.

Hodgson's. These Tramways are well adapted for carrying produce and minerals over hilly ground, or in any country where good road or water carriage is unavailable; and as feeders for railways, their use might be extended.

The undersigned will be happy to furnish Catalogues and particulars on application.

J. NICOL FLEMING & CO.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

CAMPBELL'S PLANTATION

HAVANAH CIGARS.

"No. 7," a large Havanah pattern Cigar, about 60 to the pound.

"No. 6," a smaller Havanah pattern Cigar, about 85 to the pound.

Can be purchased only at Messrs. Campbell & Co's Depôts at

CALCUTTA; ALLAHABAD, LAHORE, POONAH, BOMBAY.

"No. 7," Rs. 30 per 1,000, inclusive of all charges. | "No. 6," Rs. 23 per 1,000, inclusive of all charges.

Application should be made to the Clerk in charge of any of the above Depôts.

If 2,000 Cigars are taken, a Discount of 10 per cent. is allowed.

If 1,000 are taken, Discount of 20 per cent. | If 30,000 are taken, Discount of 25 per cent.

Terms—Cash prepaid.

MESSRS. CAMPBELL & Co. have sent a stock of their Havanah patterns Home, and are prepared to deliver them free of all charges to any Railway Station of the United Kingdom at the following rates, duty paid:—

"No. 7" Rs. 80 per 1,000. | "No. 6" Rs. 60 per 1,000.

Prices in Bond in London.

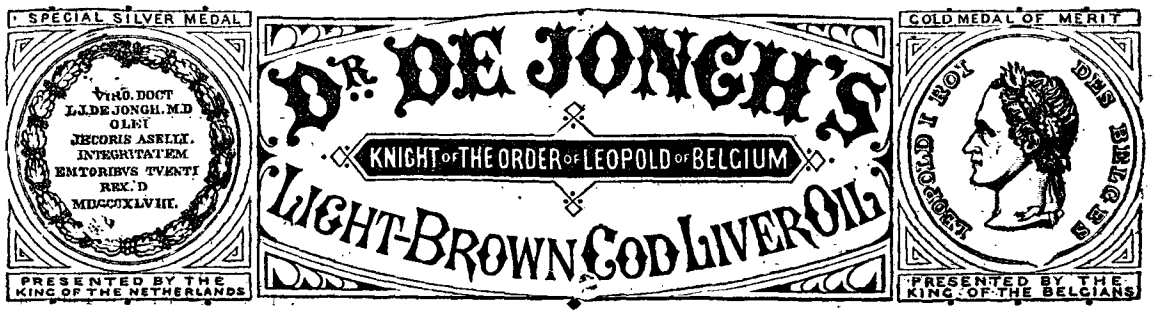
"No. 7" Rs. 35 per 1,000. | "No. 6" Rs. 25 per 1,000.

"No. 7" costs therefore about 7 Cigars to the shilling anywhere in the United Kingdom.

"No. 6" nine to the shilling.

Orders for large quantities, or orders for supplies to England, should be addressed direct to

MESSRS. CAMPBELL & CO.,
PLANTATION WORKS,
Dindigul, Madras Presidency.



The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL *is sold* ONLY *in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees,* ANSAR, HARFORD AND CO. *A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.*

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to
PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policyholders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 40 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds ...	...	**£ 971,942 10 10**

COLVIN, COWIE & CO.

NEW PLAN
BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example:

A, aged 30, wishes to Assure Rs. 1,000.		With Profits.
Annual Premium at Indian Rate ...	Rs.	36 0 0
Annual Premium at English Rates ...	„	23 10 8
Difference ...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

THE numerous testimonials received by C. Lazarus and Co. tend to prove that their

BILLIARD TABLES

are now the only ones appreciated in India, being constructed on an entirely new principle introduced by C. Lazarus and Co.

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages:—

First.—Extreme lightness, being completely self-supporting.

Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.

Thirdly.—Absolute immunity from pain.

Fourthly.—Nature so closely imitated, that detection becomes an impossibility.

Parties residing in Calcutta and the Suburbs attended at their own residences if desired.

Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.

Artificial Teeth repaired and returned by following post.

J. CORFIELD & CO.,

Surgical and Mechanical Dentists, Pharmaceutical Chemists, &c. &c.

1a, Government Place, Calcutta.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2099.] Calcutta: Saturday, 5th June, 1875. [Vol. XLI.

BARODA IN PARLIAMENT.

THE announcement that Baroda affairs are to become the subject of debate in Parliament, will attract very general attention to the last and most interesting phase of the chief political question of the day. We do not pretend to conceal our own opinion that a fatality appears to have attended the action of the Supreme Government in dealing with Baroda affairs, from the time they first assumed a critical character. Inclined it is said, in the first instance, to discredit the representations and remonstrances of the local Government on the subject of Baroda misgovernment, Lord Northbrook was at length reluctantly compelled to sanction the appointment of a formal Commission of Enquiry. Hardly, however, had the Commission commenced its work and the gravity of the complaints become apparent, than Lord Northbrook became seriously alarmed, and took steps to narrow the enquiry. The frightful charges against the Gaekwar of the murder in prison of the ex-Dewan Bhow Scindia, of Rowjee Keshew, Govindjee Naik, and several others; the spoliation and imprisonment of all the more prominent servants and dependants of H.H. Khunderao; the revengeful persecution and disgrace of the ex-Ranee Jumnabaee, and of all her friends and followers; the seizure of respectable women in the public streets; and the abominable system of slavery in the Maharajah's palace,—these, and the more serious personal charges against him, were by some strange fatality carefully excluded from the bill of indictment. Hampered as the Resident thus was by the timidity of the Calcutta Foreign Office, Colonel Phayre was still able abundantly to satisfy the Commissioners of the reality of the misgovernment which prevailed in every department of the administration; and the final Report of the Commission published at Bombay in February, 1874, at once demonstrated the necessity of the enquiry, and vindicated the action both of the supreme and local authorities in practically placing on his trial a sovereign prince.

It was now we think that the Supreme Government should have acted boldly on the report of Colonel Meade's Commission. The personal character and antecedents of the prince precluded any rational hope of reform under his reign, and notwithstanding the promises and protestations of Mr. Dadabhoy Nowrojee, the state of affairs at Baroda had gradually gone from bad to worse during the six months that followed the departure of the Commission. And it was notorious that Mulharao's first act after the appointment of the Commission was to commence a crusade of revenge against all who had had the temerity to complain. The significance of these proceedings could scarcely be mistaken by men not wilfully blind; but as if to mark still further his defiance of the enquiry which had taken place, Mulharao Gaekwar suddenly proposed to go through a formal ceremony of marriage with the married wife of one of our own subjects, and to force the authorities to recognize the legitimacy of her issue. And this outrage upon public law and decency was only prevented, as is well-known, by the firmness of the Resident, who had of course awakened the most vindictive rage for the part which he was directed to take in connection with that marriage. All this was in the month of May, 1874. In the following July, the long-deferred orders were received from Calcutta regarding the Report of Colonel Meade's Commission. The Gaekwar was severely admonished for the gross misrule which had been proved to prevail, and was ordered to introduce certain specified reforms with a distinct intimation that if within a given period of probation he did not set his house in order, he would be deposed, and another ruler provided for the State. Had Lord Northbrook boldly acted on the report of Colonel Meade's Commission, and interpreted aright the significance of Mulharao's proceedings subsequent to that report, he would have deposed the Gaekwar at once without waiting for further evidence of his unfitness to be ruler. This was the course recommended at the time by the Bombay Government and an influential portion of the press. It would have been approved by public opinion both in England and in India, and would have saved the Government from all its subsequent embarrassment. But at this juncture Lord Northbrook's counsels were marked by a mixture of timidity and indiscretion. The Gaekwar was given a period of eighteen months, in which to prosecute his intrigues and show the folly of the clemency extended to him; while the Resident, who to Mulharao was the emblem of everything hateful, was directed to watch and report on the progress of reform. The consequences of this blunder were soon seen. The irritation against the Resident, increased, and instead of reform being made existing abuses were wilfully intensified in an open spirit of bravado. A conspiracy was at least organized to assassinate the Resident, and measures simultaneously taken by Mr. Dadabhoy's party to procure Colonel Phayre's removal by means of a petition or *kureeta* addressed to the Viceroy. The truth or falsity of the statements contained in this petition, it is not necessary to discuss, as before any answer was received, the startling intelligence was made known that an attempt had been made to murder the Resident. Not until now, were Lord Northbrook's eyes opened to the position which had been created by his own nerveless policy. It was natural to suppose that he would not have been unprepared for an emergency. It was remembered that he had recently testified his full confidence in Colonel Phayre and had given him a proof of that confidence by entrusting him with the invidious and responsible task of watching and reporting on the progress of reform. It was, therefore, confidently supposed that Colonel Phayre, who had done nothing to forfeit the confidence of the Government, but who had loyally and faithfully carried out his instructions, under very trying circumstances, would have received at this juncture the fullest support. But to the amazement of every one, the announcement was suddenly made that Colonel Phayre was disgraced and removed from his appointment, and that the Bombay Government were considered unfit to be any longer entrusted with the management of Baroda affairs. It was discovered that Colonel Phayre instead of being the victim of a revengeful tyrant, was the oppressive persecutor of a mild and inoffending prince. The disaffected organs of the press were jubilant at this unexpected result of these intrigues, and every native Durbar in India was elate at the downfall of an honest officer, and the triumph of rascality. But hardly had Colonel Phayre been thus disposed of, than it unfortunately transpired that the poisoning could neither be burked nor denied. A fact more awkward and more unwelcome at this juncture could scarcely be imagined. It is no secret that the Government were for a considerable time incredulous on the subject, and that the employment of Mr. Souter was sanctioned without by any means a conviction that discoveries would be made. Sir Lewis Pelly, moreover, in his excessive anxiety to carry out his instructions, somewhat overdid his part, by publicly avowing his belief in Mulharao's sincerity and in his promises of amendment. The necessity of arresting and placing on his trial for murder, this sincere and penitent reformer could scarcely have occurred to Sir Lewis at the time of these ill-advised assurances. We must, however, do Lord Northbrook the justice to admit that when convinced of Mulharao's guilt, he did not shrink from consequences, and

the arrest and temporary deposition of the Gaekwar were carried out with commendable firmness. Once more, however, his evil genius appears to have misled him in the attempt to make political capital out of the Baroda complications. Mulharao Gaekwar was a prisonor at Baroda in the hands of British soldiers. The *primâ facie* case against him was very strong, but difficult of legal proof, and nothing was really required but formally to record the evidence, and to pronounce a sentence of deposition, the justice of which would hardly have been denied. Instead, however, of taking what appears to have been the plain and obvious course, Lord Northbrook resolved to order a public trial. With such evidence only as he had in his hand, the step has been unanimously condemned by public opinion both in England and India. The trial proved a failure ; and a whirlwind of reproach was raised. The deposition of the Gaekwar for misgovernment to a certain extent relieves Lord Northbrook from the consequences of his blunder ; but it is impossible to reconcile to one's sense of justice the action of Government in deposing Mulharao for misgovernment with the ruin of the officer by whom that misgovernment was exposed. The Proclamation announcing the deposition of Mulharao Gaekwar for misgovernment is, as every one must see, an emphatic condemnation of Lord Northbrook's proceedings in disgracing Colonel Phayre, and in placing the Gaekwar on his trial instead of deposing him at once.

There can be little doubt that when the matter comes before Parliament, it will receive the most thorough attention ; and if the action of the Supreme Government can be vindicated on sound and reasonable principles, the sooner the vindication is made public the better. The claims of official etiquette will not prevent Lord Salisbury from dealing with the whole subject in a spirit of broad statesmanship. We have not pretended to conceal our belief that Lord Northbrook's policy was from the first marked by weakness and indiscretion ; and that the extraordinary complications which followed were directly traceable to his want of capacity.

THE COLLEGE AT ALLYGURH.

IT *is with great* pleasure we learn that the Mahomedan Anglo-Oriental College at Allygurh is shortly to be opened. To Moulvie Syed Ahmed of Benares the conception of the scheme is due, but his earnest endeavours to carry it to completion have been warmly seconded by the more enlightened of his co-religionists. Over the many obstacles in their path, they have triumphed at last. Apathy, prejudice, timidity, religious jealousies, the lukewarm countenance of those in authority, the sneers of routine educationists, a conservative acquiescence in things as they are, side by side with a confession that the Government system fails to attract the better classes of Mussulmans, have been met by rare patience, tact, and determination. The scheme now published will, if faithfully carried out, give to Upper India a form of education as complete as it well could be. It is not only that being an independent national effort, the people may be expected to receive its benefits with a heartiness which no Government measure could hope to command, but that those benefits are such as, partly from financial and partly from religious reasons, it would be impossible for Government to offer.

In its distinctive features, distinctive from those of the Government system, the Mahomedan College will closely resemble those of the older universities at home. In the first place, the students will all reside within the college precincts. So far the new college will but do thoroughly, what the Government colleges of the N.-W. P. do imperfectly. But it is not only the students who will be compelled to reside. The professors and masters will come under the same rule, and there will, moreover, be thirty resident Fellows, chosen from among those who have distinguished themselves most highly in their college career. Subordinate to the college will be schools, in which the residential system will be carried out as far as possible, and from these schools the college will be fed with students, who from an early age have been habituated to a discipline that regards not only their behaviour in school, but their manner of life out of school. How vast the difference is between the system which takes account of instruction only, and that which aims at educating the character, none can so fully understand as those who have had to deal with Indian boys. The home influence, which in the education of Europeans forms so important an element, has no counterpart in this country ; or, rather, the home influence to which most are subject, only serves to undo the salutary discipline of school and college. If, therefore, the scheme of instruction in this new college were inferior to that laid down for the Government schools and colleges, we should still prefer an education which exercised a control upon the lives of its *alumni*, to that which aimed at nothing more than imparting knowledge after the newest and most approved methods. But so far from being inferior to the style of instruction hitherto offered to natives, the programme of studies in the Mahomedan College seems to us distinctly superior. It is more catholic and more varied. It recognizes the fact that the aims of all are not identical, that the minds of all are not cast in one and the same mould. It embraces religious instruction, and even the least liberal of men will admit, whatever their own pet form of faith, that without such instruction, all education is incomplete and lop-sided. Further, it discountenances that extreme competition which is doing so much to ruin the minds of those who come under the educational system of the Calcutta University. That some remedy will have to be found for this evil, daily becoming more and more gigantic, no one can deny. In the present state of things, knowledge for its own sake, or even a sound and thorough knowledge of any particular subject, is uniformly discredited. To pass examination is now the be-all and end-all of the Indian student, and the Calcutta University has reached such an unwieldy size that those examinations are, from their fierce competition, a gauge not so much of intelligence and ability as of power to reproduce the ill-digested acquisitions of an unhealthy industry. The Mahomedan College will of course have its examinations, and these will certainly not be less difficult than those of the ordinary Indian University. But competition will be kept within bounds by students being encouraged to devote themselves to those branches of knowledge to which the bent of their minds inclines them ; while the rewards held out will be dependent upon the industry and merits of students as shown throughout their course of instruction, no less than upon their capacity for passing examinations. The project is a grand one, but we have no doubt of its complete success. Its direction is in thoroughly competent hands, and every day is adding to the number of those Mussulmans who rejoice to think that they are helping to do away with that reproach under which they have so long lain, the reproach of caring nothing for the education of their children. They are now setting an example of independence and patriotic enthusiasm such as we hope other sects will not be slow to follow. The difficult problem of spreading education throughout the country can only be solved in this way ; and to the Mussulmans of Upper India will belong the proud distinction of having taken the first steps towards its solution.

CIVIL SERVICE EXAMINATIONS.

Mr. Lepel Griffin.

THE competitive system, as applied to Indian Civil Service Examinations, has been voluminously, if not thoroughly, discussed during the nineteen years which have elapsed since its institution ; but Mr. Lepel Griffin's paper on the subject in the April number of the *Fortnightly Review* deserves attention, both on account of its intrinsic merit, and also as the production of one who has been a part, and by no means one of the least brilliant parts, of the result of the system with which he deals. We are glad to find that Mr. Griffin rejects the notion of a separate college on the Haileybury plan, and decides in favour of compelling all selected candidates to pass their two probationary years at any college they may choose at either Oxford or Cambridge, while allowing those who are already members of any Irish or Scotch university, to continue their residence there. This scheme

appears to us to combine the maximum of good with the minimun of evil.

On the question of the limit of age to be fixed for candidates for the open competition, we are not so clear that Mr. Griffin is right in maintaining that twenty-one is preferable to twenty-two, or even to twenty-three. If either of the latter periods were adopted, it would be quite practicable for men who had taken honour degrees at Oxford or Cambridge, to present themselves as candidates; and this would, we think, be an advantage hardly counterbalanced by the obvious objection that such men would come out to India at the age of four or five and twenty, instead of twenty-three. If a recent telegram may be trusted, the maximum age is likely to be raised to twenty-five, and we should on many grounds welcome the extension. It is true, of course, as Solomon or Oliver Holmes, or some other master of apopthegm has remarked, that "one cannot have inconsistent advantages," and regard being had to the modes of thinking, and the notions of what constitutes a successful life now prevalent in England, a good deal may be said for Mr. Griffin's opinion. But at any rate, it should not be forgotten that the true light in which the Indian Civil Service should be regarded, is not that of a brilliant or lucrative career. We hope that it will in no long time come to be viewed, as an opening for the exercise of varied usefulness such as hardly any other mode of life presents, and which perhaps no other mode of life presents with anything like the same amount of certainty, combined with a remuneration which puts a man of simple habits beyond the need of vexatious parsimony. The prospect, of being one of the "faithful who are not famous," will, we trust, be more and more highly prized as our social ideas expand and purify, and it is, we think, more likely to be valued by a man of four or five and twenty, than by a man of twenty-one. Vexed as the life of an Indian Civilian is, by the *formalities and pettinesses* of an age of reports—a despotism untempered even by epigrams—yet it is essentially the life of a "man," and is concerned with some of the noblest work a man can do; and those who seek this first, and cash payment secondarily, will probably not be disappointed if they seek it in the Indian Civil Service.

We are sorry to observe that Mr. Griffin would altogether reject metaphysics and moral philosophy from the list of subjects for examination. His reason for the proposal strikes us as a somewhat thin one:—"The duties of an Indian Civilian may well be performed without an acquaintance with the Cartesian doctrine of innate thought, or the difference between the teaching of Plato and Plotinus." Of course they may, and it would be just as pertinent to remark that such duties might well be performed by a man ignorant of Greek, Latin, French, or German, none of which subjects, of course, does Mr. Griffin propose to exclude. But this is a feeble plea for rejecting a subject which if really studied—and the papers may be so set as to render all but real study useless—does more perhaps than any other to raise the mind above that commonness of aspiration which is the most ignoble feature of the middle-class English life.

There is one point in Mr. Griffin's paper, for which he deserves the thanks of every one who has to read the manuscript of an Indian Civilian—his insistance on calligraphy as a *sine quâ non*. We would suggest further, that in all papers marks should be given for terseness, and deducted for diffuseness of expression. When a man is writing from six to eight hours a day, and his writing has to be read by other people, it is of real importance that he should get what he has to say into as few words as possible, as well as that he should be able to write in a manner which shall not inflict despairing bewilderment on his readers, be they copyists or appellate judges.

THE *PIONEER'S* VISION.

THE *Pioneer* has not only discovered another angel, one several degrees higher than Sir R. Stuart, an archangel, in fact; but has been dreaming dreams about him. All who are familiar with the refined and feeling letters of "Asmodeus" and "Our Own Correspondent," must be aware of the intimacy that subsists between our select contemporary and the British aristocracy, including the Royal Family. No one then could be better fitted (unless, indeed, he has been dreaming by special request after a Barmecide feast) for the self-imposed task of interpreting the Coming K——'s visions, particularly when they partake of a literary character, than the seer of the N.-W.-P. Not being ourselves endowed with that acuteness of second sight, which is only to be attained by constant movement in the highest spiritual circles, we cannot pretend to say how much of his inspired utterance is to be taken literally, or how much may conceal some deep meaning hidden under the disguise of metaphor. We shall, nevertheless, make a modest attempt to translate the words of the oracle into plain English; and they are to the following effect.

Some time ago, some one said that he heard from some one else, that the Prince of Wales was reported to have declared, in a moment of enthusiasm (probably immediately after studying the history of Prince Djalma in the *Wandering Jew*), "that a trip to India had been the dream of his life." Now everybody, of course, knows that H.R.H. is one of the most imaginative potentates in Europe, a Prince, as the *Pioneer* assures us, whose "fancy loves to weave her webs from bright and many-coloured skeins." Lord Lawrence, moreover, once asserted in the blunt and straightforward manner peculiar to him, that "Prince Albert was one of the few English statesman he had conversed with, who knew where Indian places were." It may, therefore, be fairly assumed that no son of his would be capable of confounding Bangalore with Bareilly, or Delhi with Dacca. On the contrary, the Prince's well-tutored imagination, reflected in that of his seer, and acted upon by his minute knowledge of Indian topography, flies from dull geographical statistics "to Krummacher for benevolent Brahmins "singing sweet aphorisms of general love by temple doors, and on "the marge of sacred tanks" adjacent to their Agapemone; "to the shade of the forest where the humble pariah" (also found in Cossitollah bazaar) "could teach a philosophy of content, unknown to cities of splendour or colleges of learning" (canine hospitals?) "in the west." Nothing can equal his content, poor fellow, when he comes across the carcase of a camel, for he is less fastidious than inferior cynics at home, who prefer horse-flesh. It next soars to *suttee* monumen's, and if we may be permitted to make a suggestion, possibly also, to the latest sanitary improvements by Mr. Planck, and the N.-W. P. Gazetteer.

But, unfortunately, India is more or less tropical. It may be well to bear the fact in mind, as people are apt to forget it. Consequently, dusky Portuguese—among whom we plainly discern scions of two noble stocks, the De Souzas, and De Cruzas—palm trees, pyramidal temples, priests, palanquins, processions, palaces, pepper, pegs and the *Pioneer*: kings and competition-wallahs, chow-chow and chutnee; bullocks, bells, brandy, and bamboos; indigo and income-tax; starch and Strachey; Muir and murmuring, and so on *ad infinitum*, pervade the whole. Around "glitters the *lusty* vegetation," which has flourished exceedingly, ever since the British occupation sowed beer bottles broad-cast over the country. A very able article appeared on the subject the other day, entitled "Young Bengal and Drink," and we hope the Prince may have something to say about it. Here the law of association carries the mind backwards to Babel, and Baber, a most conscientious bibber; and then again forwards to the "pale determined" successors of degenerate Moghuls, who have not got such heads now-a-days as they used to have. Passing lightly over several vignettes illustrating the events of the last hundred years or so, the fancy now amuses itself with photographs of a tiger hunt, an episode in pig-sticking, another in badger-drawing, a struggle between a cock and a bull, &c. &c., And, finally, a thing almost as awful, a public interview with a peer; one of low degree, "yet still gladly recog-"nised even in the dreamer's presence as the first man in India, "and simply so because he represents . . . . . the personage "beside whom the descendants of races dating from the Sun and "Moon are mere vassals and subordinates of the Queen who is loved "like a mother, the mother who is reverenced as a Queen!" This climax overpowers the seer, who gets maudlin and bursts into tears, so that the vision suddenly ends. Probably, on this account, he forgets to mention that the Prince's knowledge of archæology being equal to his knowledge of geography, he is thoroughly well acquainted with the scientific proof of the authenticity of the pedigrees of the Lunar and Solar races; *viz.*, that the moon is made of green cheese, on which the man residing there chiefly subsists; while the man of the sun, being once upon a time on a visit to his terrestrial relatives, "burned his thumb in eating cold plum porridge."

Let us, however, be serious for a moment. Such of our readers as have not seen the original effusion, may possibly be curious to

learn the moral of the extraordinary rigmarole, which we can scarcely be said to have parodied. To paint the lily is impossible. It is rather startling, and could hardly be guessed from the context, *viz.*, that "*If the multitudes of India are happy, the administration is a success;* and *if* they are *poverty-stricken and miserable, the administration,* though conducted with the best intentions, has failed in its highest object."—Q.E.D. We certainly needed no prophet to give us this piece of information, and, in our humble opinion, the true moral is, that the most exalted rank, far from repelling, positively invites the impertinent officiousness of the class on whose foibles, a genuine seer, Thackerary, loved best to dwell. If the production in question be an earnest of the sort of writing one may expect to see daily upon the Prince's arrival in the country, we pray fervently, for the sake of Anglo-Indian journalism, that he may never come at all. Our loyalty is great, but our *esprit de corps* is not inferior to it. We trust, at all events, the *Pioneer* will take the hint.

CARLYLE'S LATEST ESSAYS.

(*Early Kings of Norway*.—Fraser's Magazine, January, February, March, 1875.)

"FRASER'S Magazine," so long given over to sapient dulness has burst upon us once again with some glowing pages from the master hand who, now so long ago, wrote here the first words of the most puissant spiritual message that has influenced this generation and the one preceding it. Not *Fraser* only must rejoice. Carlyle's voice had long been silent. And considering his advanced age, considering, also, the work already done, and the angry mournfulness with which the present aspects of political and social life were known to inspire him, one might well have thought that the old man, the weariness of evening coming with its shadows, had withdrawn from us for ever both counsel and remonstrance.

The *Early Kings of Norway*—a series of historic pictures (of "life-writings," as the author himself might term them), reveals the old power and fervid eloquence all undiminished. An historical record, strictly so-called, the reader will not expect. Carlyle's views of the aim and scope of history is well-known. "As I take it," he says, once for all, in the *Lectures on Heroes*, "Universal history is at bottom the history of the great men who have lived and worked here." We need not quarrel about definitions,—"universal history" may seem to us to deal, not so much with brilliant individuals, as with races and nations; of whose political, social, and moral development "great men" are amongst the significant manifestations. But Carlyle, despite his expressed scorn of verse, himself essentially a poet has elsewhere more than once affirmed that the inexhaustible, the "perennial" epic poem is the story of man's life from age to age. History regarded as an epic, has certainly the lives of men rather than the growth of peoples, for its main and primary object. And under Carlyle's touch, men indeed rise up before us, not in the spirit merely, but with all characteristics, and quaintnesses even, of body and garb unmistakably distinct, the wonder of the matter being with what few strokes the work is done. Let the reader try to condense in any way the information contained in these sixteen brief chapters; he will find that every line has its importance, and that its omission would involve the passing over of some point of interest. And yet in the first ten chapters alone, that is to say, from the first Harold Fair-Hair to the last king of his line, we have eight living portraits, so vividly and indelibly impressed upon us, that henceforth their names must come to us with all the familiarity of men the sound of whose voices, and the touch of whose hand, we know. Of course, Carlyle is in his element amongst these roughly royal Haarfage kings; who after, for the most part, an apprenticeship at sea-robbery, entered upon the task of curing Norway of lawlessness and heathendom. We do not quite follow our veteran author in his enthusiasm for the two Olafs—Tryjjeveson, and the "*Saint*" so called; but of the whole line, we cannot but endorse his statement, that there is something naturally royal and grand about it; and that we here have in truth, "clothed in strong enough passions and instincts, unconscious of any aim but their own satisfaction, the blessed beginning of human order, regulation and real government." Not the least interesting and lovable character in our sight, is old Harold Haarfage himself; the father and founder of this Norse kinghood. A gleam of romance plays about his fierce battlings and struggles; with which Carlyle, his ruggedness melting into the same sympathetic gentleness, deals as tenderly as when touching upon the love sorrow of poor Teufelsdröckh. But Harold Fair-Hair is happy in his love. For having been bidden by his ladye, "a certain famous and glorious young Gyda," to conquer all the yarls, or kinglets, who between them divided Norway he actually accomplishes the feat after twelve years of hard fighting, never cutting, nor even combing his hair all that length of time, according to a vow he has made. One is relieved to learn that before he brings the beautiful Gyda home, and "makes her the brightest Queen in all the North," he has his "unkempt, almost unimaginable head of hair well clipt and cleaned, Yarl Röguwald of Möre, the most valued and valuable of yarls being appointed to this sublime barber function." This Röguwald of Möre has a special interest for us as the father of Rolf the Gauger; who coming to grief with King Harold on some sea-robbery question, fled to France and settled in the shaggy desert called Normandy, so that Harold's kingly barber is direct ancestor of our William Conqueror, to appear upon the scene some two centuries later.

But Harold Haarfage not excepted, the most wholly satisfactory hero amongst these early kings, and the one, so far as it appears, least disfigured by violence and bloodshed, was Hakon, son of Haarfage's old age, and second king after him. The story of how he came to be brought up in England, and as a Christian, is by far too pretty, as told by Carlyle, to be omitted. Athelstan of England had played off a *ruse* on old king Fair-Hair, by sending him a sword as gift, the acceptance of a sword being the symbol by a feudatory's submission. Old King Harold repays the practical joke in kind :—

> Next summer, little Hakon having got his weaning well done, one of the prettiest, healthiest little creatures, Harold sent him off under charge of Hant, one of his principal warriors, with the order "take him to England," and instructions what to do with him there. And accordingly Hant one evening, with thirty men escorting, drove into Athelstan's high dwelling (where situated, how built, whether with logs like Harold's, I cannot specifically say) into Athelstan's high presence, and silently set the wild little cherub upon Athelstan's knee. "What is this?" asked Athelston, looking at the little cherub. "This is King Harold's son, whom a serving maid bore to him, and whom he now gives thee as foster-child!" Indignant Athelstan drew his sword as if to do the gift a mischief; but Hant said "thou hast taken him on thy knee" (common symbol of adoption) . . . . . Athelston straightway took milder thoughts, brought up and carefully educated Hakon, from whom and this singular adoption came before very long the first tidings of Christianity into Norway.

His zealous Christianity notwithstanding, Hakon, in strong contrast to the two Olafs, seems to have done no persecuting to further the spread of his religion. On the contrary, he seems to have been somewhat persecuted himself, by anti-Christian "kings," (local parliaments) and oratorical "bonders" (peasant proprietors) calling him to account for neglecting to eat horse-flesh, and obey other "distressing rites." Sigurd, Yarl of Lade, a "liberal heathen," or broad churchman of that epoch, is an interesting figure as Hakon's friend and counsellor; trying to persuade Hakon on the one hand, and the bonders on the other, that there is a clear affinity between the sign of the cross and of Thor's hammer; and that in a general way one religion means much the same as another. Very touching is Hakon's dying speach, when set ashore mortally wounded, on Hella's rock, after a victorious sea fight against King Harold Blue-Tooth of Denmark. "If a longer life be granted me," he said, "I will go out of this land to Christian men and do penance for what I have committed against God. But if I die in the country of the heathen, let me have such burial as yourselves think fittest." And in heathen fashion, he was buried; and besung by Eyvind the skaldaspillar, the prince amongst singers.

The two Olafs understood Christianity after another fashion. Anti-Christian "Kings" got decidedly the worst of it with them; and though Carlyle touches as lightly upon it as honesty will allow, we have it admitted that the "rough harrow of conversion knew no mercy:—that confiscation, hideous mutilations, and death, were the means for rooting out heathendom, or at least, for keeping it under." Of the two, Tryjjeveson appears to us the most lovable human character; a bright, valorous wild being, who (if we are not asked to erect him into the heroic type) claims our sympathetic interest. There is a gleam of humour even about his savagery,—as when he proposes to certain orthodox (heathen) bonders the alternative of baptism, or *of being offered up as a sacrifice to their own most sacred Thor!* And again, despite its roughness, we do not at all dislike that flick of his glove to Sigrid, Queen Dowager of Sweden, a beautiful and most puissant tigress, who has delivered herself from the importunities of two former suitors by burning them both in the same house! Olaf Tryjjeveson does not care much about this little ebullition of queenly impatience: and goes a courting all the same. But when Sigrid refused to be baptised, he flames up into shining

wrath; switches her with his glove, exclaiming "Why then should I care for thee, thou old, faded heathen creature!" Olaf Tryjjveson, as might be expected, came to his death through Sigrid. Treacherously attacked by a Danish and Swedish fleet, he makes a splendid fight of it; and finally we have a grand picture of him, at the last, when hope is over and only one man and himself survive, springing overboard, his red coat glancing a moment in the evening sun, and then lost for ever in the deep waters. Olaf the Saint is grand and pathetic in his death scene also; but in his life, with the best will in the world, we can discover nothing greatly to admire. A significant fact, too, is that whereas Tryjjeveson, his rough christianising method notwithstanding, always could command his people's loyalty, the "Saint" on the other hand, made himself so intolerable to them that they twice rose up against him; and that he finally died fighting for his own kingdom. But as we have said, in this death-struggle he appears with pathetic grandeur. An exile in Russia, he has a dream of Olaf Tryjjeveson appearing to him and exhorting him to make one last struggle for his kingdom. In obedience to the vision he sets forth, to find the whole country risen against him; rich and poor, high and low, burning with their wrongs. Nevertheless he resolves on the fight and gives all the money he possesses to be spent in masses for the souls of his enemies. "My friends will either conquer, or go whither I also am going." We have a fierce battle, beneath a ghastly copper-coloured sky which clears only when Olaf, covered with wounds, sinks down dead,—thus "for ever quiting this dog hole of a world."

The epilogue—the inevitable moral—we are, of course, but too well prepared for. "Without these wild, strange birth-pangs, was no Cosmos of human society yet got into existence; nor can ever again be." Nor can ever again be—as though this human Cosmos were so frail and transient an element, that it was for ever lapsing back into clouds and the need of "wild birth-pangs" incessantly recurring!

That to maintain and develop human society, the general intelligent co-operation of its members is of more enduring value than the domination of one gifted incommunicative will (which, withdrawn, leaves the people as sheep without a shepherd); and again that the present age with all its shortcomings shows favorably in contrast with a period when it was "fashionable" to carve a spreadeagle on the human back "*by bending the ribs from each side of the spine and turning them out like wings*;" and when one cannot even get a hero, like Knut or Tryjjeveson, without some score of atrocious murders to his name,—these observations are so very trite, so self-evident to the most common-place intelligence, that it requires a certain moral courage to make them. Nevertheless when a Carlyle and Ruskin, with all the earnest eloquence at their command, assert the contrary, it becomes necessary to repeat the plain statement of facts. No credit is to be gained by taking one's stand with "Bobus, the sausage-maker," and yet it behoves one honorably to do so, when "Bobus," whose small sharp eyes do see clearly some few inches before his nose, upholds against paradoxical genius the proposition that two and two make four. We are by no means disposed to do battle for the faultlessness of the present age; and are quite ready to admit that most of the reproaches of Carlyle and Ruskin strike home, and point out actually existing evils, against which our energies should be directed. But in the present instance, Carlyle quoting Ruskin (in a passage which has all the grander writer's severity, but far more bitterness), assures us that the cause and root of our offence lies in our refusal to discern "worth from unworth": our neglect of the question who is best man whereby the problem presents itself reversed; and "who is worst man" (though difficult of solution, we are obligingly told, in such a "wide order of merit") becomes the preliminary fact decided, ere we elect one to rule over us! Now it does seem to us that no accusation could be more signally unjust. With all its faults, this age, with its honest, if sometime faulty, attempts to discover impartial tests for solving the question of "who is best man?" apart from considerations of wealth or rank, has surely done more in distinguishing "worth" from brute force in all its phases, than has ever been attempted before. Such accusations come strangely from writers whose present powerful influence is derived solely from moral and intellectual sources,—whose claims under the conditions of society which they are never weary of eulogising, would have been totally disregarded and despised.

IN MEMORIAM.

HAMLET.—Ay, Madam, it is common.
QUEEN— If it be,
Why seems it so particular in thee?

DEATH comes once to every man. Somewhere, some day, we know that we shall feel "the fog in the throat, the mist in the face." Yet we anticipate the event with considerable calmness, or succeed in forgetting it, in ordinary circumstances, almost entirely. But death will not be ignored. Once, and once only, will he come for me, and then mayhap, a moment's dark grapple, or even a gentle slumber, and all will be well. I could forget death had I only to die. But the arch-fear comes again and again, for this one, and for that, dearer to me than myself, and the death of the heart's beloved is a long and bitter woe. Who has not felt it? How many have felt it again and again. Death is one, but bereavement is manifold; and to every brave, unselfish heart bereavement is more terrible than death. Each of us has had his own sorrow, some of us have had many sorrows, and something akin to jealousy may sometimes mingle with our sympathy when we see another magnifying his grief as if we had not experienced one as great, or perhaps a greater than his. In some such mood one might ask, What justifies the poet in thus parading his sorrow for the death of his friend? "Why seems it so particular in thee?" Is your sorrow greater than mine? Who or what was Arthur Henry Hallam that your grief for his loss should be sung in a volume, while other men must swallow down their grief and sternly face the daily tasks of life? No one who has felt a deep, unselfish sorrow, and has really read the "In Memoriam," will ask for any justification of its production or publication, and that none is needed is sufficiently proved by the fact, as we believe it to be a fact, that no poem of equal length, to say nothing of the subtlety of its thoughts and fancies, has been so much loved by so many and various readers. But this may be accounted for by the common fondness for the "luxury of woe." And our utilitarian friends ask us what real gain we derive from it. It is beautiful and touching as the flowers that grow on graves, but why linger over it? Does any sum total of real profit result from the perusal of such a bundle of elegies? One would scarcely pause to answer such a question, did not the poet himself do so. And though his answer is the only one that a poet need or ought to give, it is all too modest. It accounts sufficiently for the poem, as such, but "In Memoriam" is a poem, and more than a poem. Tennyson has often been under-rated for his philosophy, and more than once in the course of this poem he under-rates himself:—

> "I do but sing because I must,
> And pipe but as the linnets sing,"

And his Muse replies to the challenge of Urania:—

> "I am not worthy even to speak
> Of thy prevailing mysteries;
>
> For I am but an earthly Muse,
> And owning but a little art
> To lull with song an aching heart,
> And render human love his dues."

and the purport is the same of the beautiful Section xlvii where he disclaims all pretension to settle philosophic doubts, or even to search deep into the lake of sorrow; his "brief lays" are

> "Short swallow flights of song, that dip
> Their wings in tears, and skim away."

"For I am meek and lowly of heart"—Since the great Master of sorrow uttered this voice from the deep centre of all human sympathies, it has hardly found a sweeter, nor a humbler echo, than we catch here. But it is the object of this paper to try to show that "In Memoriam" is more than a beautiful poem; that, as dealing with the great problem of human sorrow, it has a depth of meaning, and a philosophic completeness that repay the most earnest study, while the meekness of its wisdom and its "sweet reasonableness" must assuredly place it alone among philosophical poems. And if we shrink for a moment from so ambitious a task as is here set before us, it is only from a doubt of our fitness to express all that we have seen and felt in "In Memoriam."

Other muses may beat the air with stronger pinion than Tennyson's in "In Memoriam." More of mere force and energy of language, more startling hyperbole, more audacity of thought and lawlessness of fancy and speech are common enough, and sometimes win credit as the marks of a sublimer genius. But while we do not claim for Tennyson a place in the front rank of poets for the originality or sublimity of his creative faculty, we believe that these are greater and grander than they at first sight appear, from the very fact that he never for a moment loses perfect control of his genius. Here are no Icarus flights, no gigantic hurling of the mountains flame-clad against the battlements of heaven, no oracular frenzies from Delphic heights to astound the mind and

leave it in doubt whether the source of inspiration be the upper or the nether. There is no lawlessness in the muse of "In Memoriam." And as he that ruleth his own spirit is greater than he that taketh a city, so we think the poet who retains perfect control over his muse, who keeps a powerful imagination and lively fancy within the just laws of human thought and speech, not only a wiser guide, but a greater poet than the rash Promethean genius that would scale the heavens and snatch their fire from the cloudy gods, or storm the gloomy abode of Dis with lawless ambition for a superhuman bride. Tennyson's muse is perfectly human, perfectly rational; "mild sweet reasonableness" is her distinguishing characteristic.

It is not our intention in our notice of this poem to point out its poetical beauties, but rather to trace its line of thought from first to last, the gentle gradual growth of the mind from the first blank inconsolable sense of present loss, on through sweet sad memories becoming less mournful as faith arises and grows from strength to strength, till regret is lost in buoyant hope and sublime anticipation. Along this path which every victorious human soul treads, Tennyson has scattered some of the sweetest "flowers of poesy." But the poetical fancies and philosophical speculations though they may first captivate the passing admirer, are but the decorations of the poem. It is its deep strain of sober chastened human wisdom that we must above all strive to understand. Few readers of any literary culture fail to admire and love scattered sections, stanzas and lines, but many who do so have never looked along the living growth of thought and feeling, so as to comprehend the full scope and teaching of this noble poem. This, it may be confessed, is not entirely the fault of the reader, but partly of the construction of the poem. Broken up, as it is, into sections, each with a certain measure of completeness of its own, and with chasms of various width intervening here and there, it is not so easy as one might wish for common readers to link them together into a perfect whole. Yet the nature of the theme demands such a construction. Grief, memory, faith, hope, are all fitful in human hearts, and in tracing the mind's growth from woe to exultant anticipation, the poet can only mark their bursts and gleams. The silent secret growth is often unsearchable and unutterable. Yet the "In Memoriam" is one artistic whole. There is often a seeming want of connection between the sections, but if we attempt to change the order of arrangement, one finds that each is in its only fitting-place and not one could well be omitted.

The first stage of the poem is very distinctly marked. The first twenty-one sections express the inconsolable sense of present loss. Little, if any, comfort is derived from memory, none from hope, and if any faith be present, it is yet silent. It is remarkable that in these sections the poet always speaks of his friend as dead. The later parts of the poem sing of a spirit vanished but alive But here he has not turned away his gaze from the mortal remains, cannot yet leave the grave:

> "Old Yew, which graspest at the stones
> That name the underlying dead,
> Thy fibres net the dreamless head,
> Thy roots are wrapped about the bones."

Sorrow is yet a "priestess in the vaults of death." Even in sleep he does not yet meet his living friend, but is haunted by an undefinable sense of loss. He has not yet even the "doubtful gleam of solace" that,

> "If any care for what is here,
> Survive in spirits rendered free,
> Then are these songs I sing of thee
> Not all ungrateful to thine ear."

But taking "this poor flower of poesy" he goes—

> "to plant it on his tomb
> That if it can it there may bloom
> Or dying, there at least may die."

He sings to the ship that is bearing home the dead—he stands by the grave and knows but the melancholy comfort that it is *better to rest there than to "toss with tangle and with shells."* Separation is complete. Communion is impossible. It is easier to fancy that it is all a dream, and that his friend is not really dead, than that he is dead and yet alive. As yet no positive faith in immortality is expressed. It is not till the seventeenth section that there begins to appear even a separation in thought between the dead remains and the living spirit:—

> "The *dust* of *him*, I shall not see
> Till all my widowed race be run."

Here, as elsewhere, is an intentional non-denial of a future life; but there is not faith enough to afford a ray of comfort. In sections XVIII to XXI he still lingers sadly about the grave, full of the strong and hopeless sense of loss. This, we say, is the first stage of the poem, and it marks, we believe, the earliest stage in ordinary human experience, of the great grief of bereavement. To be inconsolable for a shorter or longer period after the severing stroke has fallen may not be strictly orthodox, but is truly human. We do not undervalue the consolation of religion. But we have here to deal with the purely natural sorrow and pain; not with the anxiety —which religion produces and which religion can consequently soothe—for the fate of the departed soul, but with what we have called the natural, and might perhaps call the selfish, sorrow, the numbing sense of loss, the anguish of bereavement. "Never! O Reader, knowest thou that hard word?" The loved one, "dear as the ruddy drops that warm the heart," is laid in the dust and I shall never see him again in Time. "O for the touch of a vanished hand, and the sound of a voice that is still!" We all know how bitter in the first anguish of loss are the ceaseless, unassailable, common-places of condolence. Yet few of us are wise enough to spare our neighbours when their turns come round. That these common-places are repugnant to nature, and offensive to reason, we do not in our foolish kindness, or worse than foolish courtesy, consider. But the poet does not here sin against the law of our nature thus. He gives us a period of grief without consolation, whose only solace is to converse with its own sad fancies. The time for comfort is not yet come. For though he had formerly held that

> "Men may rise on stepping stones
> Of their dead selves to higher things,"

he feels now that such philosophy is not for the hour of bereavement;

> "But who can so forecast the years
> And find in loss a gain to match?
> Or reach a hand through time to catch
> The far-off interest of tears."

The very possibility of being comforted is repugnant to him. To cease to mourn, is to cease to love, and better the very delirium of woe, than forgetfulness and indifference.

Yet it is to be noted as another instance of the reasonableness of Tennyson, that as, on the one hand, he gives none of the cant of consolation, he abstains, on the other hand, from any weak or impious ravings against the law of nature and God. He mourns and *will* not be comforted. Yet with no touch of rebelliousness. There is here no quarrelling with destiny. Throughout the gloomier part of the poet's sorrow, as well as after faith and hope have become strong, his submission to law is perfect. One loves this meek mourner all the more after turning away from the rash and bitter arraignments of God and nature, so common even among men who profess to be the worshippers of law. He hears, indeed, the voice of the temptress, but he knows she is a lying spirit. And when the priestess of Death whispers from the vaults that a blind destiny guides the worlds, and leads onward but to death and desolation, and that nature is no bountiful mother, but a phantom, "a hollow form with empty hands," deaf to the sob of sorrow and the wail of desolation, though he cannot yet reason with her, he knows the falsehood and rejects it. And so, submissive, though uncomforted, he checks the first bitter words of lawlessness on the lip of sorrow, and henceforth the brave heart strives to master grief by silence. There shall be no more wild words. The deepest woes are unutterable. Only when the strong flood ebbs at times, and sorrow is in her gentler moods, will the poet sing, when thought is meek and subdued and fancies, sweet though melancholy, play upon its surface.

Enough, we think, has been said to enable us to understand the general scope and character of the first twenty or twenty-one stanzas, after which a change passes over the spirit of grief and the mourner's thoughts turn in a new direction.

BENGAL IN THE OLDEN TIME.

II.

AMONG the most useful products of Bengal the cocoa-nut finds a prominent place, and the legend in connection with it is so humorously described that we cannot help reproducing it at length:— "The whole fruit, in fact, is so valuable, that a legend attributes its creation to the sage Visnamitra, who, finding that the gods would create nothing better than man, tried his own hand at the work, desiring to form a being of a superior kind, who, he intended, should live on trees. The head only was formed, when the gods, getting alarmed, begged of him to desist—agreeing to which, he converted what he had made into a fruit. The story is childish, but shows how the usefulness of the fruit is appreciated." From time immemorial it has been known that certain streams in Bengal have been auriferous. This is partly a tradition, and partly a fact. According to Mr. Barton gold has been found in minute quantities "in the river sands in Midnapore; and in Cachar there is a tradition that the Sonai, which

falls into the Barak between Silchar and Luckimpore, used to wash down gold dust from the hills, though none has been found within the memory of any man now living. . . . . Gold is found in small quantities in the deposits broken up by the action of the small rivers (in Chota Nagpore); but the outturn of the washings does not repay the cost of labour." We need not, however, go far to discover the cause of this undesirable state of affairs. Gold, as is well known, is obtainable only in two ways, *viz.*, by the process of washing, or by that of crushing. The former process is unremunerative owing to the scantiness of the metal in the deposits of the rivers, and the rude method devised by the natives to separate it from the *débris*. As for the second process, it is not only a latter-day invention, but the machinery required for performing the operation is extremely expensive, hence the failure.

Chapters III and IV are devoted to a cursory glance at the authentic records of the Hindoo and Mahomedan periods in the history of Bengal, which cannot but be of special concern to every Englishman who takes interest in Indian affairs. In describing the Mahomedan era, Mr. Barton forms a correct estimate of the position of zemindars who have since the last years of the eighteenth century arrogated to themselves powers to which they were strangers in the early times. Speaking of the administration of the province by Moorshed Kooly Khan, he says:—"The first revenue assessment had been made by Rajah Torur Mull in 1582; a revision of it was effected by Sooltan Soojah in 1657; a further revision was now made by Moorshed Kooly, who took the opportunity to remove the old jagheerdars hitherto employed in the collection of rents, and to appoint zemindars in their places—preferring Hindus to Mahomedans for their better knowledge of accounts. The rajah *families* of Dinagepoor, Nuddea, Rajshahye, and others, were thus created by him. In his time these men were simply employed as collectors of the government dues within their respective *chuklahs*, as the revenue divisions into which the country was divided were called; but they gradually became rich and powerful, and made their offices hereditary: and thus was founded the so-called territorial aristocracy of Bengal." The permanent Settlement of Bengal in 1793, on the other hand, effected a revolution in the existing relationship between the zemindars and their tenants by investing the former with the proprietory right to the soil, and during the last 80 years this has been a bone of contention between landlord and tenant. In order to arrive at a satisfactory solution of this important social problem, it is necessary to go back in order of time and examine the primitive history of mankind. If we consult the oldest and most authentic accounts of the early days of our race, we find that when man first took possession of the surface of the globe as herdsman, hunter, or agriculturalist, the right to the soil and to the produce thereof appertained to him, as by the operation of the law of nature, and prior occupancy invested the right of property in land so that nothing short of a renouncement of this ownership either express or implied entitled the members of a different community to take possession of the same field. The earth being the common property of all, the portion which each individual or tribe occupied was his or their exclusive property, and to have interfered with the free use of it was considered a violation of the law of nature. In the same way the increase of population compelled emigration to foreign lands from the very necessities of the case. New settlements came to be formed, and the same law which governed the parent state lent its security to the possessions of its offspring. In Egypt, prior to the great famine which afflicted it during the administration of the Patriarch Joseph, the land appears to have been the property of the cultivators; but for the sustenance received in that calamity they transferred it to the sovereign, except the portion reserved for the use of the priests. At a later period of history, when the Greeks and Romans carried their victorious arms beyond the limit of their domains and planted extensive colonies beyond the seas, the conquered inhabitants were generally permitted to retain their estates and enjoy the profits of their labor with impunity, and the decree of deprivation was enforced only in the case of those who proved refractory or who raised the standard of revolt to shake off the foreign yoke. Modern history affords parallel instances of the pioneers of European civilization recognizing the claims of the primitive inhabitants of America and Australia in their treaties with the latter; and if sometimes their cupidity led them to disregard their engagements, it proceeded more from a stretch of arbitrary power on their part, than from a conviction of the invalidity of the rights of the aborigines. Even in Asia, with the exception of one or two despotic governments the rights of the people of a country to its soil have been universally acknowledged. Turning now to Indian philology, we find that the word 'zemindar,' which is a Persian compound of *zemin*, land, and *dar*, holder, is a relative and indefinite term. It means nothing more than that a relation necessarily exists between the *person* and the *zemin* or land. It has been said that since the cultivator gives *something* to him, in the name of the land which he holds, therefore he cannot be the real owner, for paying is an acknowledgment of a superior and the act of a vassal. This idea had its origin in feudal times, and due allowance must be made in its application to Indian society. Admitting that the giving of something by the cultivator is an acknowledgment of a right existing in another, we shall find that all the claimants from the cultivator to the sovereign are equal in this respect. To whom does the cultivator pay?—To the zemindar. But does this constitute him the proprietor?—Certainly not. If the zemindar was the actual owner of the land from which that something is paid, it is clear that he might either retain what he receives, or give it to whom he chooses; because the right to the proceeds of actual property must be indefeasible, like actual property itself. But we find, on the contrary, that the zemindar, in the name of his very lands, must pay either all or part of what he receives, also, to another; in this point of view, then, his right is not stronger than that of the cultivator; he receives from one and pays to another, and, therefore, can only be deemed a channel through which the produce of the soil flows from the cultivator to the public treasury of the sovereign. If in support of the above we quote the testimony of the *Ayeen Akbari* (the Institutes of Akbar) with regard to the position of the cultivator, we shall find that the latter was held responsible for the *kheraj* or land-tax to be paid by him personally into the king's treasury. "Let the *amalguzar*," says Akbar, "agree with the husbandman to bring his rents himself, that there may be no plea for employing intermediate mercenaries." Again, "the ryots in the soobah of Bengal are very obedient to Government, and pay their annual rents in eight months, by instalments *themselves*, bringing mohurs and rupees to the place appointed for the receipt of revenue." It was customary when granting a *sunnud* or commission to collect the revenues of a zemindary, to mention in express words that the *office* of zemindar was bestowed on a certain individual who had not only to enter into a recognizance to pay the government revenue into the treasury at stated periods; to keep the high roads in repair and safe for travellers; to be answerable if the travellers were robbed, but also to be diligent in the discharge of his *office*; to be mild and conciliatory to the ryots; to increase cultivation, and to tender a security for his person. Moreover, in a Proclamation by the British Government, after the assumption of the *Dewani*, dated the 11th of May 1772, the several branches of business appertaining to the *dewani*, are enumerated, among which are "the constituting and *dismissing* of zemindars with the concurrence of the nazim." A few days subsequently the country was divided into farms of pergunnahs, and in the document which contained the division, zemindars are understood merely as government officers. "That in like manner the zemindars, talookdars, Sizdars, and other *officers* of government, be forbid to lend money to the ryots." While on this subject it will not be out of place to quote a short passage from the memoirs of Warren Hastings the first Governor-General of India, who had ample opportunities of forming a correct opinion about it, and who certainly deserves a calm hearing. He says*:—"The public in England have of late years adopted very high ideas of the rights of zemindars in Hindoostan. Our Government, on grounds which mere scrutiny may perhaps find at variance with facts, has admitted the opinions of their rightful proprietorship of the lands. I do not mean to contest their right of inheritance to the lands, while I assert the right of Government to the produce thereof. The Mohamedan rulers continually exercised the power of dispossessing the zemindars. The zemindary of Rajshahye, the second in rank in Bengal, and yielding 25 lacs of rupees of revenue annually, has risen to its present magnitude within the last 80 years by accumulating the property of a vast number of dispossessed zemindars, though the ancestors of the present possessor had not, by inheritance, a right to a single village in the zemindary."

(To be continued.)

EDITORIAL NOTES.

IN justification of its prompt endorsement of the unparliamentary language of Sir John Strachey to the Commissioner of Jhansie and his Assistant, the *Pioneer* tells us gravely, that "it is a bad sign when the public verdict is on the side of public misconduct;" and that though Sir John Strachey needs little support from itself, it will support him with what little strength it has, when it finds that his verdict, in such a case, is not that of the public. If our contemporary were not systematically given

* Hastings' Memoirs of the state of India, 1786.

to the support of everything that is said or done by the authorities, we should give it credit for sincerity in this avowal. As it is, we refuse to do so, for it is simply an official echo. When it says that it has "little respect for the mawkish sentiment which "would dissuade us from speaking out unpleasantly on public "affairs because unpleasant speaking on public matters may "give private pain," we reply, So have we. Only when the necessity of unpleasant speaking is upon us at all, it is a considerable relief to be able to use it, not to aggravate but to mitigate the blow that power has aimed at weakness. We should have thought that the Government Resolution had done all the unpleasant speaking that was really necessary in this case; if it had not somewhat over-done it. Unpleasant speaking, when it is all on the side of 'the angels' becomes somewhat tiresome, and does not look well, to put it on the lowest ground; and if our contemporary could but contrive occasionally to say something "unpleasant" even to the length of a good round oath on the other side, the variety would be charming. The truth is the public would be glad of an interval in the "worship of the angels."

***

DR. ANTON VOGL of Munich makes a contribution to the literature of cholera, in which he is said to have paid especial attention to the variations of temperature in the body during the various stages of this disease. Believing that drugs can do little to arrest or modify it, he lays great stress on separating the sick from the healthy, and on burying the excretions after disinfection. He is adverse to the use of opium in the first stage, but advises morphic injections in case of cramps. His own practice consists mainly, we are told, in the use of *packs* and other external applications.

***

THE *Westminster Review* damns Colonel Malleson's "Studies in Genoese History" with the faint praise that they are as good as could be expected, by any one who regarded the circumstances under which they were written. "They were written in India "without the aids which a historian can generally command, "but in spite of this drawback this small volume is well written, "and presents the outlines of the history, and the chief character-"istics of the great families in clear relief to the reader."

Why will men persist in writing *a* historian for *an* historian? The rule is that whenever the accent falls upon the second syllable, *a* becomes *an*, whether the initial letter is aspirated or not. In the same way, we see men constantly committing the barbarism of *an* university, *an* unicorn.

***

IN the course of her voyage in the China seas, the *Challenger* visited an extraordinary volcano on the small island of Camiguin near the coast of Mindanao. A chain of high volcanic peaks, somewhat irregular in form, culminates near the centre of the island in a mountain, the height of which is given as 5,338 feet; and a little way inland, just behind the volcano, there is another peak 4,700 feet high. The active volcano forms an irregular cone 1,950 feet in height. It rises right up from the sea, with a slope at most points of upwards of 50 degrees. The general colour of the cone is a rich chocolate brown, and the contrast between it and splendid green of the mountain, nearly of the same form, rising immediately behind is very striking. There is an irregular crater near the top and from this dense masses of steam escape, more prominently it appears at night and in the morning, when the air is cooler and there is more rapid condensation; and here and there pale blue smokes arises from numerous clefts and fumeroles on the flanks of the mountain. At night all the fissures round the crater and near the top show out red from incandescent matter within. The cone consists almost entirely of a pale gray trachyte. Much of the mass has been emitted in the form of mud and afterwards consolidated, but there are likewise beds of what appears to be true lava. One lava bed is very distinct near the edge of the water, where there is a low sea-cliff. This youngest of mountains was born on the 1st of May 1871. For some months before there were violent earthquakes extending through the neighbouring islands and felt strongly even as far as Zebu. After the first eruption the earthquakes at once ceased. The accumulation of the mountain has been going on gradually and apparently with but little violence. At the end of the first four months it was about a third of a mile in diameter and 400 feet high. It is close on 2,000 feet high and its base has gradually extended until it has entirely covered the town of Catarman, formerly the largest on the island, with a population of 11,000 inhabitants. Only a few runied walls remain. Camiguin was lately one of the most fertile and prosperous of the smaller islands of the Archipelago. It had a population of 25,000, and produced hemp, sugar, and tobacco of the very first quality. Since the eruption, the island is desolate, and only a few hundred inhabitants remain; the houses are in ruins, and the paddy fields and groves of *Musa textilis* are deserted and overgrown with a second jungle. For miles on either side of the volcano in the paths of the two monsoons, the trees are blighted and the vegetation destroyed by the sulphurous exhalations.

AN attempt has been made to prove that the north-western coast of America was orginally peopled by the Chinese, the fact alleged in support of this theory being that the Indians of that portion of the continent resemble the Chinese in personal appearance and in language. Their resemblance to the Japanese, however, is equally striking, and the latter are much more likely than the Chinese to have gone out to sea far enough to be carried by the current to the American coast. That current which the Japanese call Kizo Sivo, or black stream, is, like the Atlantic Gulf Stream, very warm, and proceeds in a north-easterly direction, with a small side-stream flowing almost directly eastward. Vessels proceeding from the Chinese coast, on the other hand, would have been caught by a cold current which proceeds from Behring's Straits and would have driven them to the south. Official accounts speak of a Japanese junk which went aground on one of the Aleutian Islands in 1782; and in 1805 another Japanese junk was stranded in the vicinity of Sitka, on the Japonski Island in the territory of Alaska. Other Japanese junks have even been carried as far as the mouth of the Columbia River in Oregon, to Honolulu, and to San Francisco. The large Japanese Encyclopædia says that the commanders of Japanese vessels discovered America in the fifth century, that the continent was 7,000 miles off, and that it was called Fusang, or "rich mountains"—with reference, no doubt, to the auriferous character of California.

***

THE *Indo-European Correspondence* insists with a good deal of ill-humour that, following Mr. Gladstone, we have mis-stated what the views of Rome really are on the subject of Protestant marriages. We will bring the matter to a short issue. Let our contemporary answer plainly then in his next number: Did the man *Gordon*, concerning the *facts* of whose case there is no dispute, commit adultery or not, in forsaking the woman he married in Brazil, after 25 years' of cohabitation with her, and taking up with another? The papal *Curia* told him that he did not. What is the judgment of our contemporary upon the point?

Protestant polemics as we know always misrepresent Romish doctrines—Keenan's Catechism to wit. Let us allow that we have altogether misrepresented Rome's views of Protestant marriages; we ask simply has Gordon committed adultery or not? Rome says no. What does our contemporary say?

***

SOME one writes to the *Indian Daily News* that whilst the task of meeting the famine "was entirely in the hands of Sir George Campbell, a gentleman called at Belvedere, and offered to bring down, by steam, from the Backergunge district, an immense supply of rice, and to land it in Calcutta, at Rs. 2-8 per maund." Mr. Secretary Bernard, he says, seemed eager to accept the offer, but not so the Lieutenant-Governor. "It was rejected. Better proof of the *larger* wisdom of the local ruler could scarcely be adduced, and accordingly it is very wisely *not* adduced."

We could hardly adduce a matter of which we knew nothing. We are quite of the belief that the Government was too slow in entering the rice market. Instead of announcing to all the world, in its Resolution of 7th November, its intention of buying rice here, there, and everywhere, the Government should have made all its contracts a fortnight before through private agency, when it might have bought largely at Rs. 2-2 to 2-6 per maund. The evils of a double Government were never perhaps more clearly seen than in the early stages of this famine.

***

THE same correspondent writes:—"All the evidence on "which Sir George Campbell based his views of the extent "of the impending famine, such evidence, consisting of the "reports of local officers, was before Lord Northbrook and the "members of his Government. The opinion, it so happened, of the "Lieutenant-Governor went far beyond that of the Viceroy and "Supreme Council, and, as chance would have it, for certainly there "was none, could be none, the sequel established the diagnosis of "Sir George Campbell as the more correct."

While such views are held, these calamities will never be rightly met. *The event is certain by the end of October*: and writings of the present order show plainly how necessary it is to insist on this lesson being learned.

***

THE total quantity of grain forwarded by railway into the distressed district during the famine, or from 1st October 1873 to 31st July 1874, was 842,000 tons. The several lines contributed to this supply as follows :—

By East Indian Railway downwards :

		Tons.
E. I. Stations, N.-W.-P.	...	118,427
Jubbulpore do.	...	26,520
G. I. P. Railway Stations	...	53,270
Oudh and Rohilcund Line	...	877
Rajpootana State Line	...	966
Sinde, Punjab and Delhi	...	170,490
Tons	...	370,650
By East Indian Railway upwards :	...	472,046
Total tons	...	842,696

Of this immense quantity, 440,886 tons were rice, 95,113 tons various kinds of pulse, and 306,697 tons wheat and other food grains. The supplies from the Jubbulpore line, the Great Indian Peninsula line, the Sinde, Punjab, and Delhi railway, amounting in all to 250,380 tons, could not by any other means of communication than railways have found their way to Behar, and it is since the occurrence of the distress in 1866 that these sources of supply have been opened. It is to be regretted that there is no means of comparing the supplies by the East India Railway at that period with those of the present occasion, but the Company have unfortunately destroyed their records of the time and the information cannot now be had. The most remarkable feature of this famine traffic, from a railway point of view, must doubtless be its great pecuniary success, the Company having earned little less than three-fourths of a million sterling in excess of the guaranteed interest during the half-year ending 30th June alone, while the working expenses were but £150,000 in excess of those of the corresponding period of the previous year.

***

RUSSIAN railway loans are in high favour with capitalists throughout Europe, the third and fourth issues of £15,000,000 each launched in April 1872 and November 1873 at 89 and 93, now commanding so much as 105 in Berlin. Such a marked success encouraged repetition, and last month saw a fifth guaranteed railway loan floated at 92. Although the rate of interest accorded is only 4½ per cent, against the 5 per cent of the preceding four issues, six times the amount demanded was subscribed. As the money will probably be applied to the Caucasian, Siberian, and other Eastern lines, which cannot be remunerative for years to come, the 15,000,000 roubles annually expended by the Russian Exchequer on railway guarantees are likely to experience a proportionate increase in consequence of the new transaction. And yet Russia is deeply in debt. In 1873, the total of the Russian income and expenditure amounted to 517,000,000 roubles, against 276,000,000 roubles in 1852. Of the total expenditure in 1852, 33,000,000 roubles were devoted to the interest on the public debt, the like purpose requiring 91,000,000 roubles in 1873. Thus, while both income and expenditure have not been doubled the last 20 years, the National Debt has been nearly trebled. But there is no difficulty in ascertaining into what channels the money has been flowing. When we find the Army and Navy expenses marked at 190,000,000 roubles in 1873, against 96,000,000 roubles in 1852, the mystery is solved. Schools, on the other hand, which required about 8,000,000 roubles 20 years ago, are now accorded 12,000,000 ; so that comparing this paltry increase with the enormous sums devoured by the War Office, the balance is immensely on the side of the unproductive instead of the productive investment.

***

CONSIDERABLE progress, we are glad to learn, is being made on the Indus Valley State Railway, which begins at Sher Shah, and extends to Khanpore. Six foundations of the Sutlej bridge have been laid, each consisting of three wells nearly nineteen feet in diameter. The site of the Indus bridge has not yet been determined upon, nor has any design for the bridge which is to carry the line across the Sukker pass been selected. But notwithstanding these and other difficulties, there appears to be no reason why the line should not within the next three years be carried right through to Kurrachee. Unfortunately all the metal and iron work is sent out by the India Office authorities, who know as much about railways as Sir Bartle Frere does about Indian finance. The following few words from a report of Colonel Peile will show what we mean :—"Delivery of creosoted sleepers and iron permanent way for 100 miles, ordered in England, has commenced, but, unfortunately, there is at present no sign of any fish-plate connections being likely to arrive, and there is a doubt whether points and crossings have been ordered."

***

THE annual collections of the Wesleyans for missionary purposes have at last, we observe, surpassed even those of the Church Missionary Society. At the May meetings, that were just opening when the Mail left, the following immense sums were announced as the collection of the year by the three great evangelistic agencies that lead the missionary enterprise of the Protestant Churches :—

Church Missionary Society ...	...	...	£175,835
Wesleyan Missionary Society...	...	...	£184,039
British and Foreign Bible Society	...	...	£222,191

The figures should be satisfactory evidence, we think, to our native friends of the benevolent interest which the people of England feel in the country, whatever the Parliament may do. These vast sums of money come mainly from the poor, not from the rich. In particular is this the case with the Wesleyan body, whose 18½ lakhs of collections represent an amount of self-denial which few would credit unless they knew something of the inner life of Methodism.

***

THE great and pious Keble, we have heard, himself led the way out of church on Sunday afternoons to the cricket-ground—followed by his congregation, old and young. We want it to be publicly recognised that Sunday is a bright and happy day ; and then much of the opposition between those who keep it religiously and those who decline so to keep it, will pass away. Especially is this important with children. What can be more shocking than a child so trained as to feel like the boy drumming drearily on the window-pane, "How I do hate Sunday!" Much of the disregard of religion may be traced to the dreary observances of the Puritan Sabbath. "Why do you not go to church?" asks the parson of a workman. "Oh, I did all that "when I was a boy! They used to take me to church three times "a day, put me up in the organ-gallery where I could neither see or "hear properly, and whacked me over the head when I fidgeted. "I think I have done enough church for one man's life-"time!" This repression of childhood's instincts under the name of religion—the representation of the gloomy nature of religion—the forbidding of liberty where liberty is so possible and harmless, result in sending multitudes into resentful irreligion. By refusing to recognise that Sunday is the Christian's recreation day, as well as a day of religious worship ; by refusing to welcome rational amusements as the elements of this day's observance, we are only preparing the way for demands which would never have been made if the real wants of the period had been recognized in time. If "religious people" will persist in believing that none outside their own little circle can have true views of anything, and continue to separate from themselves all who do not see exactly as they see, they must be content to observe great and widespread indifference to all religion. Many of the modern distinctions between "nature" and "grace," between "secular" and "spiritual," between the "church" and "the world" belong, as Dean Stanley has lately said, rather to the middle ages than to Christianity itself; and even religious men are coming to understand this. And many, understanding it, resent deeply, even though it be in silence, the condemnation passed on them for the exercise of their judgments in such matters as the observance of Sunday. They are not irreligious, they are not indifferent, they are not unbelieving, but they will not submit to observances or restrictions that are but human in their origin.

***

THERE is probably no country in the world, in which taxation presses so lightly upon industry as in India. It may almost be said that there are no taxes in the country. Contrast the condition of agriculture in this respect in India with its state in Turkey, as the latter is described in the *Levant Herald* :—"Out of every 100 kilogrammes of grain which a farmer produces, one-third belongs to the land which he occupies, and goes as rent, one-third to the labour he employs, and one-third is his profit. Thus, if the season be favourable, 33 kilogrammes of grain in

every 100 raised should be profit; but out of this he has to pay 12½ for tithe on the gross returns, or close upon 40 per cent. Labour in proportion to the results obtained, owing to the primitive mode of cultivation, is even dearer than in England. And then, again, the tithe system is so obstructive that it occasions very serious waste."

It is thought hard that the Government should take 50 per cent of the net assets (or rent) in the North-West Provinces, while under a similar land law in Turkey, 45 per cent of the produce is absorbed.

***

IT is suggestive that age is beginning to tell on the old Conservative leader, that two or three times over within the last few weeks, he is reported to have lost either his temper, or his usual quicksightedness, in the management of the House. It was a strange slip for Disraeli to tell the members that his "Government were determined to carry the measures brought forward" by them; and that they would adhere to that resolution "even if it were necessary to advise Her Majesty not to prorogue Parliament until they were carried."

The House is quick to resent attacks upon it of this nature, and the blunder of course invited the reply of the Marquis of Hartington that it was the House, not the Prime Minister, who would decide whether the measures should pass or not; while it gave Mr. Gladstone the opportunity to ask whether, among precedents, that one by which the leader of the House pays due respect to its other members had not been forgotten.

***

MR. DISRAELI'S dogged refusal to deal with Mr. Biggar's impertinence concerning the exclusion of "strangers" from the House, is resented by the Press, as the question affects the reporters very seriously. The papers complained so sharply of the timidity of the Premier, that he took an opportunity to set himself right by stating that he had acted under advice given him by Lord Lyndhurst a quarter of a century ago, not to interfere with the unwritten rules of Parliament. The English papers say justly, however, that if there is one thing more than another that contributes to the progress of business and to the statesmanlike order of the House, "it is reliance on the "judgment and guidance of the leader in an emergency of this kind. "It is not to be supposed that a leader can be immaculate, but the want of discernment in this case was remarkable in one usually so quick-sighted."

It is only fair to remember that Mr. Disraeli is seventy years of age, and that he has but just recovered from an attack of gout. He is simply getting old, and the wonder is he is so seldom at fault.

***

IT is strange that there should be any difference of opinion amongst Christian men concerning the diffusion and reading of the Bible, and yet, as we all know, there is a very serious and radical difference of views on the subject. High Churchmen look with almost as little favor on the Bible Society as the Roman priesthood, both regarding "the Church" as the proper teacher of Divine truth, and relegating the Bible to the position of a mere book of reference to corroborate what is so taught. It would be uncandid to deny that there is much to recommend this view to us, but we have ourselves no sympathy with it. At the May meeting of the Bible Society last month, Lord Shaftesbury is reported to have avowed his belief that the best answer to attempts to shake belief in the Holy Scriptures, was simply to place the sacred volume in the hands of all who could read it. For the Scriptures in their integrity are a great fact, which it is difficult to account for, except on the hypothesis that the statements contained therein are true. "The "civilisation of Europe rested, he believed, upon the Holy Scrip- "tures, and the history of the past centuries had been a perpetual "appeal to the truths which the Scriptures inculcate, and which had "made the nations of Europe different from the degraded races of "more savage countries."

There are many, of course, who will deny this, but we think it is substantially true. "The Bible its own evidence" is a great fact, to which multitudes of living and dying men are daily bearing witness. It wants no tradition to sustain it, no Church to authenticate it. "Sharper than any two-edged sword, piercing even to the dividing asunder of soul and spirit," the man who has once felt its power, wants no evidence to convince him whose sword it is. It is recorded of the suffering Metcalfe that little Mary Higginson, the daughter of his private secretary, a child of seven years old, read God's Word to the dying statesman, and that he received the glad "tidings of salvation as a little child". . . . But it is not, adds Kaye, "thus that the faith of Charles Metcalfe is to be described. He had an abiding sense of the efficacy of the atonement, and if, as the grave opened to receive him, he was sometimes cheered by the thought of the hungry whom he had fed, the naked whom he had clothed, and the houseless whom he had sheltered, he did not on that account, as the great change approached, lean for support on his own merits."

For ourselves, we have thought for many years, that far too much is made of the external evidences of Christianity, in presenting it as a religious system to those who are strangers to it. It is certainly not the way in which it was presented by the Apostles to the Grecian mind. Their way was, as they themselves tell us, "By "manifestation of the truth, to commend themselves to every man's "conscience in the sight of God." The words are worth thinking about. Were we missionaries, we should be slow, we think, to enter upon any formal consideration of the "evidences of Christianity with any one. And as to asking an educated Hindoo or Mahomedan to receive the Christian Scriptures on the authority of "the Church," we should as soon think of asking him to do so on the authority of Messrs. Moody and Sankey. Men are never made Christians by what are called the evidences of Scripture—and never were.

***

WE think we have a true love for the institution of the "Day of rest," as every earnest and hard-working man must have and would do all in our power to promote its right observance; but we may not conceal our conviction that "religious" people are terribly given to keeping it, as Hudibras says, the wrong way. Sunday is the *servant's* day, the *child's* day, the *cattle's* day, while nothing is more common in religious households than to see it converted into the most miserable day of the week for all three. The servant, and the child, and the horse are commonly worked harder on what is called the Sabbath than on any other day, while the working-man is forbidden all sources of innocent pleasure and mental improvement. They have closed the Aquarium, we observe, at Brighton on Sunday.

***

MR. GRANT DUFF writes in the *Contemporary Review*, "I leave Bombay with a much stronger impression than I had of *its* great Asiatic, as distinguished from merely Indian, importance. It is, and will be more and more to all this part of the world what Ephesus or Alexandria were to the eastern basin of the Mediterranean in the days of the Roman Empire." We have been telling the world this for a good many years past. It is a very curious fact that Bombay is as nearly as possible geographically the centre of the old world, and is plainly marked out as the future capital of Asia. Its curious position is well worth a half-hour's study over a good map. Calcutta will never be more than the capital of India. Bombay a generation or two hence will be the capital, not of Asia only but of the old World.

***

AN admirer of Mr. Bright in a Manchester paper seems suddenly to have discovered that the secret of his power lies in the fact that he uses monosyllables very largely. Thus the grand passage in his speech on the Burials Bill describing a Quaker funeral begins, "I will take the case of my own sect," and on counting the words of that remarkable oration it will be found that out of 190 words, 149—more than 75 per cent—were monosyllables. This is a secret long since known to students of style. The best "leader" as well as the best speech, will be found to be the monosyllabic, or old Saxon one. It is in this secret that the charm of John Bunyan's writings lies; and thoughts too deep for tears in the Psalms: "My heart is smitten and withered like grass, so that I forget to eat my bread." We have here but three words that are not monosyllables, and one that is not Saxon: and who does not feel their plaintive beauty?

***

Vanity Fair is silly enough to sneer at the Viceroy for his connection with "the great commercial house of Baring." The sneer is so stupid that we wonder to find it in so clever a paper. The writer who affects—for it *is* affectation—to regard it as a disparagement of the Gladstones, the Peels, the Barings that they belong to commerce, wants both brains and right feeling. It is the commerce of the country that has made it overshadow the earth.

***

THERE is a real scandal, we think, in the charges that are constantly being made at home by Sir Bartle Frere and Lord Lawrence against the immoral and oppressive system of taxation we are alleged to have established in this country in our excise duties upon

salt and opium. Are we really the immoral and oppressive rulers that these gentlemen say we are? The truth is they do not mean what they say. None know better than these old Indian officials themselves the almost insuperable difficulty in the way of new taxes in India, while the only suggestion which there are able to make for our relief is the highly original one of an income-tax. We really think that we have heard that before; at all events, it is all that the two can suggest. Lord Lawrence adds customs duties as a source of revenue amongst a people that import nothing but piece-goods, which Manchester and Sir Bartle Frere say should not be taxed. Were these gentlemen in India to-morrow, they could no more devise a tax that should yield £3,000,000 a year, than obtain the same sum from alchemy.

The opium revenue is immoral they both say, and ought to go, and yet it is of the trifling amount of six or seven millions sterling. The salt tax is oppressive, and *that* ought to go too, and yet it is the trifling amount of another five or six millions. The land revenue surely is all right, and may be left us! Not a bit of it. Your true policy is to fix that at once at its present limit in perpetuity. In gaping astonishment we ask, What then do you propose to do?

Such folly is unanswerable. There is no travestying what these gentlemen are saying. It is precisely what the whole school they belong to has been saying these ten years past.

***

TWENTY-SEVEN districts in the North-West are now under the infanticide rules. The recorded mortality is higher among boys than girls up to the age of one year, and lower between the age of one and twelve, the relative mortality on the female side increasing with age. On the 1st of April 1875, there were found in the proclaimed villages 80,235 boys to 32,759 girls, in the proportion of 71·1 to 28·9. The returns on 1st September, 1874, showed 82,400 boys to 35,137 girls (not including arrivals and removals), in the ratio of 70·1 to 29·9. The minor population has risen from 12,994 to 117,537, the boys having increased by 2·7, and the girls by 6·9 per cent., in the ratio of 28 to 72 per hundred. In one Bustee case the conviction resulted in a sentence of transportation for life; in Banda the penalty was three years' imprisonment; in Cawnpore six months. Viewed as a means of repressing the crime, it would appear that these punishments are practically useless. Evidence bearing on the actual perpetration is rarely forthcoming, and rapid decomposition frequently robs the medical testimony of any value. But the moral effect of a single conviction is undoubtedly great; and every effort should be made to work out suspicious cases with care and patience.

***

THE announcement that the P. and O. Company is unable to pay a dividend for the last half-year has occasioned little surprise, but the omen is unpropitious. It is too suggestive of the cost that we have to give for enlightenment and reform. The days of the P. and O's youth were the days of its glory. Then it cheerfully charged its passengers £100 to £110, and even so high as £120, from Calcutta to Southampton, and Indian people were so well off that they would have scorned to go home or come out at less than the current rates. Everything afloat as everything on shore was then conducted on a liberal scale. The subsidy was sufficient to establish a monopoly, and freights were at a rate proportionate to the passenger fares. People did not much care what they paid in those days, and would pay anything for comfort and freedom from annoyance. The cabin accommodation of the P. and O. was always excellent, tempered only by occasional crowding; the baths and other accessories were such as could be obtained only on board British ships entitled to the designation of "floating hotels." The table fare was a trifle "shippy," but it was always sound and wholesome, and very similar to the fare which the passengers enjoyed when on shore. For those were the pre *à la Russe* days, when meat was carved at the board, and you "saw your dinner"—as plain folks still say in England—before eating it. A delicate discrimination in carving a pair of fowls was as necessary to the adjacent gentleman as the "nice conduct of a clouded cane' to the poet's fine hero. The carver might even win his way to the heart of a lady by sending her the prettiest pieces, and he had the privilege of "taking wine" with her also in the course of the meal. The wines, too, were on the table at everybody's discretion, and soda-water was available to any extent. We fancy that some people abused their privilege in these respects and made the freedom of the P. and O. table less profitable than it might have been; but on the other hand abstemious persons compensated for the excess, and so we may suppose a fair average was attained.

In these days there is a difference indeed. The cabins and general accommodation are much what they were—better as a rule, for individual passengers have more space to themselves. But the table supplies have deteriorated. They cost the Company as much or more than heretofore, but are by no means so satisfactory. It is all very well to have pretty little *plats* handed about with a guide to their contents in the form of a *menu* in the flourishing hand of the purser. It is agreeable to the eye that chopped kidneys should be surrounded by potatoes presented in the form of so many peaks of Teneriffe. It is pleasant to see that the mysterious interior of some animal which comes round in due course is adorned so that its own parent would not know it. And there is a pleasant exercise of the imagination in considering, in other cases, the nature of the compromise attained by a particular sauce. But the eye and the imagination are not everything at a repast; and the material impression apt to be conveyed is that everything is greasy. This indeed is exactly the state of things. And moreover everybody knows that the cook's galley cannot well be inspired by a Vatel; and its appearance as you pass it occasionally on your way "for'ard," is not calculated to impress you with the delicacy of its resources. In these days the P. and O. sadly requires good plain cookery. Of other kinds of cookery people have quite enough on shore—at sea their stomachs should on every account have a little holiday. On the French and Italian ships we have naturally French and Italian dishes; but these have the advantage of being real. French cookery is familiar to every body, but passengers to whom Italian cookery is strange say they are always on the Rubbatino ships able to make a meal with satisfaction. Compared with the old free table at which the passengers used actually to "sit over their wine," the present practice is most unconvivial. Each person orders for himself, and in writing, so that the chits flying about have a most depressing effect. And it is wonderful how economical people get when they consider every item. The stewards say that "they never knew gentlemen *h*order so little as they do now;" the gentlemen say that they order little because the liquors are not so good as they should be, and that nothing is cheap but what is insufferably bad.

***

MR. FITZJAMES STEPHEN has been elaborately reviewing the legal merits of the trial of Mulharao. In three long letters occupying an unwarrantable proportion of the weekly edition of the *Pall Mall Gazette*, he has given the results of his labours. His examination of the evidence is no less masterly than might have been expected. But it would have more weight had it been more judicial. Mr. Stephen throughout his three letters never assumes the position of a judge. He is always the advocate, and always the advocate for the prosecution. Giving well-deserved praise to Mr. Scoble's conduct of the case, he concurs in most of the conclusions arrived at by the Advocate-General, and re-inforces them by additional arguments. He is over-argumentative indeed throughout, and many of his arguments and the illustrative matter with which he accompanies them, are of a philosophical character beyond advocacy, and would be inapplicable for the consideration of a legal tribunal. His practical proposition is, that there being no evidence adduced on the part of the Gaekwar, the question is whether the evidence against him proves his guilt. Mr. Stephen maintains that the evidence against him does prove his guilt—if it be true. And he maintains its truth against Serjeant Ballantine's denial, doubts and inferences, with all the force of an acute logical reasoner. But Mr. Stephen employs as many denials, doubts, and inferences, as the Sergeant himself, and probes human motives in support of his arguments with an elaboration which for his practical purpose the Serjeant would have found it useless to attempt. Upon the probabilities Mr. Stephen dwells at every turn, and, it must be said, meets probabilities on the other side with other probabilities of his own in a most successful manner. Thus, alluding to the probability of a native Prince conspiring with servants and applying to them "the very coarsest expressions" if they displeased him, he says:—"I do not agree with this. Men who have passed their lives in India have often told me that nothing is more characteristic of the people than the ease with which the highest and the lowest natives will associate with each other, subject always to the rules of caste, which by no means impedes such association. The fact is, that that there is not the same difference between them as there is between man and man in Europe. Probably the Gaekwar was really far more nearly on a level with Rowjee and Nursoo than Serjeant Ballantine would be with a small shop-keeper in an English country town. As to the language used, think of our own rulers from Queen Elizabeth to William IV. Indeed, 'the very coarsest expressions' might be attributed with a good deal of

versimilitude to many an Englishman distinguished in very grave professions."

***

THIS week the London papers have little to say about Baroda. The only articles upon the subject which have attracted our attention are in the *Saturday Review* and the *Pall Mall*. But our contemporaries have not made any remarkable utterance upon the case. The *Saturday* has no objection to the sentence upon the late ruler of Baroda, its objection being confined to the inconsistency of the grounds upon which the sentence was passed; and in common with other journals the *Saturday* was unaware, at the time of writing, that the inconsistency was not attributable to Lord Northbook, but to the Home Government by which he was over-ruled. Referring to Mr. Fitzjames Stephen's criticism of the case, the writer goes on to say that had Lord Northbrook taken the same view of it, "had avowed, and acted upon it, he would have been doing quite right." This, we know, is just what Lord Northbrook did, as far as his authority extended; and it is certainly unfortunate that journalists at home should be writing in the dark as not to be informed of the fact. For the *Saturday Review*, while entertaining no doubt "that substantial justice has been done," is still mystified at the means by which that justice has been brought about.

The article in the *Pall Mall Gazette* is principally confined to an estimate of Mr. Fitzjames Stephen's analysis of the case; and our contemporary notices several important defects in his arguments. The letters do not in any degree alter the political aspect of the case or even touch upon the very serious questions raised by the conduct of the Government of India. They do little more than show the opinion of a very distinguished lawyer that the evidence was sufficient for the conviction of the prisoner. And in reference to Mr. Stephen's disregard of some important principles of criminal procedure—giving the prisoner the benefit of the doubt, &c., the writer takes the same exception as ourselves. "We can well understand," he says, "an administrator condemning the idea of judicial proceedings at all in such a case as that of the Gaekwar, and situated as he is with relation to the Government of India. On the other hand, we can understand a lawyer defending the institution of such proceedings. But that any man should hold that the two methods of procedure are reconcilable—that judicial proceedings having been instituted, they should be conducted on principles of autocratic administration, the decision to be governed, 'by regard to its consequences,' and legal maxims subordinated to 'reasons of State'—that we do not understand." Mr. Stephen's letters in no degree help the Indian Government, since that part of his argument which may convince his readers has no bearing upon the real question before them, and that part of his argument which deals with that question must fail to convince.

***

MR. R. S. MacEwen has suggested to the Bengal Government, with reference to the Bill now before the Bengal Council to amend the law relating to the Abkaree revenue, that a section like 12 and 24 Geo. II. Cap. 40, known as the Tippling Act would be beneficial. That enactment, modified by 25 and 36 Vic., Cap. 38, provides that no suit or action shall be maintained in any Court of law or equity for the price of any spirituous liquors of less value than twenty shillings sold at one time, or if delivered at the residence of the purchasers for a quantity not less at any one time than a reputed quart. There is no such provision in any of the excise laws applicable to Calcutta, according to Mr. MacEwen. A considerable amount of credit is given for liquor consumed on the premises, where it is sold in small quantities. Persons are sued in Court on these liquor bills and decrees are passed against them. "It would be better for the parties themselves and for society if no credit was allowed, as in England, for liquor consumed in taverns. If a tavern-keeper cannot sue for the money, he will not readily give credit, and a man who would otherwise run into debt for liquor, will be prevented from doing so. There is reason to believe that signatures are sometimes obtained to bills and vouchers, which are afterwards sued upon, when the writers are not perfectly sober."

The "Tippling" Act, as its name implies, was intended to prevent excessive drinking by certain legitimate means. It is for the benefit of that large class of persons who can only afford to buy small quantities of liquor at one time, and the law says that if the shopkeeper cannot get cash, he runs the risk of not being paid at all. The intention is to discourage dram-drinking and drunkenness. It may not be generally known, but it is a fact that a very large and demoralizing business is done in Calcutta by the sale on credit of small quantities of liquor consumed on the premises. The "scores" so run up are sued for; and although the limitation is now only one year, decrees for considerable sums are obtained. On one day within the last month Mr. MacEwen had before him seven suits by the same plaintiff, the keeper of a single tavern, aggregating Rs. 205. The defendants were all Europeans, and the bills were chiefly, if not entirely, for liquor sold, in small quantities, over the counter, ranging from four annas to Rs. 2 worth at a time.

***

A NEW book on the Franco-German war, called "La Guerre de France," shews the condition of the army when the strife began to have been deplorable. Deduction after deduction made Marshal Lebœuf's campaigners fall to 300,000 men, and to arrive at that figure all available resources had to be drawn on, masses of reserve men to be hastily thrown into regiments, impoverished in effectives. Most of those reserve men were devoid of training, not knowing how to use a Chassepot. Two hundred and fifty thousand men in a fortnight, 300,000 men in three weeks: such was the extent of every possible effort for the moment. All beyond was unknown and uncertain. There was a first line of battle, but there was nothing to support it; for it was not before some months that the French could calculate on making fresh armies with the conscripts and *Gardes Mobiles*. "It was a repetition of that Italian campaign of 1859, in which, with all the military forces of France, after leading 250,000 men beyond the Alps, we could only muster rather over 100,000 soldiers at Solferino, without being in a condition to oppose another army on the Rhine had it been necessary." The plan of campaign, which the Emperor afterwards revealed in a pamphlet written under his inspiration or dictated by him, which at first he communicated only to Marshal Lebœuf, who had become Major-General on the 20th of July, and to Marshal MacMahon, charged with one of the chief commands, was founded solely on the possibility of rapid action. With 300,000 men the Government flattered itself with having at hand in a few days, it thought it could dash on the Rhine between Rastadt and Germersheim and force South Germany to be neutral, and next, supported by Austria and Italy, which would then declare themselves, march to meet the Prussians, while a debarcation force sent to the Baltic, finding Denmark an ally, would threaten Germany on the north.

It was said that the Prussians had 950,000 men, and these were treated as a fiction by the French Government. Comprising all, even the Hessians, who, though belonging to the South, were incorporated in the Northern army, the formidable array of 982,000 men and 209,000 horses was really arrived at, of which more than half could immediately proceed to the frontier. The Southern States brought 200,000 men more, Bavaria could immediately furnish 50,000 infantry, 5,000 cavalry, and 192 cannon in two Corps d'Armée. The active division of Würtemberg was 15,000 infantry, 1,500 cavalry, and 54 cannon. The active contingent of Baden was 11,000 infantry, 1,800 cavalry, and 54 pieces of artillery. North and South Germany could, united, march to battle with an army immediately ready of 462,000 infantry, 5,600 cavalry, and 1,584 cannon. "This was assuredly an immense force against our modest array of 250,000 men wandering on the frontier in search of an enemy whom they could not find, since he was not there yet, and whose approach was so little anticipated on the day when he was met."

***

A GOOD deal of discussion and some angry feeling has been provoked by an attack upon certain cartoons entitled "On the Hills and in the Plains," published in the 16th number of the *Oriental Figaro*. It seems probable from a correspondence that has appeared in the daily papers, that the question whether the imputations that have been cast upon the artist and his work, by a correspondent of a local journal are libellous or not, will be submitted to the decision of a civil or criminal court. It is also rumoured that "Caro" so warmly takes to heart the slurs that have been cast upon him, that if his anonymous accuser had accepted a challenge the dispute would have been settled more in accordance with the continental practice in questions of "honor" than with the law against duelling.

***

THE position of our Resident in Mandalay is attracting attention. It is asserted that even in the compound of the Residency the King's officials clear the road with rattans, when a certain Woondouk sits in the Mixed Court. The English inhabitants urge that the rattans should be lowered within the fenced space shadowed by the British flag; the Burmese say that the ground occupied by Captain Strover belongs to the King, who lends it to the Queen of England free of rent, and that consequently, the flag is simply ornamental,

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

LONDON, MAY 7TH, 1875.

MR. BARING GOULD in his curious and interesting work on the Old Testament Legends tells us that, when the idol worshipped by the Thamudites was found for the second time prostrate on the floor of the temple, "the monarch set it up once more, and Eblis entering the image, spoke through its mouth, exhorting all men to beware of novel doctrines which were about to be introduced." Could it have been this same Eblis that spoke last Tuesday night through the barriers of Mr. Disraeli's (false) teeth, and prated so mischievously about the wisdom of our forefathers? Seldom has the Prime Minister been so unequal to himself as when opposing Lord Hartington's resolutions touching the future relations of the House and the press. In truth, he had no other reason to give for not attempting to deal with a practically obsolete and decidedly inconvenient restriction, than that the task had proved too difficult for such men as Sir George Grey and Mr. Bouverie, and that the system had been devised by the wisdom of our ancestors. The only hit he made was a humourous remark at the expense of Mr. Mitchell Henry and Mr. Newdegate, who complained that newspaper reports were too brief, and that the House itself ought to provide means for the exact reproduction of every speech. This is done in France and Belgium, and I well remember my surprise when I was connected with a Brussels paper, upwards of twenty years ago, on seeing two Ministers come into the room to correct their proofs somewhere about two in the morning. The *Moniteur Belge* professed to give each speech *verbatim*, and speakers usually availed themselves of the chance of touching up their utterances and even of embellishing them. This sort of thing is certainly not needed in this country, and Mr. Disraeli easily raised a hearty laugh when he drily remarked that his two honourable friends seemed desirous to bring in a "Speeches Preservation Act"—the point coming home the more keenly because the House had been so long engaged with the Peace Preservation Act, the debate on which the weakness of the Government and the mischievous perversity of the Irishman have protracted to such a wearisome length. Mr. Charley and Mr. Beresford Hope, both of them the stanchest of Conservatives, broke away entirely from their usual leader, and virtually accepted Lord Hartington's Resolutions. It was Mr. Lowe, however, who carried off the laurels of the debate as regards argument. One by one he demolished Mr. Disraeli's sophisms, very much as a poulterer kills young rabbits by holding them up by the hind-legs and giving them one tap behind the ears with the edge of his hand. He had, of course, no trouble in showing that a usage which might possibly have been advantageous in a different state of society was the reverse of beneficial in our own times. For instance, the chief motive that actuated the Commons in bye-gone days was the fear of fines, imprisonment, and the Tower as the price of independence of speech. Nothing of this kind is now to be apprehended, and if there is one thing that members crave more than another, it is that their orations may be published at full length. After Mr. Lowe had resumed his seat amid considerable applause from both sides of the House, Mr. Hardy rose, but was cut short before he had completed his first sentence. "Mr. Speaker," exclaimed Mr. Sullivan, waving his hand towards the Reporters' Gallery, "I espy strangers behind your chair." The Speaker had no alternative but to clear both galleries, for Mr. Disraeli dared not again intervene with a motion to suspend the standing orders. The wind had been taken out of his sail on that tack by Mr. Lowe, who had adroitly denounced as unconstitutional a resort to such a proceeding unless in very exceptional cases, and the Conservatives are nothing if not constitutional. For the best part of an hour, therefore, there was strife and evil speaking in the House, and several members fell foul of Mr. Sullivan, who protested that being himself a journalist he should insist upon the representatives of the press being treated as gentlemen. That is all very fine, but how many men of gentle-blood and gentle-breeding are to be found now-a-days in the Reporters' Gallery? The time was when young barristers and men of culture undertook for a while to report, and sometimes to improve, the style and tenor of parliamentary speeches; but for many years past the reporting has been done by a very inferior race who write short-hand notes like so many machines, and who eke out their livelihood by contributing absurd vulgar letters to provincial papers at ridiculously low rates of remuneration. It seems to me that some sort of restriction is absolutely necessary considering the class of men who now furnish newspaper reports of parliamentary speeches; but certainly not after the present fashion which enables an idiot or an angry man to mar a whole debate by depriving it of the publicity which is essential to constitutional legislation. Mr. Hardy, it is understood, would have deprived the question of its party aspect by expressing a strong dissent from Mr. Disraeli's obstructiveness, and in this line he would have been supported by Sir Stafford Northcote and Mr. Ward Hunt. Mr. Sullivan's dramatic interposition, however, prevented an equitable adjustment of minor differences of opinion, and in the end Mr. Disraeli postponed the futher discussion of this now embittered question until the 25th May. But he was doomed to disappointment if he imagined that the interval would be one of blissful repose. Last night the Marquis of Hartington returned to the charge, and asked which course the Government proposed to pursue with regard to his resolutions. Mr. Disraeli replied in a most extraordinary manner. He began by regretting the abrupt termination of the debate through Mr. Sullivan's espying of strangers, especially as there has been a sort of general understanding that resort should not be had to that expedient until the opinion of the House had been taken with reference to the Resolution. At the same time he acquitted Mr. Sullivan of *mala fides*, and believed that he had acted on the impulse of a momentary excitement. The real question at issue was more conflicted than might at first be supposed. A quarter of a century ago he was emphatically warned by Lord Lyndhurst, "perhaps the most sagacious man of this century," never on any account to interfere with the unwritten law of Parliament, for if he did so, he would soon find himself in inextricable confusion. Still, as it was no longer possible to avoid or evade the difficulty, he proposed to put a notice on the table of a motion for the morrow "that, if in any sitting of the House, or in Committee any member shall take notice that strangers are present, the Speaker or the Chairman, as the case may be, shall forthwith put the question that strangers be ordered to withdraw, without permitting any debate or amendment." So far, so well. Unhappily, Mr. Disraeli would not stop at this point, but committed the astounding mistake of directly answering an article in that day's *Times*, in which much stress was laid upon the waste of time caused by the cropping up of privilege questions, and by the general vacillation of the leader of the House. The particular occasion that led to these strictures was not so much the excessively spun-out discussion on the Peace Preservation Bill, as the weakness shown in being caught in a cleft stick on such an easy matter as Mr. Smyth's Bill to prevent the sale in Ireland of intoxicating liquors on Sunday. Sir Hicks Beach admitted the excellence of the measure if confined to rural districts, but he deprecated its extension to large towns, and therefore he opposed it altogether. Mr. Gladstone, in clear, forcible, but moderate language, exposed the fallacy of such opposition. When the Bill was read in Committee, an amendment could be readily introduced excluding large towns from the action of the Act. The case, indeed, was so simple that Government could hardly have failed to be defeated had not two English members contrived to speak against him, so that, it being Wednesday, the hour arrived for adjournment before a division could be taken. On this ridiculous and disgraceful mismanagement the *Times* expressed the opinion of nine educated men out of ten, whatever their political creed might be. It was undoubtedly a telling article because it was irrefutable, and it was, therefore, peculiarly unfortunate that Mr. Disraeli should have been stung into noticing charges which he had better have left to the effacing processes of time. Naturally enough, Lord Hartington fastened upon this egregious blunder, and this morning, as might have been anticipated, the *Times* reiterates its former charges with redoubled energy. Then, not content with this melancholy exhibition of declining judgment, Mr. Disraeli concluded by almost parenthetically remarking, "Being on my legs I ought to give notice that it is our intention to proceed with the Budget Resolutions to-morrow morning." A step so unprecedented roused the indignation of Mr. Gladstone, and even Lord Hartington sneeringly asked of "the Right Hon'ble gentleman who has told us he is such a stickler for preserving the precedents of this House, whether there is any precedent for his taking the Budget Resolutions at a morning sitting." Mr. Gladstone adopted a more serious tone and pointed out the extreme impropriety of bringing on the Budget at two o'clock without giving timely notice to the chief authorities on financial matters, usually engaged in the city at that hour. Upon this point Mr. Disraeli lamely excused himself by saying that he was under the impression that the Chancellor of the Exchequer had privately sounded the wishes of honorable gentlemen opposite. Sir Charles Dilke at last extricated the Ministers from the slough into which they had been so clumsily led by promising to postpone his motion on the representative system. Both Lord Hartington and Mr.

Gladstone protested against Mr. Disraeli's menace that he would not prorogue Parliament until he had carried all the measures he had in hand, but the ex-leader of the Liberal party must surely be gifted with a convenient want of memory if he forgot that he himself had uttered a similar threat under similar circumstances. Nor was this the last of Disraeli's blunderings last night, for unless Lord Hartington had reminded him that the Budget was to come on to night, he would have left on the notice paper his motion touching the espial of strangers. I was not myself present at the debate, but am told that the Prime Minister looked worried and even nervous, and seemed painfully conscious that his work was becoming too much for him.

Owing to the happy circumstance that everything human must have an end, the Peace Preservation Bill was passed through Committee last night, after the Government had complimented the Irish members upon the perfectly constitutional and parliamentary character of their opposition. To which Mr. Butt responded by thanking Government for the concessions that had been made, which would be gratefully accepted by the Irish people. This statement was characterised by Mr. Disraeli as a Message of Peace. It is not reported that all parties then retired to the bar to liquor up.

"Superfluous lags the veteran on the stage" is the uncomplimentary remark that will rise to many lips after reading Earl Russell's latest "interpellation" relative to Germany and Belgium. Although he might easily have known that the Belgian rejoinder had barely reached our Foreign Office, he must needs call upon Lord Derby to lay it on the table, or at least to explain its contents and his own views thereupon. Throughout his speech the aged Earl displayed his sympathy with the German Government, and expressed himself to the effect that Belgium ought at once to accede to the claims put forward. Assuming the guilt of Duchesne, and the reality of the conspiracy he affected to divulge, Earl Russell declared that it was contrary to international law to screen such a criminal. No doubt; if only the facts were as the Germans thought proper to set them forth. As it happens, however, there is strong reason to believe that Duchesne's revelation was nothing more than the babbling of a drunken idiot, who, on his return to sobriety, knew nothing of what he had said. The Belgian reply is brief, courteous, and dignified. It asserts the earnest desire of the Government to cultivate the most friendly relations with its powerful neighbour, and expresses a perfect readiness to introduce such measures as may seem likely to prevent the occurrence of incidents offensive to friendly nations, so far as that can be done consistently with the Belgian character and traditions. But as Germany is about to set the example of preparing a new international code for its own guidance, the Belgian Government prefers to wait until an opportunity be afforded of examining this promised legislation, with a view to adopt whatever may appear expedient and suitable. Not even Prince Bismarck in his most dyspeptic mood could find anything in this note of an unpleasant character, and our own press commends it warmly and judiciously. It is almost needless to add that Lord Derby replied to his interrogator in a guarded and moderate tone, reiterating his former denial that any menace was conveyed in the German notes, and repudiating all necessity for meddling with a matter which thus far directly concerns only the two friendly Powers who are exchanging "paper pellets."

The Royal Academy exhibition contains in itself and its concomitant incidents matter for half-a-dozen letters, with the probable effect of lulling the majority of your readers into a soothing slumber. I shall treat the mattter, therefore, very briefly, at the risk of being obscure. Friday was the private-view day, and consequently a double line of carriages occupied the centre of St. James'-street stretching round into Pall Mall. On that day it is physically impossible to see anything, except the gay colours of the pushing and crushing crowd—good manners abandoning the fashionable as well as the vulgar world. May-day was cold and miserably wet. Nevertheless, "the right thing" was "done" by some hundreds of those who dwell just beyond the pale, but near enough to ape the whims and humours of the privileged few. The opening-day, however, affords a capital opportunity for inspecting in peace and quietnesss whatever has not been ultra-lauded in that morning's papers. There is an "ugly rush" at two or three sensational or otherwise exceptional paintings, but the great spread of canvass is left comparatively unnoticed. For instance, only the most patient or the most pushing could hope to catch a glimpse of Miss Thompson's military picture, representing the 28th, in square, repulsing the French cavalry at Quatre Bras, and, after all, was it really worth the trouble? It is, of course, a wonderful performance for a young girl, and displays profound study of the manifold expressions of human passion from the calm, inexorable resolution to do one's duty, to the most devil-may-care recklessness. But every minor consideration has been subjected to the delineation of human nature in its least loveable mood. The colouring is most unpleasant and oftentimes quite untrue, and the treatment altogether is repellent, full of affectation, and likely to do as much harm to *quasi*-historic painting as Miss Braddon has done to novel writing. The most amusing feature of which may be called the Humbug of Art in this country is the Saturday Banquet. It was very funny to hear the Duke of Cambridge, trying to detect an affinity between the military and artistic professions because so many painters select scenes of strife and bloodshed. The fact is simply that wherever emotion is strong there must be picturesqueness, and a certain school of art adopts the treatment of emotions as its peculiar province. Then Mr. Ward Hunt expressed a hope that Mr. Cooke would immortalise his name by his queer picture of the Devastation, "about the ugliest ship in the fleet." Mr. Ward admitted the cleverness of the artist in concealing his hideous subject in a cloud of gunpowder smoke, but we surely cannot have sunk so low in our appreciation of art as to be filled with admiration on beholding a shapeless mass enveloped in a dauby haze. To conceal the face of the father when sacrificing his daughter for the public good, may have been acclaimed as praiseworthy on the part of the Grecian painter, though it was nothing less than a cowardly escape from a difficulty, and only to be ranked with the *concetti* that characterise the debasement of taste in every age and clime. But in the case before us, I have no hesitation in ranking this picture of the Devastation as on a par with the realistic abominations that have lately degraded the stage, such as a real hansom on our own boards and a locomotive engine in a Parisian theatre. The necessity, however, of saying something original or clever must be very trying when it occurs under the influence of an east wind, as was the misfortune of the Royal Academy's guests on Saturday. Even Mr. Disraeli failed, though I fear I shall be esteemed a censorious Goth for laughing at his stilted periods. After bestowing a high-flown eulogy upon British Art as exemplified in portrait and landscape painting, and congratulating his hearers upon no longer needing to import a French or Flemish limner—just as a country squire might praise his tenants for growing their own salad instead of importing it from Holland—the Prime Minister seems to have been suddenly impressed with the idea that English artists lived all the year round in smoky neighbourhoods, and evolved from their inner consciousness whatever was bright and beautiful in their productions. Nothing, in his opinion, is so wonderful as the imaginations of the British artist, who is also a cockney. "Mr. President," he exclaimed, with mock-heroic earnestness, "you know well that the English artist has developed that faculty under very great disadvantages. He is not favoured by a climate of inspiration (cheers and a laugh). He is not surrounded by a sublime nature. He does not dwell in cities glittering with symmetry, under purple skies (cheers and a laugh). He is not surrounded by human beings whose flashing forms and picturesque gestures stimulate his invention and often afford a happy hint of expression and of grace (cheers). For him there are no bannered processions parading the squares and streets of fair cities to animate his fancy amid the fall of fountains and the carolling of sacred bells (cheers). No, sir, he lives in a studio invaded too often by the London fog (a laugh). If he walks forth for relaxation he wanders in streets of hideous monotony (cheers and a laugh). His living studies are the constable and the cabman. Instead of a procession he encounters a blockade of omnibuses (a laugh), and instead of bursts of harmony he is greeted by the scream of the subterranean railway (a laugh), and the horrible concert of organs and hurdygurdies (much laughter). And yet this man, by his imagination, by that divine gift alone, can give us a canvas breathing with human passions, in scenes of romantic loveliness and with every accessory of splendour and of grace (loud cheers)." Would not any one suppose from these conceits that English Art was confined to the lowliest localities of the metropolis? Mr. Disraeli, however, must know, as well as any man, that all our leading painters have comfortable homes in the best quarters, that their studios are carefully guarded against distracting noises, and that their "inspiration" is derived, in the course of many wanderings, from sunny climes and from peoples still sufficiently uncivilized to be picturesque in their costumes and demonstrative in their ways. To my mind, the best speech was that of Mr. Matthew Arnold, sadly humourous after his usual style, pointed and marked with reading and thought. A man of his type can never be wholly joyous. A thread of melancholy, of disappointment, and regret must inevitably run through his fancies and

their expression. Capable intellectually of conceiving a higher standard than human nature can ever reach, he is naturally depressed in the midst of mirth, and, like the Jewish monarch, sighs over the vanity of all things. There was something very touching in his allusion to the colony of Greeks settled in Southern Italy, who for an extraordinary length of time retained their language and civilization. Pardon me if I extract the entire passage. It is worth more than anything I can ever hope to write :—" Fauriel, the French literary historian, tells us of a colony of Greeks settled somewhere in Southern Italy who retained for an extraordinary length of time their Greek language and civilization. However, time and circumstance were at last too strong for them; they felt themselves losing their distinctive Greek character; they grew like all the other people about them. Only, once every year they assembled themselves together at a public festival of their community, and there, in language which the inroads of barbarism were every year more and more debasing, they reminded one another that they were once Greeks. (Cheers and a laugh.) How many of your guests to-night, Sir, may remind one another of the same thing. (Hear, hear.) The brilliant statesman at the head of Her Majesty's Government, to whom we shall listen with so much admiration by-and-bye, may even boast that he was born in Arcadia. (Cheers and a laugh.) To no people, probably, does it so often happen to have to break in great measure with their vocation and with the Muses, as to the men of letters for whom you have summoned me to speak. (Cheers.) But perhaps there is no one man here, however positive and prosaic, who has not at some time or other of his life, and in some form or other, felt something of that desire for the truth and beauty of things which makes the Greek, the artist. (Hear hear.) The year goes round for us amid other pre-occupations ; then, with the spring, arrives your hour. You collect us at this festival ; you surround us with enchantment, and call upon us to remember, and in our stammering and imperfect language to confess that we were once Greeks. (Cheers.) If we have not forgotten it, the reminder is delightful ; if we have forgotten it, is salutary. (Hear, hear.) In the common and practical life of this country, in its government, politics, commerce, law, medicine—even in its religion—some compliance with men's conventionality, vulgarity, folly, and ignobleness, a certain dose of claptrap (a laugh) passes almost for a thing of necessity. But in that world to which we have sometimes aspired, in your world of art, Sir, in the Greek world—for so I will call it after the wonderful people who introduced mankind to it—in the Greek world of art and science, claptrap and compliance with the conventional are simply fatal. (Hear, hear.) Let us be grateful to you for recalling it to us ; for reminding us that strength and success are possible to find by taking one's law, not from the form and pressure of the passing day, but from the living forces of our genuine nature ;—

'Vivitur ingenio ; cetera mortis erunt.' "

THE ENGLISH MAIL.

SOME time ago Dr. Kenealy asserted that not only are great numbers of people in England dissatisfied with the Tichborne trial, but "the people of Germany are almost unanimously dissatisfied with it." The fact is that the verdict of the German press at Berlin, at Hamburg, at Cologne, at Frankfort-on-the-Main, at Stuttgart, at Munich, at Leipzig, at Dresden, at Breslau, and at Vienna has long ago pronounced the so-called claimant to be a common impostor, whose pretensions have only given rise in Germany to mingled feelings of merriment and disgust. Germans simply wondered that it should take years, as well as the spending of such enormous sums of money, and the spilling of oceans of ink, before the "pseudo-Tichborne," as he is universally called, could be disposed of. The only dissatisfaction of the German people was with the unaccountable length of a trial which, in their country, would probably have been brought to a conclusion within a week.

***

THE statement that a gun factory in Upper Austria is making a quarter of a million of rifles for Germany, and that a Vienna firm is executing a German order for thirty million cartridges, is entirely without foundation. The "30,000,000 cartridges" which are to be delivered in June, resemble rather closely. the 40,000,000 cartridges which the *Avénir Militaire* recently alleged to have been manufactured by a Vienna firm in consequence of an order from the German War Minister. The same well-informed French military paper announced that "Krupp has received an order for a monthly supply of 400 pieces of ordnance, steel-guns ;" 400 of them, and not less, having to be turned out every four weeks ! These assertions, to which others equally credible were added, have, says the *Examiner*, created much amusement, and been treated as "wild ducks of journalism" in the Berlin press. After having been lamed in the wing in their flight through Germany, they are revived now by the electric wire, and set out for a fresh journey from Vienna to London.

***

THAT "frequent religious disturbances are occurring throughout Belgium," and that the populace are insulting pilgrims, is exactly what might be expected from the circumstances of the case. Belgium may now be called the only truly Catholic country in continental Europe, and even before other powers took to persecuting and expelling "religious orders," every town in Belgium was full of nunneries, monasteries, and other unproductive and obstructive institutions. But since Germany determined to get rid of the "drones" which, in a great measure, subsisted on the working bees of the community, Belgium has been invaded by a swarm of Jesuits, Dominicans, and other bare footed friars and mendicants. The consequence is that the poorer classes find that the charity which used to fill their mouths with bread, is flowing into the coffers of those who are too proud to work but not to beg' and they naturally resent what is so detrimental to their interests.

***

A FRENCH commissariat officer has published a book on the various continental armies. He puts the length of military service at twelve years in Germany, Austria, and England. In Russia it is fifteen years ; in Italy and France twenty years. The number of young men who annually attain the age for entering the service is—Russia, 665,000 ; Germany, 345,000 ; France, 314,000 ; Austria, 337,000 ; England, 280,000 ; Italy, 260,000. The ordinary war budgets are thus given ;—France, 2,838,260,000 francs ; Russia, 2,500,548,000 ; Germany, 2,257,816,000 ; England, 2,109,593,000 ; Austria, 1,572,804,000 ; Italy, 1,345,297,000. The above expenditure includes that of the Navy. We are then told that Russia spends 36 per cent of her general budget on her Army ; England and France, 31 ; Germany, 26 ; Austria, 20 ; Italy, 17. The special military budgets of 1874 were :—Russia, 788 millions ; France, 719 ; Germany, 488 ; England, 378 ; Austria, 255 ; Italy, 210. And so the six great Powers expend per annum nearly £120.000,000 for the pay and keep of their troops, the purchase of war *matériel*, and military instruction. In the way of military schools, it is shown that Austria spends, supposing her budget to be 100—*56 ; Russia*, 28 ; Germany, 27 ; England, 22 ; Italy, 18 ; and France, 16. The effectives are thus given ; Russia, 663,000 men, 88,000 horses ; France, 460,000 men, 99,000 horses ; Germany, 438,000 men, 97,000 horses ; Austria, 248,000 men, 46,000 horses ; Italy, 220,000 men, 33,000 horses ; England, 189,000 men, 26,000 horses.

THE risks run by American liners along the Newfoundland coast are severely commented on by *Iron*. On the 10th March, the *Cimbria* left Hamburg for New York with nearly five hundred passengers and the German mails. On the afternoon of the 19th an irregular and brilliant mass bore in sight to the southward, and at the cry of the look-out, "mountains of ice ahead !" all the passengers hurried on deck. A magnificent iceberg rapidly approached, until it displayed in stupendous proportions its sparkling peaks and slopes covered with snow at three miles distance. The skipper gave it a wide berth, and when the sun had disappeared, fortunately to give place to the moon in a clear sky, the scene had changed. For miles on every side the ship was surrounded by a field of ice, only broken at intervals by the swelling of the waves. The captain turned the steamer's head to the south ; but, after some time, despairing of opening a way in that direction, issued orders to penetrate westward, and the *Cimbria* until two o'clock in the morning, "went gallantly on, her iron prow crashing along the ice, which varied in thickness from 2ft. to 3ft. Blue water at length appeared, and the danger was passed, but the ship had first traversed sixty miles southward and then seventy miles in a westward direction, before getting rid of the floe."

A HOME paper has taken the trouble to collate the latest figures with reference to our Indian army, which is put down at 200,000 men. Of this force 128,447 are natives, and 60,613 British, exclusive of officers. More than half of the English soldiers are stationed in the Bengal Presidency, and the 38,000 British troops in Bengal are in garrison along the valley of the Ganges and in the Punjab. This province, which covers an area of 105,000 square miles, about

a ninth part of the total area of British India, requires 17,127 English troops for its guard alone, or, in other words, nearly one-fourth of the total number of British troops employed in India. The native army of Bengal numbers 47,814, and these are stationed by themselves in some places, and with British troops in others. In the latter case the native troops are usually the larger force of the two.

***

ONE of the most important items of news by the last mail relates to the supply of horses. That the number of horses bred in England is far below requirements is conclusively proved by the recent parliamentary returns, the imports last year being four times more numerous than the exports. More than 12,000 horses were imported as against 3,000 exported, so that it may be said that we bred 9,000 fewer than were required. "This would not be a matter calculated to excite any apprehension if it were certain that the Geneva arbitration had definitely ushered in the millennium, but as contingencies may arise to prevent the importation of horses from France and Belgium as well as from Germany, it would be far more satisfactory to know that England still preserved her supremacy as a horse-breeding country and came into the cosmopolitan horse market as a seller rather than as a buyer." It appears that the average price paid for cavalry horses last year was £45, and Mr. Disraeli reminds us that in 1854 the average was £36; the deduction, of course, being that the increase was only 20 per cent. in twenty years. But as the Crimean war had raised the price of cavalry horses from £26-5, at which it stood in 1850, to £36, it would be more accurate to say that they have nearly doubled in price within the last five and twenty years, Mr. Chaplin is particularly alarmed at the price which foreign Governments offer for good English stallions and brood mares. A Prussian agent, for instance, offered £11,500 for Blair Athol, who was only saved to the country by the formation of a company of private gentlemen, who clubbed to buy him for stock purposes for £12,000; while Breadalbane was secured by the Prussian agent for £6,000, being three times the liberal sum offered by the late Lord Ossington. Mr. Chaplin gives some account of the measures by which the German, Austrian, and French Governments help and stimulate the horse-breeders in those countries, by distributing to given local centres animals devoted to the purposes of the breeders, and he declares that 1,700 of the German horses are of English extraction. Mr. Gerard Sturt's reply shows, however, that private enterprise in England is much more stimulated by the competition of these foreign customers, than the market is drained by it, the average height of thorough-bred stock having been in 1700, 14 hands, and in 1875, 15 hands two inches and a half,—and Mr. Sturt asserts that the poorest breed is capable, "if pluckily mated," of producing a horse of great stature and incalculable value.

***

THE Zenith balloon, with the three French *savants*, ascended to a height of more than five miles. Though Sivel and Croce-Spinelli have perished, there is at least one instance on record in which voyagers came back safely from a height of no less than seven miles. In 1804 Gay Lussac attained 23,000 feet—more than four and one-third miles—and brought down, for analysis, air collected at that altitude. In 1808, Andreoli and Brioschi ascended from Padua; at 23,000 feet Brioschi became insensible, but at 29,000 feet—*i.e.*, five and a half miles—Andreoli found that, though he could not use his left arm, he was still able to observe that the balloon was fully inflated. In 1852 Mr. Welsh, of the Kew Observatory, made a series of ascents with Mr. Green, under the auspices of the British Association, and made valuable observations at a maximum height of 22,930 feet. In August 1862, Mr. Glaisher and Mr. Coxwell ascended from Wolverhampton to the vast height of 37,000 feet, or upwards of seven miles. At about five and three-quarter miles Mr. Glaisher laid his arm on the table in the car and suddenly found it powerless. "I dimly saw Mr. Coxwell, and endeavoured to speak, but could not. In an instant intense darkness overcame me. I thought I had been seized with asphyxia." Now M. Tissandier met these symptoms at least three quarters of a mile nearer the earth, and Mr. Glaisher's last observation was made at a point about 3,000 feet above the point at which M. Tissandier had swooned.

***

THE growth of the 88-ton gun is vigorously proceeding, and its immense proportions are becoming more apparent at every stage. The inner tube and some of the strengthening coils have been shrunk together, and the gun in its embryo state now stands half hidden in the new shrinking pits at the Royal Arsenal, Woolwich, waiting until the crane above it is sufficiently strengthened to lift it out, Beside it rests the great double coil which is to encompass the breech, after it has been welded into compactness under the great hammer, and the only remaining portion, the trunnion ring, which is to be shrunk on over all, lies close by. This trunnion ring is believed to be the largest forging ever made, and has cost about £600. The double coil will be welded during the night, in order to avoid any risk of disturbance by spectators. The 40-ton hammer, which was thought fit for anything in the shape of gun-making when it was erected about a year ago, will be only just large enough to deal with this great coil, and should any further advance be made in the size of the Woolwich Infants, a still more powerful hammer will have to be provided. The coil stands about 8ft. high, and when it is placed upright on the anvil there will be very little free play for the hammer.

***

THE *North-German Gazette*, which is supposed to be the organ of Bismarck, has made a strange revelation. It appears that during the German war, and while the German army was still around Paris, Prince Bismarck endeavoured to induce the Pope, through the French Bishops, to persuade the French Government to make peace. The Pope acceded to the request, but totally failed. The incident occurred before the defeat of General Chanzy, and strengthens the conviction of many observers that there was a time when the German chiefs began to doubt, and that had General, Chanzy won a battle or Marshal Bazaine broken out of Metz with even half his army, the whole course of the war might have been different. It is their knowledge that victory was not so easy as Englishmen imagine, which makes Germans so sensitive to rumours of French preparations.

***

DR. GESSNER, German Councillor of Legation, and a distinguished member of the Berlin Foreign Office, has published a dissertation upon maritime law, in which he arrives at the conclusion that the War Code Reforms to be enacted by the coming St. Petersburg Conference will shortly result in analogous changes in naval warfare. Having criticized at length the Springbok case, which occurred in the American Civil War and led to the condemnation of an English ship bound for a neutral harbour on the mere suspicion that her cargo might be destined for the enemy, the author proceeds to represent the existing usages of naval warfare as at variance with the views officially advocated by the German, Russian, Swedish, and Danish Governments. France and Italy, too, he says, on a previous occasion, showed themselves favourable to reform. As to England she certainly profited by the right to seize private property at sea while she was the only Naval Power of any consequence; but now, when other powerful navies are being formed by more States than one, she has as much to lose as to gain by the continuance of former practices. The inexorable logic of history will compel her to give in, even if she succeeds in preventing reform just now.

***

WE are glad to see that Mr. Gladstone was to take a prominent part in the discussion on the English Budget. To facilitate the discussion, Mr. Fawcett had abandoned the motion with respect to local taxation, of which he had given notice, and was to move a resolution of similar purport on the second reading of the Public Works Loans Bill. This course was agreed upon it seems, and the terms of the resolution were settled at a meeting at Lord Granville's. Mr. Gladstone cannot possibly retire from the service of the country at 65 years of age. For the next ten years we must count upon his devotion to public life.

FOREIGN NEWS.

GERMANY.

ONE of the most original of the gifts which the 1st of April brought to Prince Bismarck from his grateful and admiring countrymen was a costly and highly-decorated clothes-brush. With it came the quaint conceit:—"As this brush shall cleanse the garments of His Highness from dust or stain, so may he long continue to keep the German Imperial mantle free from moths and to shake out of it all antiquated dust."

THE new Prussian bill for the suppression of religious orders has been laid before Parliament, accompanied by a long statement of arguments, statistical and explanatory. It is shown from statistical reports, presented in 1872 and 1873, that there are at least 1,100 male and 9,631 female members of sacred orders or congregations in Prussia. These are distributed over 914 settlements. The existence of so large a number of clerical establishments is said to involve "danger" to the State, both by the objects pursued and also by the influence exercised upon the Roman Catholic population. It

is pointed out that most, if not all, of these orders and congregations are under the control and dictation, either of foreign superiors, living in Rome or else in France, or otherwise of Prussian bishops. In all strict and blind "Jesuitical" obedience is exacted. Consequently the moral responsibility of each member is sacrificed, as he or she becomes the unreasoning, irresponsible instrument of his or her superior, known to be hostile to the State. A very small minority of the orders referred to lead a life of passive meditation. Most by far are engaged in active duties—the females teaching and nursing, the males teaching and officiating. The influence exercised by those teaching and devoted to the cure of souls is such that "immediate interference on the part of the State appears indispensable." The right secured to every Prussian of forming associations is not rightly appealed to in defence of the orders, for they are essentially different from all other associations and from the associations to which the constitution refers. The "arguments" go on to show why female teaching and nursing orders should be more leniently dealt with than others, and to disclaim any greed on the part of the State for the property vested in the doomed institutions. Not a penny will be appropriated by the State. The property will, for the present, be employed in maintaining the members, and it is proposed to bring in a separate bill at a later stage definitely disposing of the accumulated funds.

IT is stated that the King's approval having been obtained for the measure lately before the Diet decreeing the suppression of religious orders in Prussia, the Government is preparing a supplementary Bill to be laid before the Imperial Parliament for application to the whole of the empire in the next session. The new Bill lays down rules for the expulsion from non-Prussian countries of members of monastic orders banished from Prussia, or the appointment of fixed residences in such countries. Without such precautions, it is said, members expelled from Prusia might obtain the rights of citizens in other German countries, and would then be free to move about through the whole empire wherever they chose.

THE Prussian correspondent of the *Times* mentions a report, which he says is true, that a man has been arrested who was prowling about Prince Bismarck's residence with a loaded pistol in his pocket. The prisoner, who is a working engineer, has been sent temporarily to a lunatic asylum.

SPAIN.

KING ALPHONSO, accompanied by the Ministers and public authorities, attended a religious service on May 2nd in memory of the Spanish sailors who were killed in the bombardment of Callao on May 2nd, 1866. His Majesty was afterwards present at a service in memory of the persons who lost their lives at the massacre in Madrid in 1808.

THE special correspondent of the *Neue Freie Presse* and of the *Fremdenblatt* of Vienna have enterviewed Don Alfonso and Donna Blanca, or rather Donna Maria, as, according to her own statement, she ought to be called. In spite of the state of seige and military occupation in which the villa was, they found no difficulty in gaining access, for scarcely had they passed, through the railing of the garden in which the villa stands, their cards to the policeman, when down came the secretary and aides-de-camp of Don Alfonso to ask them to step into the house and up into the drawing-room on the first floor, where they found the princely couple. The impression made upon both of them seems to have been very favourable. Don Alfonso looks a very young man, of elegant appearance and refined manners, while Donna Maria looks the very reverse of that savage Amazon she might have been supposed from the accounts current about her. She is slim, fair-haired, and with dark-blue lively eyes. Both speak German, and when the interviewers brought forward their excuses for obtruding, Donna Maria, who, speaking German more fluently, mainly carried on the conversation, interrupted them by saying how glad they were to see representatives of the press and how ready they were to answer any question which they might have to put to them. In talking of the events of the last few days, Don Alfonso characterised them as blunders to be regretted, but which did not disturb his peace or shake his intention of remaining in Gratz. He had lived there before and had longed to be back again in that fine town. He did not wish to take part in the war, and would have preferred by far to keep aloof from politics; but his brother, whose first subject he was, ordered, and he obeyed. He did not want to take Donna Maria with him, but she insisted. Before returning to Austria, Don Alfonso asked whether there was any objection to his doing so, and had received the assurance of the Emperor, who had been always very kind to him, that there was none. The princess laughed at the picture the interviewers drew of her as she lived in the popular mind—on a flying steed, with flying hair and sabre in hand. According to herself, she wore a lady's riding habit, the only military part of her dress being the red cap worn by the Carlists. When the subject of the cruelties laid to their charge came on, the prince brought pen, ink, and paper. Donna Maria declared the story about the woman who had been "feathered" an invention. She did not know what the expression meant. As for the story of the Spanish General Iglesias, who, it was said, had been tied to a horse's tail, it was quite ridiculous. He was taken among the Etat Major, got a horse, was invited to dinner, and was set free on *parole*, which he has faithfully kept up to this day. Don Alfonso's account of the capture of Cuença is that it was taken after three days' storm. The order was given to place sentries before every house that had been deserted by its owners, so that nothing should be stolen, while on leaving the soldiers were visited in order to see whether they had appropriated anythings. He declared it a lie that houses had been set on fire. The Town-hall did take fire, but it could not be found out who had done it. The order was given at once to extinguish the fire, and the troops succeeded in effecting this. Deeds of violence had occurred no doubt, but not more than in any other war—for instance, the Franco-German War. Soldiers and officers were found murdered, men fired from the windows, and of course this led to retaliation, but in general war was conducted on humane principles, prisoners were exchanged, and there was no question of torturing or buchering them wholesale. General Saballs had once fifty volunteers shot. As for the plundering which had been laid to their charge, just the reverse was the case. There were orders to pay for everything, and some districts made quite a good affair by selling provisions to the troops, and it was hard enough at times to obey orders, for often the soldiers had long marches to perform, and people would not sell provisions. During the vintage time the troops passed near the vineyards without touching them. If requisitions were ever made, they were always scrupulously paid for. To give an example how severely discipline was upheld Donna Maria mentioned one case in which a soldier on whom a stolen fowl was found received fifty lashes. Fresh risings of Cabrera partisans against Don Carlos are reported to have occurred in Valencia and Catalonia. The Carlist leader Polo is said to have joined them. The Cabrerist force under General Aguirre is stated to be making progress in the neighbourhood of Vera. There has been some sharp fighting near Valmaseda between General Loma's troops and the Carlists. "Events of considerable gravity," says *Galignani*, "are occurring in Spain. General Loma, marching by the Encartaciones Mountain, is driving the Carlists before him. At the same time a part of the Pretender's troops, badly paid and tired of the war, have risen and made a *pronunciamiento*. General Aguirre has placed himself at their head, and is about to lead them to solicit their pardon. A great battle may be expected to be fought in Navarre. The Government forces have been manœuvring during two months to drive the rebels towards the frontier, and are going to attack them in the hope of putting an end to the war at one blow."

BELGIUM.

IN the sitting of the Brussels Chamber of Representatives on May 4th, Count d'Aspremont-Lynden, Minister for Foreign Affairs, read his reply to the German Note of the 15th of April. The reply says:—"The investigation of the Duchesne incident will be actively carried on, but is not yet terminated. The Berlin Cabinet, taking its stand upon a general view of the question, invites the Government of the King to investigate the manner in which each State ought to fulfil in practice the obligation imposed upon it of preventing its subjects from disturbing the internal peace of its neighbours and from jeopardising good international relations. This question does not only apply to Belgium and Germany, but touches all nations which consider it their duty to watch over the common peace. As the German laws are defective the Imperial Chancellor has invited the Imperial authorities to prepare fresh measures on the subject, and asks Belgium to follow this example. When the Government of the King is informed of the steps adopted in Germany and elsewhere to bring about these changes, it will devote itself to a study of them in their bearing upon the customs and traditions of Belgium, as well as examination to the subject with the most sincere desire to aid in the maintenance of good international relations. Belgium is fully resolved of fulfil her duties as a neutral State in an amicable spirit, and to the extent assigned to them by international law. The Government has never entertained any doubts upon the intentions which actuated the Berlin Cabinet in the communications it made to the other Powers which guaranteed the neutrality of Belgium."

ITALY.

THERE has been a strong debate in the Italian Parliament upon the relations between the Church and State. Signor Laporta, with whom the debate originated, found fault with the ecclesiastical policy of the Government, and declared that the superior clergy were violating the laws with impunity. This statement was denied by the Minister of Public Worship, who promised to bring in a Bill for the administration of Church property. Signor Ginghetti the Premier, also defended the Government. Signor Guerrieri Gonzaga read passages from Mr. Gladstone's "Vaticanism," and thanked Mr. Gladstone for what he had said in favour of Italy.

THE Pope is again reported to be in a very weak state, and requiring medical advice. On May 6th His Holiness received more than 1,000 French pilgrims. In reply to an address, which assured him that France wished to atone for the past by a greater affection, the Pope said:—How can I help counting upon France? It has given me a thousand proofs of love. The more we are threatened, the more it is necessary to show that love by all possible means. Pius V. had armies and fleets which fought against the Mahomedans, and he made pilgrimages, and when Colonna said to him, 'Rest and preserve a life which is precious,' Pius refused to rest and he saw the Turk defeated. We are without armies and fleets. The Governments which reign are deaf to our voice. I myself am a prisoner in this palace, deprived of the consolation of going out to bathe the holy stairs with my tears, but in spirit I am with you. Our arms are prayer and an exemplary life. Let us bow the head; let us adore the Divine decrees; let us implore the celestial benedictions for a threatened France and world!"

THE *Unità Cattolica* has a leading article full of bitter comment upon the installation of the Prince of Wales as Grand Master of the Freemasons. It identifies Anglican Protestantism with Masonry, and says that the two must stand or fall together.

GARIBALDI'S son Menotti will go, it is said, to London to raise funds. Robbers and murderers are busy as usual in and about Rome. The church or chapel near the Mamertine prison has been robbed, and the miraculous image of the Virgin despoiled. No one cares to make excursions in the vicinity of the Capitol without

revolvers and companions. The Cardinal Patriarch of Verica has been received by the Pope. He is old and infirm, but lively and cheerful. He was attended by Monsignor Nardi, auditor of the Rota, with whom he is on a visit. Nardi, it may be remembered, wrote lately a book in contradiction of Mr. Gladstone's "Expostulation." The Italian Senate has modified the new conscription law, and removed the clause imposing military service on Catholic clergymen. This course has been adopted in consequence of the strong appeal to the King made by Pius IX.

TURKEY.

THE money article of the *Levant Herald*, under date April 21st, has some observations upon one or two points interesting to English investors. There has been long delay in publishing the Budget, and this has arisen, we are told, from an anxious desire to scrutinise and assess justly every item of account. Several elements of difficulty have made the work slow, and have after all made the Budget estimate only a rough guess. There is, it appears, great mortality among the sheep, which renders much reserve necessary in estimating the yield of the sheep tax, upon which one of the many Turkish loans is secured. There are also difficulties connected with the floating debt interest, and with the debased currency, that must be very difficult to get at the bottom of. Other taxes would appear to be also somewhat hard to gauge, if we may judge from the following observations:—There was once a manufacturing population in Turkey, but it has died out. There is an agricultural population in Turkey, but it also is dying out. No mystery attaches to these results. They follow necessarily from want of freedom and want of security. Freedom and security are necessary in order to make profits. Population lives upon profits; it increases when profits are large, dwindles when they are small, dies out when there are none. The agricultural population, under the blighting influence of the tithe system, must die out. The Government claims of the agriculturist, besides other taxes, 12½ per cent upon the gross yield of his land. Now, an income tax of 12½ per cent—2*s.* 6*d.* in the pound—would be deemed onerous. But this tithe is not an income tax; it is levied upon gross returns. These latter are made up of three items—rent, labour, and profit. The fiscal system, as applied to agriculture, cuts down agricultural profits to so low a level that the agricultural population cannot increase; and when it is remembered there are other taxes besides tithe, and that the farmer receives nothing which in other countries would be reckoned as advantages for all he pays, it follows logically that agriculture makes no profit, and must, in the natural order of things, dwindle away. The immediate manifestations of the drain upon the vital powers of the population may, of course, be disguised for a while by resorting to usury, but that action is no less inexorable in the end, and the smallest accident precipitates the fatal culmination. Witness the famine in Asia Minor.

HOME NEWS.

IT is hard to read without impatience the accounts in the newspapers of the installation of the Prince of Wales as "Grand Master of the Freemasons." Freemasonry is at the present day the most purposeless, unmeaning, and fruitless of all associations into which men can enter, being, in fact, nothing more than frippery tempered by feasting and self-adulation. Nobody can understand its ends any more than its "mysteries"; but all that outsiders are allowed to know of it breeds a vehement suspicion that both are merely nonsensical. If its purposes are moral or religious, there is no need for secrecy, but the contrary; if the relief of distress, it is inferior to any benefit society extant; if anything more tremendous, and hitherto unknown, then it might be challenged in its very existence. But in reality it has no purpose in England, and this, which is made its excuse, is in fact its condemnation. It may be very well for private individuals to covet the putting on of apparel and the laudatory speeches in which distinction in the craft appears to consist; but a Prince who will one day be called upon to reign over our Empire would do well to hold himself aloof from such vanities.

More light has been shed on the important subjects of desertion and recruiting. Z in the *Times* says that he has been an adjutant, and that his experience and much inquiry convince him that many men desert simply because they are in debt. Four "drunks" in a twelve month cause a soldier to be fined ten shillings, and often a man is put under stoppage to a serious amount in order to get a new cap, pair of boots, pair of trousers, &c., especially in the cavalry and horse artillery. Having nothing but one penny a-day to look forward to for perhaps months, the recruit becomes desperate, and, in order to clear off old scores, deserts, and enters another regiment. He does not wish to quit the service, but merely to perform an act of irregular bankruptcy. In the *Standard*, Mr. Alsager Hay Hill points out that were Government to act like private employers of labour, and publish freely details as to the class of men wanted, &c., recruiting would be much facilitated. The suggestion is specious, but the fear is that were publicity given to a detailed statement to the requirements of the Government and the terms offered, we should get even fewer and worse recruits than at presents. The public are informed that recruits for infantry will obtain Lord Cardwell's famous "clear shilling." Thinking that he will receive that sum as pocket-money, and over above all necessary expenses, Johnny Raw enlists. He soon finds out, however, that, even if he keeps sober, the clear shilling after compulsory deductions dwindles down to sixpence. Naturally he considers that he has been swindled, and warns his friends against such "a do." A soldier should be provided by the State with everything necessary in the way of clothes and food, and the pay should begin clear of every deduction which a reasonably careful man can avoid. There would then be no misunderstanding, no complaints of deceit, and the intending recruit, knowing exactly what he would get, would enter into the contract with his eyes open.

LORD CALTHORPE offers to subscribe £100 per annum for five years if 100 other gentlemen will do the same, to form a fund with which to buy stallions and place them in various parts of Great Britian and Ireland at very low charges. The money, his lordship suggested, should be a free gift. Lord Lucan and Mr. H. G. Sturt state they are willing to join Lord Calthorpe in his undertaking.

THE Admiralty, having now determined to send out the *Valorous* steam-frigate to accompany the *Alert* and *Discovery* in the Arctic expedition as far as Disco Island for the conveyance of additional stores, has acceded to the request of the council of the Royal Society that on her homeward voyage she should be employed in carrying out such a physical and biological exploration of the sourthern part of Baffin's Bay and the North Atlantic between Cape Farewell and the British Isles, as may serve to complete the work which is being so successfully prosecuted in other seas by the *Challenger*. Dr. J. Gwyn Jeffreys, F.R.S., who was the valued coadjutor of Dr. Carpenter and Professor Wyville Thomson in the *Porcupine* expeditions, which first demonstrated the feasibility and scientific importance of this kind of exploration, has volunteered for the service, and he will take with him as his assistant Mr. P. Herbert Carpenter, B.A., who did good work when accompanying his father in the *Porcupine*, and who will especially take charge of physical inquiries.

ON May 4th, the *Bessemer* steamer left Dover Harbour at high water to make a trip of a private nature to Calais. The voyage was successfully accomplished in one hour and forty minutes by an average of twelve knots an hour. She returned to Dover in the afternoon. Her funnels will be lengthened about six feet, and this alteration will considerably quicken the draught of her fires and add to her speed.

THE *Standard* states that a scandalous disturbance occurred at the funeral of the late Baron Pigott on May 5th at Sherfied Churchyard, near Basingstoke. The baron had been dead more than a week, but it was not till the day before the funeral that his two sons, who are members of the sect known as the "Plymouth Brethren," intimated that they did not wish the Church service to be used. Mr. Osborne Morgan's opinion was at once telegraphed for, and he replied that the clergyman was bound to read the service, but that, if interfered with, he *might* refuse to continue it, but could not stop the burying. The clergyman went early to the churchyard, and exhorted the crowds to seemly and decent behaviour. He then met the funeral at the gate, and proceeded with the words, "I am the Resurrection and the Life," when some of the mourners shouted to him to stop and others to go on. Meanwhile the bearers, commanded by one of the baron's sons, pushed along and threw the coffin into the grave near the gate. The clergyman shut his book and walked quietly away. The churchwardens have served a notice on the solicitor for the two sons, stating that they hold them legally responsible for stopping the rector in the performance of his duty.

MR. ALBERT GRANT has been examined before the Foreign Loans Committee respecting the Paraguayan Loan. He said he was a member of the Syndicate for both loans. On the first, in 1871, he was to have £5,000 out of the first profit, and 25 per cent on the balance, or 2½ to 2¾ of the loan net. Between November 21st and December 2nd he bought £300,000 Paraguayan stock. His profit was about £28,000. The total profit of the Syndicate was about £100,000. The second loan resulted in a loss. Mr. Grant was cross-examined as to the practice of certifying that a loan has been unconditionally allotted when a large portion has been bought back by agents of the Government. He said he saw no objection to this. He suspected that with the loans for the Russian Government frequently in our market, the whole was not placed on the day of its issue. Mr. Lionel Cohen, a member of the Committee of the Stock Exchange, was examined on the general question. He expressed doubts whether the evils out of which the Committee originated could be reached by legislation, but he thought that for a long time the proceedings of that Committee would be productive of a large amount of benefit. The objects of the Committee had been indirectly secured by the publicity that had been given to its investigations, and the extra caution that would thereby be induced in the public.

THE European Assurance Arbitration Bill has passed the Committee of the House of Lords. Its object, as explained by Sir Edmund Beckett, Q.C., on behalf of the promoters, is to provide an appeal to Chancery in the case of conflicting decisions, such as those of Lords Westbury and Romilly, and to authorize the Lord Chancellor to appoint, in default of a past or present judge willing to accept the office, a barrister of fifteen years' standing as arbitrator. The learned counsel said he could not better enforce his argument in favour of the bill than by comparing the costs in the Albert Arbitration, which was on all fours with this, with the costs and expenses in the Court of Chancery. The Albert Company was in Chancery for nineteen months, and the costs exceeded £70,000, the amount realized being trivial. The Albert Arbitration, now practically at an end, had been in operation nearly four years, and the total amount of costs had only been £66,000, while the sum realized was was £390,000. Lord Justice James, when the Albert case was before him in Chancery, computed that it would have taken fifteen years to finish it in Chancery, and if that were so it was reasonable to suppose that the European would take at least fifty. As an illustration of the immensity of the work, Sir Edmund Beckett mentioned an instance in one of the absorbed companies in which the provisional liquidators under the Court of Chancery had handed over to

the arbitrator account books and papers weighing thirty tons. But besides the public decisions of the arbitrator, there had been an enormous amount of judicial work done, and the costs, up to the present time, were clearly shown to be about one-tenth what they would have been in Chancery.

MR. MOODY, at one of his great meetings the other night, read John's explanation that he was only a voice—one sent to prepare the way. "John was only the messenger," said Mr. Moody; "he was simply Mr. Nobody. He did not want the people to run after him, but to take his message. We want to get away from the messengers. When the telegraph boy comes to our door," continued Mr. Moody in his rapid way, "we don't trouble ourselves about him. We don't say, Who are you? Where do you come from? What sort of boy are you? *We take the message*, and all our interest is in it. Never mind the boy. Never mind the messenger. What is the message God has for us from his word to-night?—that's the point." He then spoke from the words "There was not room for Him;" and from the rejection of Christ by the Jews and the rejection of Him in the present day, made a powerful appeal to make room for Christ in heart, business, and home.

THE mad story which we quoted last week from the *World*, about the largest prisoner at Dartmoor being both a Tichborne and an Orton, hardly wanted refutation; but "Hard Facts," who believes that the story was only clever enough to be told to the "marines" and the readers of the *Englishman*, takes the trouble to knock it to pieces much in the same way that the claimant's own story has been shattered. Roger's father, at the time referred to, was not "a baronet," and was not "elderly." He became a baronet, it is true, four-and-twenty years afterwards, but even then he did not become "Sir Roger Tichborne;" for his name was James. There never was, in fact, a "Sir Roger Tichborne," unless the unhappy nobleman now plying the sewing-machine at Dartmoor is identical, as he says he he is, with young Mr. Roger who disappeared with the *Bella* in 1854. Further, Roger's father did not reside at Bath. In the year 1829, and for some years before and after that date, he was living with his wife and family in the Rue de la Ferme in Paris, where his son Roger was born. So much for the Tichborne phase of the story; but the Orton phase is even more difficult to reconcile with facts. Of course, if the supposed gay baronet's frail cook of the name of Orton was not Mrs. Orton, the mother of Arthur, the little romance necessarily loses half its significance; and as, in fact, there were no female members of the Wapping family bearing the name of Orton except Arthur's sisters, who were then young children, it may fairly be asked, who else could she possibly have been? But Mrs. Orton, at the time of the real Roger Tichborne's birth, had been settled down in High Street, Wapping, for many years as the wife of a respectable butcher.

THE anniversary banquet of the Royal Academy took place at Burlington House on May 1st, Sir Francis Grant, the president, in the chair. Amongst the guests were the Prince of Wales, the Duke of Cambridge, Mr. Disraeli, Mr. Ward Hunt, and the Archbishop of Canterbury. The Duke of Cambridge, in responding to the toast of the Army, said it appeared to him that artists had a very great affection for the military service, which gave them so many opportunities of delineating gallant achievements. He thought that one of the best pictures in the room in which he was speaking was one entitled the "Last Roll Call," and a young lady had again distinguished herself by painting a military picture—"The Square of the 28th Regiment at the Battle of Quatre Bras." There was also the picture of a foreign talented artist in another room, delineating an historic "Charge at Waterloo." Mr. Ward Hunt, in responding for the Navy, said that last year he ventured to complain of what he called the slight offered to the navy by the Academicians in omitting to depict the ships of her Majesty's fleet; but Sir Francis Grant had this year called his attention to the picture of the *Devastation*. "Well, I must say (remarked Mr. Hunt), the artist has grappled most boldly with the subject. He has selected for his brush about the ugliest ship in the fleet." Mr. Hunt added that he thought the artist had every reason to be proud of his performance, and he ventured to thank him for his work, which he hoped would immortalise his name.

The Archbishop of Canterbury, responding to the toast of the visitors, spoke of the growth of taste among our skilled workmen. Much of this, he said, was owing to our schools of design. All honour to the memory of the illustrious Prince whose example and energy, more than any other cause, contributed to the general establishment through the country of these centres of enlightenment and good taste. But he supposed no one would deny that the Royal Academy was the chief motive power in this general revival of the love and knowledge of the noble and beautiful. The toast of "The Interest of Science and Literature" was acknowledged by Sir John Lubbock and Mr. Matthew Arnold; and the Lord Mayor responded to the toast of "The Health of Lord Mayor and the Ancient Corporation of the City of London."

THE exhibition is very gratifying and decidedly above the average in merit, though there are 200 fewer pictures in it than last year. It is not what the pictures are, but what people say about them, that every one wants to know. After hearing what was said about Miss Thompson's picture last year, it was not necessary—it was perhaps better not—to see it. Her picture this year—soldiers again—"28th Regiment at Quatre Bras"—is well spoken of, without excessive praise. There is no talk about any one picture this year. The great masters hardly sustain their places, and the rising artists share in honourable mention. The following is a fair grouping of the principal pictures:—

Mr. Millais, R.A., at once meets the eye with perhaps the master landscape of the year; indeed, "The Fringe of the Moor" will rank as his most faithful study of nature, not excepting "Chill October" of a bygone season. Another chief centre is "The Sculpture Gallery," by Mr. Alma Tadema. In Gallery II., "The Bearers of the Burden," by Mr. Broughton; "The Barber's Prodigy," by Mr. Burgess; "A Minuet," by Mr. Val Prinsep; "Sain et Sauf," by Marcus Stone; "The Jolly Postboys," by Mr. Marks, A.R.A.; and a landscape, grand in conception, "The Heavens declare the Glory of God," by Mr. Raven; all, especially the last, receive favourable notice. In the Great Gallery, "Rachel and her Flock," by Mr. Goodall, R.A., is counted as among the few gold nuggets. "The Early Post," by Mr. Sant, R.A.; "The School Revisited," by Mr. Leslie, A.R.A.; "The Crown of Love," by Mr. Millais, R.A.—a young lover carrying a fair Princess at her father's order up a mountain—and "The Golden Age," by Mr. Poynter, A.R.A., are noted as deserving special mention. Perhaps the most remarkable portrait of the year is that of "Sir Moses Montefiore," by Mr. Richmond, R.A., also the "Portrait in the Costume of the Sixteenth Century," by Mr. Pettie, R.A.; "A Venetian Girl," by Mr. Leighton, R.A.; "Sandy Cove," by Mr. Cooke, R.A.; and "The Samphire Gatherer," by Mr. Hook, R.A., are conspicuous in the next galleries. Further on hang in conspicuous centres, and as contrasts on opposite walls, two memorable pictures, "Julian the Apostate presiding at a Conference of Sectarians," by Mr. Armitage, R.A., and a "Babylonian Marriage-Market," by Mr. Long. The "High and Low Church" picture, which Mr. Watts, R.A., has dedicated "to all the Churches," is in Gallery VII. Then are mentioned "Turner's Calais Pier—etching in two states of the plate," by Mr. Seymour Haden; "Outside the Harbour," by Mr. Henry Moore; "Summer Days for Me," by Mr. Alfred Hunt; and Mr. Brett's "Channel Islands."

MR. GRANT-DUFF ON INDIA.

THE *Contemporary Review* for May contains a first instalment of Mr. Grant Duff's Notes on his Indian Journey:—

Dec. 3.—*En route* to Ahmedabad.—Well, I have had my first glimpse of Bombay—what is the net result? I have had various conversations with the Governor and other leading persons about public affairs. I have re-seen a few people whom I had previously seen at the India Office, and with whom I was glad to improve my acquaintance. I have met a number of new faces—native and European; amongst others, the Hindoo, the Mahometan, and the Parsee members of the Legislative Council, Sir Jamsetjee Jeejeebhoy, Mr. Munguldass Nuthoobhoy, &c. &c. I have learned the leading localities of Bombay. Maps are all very well, but if one has ever again, as I have had before now, to read papers which turned upon these, it is something to know the nature of the ground by personal experience. I have seen a great Oriental city under British management, and been able to compare it with Constantinople or Smyrna. I have looked at a considerable number of native manufactured goods, especially textile fabrics. I have seen the outside of a Jain, a Hindoo, and a Parsee temple, so curiously unlike one's ideas of ecclesiastical edifices, which have hitherto always been connected with Gothic, or Classical, or Saracenic, or Russo-Byzantine architecture. I have paid a visit, with their curator, to the Victoria Gardens, which have been of late years sadly neglected, but contain a great many curious things. Here, *inter alia*, I saw the Banian, the Shaddock, the Custard Apple, and its near relative the Soursop, close to the nettle, which produces the Rheea fibre, which furnishes us with tapioca, and the Baobab. I have seen Dr. Wilson, of the Free Church, whose acquaintance I made some years ago in London, and who is well known as a mine of information about this part of Asia. His villa commands a most exquisite view of the open sea, of the harbour, and of the mountains on the mainland—a view which has been compared to some on the Bay of Naples, but, perhaps, not very happily. It would, however, be difficult to overpraise it.

Dec. 9.—We were up long before day, and off to see the Colaba observatory, which is chiefly important for its magnetic and meteorological work. Mr. Chambers, its distinguished head, showed us over it; and here, too, we saw the beautiful planet which had given us so much pleasure on the Red Sea and the Indian Ocean, shorn of her beauties, and like a small black pea on the disc of the sun.

I wish I could give Bombay a fortnight, and be allowed to pick Dr. Wilson's brains all the time; but the "limitations of existence" say *no* to that.

* * * * *

And now, before we turn our faces towards Northern India, is there anything which has struck me much, and which I have not noted?

Female Beauty.—I have seen none, unless a monkey of some ten summers, who begged from us at Ahmedabad, might claim to be an exception. Many admirable figures there are, no doubt. The peasant women, walking into Surat, with loads on their heads, and undraped more than half way up the leg, were certainly very finely formed. Further north, we found them wearing a hideous petticoat.

The Bombay Markets.—An admirable building, and most instructive, if one went there, as I must try to do when I return, with some one who knows well the various products of the country—fruit, vegetables, and seeds. We bought a large jar of splendid dates for a rupee.

Types of Character.—Three young civilians, of from four to six years' standing, in different places, and having had different trainings. Are these the men with reference to whom some persons tell us that the competitive system has been a failure? If so, I *should* like to know what result they would call a success!

Bombay Cathedral.—Part of it the oldest, or about the oldest, ecclesiastical building in India, and very ugly—the modern additions very much better. The service was choral, but the singing might easily have been improved. It was curious to see the punkah for the first time as an article of church furniture.

Life at a Station with few Europeans.—The game of Badminton in the early morning—the keen interest of everyone in his own

work—the anxious watching for the arrival of the English mail—the young civilian, landed just a fortnight, and starting for "the districts," to see the kind of work he is hereafter to do.

L—— will say he has not had enough of birds, beasts, &c.; so I will note having seen, at Ahmedabad, the beautiful Sarus crane—the creature which is said to die if its mate is killed, and which is accordingly spared by all but the most brutal. Of jackals we have heard many. At Surat they held a council close by, while we were at dinner, and I am sure all but resolved to invite themselves in. The little trotting bullocks, like Shetland ponies, and going about the same pace in a light cart, at that place; the Mysore bullocks, with erect, antelope-looking horns, in the streets of Bombay; the great buffaloes, wallowing as they do in the Pontine Marshes; a few fireflies at Matheran; the coppersmith bird, which makes a noise like hammering metal, have been, in addition to others, mentioned in their proper place—the live creatures, other than human, which have struck me most.

INDIAN AFFAIRS.

INDIAN princes are not to be envied—at least as long as Lord Northbrook is at the one end and Lord Salisbury at the other end of the Anglo-Indian telegraph line. Lord Northbrook heard that the state of Baroda was badly governed, or not governed in accordance with the views entertained in England at the present moment. He sent a Commission to inquire into the matter, and that Commission's report was to the effect that, though affairs were not so bad as had been represented, they might be better. Thereupon the Viceroy issued a proclamation warning the Guicowar that if he did not accomplish sensible improvements in eighteen months' time—*i.e.*, by the end of 1875—he would be deposed. This proclamation was admirably calculated to strengthen the Guicowar's hands at a moment when he required all his *prestige* and authority to cut away the abuses which undoubtedly existed in his dominions, as they more or less exist in every native State. The Guicowar was naturally much gratified by the share which the Resident, Colonel Phayre, took in causing the Commission to be appointed, and showed, as most people would have showed under such circumstances, his gratitude to the man who had brought this wholesome correction upon him. He nevertheless did make some attempts to introduce a better system of government, and it is admitted that matters did somewhat improve. Colonel Phayre was, we may assume, honestly anxious to co-operate in the good work, but he not only had to contend with the Guicowar's feelings towards him, but was singularly wanting in tact and calculation. He was evidently convinced that no reform was to be expected, and of course was inundated with informers, and became the central point round which rallied all discontented spirits. In short, to all appearance he identified himself with the Guicowar's foes. Ere many months had elapsed an attempt was made to poison the Resident, and it was immediately assumed that the Guicowar had instigated the crime. It is possible to conceive that the Guicowar might take this means of slaking his thirst for vengeance, but otherwise he had little or nothing to gain by his enemy's death. On the other hand, it is perfectly conceivable that one of the Guicowar's numerous foes himself caused the attempt to be made in the hope of implicating his sovereign. Such a manœuvre was quite in accordance with Indian nature, and presented fair chances of success. At all events, the scheme, if scheme there were, succeeded. The Guicowar was suspended, and a Commission appointed to inquire into his guilt. This Commission could not agree upon a verdict, and the Guicowar is therefore entitled to be considered innocent. Nevertheless though the charge of poisoning has been distinctly abandoned, the Guicowar has been deposed on the ground of his notorious misconduct, his gross mismanagement, and his incapacity to carry out necessary reforms, and, in addition, the opinion of the Indian Government "that his restoration would be detri-"mental to the people of Baroda, and inconsistent with the mainte-"nance of the relations proper to subsist between the Indian "Government and the State of Baroda." This is fine writing, and the adjectives are imposing, but it conveys to our mind no other idea than that the Guicowar has been treated with grave injustice. His tenure of probation had not elapsed, and instead of being shortened should have been lengthened on account of his suspension. His conduct had been better, it was acknowledged by Sir Lewis Pelly, since he received his warning, and there was therefore no ground for departing from the original arrangement. It is obvious, therefore, that had not some one attempted to poison Colonel Phayre, the Guicowar would have been left in possession of his throne till the end of 1875. Indeed, no one will believe that "his "notorious misconduct, his gross mismanagement, and his incapacity "to carry out necessary reform," had really anything to do with his deposition. The real cause of that violent act was that, having on insufficient grounds treated him as a convicted felon, Lord Northbrook felt that either he or the Guicowar must be removed from political life. Lord Northbrook, having probably only acted as the mouthpiece of Lord Salisbury, it was evident that it was the Guicowar who must go to the wall. Therefore, because the Viceroy blundered in the most clumsy way conceivable, one injustice must be set right by another. The Anglo-Indian representative of the firm of Baring and Co. has not, however, heard the last of the business personally, and he will have the satisfaction of knowing that he has left a fine crop of troubles as a legacy to his successors. All faith in English justice will quit the minds of Indian princes, not one of whom will feel safe on his throne. No native State is really well governed according to our ideas, witnesses can be obtained by the Government for asking, who will prove anything which is believed is wished to be proved; and when everything fails a discontented subject can always poison a Resident and throw the blame on his Sovereign.—*Vanity Fair.*

MR. GLADSTONE AND AMERICA.

THE following letter from Mr. Gladstone, declining an invitation to the recent banquet at Lexington, appears in the American papers:—

London, March 5, 1875.

Gentlemen,—I have had the honour to receive the letter in which you convey to me a very warm and courteous invitation to attend the banquet which it is proposed to hold at Lexington in commemoration of the attainment of the independence of the United States of America. The circumstances of the war that yielded that result, the principles it illustrates, and the remarkable power and characters of the principal men who took part, whether as soldiers or civilians, in the struggle have always invested it with a peculiar interest in my eyes, quite independently of the intimate concern of this country in the events themselves. On account of these features, that war and its accompaniments seem to me to constitute one of the most instructive chapters of modern history, and I have repeatedly recommended them to younger men as subjects of especial study. With these views I need not say how far I am from regarding the approaching celebration with indifference. It is entirely beyond my power to cross the sea, even with the present admirable communication, for the purpose of attendance. The present time happens to be for me, independently of my attendance in Parliament, one of very urgent occupations which I am not at liberty to put aside. But I earnestly hope, and I cannot doubt, that the celebration will be worthy of the occasion. In a retrospective view of the eventful period, my countrymen can now contemplate its incidents with impartiality. I do not think they should severely blame their ancestors, whose struggle to maintain the unity of the British Empire is one that must, I think, after the late great war of the North and South, be viewed in America with some sympathy and indulgence. We can hardly be expected to rate very highly the motives of those other Powers who threw their weight into the other scale, and who so sensibly contributed towards accelerating, if not, indeed, towards determining, the issue of the war. Yet, for one, I can most truly say, that whatever the motives, and however painful the process, they, while seeking to do an injury, conferred upon us a great benefit by releasing us from efforts, the continuation of which would have been an unmixed evil. As regards the fathers of the American Constitution themselves, I believe we can and do now contemplate their great qualities and achievements with an admiration as pure as that of American citizens themselves, and can rejoice no less heartily that in the counsels of Providence they were made the instruments of a purpose most beneficial to the world. The circumstances under which the United States began their national existence, and their unexampled rapidity of advance in wealth and population, enterprise and power, have imposed on their people an enormous responsibility. They will be tried, as we shall, at the bar of history, but on a greater scale. They will be compared with the men, not only of other countries, but of other times. They cannot escape from the liabilities and burdens which their greatness imposes on them. No one desires more fervently than I do that they may be enabled to realise the highest hopes and anticipations that belong to their great position in the family of man.—I have the honour to be, gentlemen, your obliged and faithful servant,

W. E. GLADSTONE.

AMONGST the deaths recorded this week are:—General J. Briggs, Indian Army; Major-General J. C. Brooke; Major C. Murray, late 16th Regt.; Major P. M. McKeller, late R.M.; Capt. D. Littlejohn, late 48th M.N.I., H. W. Farley, late Indian Navy; Lady Paget; Lady Hoste; and Professor Ewald.

SHIPPING.

LIST of persons who have engaged passages by the Peninsular and Oriental Company's Steamers during May.

May 6, vid Southampton, per Indus; May 17 vid Brindisi.

SOUTHAMPTON TO CALCUTTA—Miss A. C. Matthews, and Col. A. Carnegy.
SOUTHAMPTON TO MADRAS—Lieut.-Col. Hudlestone, Paymaster Patterson, and Mr. H. B. White.
SOUTHAMPTON TO BOMBAY—Mr. P. Carnegy, and Col. A. Carnegy.
BRINDISI TO BOMBAY—Mr. G. Macfie.
VENICE TO BOMBAY—Sir A. Arbuthnot, Mr. T. Parsons, and Mr. C. D. Maclean.
SOUTHAMPTON TO GALLE—Mr. A. A. Young Adams.
VENICE TO GALLE—Mr. Bilbrough.
SOUTHAMPTON TO HONG-KONG—Rev. J. Walker.
SOUTHAMPTON TO YOKOHAMA—Rev. Mr. and Mrs. H. Maundrell.
VENICE TO SHANGHAI—Mr. T. Smith.
SOUTHAMPTON TO PENANG—Mrs. McGilliviary.
SOUTHAMPTON TO SINGAPORE—Mr. Bamfylde.

May 13, vid Southampton, per Cathay; May 24, vid Brindisi.

SOUTHAMPTON TO BOMBAY—Surg. A. Adams, Lieut. Adye, and Mrs. Mullaby.
BRINDISI TO BOMBAY—Capt. Daniell, and Lieut. D. M. K. Barr.

and can carry no authority whatever over any ground or building at present used by our Resident.

THE WEEK.

ENGLISH residents in Burmah continue to express fears that Sir Douglas Forsyth will be imposed upon by the King. The Mandalay correspondent of a local paper believes that "the actual idea of the Burmese Government is to talk Sir Douglas away; and when all the forces which have been brought over from Madras are all gone back, to try then a grand raid simultaneously on Thayetmyo and Tounghoo, and descend by steamers or by boats to Rangoon, having previously, of course, cut the telegraph wires. The King has been—and is daily being—assured by a vast number of priests and *loobyo-goungs*, all residing in various parts of British Burmah, that as soon as his troops come down, the whole of the Talines will rise on his side to a man, when the English, seeing the unanimity and invincibility of the movement, will go away in their ships and never afterwards face the trouble, expense, and great uncertainty of a fresh war to attempt regaining such an unwilling people as the Burmese." This style of writing is manifestly absurd. The King of Ava's well-known anxiety to conclude an alliance with France, Russia, Italy, or any other Foreign Power, is alone sufficient to show that he knows and dreads the power of Great Britain, and recognises his utter inability to cope single-handed with us. We learn, from the same source, that "the King has appointed several of his favourites to military commands at various points near the English frontier. But they will proceed to their new head-quarters only after the departure of Sir Douglas from among us." Most of these warriors, however, never saw a musket fired in their lives. Italian engineers and French officers are busy surveying at Menhla. The only really suspicious feature in the case is the fact of a Chinese embassy having been despatched to Mandalay; but this may be connected with the enquiry into the murder of Mr. Margary. If, however, the treacherous Chinese think they see in the Burmese embroglio an opportunity of attacking us at a weak point, they may urge the King of Ava on to his sure destruction by promising him the support of a few thousand "braves." Meanwhile, there can be no doubt that the cultivators of Upper Burmah scent the battle from afar, and are generally withholding payment of revenue to the King, so that he will have good reason to be in very bad humour when Sir Douglas Forsyth presents himself.

A WRITER in the *Rangoon Gazette* is of opinion that the unpleasantness of our present relations with Burmah is in a great measure due to the "weakness" and "abject spirit" of some of our Residents at Mandalay. He thinks that if our representatives had been instructed, in the first instance, to maintain a dignified position at the Court, instead of taking off their boots and squatting in the royal presence on an unswept floor, the King would have been more impressed with a sense of the power and dignity of the nation they represented. Her Majesty's officers should not have been obliged to preface their petitions with the degrading formula, "bowing as humble slaves to the Royal foot of your Majesty." It is small wonder, forsooth, that the ignorant barbarian should have learned to despise us and laugh at our diplomatic remonstrances. In uncovering their heads as well as their feet, the British envoys went far beyond the requirements of etiquette, such being "neither Burman nor English custom." It is said that old boats, torpedoes, and iron chains are to be laid across the channel of the Irrawaddy, below Menhla, after the departure of Sir Douglas Forsyth. In fact, to sum up the opinions of most of our countrymen in Burmah, the King of Ava means mischief, but is not quite prepared for war at present, and is therefore anxious to gain the necessary time by appearing to meet all Sir Douglas Forsyth's proposals in a friendly spirit, although determined to renew his warlike preparations immediately our envoy retraces his footsteps.

LEE SEH TAHEE, the Chinese chief who attempted to stop the progress of Major Sladen's party in Bhamo some years ago, has been on a visit to the King of Burmah, who received him with great *éclat*. He was conveyed, with about a hundred followers, from Bhamo in the King's steamer and was attended from the landing-place to the palace by thirty gold umbrellas. He is described as "a short stout man of dark complexion and forbidding-looking countenance. He is heavy made, and his low forehead makes him look something like one of the well-fed convicts of some of the Burman jails. His mother is still in Bhamo and is said to be a pensioner of the King's." The object of Lee Seh Tahee's visit to Mandalay was, we believe, connected with the refugee Panthays whom Captain Cooke protected. There is a report that he has offered to supply the King with five thousand men, and that he counsels him to prevent any British expedition passing through Burmah to China.

GOPALRAO, or Sayajeerao, is now Gaekwar of Baroda, the installation ceremony having taken place on the 27th May, with all the state befitting the occasion. At six o'clock in the morning the troops under Colonel Thompson assembled in front of the Residency and thence marched to the city, where they lined the principal thoroughfares. At eight o'clock Sir Richard Meade, accompanied by the officers of the garrison drove to Laripoora Gate where the company dismounted and proceeded on elephants gorgeously caparisoned to the palace, After Jumnabaee in private had adopted Gopalrao, Sir Richard Meade met him at the entrance to the private temple, near the Durbar-room, and conducted him to the *guddee*, where the Sirdars and others present congratulated the new Gaekwar and vowed fealty to him. Tarabaee, Khunderao's daughter, was seated on the left of the Gaekwar. Dresses in honour of the occasion were given to the Gaekwar by Sir R. Meade, after which the former presented dresses of honour to the military officers. Sir Richard Meade then took the Gaekwar to Jumnabaee, and exhorted him to remember his allegiance to the British Government and his duty to give good government to his subjects. Addressing the assemblage, Sir Richard Meade said: "Gentlemen, with the concurrence of the British Government, H.H. the Maharanee Jumnabaee has adopted this young prince (putting his arm round the little boy's neck and standing besides him), Sayajee Rao. The Viceroy and Governor-General of India in Council has also vested His Highness with the sovereignty of the Baroda State. It is my duty now to proclaim, this." Then turning to the new Gaekwar, Sir Richard Meade saluting him with a low salaam, said "Maharajah Sahib." The British artillery immediately fired a salute of twenty-one guns, and a similar salute was fired by the gold and silver guns of the Gaekwar. Turning to the Sirdars assembled, Sir Richard said: "You must pay your allegiance to this prince who has been adopted by H.H. the Maharanee Jumnabaee with the concurrence of the British Government, and has been made sovereign of the Baroda State by order of the Viceroy." Sayajee in the presence of Jumnabaee, was addressed as follows: "Your Highness, there is no use in my making a speech to you, but there are three things I wish to impress on you; first, remember that you owe a duty to the British Government who have selected you to be sovereign of the Baroda State; secondly, try to perform your duty as loyally as you can to the British Government and to the large State of Baroda; thirdly, remember your duty to Her Highness the Maharanee Jumnabaee; she is now your mother, and you must look up to her as such."

On the morning of the 28th the Gaekwar visited the temples in the city and offered thanksgivings. In the evening there was a grand Durbar at the Residency, at which Sir Richard Meade, on behalf of the British Government, presented the Gaekwar with a dress of honour, an elephant and a horse. The Gaekwar and our representative then proceeded to the parade ground, where the native troops and the European Artillery and Infantry marched past and saluted. A special durbar was held on the 31st for receiving Holkar's presents, which consisted of a state elephant, two horses, a diamond aigrette, a magnificent pearl necklace, twenty-one suits of gold and silver clothes and a large sum of money, which was carried round the Gaekwar's head three times and then distributed. There were handsome presents for Jumnabaee and Tarabaee also, the value of the whole being estimated at twenty thousand rupees. The Gaekwar will be installed according to the oriental fashion to-morrow. All the Nawabs and Sirdars will present *nuzzurs* and take oaths of allegiance The ceremony promises to exceed anything of its kind in grandeur.

WE have to announce the death of a distinguished police officer while endeavouring to capture dacoits in the Pegu district. Colonel Hamilton, accompanied by a small body of cowardly policemen, attempted to do the work in which Mr. Davidson lost his arm, and was shot through the heart because he could not prevail upon his men to charge the robbers. His death took place at Pyagalay, and the remains were buried in Rangoon on Saturday last. The Colonel's orderly was wounded, while two dacoits were killed and one severely hurt. The latter has since confessed that the whole district is swarming with robber-bands, scarcely a village being unconnected with them. A detachment of troops will now doubtless hunt them out. There is a moral in the sad story of Colonel Hamilton's death, *i.e.*, that it is cruel to employ British officers to lead cowards against determined foes, and that, consequently, the raw material of a force intended

to cope with daring dacoits ought to be carefully selected, with due regard to the fighting qualities which appear to have been conspicuously absent in this deplorable affair. The head of the gang who seriously wounded Mr. Davidson and killed Colonel Hamilton is named Nga Poung, a most determined rascal, who flies to the hills when pursuit is hot, and returns to his raids on the plains when the pursuers have become disheartened and retired within the peaceful precincts of their thannas. It appears that Colonel Hamilton, accompanied by Lieutenant Raikes, Assistant Commissioner, caught the dacoits in a paddy-field at daybreak. As the Burmese policemen refused to advance, the two officers, with an orderly, went forward alone.

THE sun of Nowroz Khan, like that of nearly all Afghan rebels, is in the descendent. His men are deserting him, and the Mullicks of the Khyber appear to be willing to keep the Pass open in consideration of a subsidy from the Ameer. No new Governor has been appointed in the place of Nowroz, Shere Ali evidently intending to watch over the fickle Mohmunds himself. Mahomed Oomer Khan is said to have been appointed Governor of Herat. The investigation of provincial revenue accounts is being continued. The officer trusted with the collection of customs in Cabul has embezzelled seven lakhs, and similar defalcations are coming to light.

"DYING like rotten sheep" is the last report from the Karen country relative to the condition of the inhabitants. The Commissioner of Tenasserim recently went through the suffering districts, but his visit has resulted in little good, since the so-called "scarcity" has now developed into certain famine. The authorities are really doing nothing to mitigate the evil, acccording to a correspondent. Nothing in the shape of food has yet been given to the unfortunates, who are now suffering from sickness as well as starvation. "If immediate and effectual relief, such as Colonel Brown promised, be not given, the mortality will be greater than it was during the last monsoons, when as many as thirty people were known to die in one village. But it is useless to hope for any thing from the authorities; if a gentleman ventures to speak on the subject he is insultingly told to say no more about famine. And this is the way things are managed in British Burmah. Those who are not sick are refused both work or food, and those who are sick, together with widows and orphans, are obliged to make two and three days' journey from their villages to the rice store and back, to be told that they must live upon hope (not always a very digestible article), or die."

OUR fellow-countrymen in China and Japan are generally of opinion that the sad death of Mr. Margary would probably have been prevented if the authorities who organized the Expedition had shown more knowledge of the character of the people with whom its members would be brought in contact. The Expedition was for ied for exploring a route from Burmah into the Western provinces of China, but as the route to Bhamo as far as the frontier of Yunnan was perfectly well-known, it is remarkable that the organization of the Expedition was not entrusted to the English authorities in Pekin. We have ample evidence in the history of the past thirty years that the Chinese are inherently treacherous, and as they cannot see, or refuse to acknowledge, the validity of the reason which actuates the Western nations, an exhibition of force is the only argument by which they can be persuaded. Now the obvious cause of the failure of the exploring parties hitherto sent has been that they were not supported by a sufficient force. Lord Elgin in 1858 said that with 300 men he could march through the length and breadth of China. This was no idle boast, and what Lord Elgin said in 1858 is without doubt true to-day. The fact that the late Mr. Margary succeeded in reaching Burmah, travelling alone, proves that he posesssed courage and determination, and that he was fortunate in not meeting an obstructive mandarin who could instigate the people at any moment to force him to turn back. "The defeat of this exploring party is, therefore, to be lamented in many ways, and is entirely attributable to lack of prudent organization and the exhibition of sufficient force. With the result of the late American expedition to Corea before us, and the manner in which this was treated by the Chinese, it is evident that the report of the defeat of this party will be magnified all over the country."

THE death of the young wife and sister of the late Emperor of China shows the strange fatality which has attended his family. The title of "Good Luck" under which he ascended the throne is curiously belied by this remarkable if not suspicious mortality. One of the foreign journals in Shanghai appears to think that the premature deaths of the sister and wife of the late Emperor give the young Empress a happy release from a sea of troubles. But the two Empresses Dowager appear to be sufficiently resigned under a wholly different dispensation, and it must be allowed that the burdens borne by the great are not commonly laid down on account of their weight, from which it may be inferred that they are not unaccompanied by compensating consolation.

THERE is little change in the state of affairs in Achin, except that considerable reinforcements have been sent from Batavia. Meanwhile, a correspondent writes, "the enemy leave us undisturbed, just as we do them in their positions"—not a very creditable proceeding, on the part of the Dutch. A large naval force is still stationed in the waters of Achin to blockade those portions of the coast where the Netherland flag has not yet been hoisted. But the blockade is ineffective; for, now that so many petty States are displaying the Dutch flag and the blockade has thereby been raised, nothing prevents the enemy from receiving all possible importations on the landside. The country is, besides, intersected by number of creeks and rivers, which furnish connected means of communication.

OUR LIBRARY TABLE.

The Oriental Figaro.—Our humorous and satirical contemporary has lately been exciting a good deal of public attention. Its first number was one of brilliant promise, and we are bound to admit that the contents of each succeeding issue have equalled, if not excelled, its predecessor. As the only serio-comic critical journal of Indian Society and the Indian Press, the *Figaro* will well bear the test of comparison with journals of the same class produced in those favoured lands, where satirical and comic "copy" is supposed to be easier to obtain; and where the satirist has more subjects to deal with, and a wider field for observation. When the paper was first started, we doubted if the materials existed in India for keeping up, week after week, its initial standard of literary excellence, but in this opinion we may congratulate our contemporary that we were mistaken. The conduct of the *Figaro* is distinguished by *esprit* and enterprise which continually provide the public with surprises and sensations; and in these dull months and stagnant times, the public should not be slow to testify appreciation of a paper which knows so well how to minister to the enjoyment and excitement of *the jaded* residents of India. The managers not *only* secure the best "talent" available, but know *how* to utilise it to the best advantage. First they produce the "Baroda Album," in a style never before attempted in India; then they offer a "Spanish Lady," as the prize in a "Marriage Lottery;" next we hear of them getting up a "Pantheon" of the principal residents of this city; which announcement is followed by that of a forthcoming "Book," to be "profusely illustrated," and entitled "Free Masonry Exposed;" and lastly we find the plucky little literary bantam engaged in a fierce controversy with a contemporary as to whether the meaning of a certain cartoon may or may not be said to be of an immoral tendency. Into the merits of this discussion we do not purpose to enter. It appears to us, however, that certain journals have gone out of their way in seeing a *double entente* in what appears to us a mere harmless representation of innocent flirtation. Having said this much in praise of *Figaro*, our contemporary will perhaps be disposed to take in good part the advice and criticism we now offer. The members of our Anglo-Indian Society are, as a rule, peculiarly sensitive; and the protest against Caro's cartoons may be but the belief of a large section of the community, who would, in India, take offence at caricatures which, in England, would either only excite a laugh, or be passed over without exciting comment. Caro is an indubitably clever artist, but he has "mannerisms" which do not accord with the tastes of the public he addresses. His sketches are more remarkable for dash than accuracy. If he would enhance the reputation he has already achieved, he should bestow a little more care upon details, he should strive to impart more "finish" to his "compositions," and, above all, he should not try to palm off upon us ladies and gentlemen who would be in their place on the Boulevards of Paris, but whom we refuse to recognise as our countrymen and country-women, as they exhibit themselves in the East. Until Caro has learnt to draw *English* men and *English* women, we would counsel him to confine his efforts to those allegorical designs and political subjects in which his ingenious fancy and facile pencil may find employment without giving offence.

We were not, we confess, particularly struck with the manner in which the French professor of lithography, engaged by the *Figaro*, executed his opening cartoons, but we acknowledge that his "new process" has latterly appeared to work well. His lithographs from chalk-drawings are softer and more artistic in their appearance, and infinitely superior to the harsher effects produced from ink sketches.

The Trial of Mulharao.—This compilation, issued from the *Bombay Gazette* press, is neatly bound, well printed, and forms a convenient history of the deposition of the Gaekwar. There is an excellent summary of events in Baroda since the State came under the dominion of the Gaekwar dynasty, up to the 2nd May, 1875, when Sir Richard Meade read the Proclamation bestowing the succession on the Khandeish line. To the full report of the proceedings of the Commission of 1875 and the Government Resolution thereon, is prefixed the report of the Commission of 1873, which prominently notices many of the acts that rendered Mulharao unfit to rule.

British Policy in India.—The contents of this bulky pamphlet comprise a large number of articles published in a Madras daily paper. They are marked by some ability, although the same thoughts might have been equally well expressed in half the space they now take up. The following extract, pointing out the Hindoo idea of British Government, and the necessity for making our native fellow subjects identify themselves with our administration, will show the drift of the essays :—"The grandest effect of constitutional and representative government, would be a coherence of the entire population, European and indigenous; thus making India, what it is very desirable it should be, a nation. Thenceforward, she would enter upon new life, and have her national sorrows, amusements, traditions, patriotism, glory, and history; and all these would have for their centre modified British rule. It is only the Hindoo, for whom personal objects have so high a charm, who could rest under a government with which he has no sympathy; but it would pay to awaken the feeling, especially with regard to the possibility of foreign invasion. It is a singular fact, that, bound up as the Hindoo's fate is with British Indian Government, that Government is not his, though he is claimed as a British subject. British interests, in their wide sense, are not his interests, and British wars are not his wars. All that the Hindoo realizes is a foreign government which is powerful, clever, liberal, oppressive, and given to much taxation. He thinks it will depart some day; and as he is unable to conjure up the fearful picture of what would follow, his condition is one of general indifference. To make him throw off his supineness, to make him feel that British Government is the legitimate government of the country, to make him understand that the ruin thereof is his ruin, are the points to be gained; and it is believed that they are within the reach of statesmanship, and supplementary exertion, inspired by the form of Government suggested. The hope also is entertained that such a condition of mind on the part of the Hindoo, would find a response if the European also felt that his stake in the country was permanent. Common interests, surely, would, eventually, make themselves felt."

Songs of Two Worlds.—A "New Writer" is the *nom-de-plume* under which the author of these songs presents his labours to the public. We need only notice the following sweet little piece to explain the tenor of the whole :—

Oh! were I rich and mighty,
With store of gems and gold,
And you, a beggar at my gate,
Lay starving in the cold;
I wonder could I bear
To leave you pining there?

Or, if I were *an angel*,
And you an earth-born *thing*,
Beseeching me to touch you
In rising with my wings;
I wonder should I soar
Aloft, nor heed you more?

Or, dear, if I were only
A maiden cold and sweet,
And you, a humble lover,
Sighed vainly at my feet;
I wonder if my heart
Would know no pain or smart?

Hand-book of Practical Surveying.—J. W. Kelly. The author has especially designed this work as a guide and book of ready reference for district officers, planters, Municipalities, Courts of Wards and landholders, and for the use of surveying classes. We are told in the preface that there are numerous and excellent works extant on surveying, but with the exception of the "Manual of Surveying," by the Surveyor-General of India, which has long been accepted as a standard work by the profession and scientific men generally, these books do not meet the peculiar wants of India. They are, moreover, too comprehensive, abstruse, and technical, to be of much use to non-professional men and students, who do not as a rule possess the previous training required to enable them to understand the entire subject, and to whom a knowledge of it in all its bearings and applications, even if it could be acquired, would be superfluous. A knowledge of the leading principles and practice of surveying, however, may be easily obtained and must always be useful, and it is the object of this work to render such knowledge easily accessible to non-professional men generally, as well as to the students of the surveying classes recently formed in Bengal. It is assumed that the reader has no previous knowledge whatever of any of the various subjects connected with surveying, except numerical values in arithmetic, and he is led step by step, by the most familiar illustrations and in the plainest language, to acquire all that he needs to make him a practical surveyor in the field and able to compute and map his work in office.

The People of British Burmah.—It is a peculiarity of the Rangoon Secretariat that it produces the best written reports in all India; and the blue-book detailing the results of the last census forms no exception to the general rule.

There is possibly no country in the world whose inhabitants are more varied in race, custom, and language than those of Burmah, and the natural circumstances of the country are such as to make this variety more than probable. A land which Dr. Mason describes as bounded "by the Tais on the east, the Malays on the south, the Tartars and Chinese on the north, and the Caffres and Hindus on the west," and which is, in fact, wedged in between the local confines of three of the five great divisions of the human race, possesses features likely to attract settlers from many lands, and of very varied customs and tastes. Rich, well-favoured valleys for the cultivator; wide mountain regions and dense forests to hide the wildest tribes in unimpaired savagery and undisturbed by the neighbourhood of a later civilization; a long sea-board, indented by many sheltering harbours, to tempt sea-farers—all have contributed to bring together a mixed people. It would be easy to suppose it a disputed spot in the earlier days, and to expect that, in the collision of great races through a long period of history, many ethnological fragments should people the middle land; and although the Mongolian element has been, and is, the predominant race, it appears under very numerous forms, and in races who, among themselves, reject the connection of a common parent stock. Of these are the Burmese, Arakanese, indigenous and immigrant Shans, the Karens, and the endless list of hill tribes; while, on the other hand, there are the Talaings of Martaban and Pegu, who are of Indian origin; the Selongs of the south, who are undoubtedly Malays. One imaginative traveller identifies the Toungthoos with the ancient Huns, and there have not been wanting enthusiastic minds to find yet another resting-place for the ill-used Ten Tribes of Israel in the Karens of Toungoo. Add to this numerous local races, the Europeans of all nations who crowd the sea-ports; the Chinese from every part of the Celestial Empire; the Mahomedans of Surat, Persia, Bengal, and southernmost Madras; the Hindoos of Bengal and the Coromandel, Panthays, Siamese, Malays, Jews, and Negroes, all of whom are to be met with in Burmah, and we have a varied and Babel-tongued population, for which, except perhaps at Singapore and Port Said during the early days of the Canal, there is no parallel elsewhere. The indigenous population of Burmah—or rather the total of its inhabitants belonging to *races* which are indigenous to it—may from one point of view be regarded as of two classes, (1) the people of the plains—the settled, paddy-cultivating, manufacturing people, *viz.*, the Burmese, Arakanese, and Talaings; (2) the hill people—the Highlanders, who are in many cases more or less nomadic, and are all naturally less settled and less civilized than those of the first division. This second class consists of Karens, Shans, the Toungthoos, the Khyengs, and other hills tribes of the Arakan Yoma. But so far as regards the Karens, this classification is only partially applicable, for many thousand Karens had, long anterior to our occupation, descended into the plains and adopted the cultivation and settled habits of the Burmans.

POETRY.

LOST.

I RECOLLECT the face we loved, I see it in my dreams,
Another look it wears from that which gladdened us on earth,
For a mystic radiance shines there now, a light unearthly beams
Across those features that were erst so sportive in their mirth.

She walked the world beside us, and we gloried in the prize
That the blessed God had given to us to make our journey sweet;
But He took her to His bosom, lest the light of those blue eyes
Should become the all in all to us, and not His mercy seat.

But yet altho' we have her not, she watches o'er us still,
The wave of angel pinions in our visions oft is near,
Oh! 'tis sweet to think she hovereth o'er and guardeth us from ill,
That white-robed child of purity we laid upon her bier.

When the stream is gently rippling as the gloaming on it falls,
When, like a spell, the breezes hush the twilight into night,
Then we think across the moonlit-rill a fairy whisper calls,
And we faintly see the waving of a garment snowy white.

But this is all remains to us of her whose happy heart
Was as a cool refreshing well in the dreary desert life,
From which we drank in gladness that allayed the galling smart
Of the wounds the world had given to us in its unceasing strife.

She came among us like a ray of love-light from the throne
Of Him who sways the sceptre of the worlds He spake from naught;
Unsullied by our touch she walked in purity alone,
Till to its home His loving hand her spirit gently brought.

W. H. T.

"LIVE WHILE YOU LIVE."

ADAPTATION FROM HORACE, ODE. IX, Bk.I.

D'you see the ground, how all around
It yawns with crack and split;
On all the town the sun strikes down,
And ne'er relents a bit.

Calcutta's halls are void of balls,
And "bund" are all her doors:
Some headlong dash (who've got the cash)
To colder climes and shores.

Our rulers all, both great and small,
Bewail their countless ills,
Chowringhee sighs, and forthwith hies
To Simla's snow-capt hills.

Give me the price to buy some ice,
And let the soda flow,
And, friend, bring out that sparkling hock,
You bought four years ago.

All other odds leave to the gods
Who can, when seems it good,
Make tempests roar from shore to shore,
Yet spare the cypress-wood.

Seek not to know to-morrow's woe,
And neither fret nor pine :
If you've the chance to flirt or dance,
Young fellow, don't decline.

Now 'Eden's walk'* is full of talk,
And whisperings invite
Young Dick or Tom to "do the Prom"
Again to-morrow night;

Now to her lair the willing fair
Speeds, wishing to be seen :
Her laughter low is meant to show
Just where she's hid, I ween :

Then snatch some charm from off her arm—
She'll never say you 'nay'—
And steal a kiss—the pretty Miss!—
Her threats are only play.

LETTERS TO THE EDITOR.

SIR BARTLE FRERE AND OUR FINANCES.

To the Editor of the Friend of India.

SIR,—I fully concur in your remarks, in your last issue, on the character and recent utterances of Sir Bartle Frere, his wild ideas of Indian Finance, and his miserable failure as head of the Bombay Government. How the shrewd men of Manchester could listen patiently to the stupid ideas of such a political charlatan it is very difficult to understand. But what more than all surprises me is that he should have been selected to accompany the Heir Apparent on his tour through India, as the home telegrams inform us is the case. With whom would the selection of His Royal Highness's staff rest? If the Secretary of State wished him to be imbued with false ideas of India and its many difficult problems in politics and government, he could not have made a selection more suitable for that object. But besides this there would be the mistake of chilling the loyal welcome his Royal Highness should everywhere meet by seeing him accompanied by so unpopular and little respected a man as Sir Bartle. It is not difficult to trace the failure of the unfortunate Bombay Bank to his want of judgment, weakness and petty jealousy of the wholesome control of the Viceroy; and the thousands who suffered directly or indirectly from that calamity, including a large number of helpless widows and orphans, will find it hard to understand why such a man should be the one whom "the Prince delighteth to honour." I wish the press would speak out in time and endeavour to avert such an unfortunate arrangement.

LOYALTY.

DISESTABLISHMENT OF THE INDIAN CHUCH.

To the Editor of the Friend of India.

SIR,—I do not quite see the force of your arguments in favour of an Indian Ecclesiastical Establishment.

One is that the Hindoos, and Mahomedans established their religion: why should not we? You also say the Mahomedans persecuted: are we to do the same? Again, the Mahomedans chiefly maintained their establishment by endowment of rent-free lands, which you say is a very light and easy way of doing it. Is this any argument for paying Bishops, &c., out of the taxes? You seem to think that if care is not taken, infidelity may spread as a consequence of our rule; will our taking money to pay for Bishops and Chaplains for the wealthy rulers (who are paid from the revenue) out of the pockets of the poor, give them any greater love for our religion when they begin to doubt the propriety of their own? You surely do not maintain that the taxes should pay for the propagation of Christianity amongst the Hindoos and Mussulmans. You also seem to hint that the higher offices are only given to Christians because they are Christians, and not because they are Englishmen. But the Government does not seem to give any more encouragement to native Christians than to Hindoos.

In my opinion the Government gives more hope to the ambition of the natives by opening its Civil Service to all alike who pass the competition. If the Government were to add one or two more over-paid Bishops to its staff, even if one of these were a Propagation Society missionary, like the excellent and learned Dr. Caldwell, it would be very difficult to make the natives appreciate so one-sided a favour.

You say that Englishmen are "birds of passage," and that they cannot be expected to keep up episcopal establishments in all their grandeur. I would ask whether the Chaplains are not as much "birds of passage" as the Collectors; and it is not unlikely the natives may think that many Collectors have their interests more at heart than all the clerical "birds of passage."

* *i.e.*, the Promenade in the "Eden Gardens."

THE SAME.

To the Editor of the Friend of India.

SIR,—I was glad to see your article on the "Disestablishment of the Indian Church" in your issue of May 22nd, as I was anxious to know your views on that important question. You appear in the first paragraph, fully to concede the principle of the proposed measure. You say, "we do not doubt the abstract soundness of the general proposition, that it is 'unjust to tax the whole body politic for the benefit of a minority'"—no advocate of disestablishment could wish for more than this, as a matter of argument on the ground of political justice. But when it comes to the practical application of it to India, you appear to doubt the expediency of it. In this you resemble Mr. Gladstone, who, when Mr. Miall brought forward his resolutions on the English Church in the House of Commons, allowed that logically his position was unassailable; but said that as yet the people of England were not prepared for it, and then significantly advised him to do what he could to prepare them.

I am not sure that I correctly understand the reasons you assign for thinking the measure inexpedient in India; for you seem to me to write on this subject with less than your usual clearness and force. But they appear to be as follows. That the Hindoos and Mahomedans successively established their respective faiths when supreme in India, and therefore would naturally expect Christians in the same circumstances to do the same:—that all the institutions of a Government established by Christians are more or less imbued with the spirit of Christianity, and therefore necessarily hostile to other religions, the endowments of which, however, having been made by previous Governments, or with their sanction, are maintained by the present Government, and therefore Christianity should be endowed too:—that in these circumstances to profess neutrality or impartiality in religious matters, or to say that Government action should be confined to secular matters, can be nothing better than a hypocritical pretence, because in point of fact, by legislation, education, social intercourse and in a thousand ways, Christians in India are undermining and overthrowing the ancestral faiths of the people; and unless Government esfablishes Christianity, the result will sooner or later be a nation of infidels, believing in no religion whatever. Therefore, Government ought either to maintain the establishment of Christianity or else to "disestablish our judicial, educational, political and social systems, which are imbued with the spirit of our religion:" or, in other words, to abandon the Government and the country *altogether to the* native population. "For these reasons" *you* express your opinion that "it is an absolute obli*gation* on the Government holding the country, *which believes* in the Christian religion to retain and uphold the same as a part and parcel of their constitution as a Government."

But, Mr. Editor, if this is so, does it not follow that in your opinion it is the "absolute obligation" of a Christian Government to do what you have previously allowed to be an "unjust" thing? I fail to see how you can reconcile these two positions with each other. Surely one or the other must be abandoned. If the thing is *per se* unjust, nothing can justify it; if it is an "absolute obligation" to do the thing, it cannot be "unjust to tax the whole politic for the benefit of a minority." Nor does Government maintain that previous grants to those faiths make other grants to Christianity any more legal. In doing the former, Government is only upholding previous engagements, and not making religious endowments at all.

Is not the position you have taken in the argument the same as that of Mr. Gladstone in his work on "Church and State," to which you refer in another part of your paper, and which was so brilliantly reviewed by Macaulay? You speak of Gladstone's prodigious intellectual growth since then, and intimate that he has escaped from the trammels that then entangled him. When he wrote that book nearly 40 years ago, I well remember its appearance and Macaulay's review of it in the *Edinburgh*; and if you will look over them again, I think you will see some resemblance between your arguments and those of Gladstone, regarding which Macaulay said that they were like pieces of ordnance, which go off with such tremendous force, and that they recoil on the man discharging them and overthrow him.

Looking at the subject in a political light, Macaulay's reply to Gladstone's argument—*viz* that from the nature of the case religion is a matter beyond the province of secular Governments—is, I think, both unanswerable and appropriate to the present discussion. It is the peculiarity and the glory of Christianity to have first announced this great truth in the words of the Master which distinguish the functions and province of Cæsar from the sole prerogative of God: Cæsar has to do with religion, so far as it has to do with civil rights, which it is the special function of Government to defend; but no farther. When on professedly religious grounds civil rights are violated, a just Government will rectify this, and so far will be hostile to such religions. In this way the British Government in India, by upholding natural justice, cannot do otherwise than undermine the religions of India. This, however, is no legitimate argument for using Government influence in support of Christianity; but rather the contrary. Being compelled as a matter of justice to do so much, a Christian Government should be specially careful not to attempt any more in that direction.

In a religious point of view, a man who has real faith in Christianity, will believe that the Master knows the best method of upholding and diffusing the truth which He came both to declare and to be; and will accordingly shrink from the heathen system of using the power of secular government in the promotion of reli-

gious objects. The first disciples had no other help from secular governments than their bitter persecutors, and yet they triumphed gloriously against tremendous odds. Had their successors been equally loyal to Christ, Christians would not now be so feeble in using spiritual weapons, nor so eagar to lay hold of the coarse weapons of secular governments, instead of the spiritual ones given them by their Master. To recover primitive power, we must return to primitive spirituality and faith.

I observe that your correspondent "Fair Play," in his rejoinder to my former letter, expresses a doubt if I am "quite aware of the exact bearings of the sentences embodied in his letter." If he refers to some particular circumstances not mentioned in his letter, of course I cannot know what these are, and the best remedy for this will be for him plainly to state them. So far as my knowledge and experience of upwards of thirty years in India go, there are no such facts in connection with Dissenting missions as he appears to refer to in both his letters.

IMPARTIALITY.

THE COURTS MULCTED.

To the Editor of the Friend of India.

SIR,—A case, which lately occurred in a mofussil station, not two hundred miles from Calcutta, illustrates painfully the danger of Draconic laws, and the natural tendency they have of converting the Criminal into Civil Courts, for the purpose of realising questionable claims in a most summary manner. Two persons have had some money transactions, including some gambling ones. They quarrelled, and one of the parties immediately brought a charge against the other party in the Criminal Court for cheating. But no soouer was the case for the prosecution closed, than it was compromised. Government was thus cheated out of its stamp duty, and the administration of justice scandalised! So much for making laws to convert ordinary civil transactions into crime; for helping unscrupulous men and ruining honest people. In short, it is almost impossible to understand what is or what is not a crime under the provisions of the Penal Code and other Criminal Acts, particularly as they are variously interpreted by different Courts.

FIAT JUSTITIA.

INDIAN INTELLIGENCE.

BENGAL.

A CONTEMPORARY narrates some curious incidents in connection with the native drivers and guards on the Railways. One guard refused to travel in the brake-*van* of a train "because it contained hides;" another "who entered a station *with* all his brake-van lights out, when questioned as to the cause of such *gross neglect*, replied 'I am not a buttee-wallah';" another, immediately after a train started from a station, shut himself inside the brake-van and went to sleep till he was awakened at the next halting-place by the station-master. There is an air of *vraisemblance* about these anecdotes which almost vouches for their truthfulness.

THERE is bad news from Dacca; the fish in the rivers there are reported to be rendered unfit for food, and in fact quite poisonous, being infested by parasitical insects. This is a serious misfortune, as fish is one of the great staples of native food. Seventy-five per cent of the population have, it is stated, ceased to take fish, for fear of being poisoned, and are meanwhile doing *poojah* to their gods, to see if haply the scourge may be removed. We should be more pleased to hear that some prompt steps had been taken to investigate the matter, and, by subjecting the fish to scientific analysis, to find out if anything could be done to remedy the disaster.

THE "Uncovenanted Service Family Pension Fund" is in a flourishing condition. Its steady advance year by year from 1837, may be taken as a proof of the sound principles on which it is being worked. From its opening to the end of 1874, there has every year been a steady increase in the number of subscribers excepting in the years 1841-43 when the number remained stationary. Beginning in 1837-38 with 75 subscribers, and with total receipts of only Rs. 17,199, it has risen 1873-74 to 1,208 subscribers, with a total receipt of Rs. 8,06,454. By these subscriptions for 1874, provision is made, in the event of the subscribers' deaths, for 1,056 wives, and 1,958 children. The amount of misery that is thus provided against can only be realised by those who have had occasion to witness the aggravated troubles of wives and children whose husbands or fathers have died without making any such provision. In 1874, the actual number of widows provided for was 227, of boys 92, and of girls 235. From the commencement of the fund, the total number of pensioned widows who have died is 75, of children 38. The total number of widows who have re-married is only 56, while the fund has been relieved of 200 daughters by marriage, and of 171 sons through their attaining the limit of age.

THE two introductory concerts recently given by the Calcutta Orchestral Society in the Town Hall were followed on Saturday evening last by a third, which was announced as the "first promenade concert." As usual, the programme was an excellent one, made up by a selection from the works of some of the first masters, commencing with the overture to Mozart's *Zauberflute*. This overture was contained in the programme of the previous concert, but it was nevertheless warmly welcomed, and its performance evidenced considerable improvement. The *Amoretten Tanze* waltzes, which came immediately after, were played by the full orchestra with the most exquisite taste, indeed we have seldom heard a more creditable performance in Calcutta. The music is peculiarly difficult in its character, but was mastered in a style which showed that the most careful practice had been given to it under a leader who knows his work. Nothing could have been better than the care with which the weirdlike music of the accompaniment was executed, its subdued tones gradually working up in *crescendo* to a full passionate burst, and again subsiding into *pianissimo* with the most charming effect. We specially congratulate Herr Stoeckel and the members of his Orchestra upon this performance. Another set of waltzes, *Die Lustschwarmer*, and the concluding galop, *Champagne*, also merit special mention. The solos during the evening consisted of a fantasi upon airs from *La Sonnambula* and the *Traumbilder*, which latter we have previously noticed. The first of these was a clever performance upon the violin by Signor Detori. The overture to *L'Italiana in Algieri* formed one of the most pleasing features of the evening, and brought out some very excellent playing in the solos by the flute, oboe, and clarionet, which in tone and execution deserve praise. Herr Stoeckel's clever performance upon the horn has now become familiar to all music lovers in Calcutta, and it is almost superfluous for us to remark upon the two horn quartetts in which that gentleman took part on the present occasion. They were played with great taste, and were listened to with much pleasure and attention.

THE report issued by the Directors of the Bowreah Cotton Mill Company, Limited, for the half-year ending 20th February, 1875 begins with an expression of gratification at the mill having continued to work in a satisfactory manner. This would appear at first sight to imply that all was going on well for the shareholders, but on closer examination, we are led to conclude that the remark applies to the mechanical portion of the property, and is to be taken in a purely literal sense, as an announcement that the machinery is doing its work well. The report goes on to say that the production has somewhat fallen off, but that prices have been maintained; particulars are given of extensions, machinery, &c., which have cost the Company Rs. 3,43,899-14, being an excess of Rs. 43,899-14 over the new capital which was raised for the purpose, and further improvements have cost Rs. 1,06,716-8-4. The business of the six months leaves an available cash balance of Rs. 2,405-8-11, which at once explains the suggestion of the Directors at the conclusion of the report, that if approved of, they will be able to make arrangements with their bankers to pay a dividend of 3½ per cent on the paid up capital, these arrangements being, we presume, a loan by mortgage of property, since the funds are not in hand. During the six months ending on that date, the average price of Dhollerah cotton in Bombay was Rs. 204, and the price of No. 20 twist in Calcutta was annas 8 pie 6½ per lb. The outturn of the mills was 8,98,331 lbs., which yielded a profit of Rs. 1,21,089. For the half-year ending 28th February, 1874, cotton averaged Rs. 184, twist annas 8 pie 9¼, showing that material was cheaper, and the produce of the mills dearer, than during the preceding six months. The outturn was 10,18,915 lbs., but singularly enough, the profit was proportionately smaller, being annas 2 pie 0·67 as against annas 2 pie 1·88 per *lb*. Again, in the next half-year, cotton averaged Rs. 181, and twist annas 9 pie 5½, showing still more favorable prices. The outturn of the mills was 11,83,584, being a considerable increase, but again the profit, Rs. 1,27,422, is smaller in proportion, being only anna 1 pie 8·67 per lb. In the last half-year, of which the present report speaks, the cost of cotton averaged Rs. 168, and twist was 9 annas, showing further improvement in the prices of both the raw material and the manufactured article. The outturn of the mills was 10,67,679 lbs., but the same rule follows in regard to profit, which was Rs. 93,238 or anna 1 pie 4·76 per lb. It appears to be a singular result that, whereas the cost of raw material has steadily decreased from Rs. 204 to Rs. 168, and the price of the manufacture of the mill appears to have advanced from 8-6½ to 9 annas, the profit has fallen off from 2 annas 1·88 pies to 1 anna 4·76 pies per lb., and as there is doubtless a possible explanation, we think that it should be given to the public.

A NATIVE guard has been tried in the Hooghly Court on a charge of being found asleep in his van, and sentenced to six weeks' imprisonment.

SIR RICHARD TEMPLE continues to devote himself to the spread of education in Bengal. In order to "elevate somewhat a portion of the Primary Schools," he has decreed that in each district one-third of the grant for primary education must be set apart for those schools which teach up to the following very moderate scholarship standard: "Writing the vernacular of the district, and reading it in printed books as well as in manuscript. Arithmetic up to the first four rules, simple and compound according to the European method, and the rules of Subhanker (mankasa, masmahina and jumabundee). Bazaar and zemindaree accounts, and simple mensuration." Sir Richard is also anxious to promote the interests of his immense flock by establishing schools for surveying, and he wishes the Director of Public Instruction to submit detailed proposals for the formation of such schools, there being now a great demand for surveyors. If the local authorities anywhere in Bengal can establish lower technical or industrial schools, the L.-G. will "be happy to help."

THE two branches of the subordinate executive service in Bengal are to be amalgamated, and the regulation and non-regulation districts are, for the future, to be dealt with alike in respect of the subordinate executive service. The plan is unfolded as follows in a resolution dated 31st ultimo: Instead of 182 deputy magistrates and deputy collectors and 24 extra-assistant commissioners, or 206 officers in all, as at present, there will in future be 201 deputy magistrates and deputy collectors. As vacancies occur, one appointment of Rs. 700 in the present 2nd grade and six appointments of Rs. 250 in the 7th grade of extra-assistant commissioners, as well as one appointment of Rs. 200 in the present 6th grade of deputy

magistrates and deputy collectors, will be absorbed; and from the savings thus effected, the three new appointments of deputy magistrates and deputy collectors of the 1st grade will be created.

THE re-marriage of the minor Maharajah of Durbungah took place a few days ago. The bride is only nine years of age. The bridegroom has since left with his tutor, Mr. Alexander, for Kashmeer where he intends to spend the summer. The young Rajah of Cooch Behar has also left for Umballa *en route* to Simla, where he will stay for a time.

THE Vice-Chairman of the Serampore Municipality is to be congratulated on his attempts to suppress any "personal stimulus" in the recent elections in the North Canterbury of India. He ensured thorough publicity and rendered the system intelligible to the lower orders, by means of letters to zemindars, notices to rate-payers, "proclamations hung up far and wide," unlimited drumming from the 9th February to the 21st March, and personal explanations given to all with whom the energetic public officer came into contact. To those ill-informed people who might suppose that continual notifications by beat of drum for a period of six weeks would be regarded as one of the worst of the local nuisances with which municipal authorities have to deal, we would merely observe that the drum is perhaps the most popular of native musical instruments, and that national tastes and customs cannot be interfered with in favor of a ridiculously small minority of foreigners fail to appreciate true harmony. There is a mournful pathos in Mr. Beighton's account of this remarkable election. "Notwithstanding that every effort was made to ensure publicity and intelligibility," by means of drums, proclamations, chits, notices and personal interviews, it was found, on counting up the cowries deposited in the sacred municipal "urns," that only 673 rate-payers had availed themselves of their glorious privilege as free and independent voters, as compared with 1,793 who last year recorded their votes. To what may we ascribe the unpopularity of an institution which it was expected would prove a boon and a blessing to the rate-payers of Serampore? Mr. Beighton, in undertaking to answer the momentous question, does not appear to attribute the falling-off to the absence of the "personal stimulus" already alluded to, but thinks it is due to "the frustration of the chimerical hopes held all but universally at the last election by the lower orders, that the election of Commissioners was to be directly efficacious in a reduction of taxation." In other words, the lower orders elected not to be taxed, and behold! they *were* taxed, and so they pronounced the whole business a snare and a delusion. They had evidently not been taught in their "primary schools" the inestimable benefits which, under proper management, are conferred on civilized communities by institutions which the brutal vulgar term "shams." If their teachers had not neglected their duty in this respect, these people would never have expected that the liberty of self-representation in municipal affairs would include the power of voting themselves out of objectionable taxation. India and England, ye men of the "lower orders," are different countries, differently administered. The British workman, like the voters of Serampore, thought that the electoral privileges conferred upon him would give him the power of transferring to the shoulders of some other and politically weaker class the burden of national taxation; he was right, for what he received was the *substance*; what the Serampore electors receive is the *shadow*.

NORTHERN INDIA.

THE most interesting branch of educational progress in Ajmere is connected with the instruction of the young Thakoors. This class of men exercise an influence for good or evil in the district of the most powerful kind. They are very independent, and their word is law with their tenants. They are charged with responsibilities in the prevention and discovery of crime. Some of them are Honorary Magistrates. Some are wealthy, and others, though now heavily in debt, if they ever extricate themselves from their involved position, will be, comparatively speaking, wealthy. Most of them are at present illiterate to a degree. Some, a writer in the *Pioneer* asserts, are in addition given to strong drinks and opium. Nominally lords of their estates, they are in the hands of favorites and sycophants who fawn and prey on them. Few of them transact business themselves. Those who make a pretence of doing so discharge the duties in a perfunctory manner, and their *Kamdars* do what they will with them. There are exceptions to whom these remarks do not apply, but the majority are such as we have described. They have had no chance of emancipating themselves from the flattery and thraldom of their followers. Born and bred in their native villages, they acquire the vulgar brogue of the poorer classes, and talk a language almost if not quite incomprehensible to an Oordoo scholar. For example, in the local dialect a Thakoor in saying "Sir, I don't understand you," would probably say "*kaien shahumjhon koi nan*" instead of "*kya, sahib, hum nahen sumajhte hain.*"

THERE are now 83 students on the rolls of the Canning College, Lucknow. Of these 72 are Hindoos, 9 Mahomedans, and 1 is a Christian. In the school department there are 710 pupils, of whom 482 are Hindoos, 207 Mahomedans, and 21 Christians. Taking the whole institution together there is an increase of 17 pupils over last year. The Chief Commissioner at the recent distribution of prizes to the scholars, referred to the small proportion of Mahomedan pupils, and accounted for it by their disinclination to accept a system of education which in their opinion is devoted too much to teaching English and European science, to the comparative subordination of Arabic and Persian. It was his opinion that their feelings in this matter should be deferred to and consulted, and that an endeavour should be made by combining instruction in their own literature with the teaching of European science to overcome as far as possible their objections. He also urged the necessity of establishing one or more boarding houses in connection with the Canning College, so that the advantages offered by the institution should not be confined to boys whose parents or friends live in Lucknow.

NOTHING has been done yet to repair the damage caused by the fire at Peshawur. The fire ought to have purified the place, but, strange to say, small-pox of a virulent type is said to be raging now in the city, and the troops in cantonments have been forbidden to visit the town. There are conflicting accounts about the casualties during the fire, but it seems to be generally allowed that two persons, a man and a woman, were crushed to death by falling walls; their bodies have not yet been recovered.

MAJOR-GENERAL DONALD STEWART will command the third division of the Delhi Camp of Exercise.

FROM the 15th instant, Agra will take the place of Meerut as a centre of garrison instruction. We believe one reason for the change is that Meerut was found to be too lively a spot for studious young officers. Judging from the local news of our Agra contemporary, the same objection does not apply to the city of the Taj.

THE Central Asian dealers have been doing a very limited business in Kumaon this year. The planters prefer making black tea to accepting any reduction in the prices of the new leaf.

BOMBAY.

OF the three principal rogues connected with the attempted poisoning of Colonel Phayre, Salim has been sent to Aden, Yeshwunt Rao to Moulmein, and Nursoo to Rangoon.

THE Aden news report, down to the 19th instant, informs us that the Sultan of Zanzibar arrived at Aden on the 16th May in the S.S. *Cashmere*, and was visited during the course of the day by Rear Admiral Cumming, C.B., and the Resident. On the 17th, the Sultan paid a return visit to the Resident and was received at the landing-pier with a guard of honour from the 2-25th K.O.B. The regimental colour and band, commanding officer and heads of departments were present. A salute of twenty-one guns was fired from the battery. The Sultan was taken by Captain Prideaux, First Assistant Resident, to see the town and fortifications, and re-embarked at 11 A.M. He sailed in the *Canara* for England in the evening and was saluted with twenty-one guns by the *Glasgow* and *Undaunted*, when steaming out of harbour. Dr. Kirk, H.B.M's Agent and Consul-General, accompanies His Highness.

ACCORDING to a correspondent of the *Bombay Gazette*, the new Gaekwar did not carry off his newly conferred honours with perfect *sangfroid*, though, considering the training of his early days in his Khandeish village home, he did astonishingly well. "He looked abashed, and frequently, as he sat cross-legged, cast his eyes to the ground; and in these respects he was a contrast with the charming little girl, Tarabaee, at his side, whose eyes were examining all parts of the room without the owner of them exhibiting the least emotion." Syajeerao has a face which is rather thin, though betraying no lack of intelligence, and his figure is also exceedingly slight. From the right side of his puggaree there hung a lobe of pearls; he had gold wristlets and bangles; and around his neck hung some jewels of little comparative value. His bodice was made of pink cloth with flowers of gold stamped upon it; his gown was claret coloured, with stripes of gold; and his tight-fitting trousers seemed to be composed of gold tissue. In front of him lay an old sword, the common leather scabbard of which did not suit the surrounding magnificence of the new Gaekwar's possessions. Little Tarabaee's cap, which she wore in a jaunty way, was composed in a great part of silver and gold lace, and her dress was green and red, with gold flowers, each colour being of the most brilliant kind even among the brilliant fabrics for which India is famous. She wore a necklace composed of pearls and emeralds, while on her arms and feet she had no lack of handsome ornaments. Sitting on the ground on the right hand side of the Gaekwar were the Mahratta Sirdars, each of whom had his sword in his right hand; and on the left, the Mahomedan Sirdars, some of whom had their swords in their laps, while others stuck the point in the ground and grasped the hilt. Behind the bolsters which supported the back of his Highness stood two handsome Mahratta henchmen, each holding the peculiar native insignia of office called *morchal*, composed chiefly of peacocks' feathers; and it may be worthy of remark that the two handsome *morchals* which were borne on this occasion almost over little Tarabaee's head were presented years ago to her father, Khunderao, for his loyal conduct towards the British Government in the dark days of 1857.

IN making enquiries into the rights of the Khandeish claimants, the authorities found that a certain priest at Baroda ought to be in possession of a complete and correct genealogical table of the Gaekwar family, an examination of which would settle beyond dispute the legitimacy or otherwise of the birth of Prataprao. Enquiries were set on foot, which resulted in the discovery of the wily Brahmin, who was induced very reluctantly to produce the important document the existence of which for reasons best known to himself, he had so long kept secret. As the Government expected, the table showed that Prataprao was a legitimate son of Pilajee.

MADRAS.

GOLD has been found in the Mahanuddee river, and a few diamonds of some value have been discovered in the neighbouring district.

THE Governorship of Madras was originally offered to Lord Lytton, English Minister at Lisbon.

MR. CLEMENT SIMPSON, Chairman of the Chamber of Commerce, has been appointed Sheriff of Madras, and Mr. L. R. Burrows, President of the Municipality.

A POLICE officer has been selected to be in permanent charge of Mulharao, whose residence is being furnished in a manner which seems to show that he will remain in Madras.

FOUR Europeans—J. Colin Campbell, late Captain of the 2nd Bengal Fusiliers, age about 34 years, Francis O'Neill, an Irish sailor, 2nd Mate, age about 20 years. W. Elder, an Irish sailor, 3rd Mate, age about 24 years, and F. White, a German sailor, 3rd Mate, age about 20 years—have become perverts to Mahomedanism at Bangalore and taken the names of Mahomed Abdoolah, Abdool Luteef, Abdoolah, and Abdool Salaam.

CHOLERA has appeared in Trichinopoly and Tanjore, a large number of cases having already occurred.

MR. LAVILLE, Civil Engineer and Geologist, lately entered into arrangements with the Mysore government for examining portions of the Colar District in the Nundidroog division of Mysore, with a view to finding gold metallic ores, precious stones, or other substances of a similar nature. He is to carry out his examination all over the district for the space of three years, at his own expense, after which time he is to select any portion of land not extending over an area of twenty square miles, which he will exclusively hold on certain terms for twenty years. Mr. Laville has been out exploring, and is now working in the village of Oorgum of the Great Munghum Taluq of the Colar district. Several shafts have been sunk, one to the depth of 70 feet, and gold has been found in the proportion of 3½ ozs. to every ton of quartz reef. Sanguine expectations are held of the results of further search for gold. At present the working cannot be carried on as fast as is desirable, owing to the difficulty experienced in procuring labour. The fields where gold lies are said to be very large, extending from Cuddapah in the north as far as Travancore to the south. The little gold now found is of very superior quality, being quite equal to the 24 carat article. A quantity of quartz reef was brought the other day to Madras, and washed in the presence of several gentlemen who have been in the gold fields of Australia, and they expressed their surprise at the quantity and quality. Mr. Laville has also found coal and tin.

WITH reference to the drainage of Madras, Mr. Clarke proposes to carry off all fluid, filth, or house-drainage, sub-soil water near the surface, and so forth, by a system of main and out-fall sewers of brick or laterite in mortar plastered with cement inside, and laid in concrete, or of concrete blocks cast to the required shapes; and of subsidiary stone ware drain pipes, laid in concrete, all concentrating at a pumping station near the Elephant Gate Bridge, where a couple of engines of 35-H.P. each will lift the discharge of the main sewers a height of 19½ feet, to gravitate through the out-fall sewer into the sea, if no arrangements can be made to utilize the sewage for the irrigation of land. To facilitate such use it is proposed to leave open 1,300 yards in length of the out-fall sewer. *Including* Rs. 1,08,325 on account of the separate Saint Thomé project, the *total cost* of the drainage scheme is set down at Rs. 23,48,000, Major Tulloch's *estimate* having been 33½ lakhs. The Governor in Council cannot but accept the *scheme*, elaborated during four months continued devotion to the subject on the spot, by an Engineer of Mr. Clark's extensive practical Indian experience, as the most satisfactory solution of the problem of draining Madras that is likely to be attained. He observes, however, that Mr. Clark bases the details of his proposals in a great measure on the local water-supply; and considers that their efficiency is likely to be commensurate with the development of the latter. The Government as well as the Municipality being financially and otherwise interested in its complete development, which is now retarded owing as much to want of engineering knowledge and experience as to lack of funds, it would appear desirable that arrangements should be entered into for placing both the water-supply and drainage in the hands of a competent Engineer-in-Chief, such as Mr. Clark.

THE chief event of the week at Ootacamund has been a Badminton tournament. The prizes numbered six in all. The 1st, a solid silver tankard; 2nd, an elegant silver cup, on a tall stand; 3rd, a set of telescope cups both useful and ornamental, especially on the hills where so many pic-nics are constantly taking place; 4th, an English racket bat, in the handle of which was inserted a little silver plate, bearing the date and name of the winner; 5th, or Ladies' Challenge prize, Rs. 40; and the last, the Commissioner's prize, a richly chased Burmese cup, saucer and cover. The first prize was won by a Bangalore lady.

BURMAH.

THE steamers *Nemesis* and *Talifoo*, with Sir Douglas Forsyth, the members of the Burmah Mission, and the military escort, reached Thayetmyo on the 2nd June.

THE Burmese census shows that, on the 15th August 1872, the province of British Burmah possessed a population of 2,747,148 souls, on an area of 88,556 square miles. The total area within the nominal administration of the Chief Commissioner is estimated at 93,664; but of this 5,000 square miles in the Hill Tracts of Northern Arakan are not included in the returns, as there is no established administration in this tract, and any enumeration of its inhabitants is at present impracticable. The previous estimate of the population for the year 1871 had been 2,562,323; but as this was the result of the usual population returns, the census total must not be taken as indicating exclusively the increase during the first eight months of 1872. The population returns for 1870 gave 2,491,736, which shows an increase of 70,587 in 1871, or 2·83 per cent.

A LETTER from Tavoy in the *Rangoon Mail* says that the inhabitants were lately surprised by the arrival of forty-three Siamese, partly armed, from the jungle. On inquiry it turned out that they had been sent from Siam to survey the track for a line of telegraph. They have since returned to Siam.

A CAREFULLY devised plot has been opportunely discovered among the convicts in the Rangoon Central Jail. As is often the case, a long-term prisoner, a desperate character, who was imprisoned for dacoity, was at the bottom of the conspiracy, and by means of certain metal charms he induced fifty or sixty of his fellow prisoners to join him in an attempt to break through the jail and release all those confined within the walls. The attempt was to be made some time this month, and the men had been hatching their design for a considerable period, as is evidenced by the fact that certain *daos* made in the jail were found hidden away in the workshops and sleeping apartments. The plot was discovered by one of the convicts, not in the secret, over-hearing a conversation between two of the conspirators, and giving warning to the Superintendent.

THE *Friend of Burmah* states that great preparations are being made by the King for the reception of Sir D. Forsyth. High officials are to proceed down to Minhla to receive the Mission, and to conduct it to Mandalay. Rafts of timber, to be towed by steamers, are to be constructed, on which the King's dancers will perform all the way up to the capital.

THE Minister of War has advised the King of Burmah something to this effect: "I have seen, my Lord, both the last two wars with the English, and speak only from what I have seen and experienced. Their weapons are so infinitely superior to ours, and we have no chance. Your Majesty knows full well that I am not afraid to die, and I am ready to lead the troops against the English at your Majesty's command. But as a true servant to your Majesty, I am bound to inform you as to what my experience has forced me to think, *viz.*, that a greater loss will result from fighting the English now than from acceding to their demands, however unjust, and however exacting they may be."

ASIA.

THERE is important news from Saigon by the last mail. In consequence of the difficulties raised by the Annamites regarding the exchange of ratifications of an important treaty—evidently for the purpose of gaining time—a gun-boat had to be twice despatched to Hue. The Commander of the *Dassas* left in that vessel, accompanied by the *Duchaffant*, to make final arrangements and fix a date for the opening of Tonquin to foreign trade. He was expected back at Saigon on the 20th April, when the treaty was to be at once published. It is supposed that the time named for the opening of the country will be in June. It was the French Admiral's intention to himself visit Hue and stay with King Tu Duc; but the latter put so many obstacles in the way that the idea was abandoned and the Capitaine de Vaisseau of the *Dassas* was delegated to represent him. One of the difficulties raised was to the effect that the treaty forbade the ascent of the river as far as Hue by men-of-war, and that consequently the Admiral would have to travel overland from Touron to the capital. The Annamese also desired to be excused from firing any salutes.

A RECENT report of the British Consul at Shanghai shows that the same causes which prevent the development of trade in Upper Burmah are to a still greater extent operating to the disadvantage of trade in China. "The resources," says the Consul, "for the conduct of a vast trade undoubtedly exist, but development is checked by irregular and excessive taxation, and the want of cheap and speedy means of internal transit, and until these counteracting influences are modified and removed, it is hopeless to expect anything but partial and sickly growth at best." Fortunately, the past conduct of the King of Ava has given us an opportunity of urging upon him at the present time, some modifications which will be beneficial to commercial interests in Burmah, and the day may come when the Chinese in their own interests, will seek to remove the barriers which arrest the development of internal trade. It is pointed out by the Consul that almost the whole of the export trade of China consists in the two items of tea and silk. Only about 1,800,000 taels of sugar are exported altogether, whereas no country is better adapted for the growth of sugar than South China and Formosa, and the supply of labour is practically unlimited; but the insuperable obstacles to the development of trade in this item are the fiscal exactions that crush sugar as they crush many other productions which would otherwise find a ready sale abroad.

THE latest news from Japan shows its trade to be in a very pitiable condition. About four millions of dollars in gold have left the country since the beginning of the year. The development of its resources is practically at a stand-still; and its current expenses, though somewhat decreased of late, are large. When the country was first opened to foreign trade, the foreign and native merchants made money fast, though the country people did not make large gains. The foreigners bought their silk and tea very cheaply, and sold their imports at high prices. The adjustment of values which has since taken place in trade had then just commenced, and there was a large margin between the prices at which the foreigners on the one side, and the Japanese on the other, could afford to buy and sell, and the prices at which exports could be sold, or imports bought in Europe.

THE great prison mutiny murder trial at Singapore, has been concluded. There were 42 prisoners in all, arraigned upon two indictments for the murder of Henry Digby Dent, Superintendent of Prisons, on the 13th February last. At the outset, eleven of the prisoners pleaded guilty, each in turn declaring he had wilfully done the deed. The other 31 were put upon their trial before a special jury, who found seven of them guilty on the capital charge, eleven guilty on the lesser counts of the indictment, and acquitted thirteen. The eleven who pleaded guilty and the seven found guilty by the jury have been sentenced to death.

A TERRIBLE tragedy has taken place in Yokohama. A few weeks ago two of the clerks of the Comptoir d'Escompte, W. S. Swaby

and V. Cantelli, were not at their usual posts. Suspicions were aroused, the strong-room was opened, and a considerable sum of money ($37,000) at once found to be missing. Warrants for their apprehension and for that of a man named Adds, formerly a billiardmarker at the Grand Hotel, were issued, and it soon transpired that all three had taken flight in a schooner which they had bought and provisioned. The schooner had been well-armed, and as resistance appeared at least possible, a steam-launch in charge of an officer and six men from H.M.S. *Thalia* went in chase. The schooner had only got under weigh at five o'clock in the morning, and, the wind having fallen, she lay becalmed in Kaneda Bay, not many miles from the port. As the steamer came alongside, Swaby and Cantelli went down into the cabin, reports of firearms were heard, and the former fell dead with a ball through his heart, the latter, who lingered a few hours, with one through his head. At the inquest on the body of Swaby a verdict of *felo de se* was given by the jury. The result of the process on Cantelli's body at the Italian consulate has not been announced, but it can hardly be far different. Adds is in goal, and Withers, the captain of the schooner, on bail pending the enquiry which will be made shortly into the complicity of one or both of them in the robbery. It is said that the Comptoir will recover $20,000 of the money carried off, but it is probable that their loss will be greater than it was at first estimated. The two men were in receipt of good salaries, but losses in the betting-ring and in gambling-houses were their ruin.

THE vernacular journals of Japan are engaged in a warm discussion upon the Women's Rights question, and many writers are anxious to raise the status of the wife to that of equality with the husband. The eastern custom of concubinage is undoubtedly common in the capitals and the great towns among the wealthy, but public opinion is opposed to it and is gathering force. It is probable that any fresh legislation on this subject will guarantee to the wife a firmer position than she now enjoys. At present the power of dismissal on the part of the husband, though perhaps really exercised, is unquestionable.

AN imperial edict has been published in China, ordering the discharge from the army of all men armed with gingals and bows and arrows, and the substitution of foreign drilled troops properly armed.

SIR WILLIAM JERVOISE, the new Governor of the Straits Settlements, arrived at Singapore on the 8th May, and was sworn in on the 10th.

LITERARY.

THE special correspondents of the principal London papers appointed to accompany the Prince of Wales during his tour in India are Dr. W. H. Russell for the *Times*, Mr. Forbes for the *Daily News*, Mr. Henty for the *Standard*, and Mr. Edwin Arnold for the *Daily Telegraph*.

DR. A. C. BURNELL, of the Madras Civil Service, has brought out a work, entitled "Elements of South Indian Palæography, from the Fourth to the Seventeenth Century A.D., being an Introduction to the Study of South Indian Inscriptions and MSS." This work, consisting of about 100 pages quarto of letter-press and thirty plates of alphabets and inscriptions, is likely to initiate a new era in the science of palæography, inasmuch as it places on a solid basis the history of the Indian alphabets, of the numeral figures used in India, of the various Indian eras, and many collateral questions, about which our information has hitherto been extremely vague.

IN his "Ancient History of Egyptian Monuments," just published by the Christian Knowledge Society, Dr. S. Birch points out the remarkable fact that, so early as the Fourth Dynasty—that is, about 2200 years B.C.—Egyptian art had attained perfection; the hardest materials, as the granite from Syene, having been hewn into the requisite form and in the truest proportions, while the softer and yet more beautiful alabaster had been discovered and worked. Dr. Birch seems to have little taste for speculations, hence he is very cautious with regard to monumental representations of the descent of the Jews into Egypt, which have been at once accepted by many writers; but he rightly calls attention to their remarkable resemblance to the story of Jacob, thinking that, if not referring actually to this story, they unquestionably embody one analogous to it. He further shows that there are many considerations in favour of the arrival of Joseph in Egypt during the reign of one of the Hyksos or Shepherd Kings: such as the form of the name of Potiphar; Joseph's marriage with the daughter of the high priest of Heliopolis; the omission in the Bible narrative of the names of Memphis and Thebes; the near coincidence of the 430 years of the Egyptian bondage with the monumental date of the 400 years from the Shepherd Rulers to Rameses II.; moreover, the elevation of a foreigner to the high office held by Joseph is more consonant with Egypt being at the time under the Shepherds than under a native dynasty, especially if, as is probable, these Shepherds were a Shemitic race who had entered Egypt from the north-east. We may add that Dr. Birch has given a careful and well-considered narrative of the Exodus itself, in which the most recent theory of Brugsch-Bey, though not accepted, is examined with patience and judgment.

THE well-known writer Mr. C. G. Leland has, in a recently published book on the discovery of America endeavoured to prove that the new world was first found by Chinese Boodhist priests in the fifth century. A well-known Chinese encyclopædia, entitled 'Wan hien tung kaou,' contains a number of supplementary chapters devoted to foreign countries and peoples. Many of the descriptions given are purely fabulous, others are grossly inaccurate, while some few, such as those of parts of Mongolia and Turkestan, are valuable geographical and ethnological treatises. Among these chapters, there is one in which it is stated that, in the year 499, a Boodhist priest named Hwui-shin announced that he had just arrived in China from a country which was called Fusang, from the number of trees of that name which grew in it. Fusang, he said, was 40,000 Chinese miles in an easterly direction from China; and the tree of that name he described as having leaves like the *tung*, a tree which is believed to be the *Dryandra cordata*, not, as Mr. Leland states, the *Dryanda cordifolia*, the sprouts of which resemble those of the bamboo tree, and are eaten by the inhabitants of the land. The fruit, he said, was like a pear in form, but was red. From the bark the natives prepared cloth and paper. The houses were built of planks. There were no cities in the land, and arms and war were unknown. The native carts were drawn by horses, by oxen and by stags. The deer were their domestic animals, as cows are in China, and fermented drink was prepared from their milk. Mulberry trees were found there, and a kind of red pear which could be kept all the year round, as well as grapes, abounded. There was no iron in the country, but there was copper, which, however, together with silver, was not considered valuable. The natives were originally ignorant of Boodhism, but were converted to that faith by five priests, who journeyed thither from Ki-pin (Samarcand?), in the year 458. Such are some of the principal statements he made concerning Fusang, and we should probably have heard no more about that country than we have of the kingdoms of dwarfs, or of giants, or of women contained in the same volume, had not Deguignes, lighting upon it, chosen to see in Hwui-shin's narrative a reference to an early discovery of America by the Chinese. It is difficult to understand the ground on which he founded his belief, or why his lead in this matter should have been followed by others, including Mr. Leland, who states roundly that Fusang is Mexico, and that the tree described by Hwui-shin as that from which the country derived its name is probably the "great American aloe."

TO-DAY a new Indian weekly journal, called the *Uncovenanted Service Gazette*, will appear at Madras.

THE Report of Sir D. Forsyth's Mission to Yarkund will be published immediately. It has been delayed for the completion of Captain Trotter's map.

ECCLESIASTICAL.

LIEUTENANT CONDER has forwarded to the Palestine Exploration Fund a new identification for the town and cave of Adullam. He points out that the site must satisfy certain conditions in which the caves at Khureitûn, the traditional site, and those of the Deir Dubbad both appear to fail in one point or other. Adullam was in the Shephelah: it was near Jarmuth and Socoh, between Gath and Bethlehem. It was a natural stronghold. Its site must show the usual indications of an ancient town with rock-cut tombs, good water supply, and roads. It must have at least one habitable cave; and the modern name must contain the essential letters of the Hebrew, especially the Ain. All these conditions seem to be satisfied in the site now called Ayd el Mieh, the name of which was discovered by M. Clermont Ganneau, and communicated to Lieut. Conder, who has followed up the discovery. Ayd el Mieh lies in the upper part of the wady, known first as the Wady Sur and then as the Wady Sumt (the Valley of Elah). On the western slope of this valley, halfway between Kilah and Socoh, is a place named on Murray's map after a kubbet called the Wely Mudko. The kubbet itself stands on the north edge of a range which rises 50 feet above a valley, here a mile broad. The sides of the hill are step, and cut into terraces. The kubbet is surrounded by heaps of stones and ruins of indeterminate date. The rock is scarped and quarried. There are wells and stone troughs; there are ancient tombs; and there are roads connecting the place with Hebron, Bethlehem, and Tell es Safiyeh. The name Ayd el Mieh with an Ain preserves all the essential letters of the Hebrew. As for "the cave," there is no single cavern of vast dimensions, and with winding passages, as may be found at Khureitûn, but a series of small caves, smoke-blackened and still inhabited, or used as stables. Lieut. Conder points out that the present troglodytic peasantry carefully avoid living in the large caves, as being damp and feverish as well as dark, and dreading the bats, scorpions, and flies which infest them. If this identification be accepted, Lieut. Conder argues that the adventures of David assume a consistency and clearness wanting from the old traditional sites.

ARCHDEACON GORTON of Madras, having failed to prove, to the satisfaction of the Secretary of State, that the State would benefit by allowing him an extension of service for furlough purposes, will probably retire at once.

THE Report of the Baptist Missionary Society for 1874 speaks of the "Bible-work" of the Society, the completion of the new Bengalee revision of the Scriptures, the commencement of the printing of a small-print edition, and the printing of 12,000 copies of gospels in Bengalee, and 13,000 in Hindee for the Bible Translation Society, independently of 45,000 copies of Scripture portions printed for the Calcutta Bible Society. The first version of the Gospel of Matthew in the language of the Garo hill-tribe, in Eastern Bengal, has just been printed, and the translation and printing of the other Gospels will probably follow. The translator is the Rev. T. J. Keith of Gowalpara. For the relief of the suffering caused among Baptist converts by the famine, the churches of England raised £3,584, but only £1,321 needed to be expended. "It will be the duty of the Committee to determine how best to use the balance for the benefit of the people for whose necessities the fund was formed." The reports from Ceylon "continue to exhibit steady and gratifying progress." In addition to other work special attention has been paid to Christian schools. There are 46 day-schools connected with the denomination, containing 2,509 scholars. The Report adds:—"The course pursued by our brethren finds an ample justification in the language of the revered missionary Daniel. Referring to mission schools thirty-two years ago, he wrote:—'I am persuaded that great, and what in the end will appear lasting, advantages will result from them. This is not merely a subject of hope, but has in many cases been actually realised. Several who are members of the

Churches were formerly taught in our schools, and several of our most active and useful (native) missionaries received in them the commencement of their religious knowledge.' The later experience of the Mission fully sustains the views expressed by the 'Apostle of Ceylon.'"

IN Tinnevelly and other parts of Southern India the accessions to the Christian community have often been by the adhesion of whole villages and communities rather than by the addition of individual believers. Hence the increase of numbers in the north has been slower than in the south, but perhaps it has been surer. The Rev. R. R. Meadows of Tinnevelly writes thus in a recent report :— "Among the 500 or so at and near Paneidipatti there seems to be hardly a single genuine Christian. They do not improve in knowledge. They contract heathen marriages and unscrupulously put away their wives for any, the most trifling, cause. In fact, with some exceptions, the older the congregations, the less of life there seems to be in them. It arises partly from the fact of their having come over in bodies, partly from their having been only imperfectly instructed at the beginning to send their children to school. You can imagine, when I compare the earnest heartiness of those who come over from real conviction with the coldness and inconsistency of those who have come over in bodies, that my mind revolts from receiving the one, while I joyfully and gladly welcome the others." Mr. Meadows has in his district 2,001 Christians, of whom 577 are communicants, and 2,049 unbaptized adherents, out of a population of 270,000 persons. Of the total expenses for the native agency engaged, Rs. 278 a month, the native Church contributes Rs. 100.

WE are sorry to learn that the American Baptist Missionary Society is becoming much straitened in respect of funds. Dr. Bronson of Assam writes, "While my work here in Gowhatty was never more successful, warning to retrench is constantly reaching us. Within the last four Sundays, I have had the pleasure of baptising on three Sabbaths, and others are abandoning the false religions of the country for Christianity. I can't retrench now."

COMMERCE AND FINANCE.

FRIDAY NIGHT.

SINCE our *last* report the tendency of the money market has been steadily in the direction of easier rates. Money has continued to accumulate in the Bank of Bengal, and the statement issued for the week ending 1st of June shows an increase of more than 27½ lacs in the cash balances. Of this, however, Treasury funds have contributed Rs. 10,78,000, and the Government balances now stand at Rs. 4,28,91,000, against Rs. 3,47,70,000 of cash balances. The principal changes in other items have been deposits increased by Rs. 9,44,100. Loans and credits have decreased by Rs. 9,78,735, while mercantile bills discounted exhibit an increase of Rs. 4,42,700. A reduction of 1 per cent in the rate for accommodation was announced last week, and at their meeting yesterday morning the directors of the Bank of Bengal again lowered the rate 1 per cent all round, which has reduced the minimum rate to 7 per cent per annum. As we anticipated last week, the first move towards a reduction did not materially quicken business, although an improved tone was immediately perceptible in the market. The outside influences which caused the recent tightness may now be said to have passed away, and the only remaining source of apprehension is the large amount of the Government balances in comparison with that of the public deposits; much of the present strengthened position of the Bank's resources being due to the increase of the treasury balances, which have been steadily augmented during the past few weeks. The further fall of one per cent. announced yesterday has given a stronger spurt to business generally, and the prospect of still easier rates next week, which is confidently expected has induced a feeling of confidence throughout the market.

Exchange since last week has gradually weakened: 6 months' Bank bills are now quoted at 1*s.* 10*d.*, which is a fall of 3-16 from our former quotations, and the following are closing rates on London:—

	s. *d.*
Bank bills at 6 months' sight	1-10
Do. do. at 3 months' sight	1-9¾
Do. do. on demand	1-9½

The Government paper market has shown considerable variation. 4 per cents fell to Rs. 102-6 at the close of last week, and have since advanced to Rs. 103 to 103-2, at which rate they closed last evening. This morning rates were somewhat weaker; business was reported at Rs. 102-14 to 103. Transactions in other descriptions have been very limited; we give the following as present quotations :—

4 per cents., at Rs. 102-14 to 103-2.
4½ per cent. (1872), at Rs. 103-8 to 103-12.
5½ per cent., at Rs. 109-12, nominal.

The advent of the new loan is exercising an influence and, in some quarters, it is thought that high rates will be tendered from the continent of Europe owing to the present low price of silver, which will enable tenderers to ship silver in payment should their offers be received, a mode which will place them in a position of advantage over local bidders. We may, therefore, expect present rates to hold firm, if indeed higher prices are not reached before the issue of the loan.

With regard to the share market, there is little to report beyond what we stated in our last. Prices generally have been well sustained, and the market is in a thoroughly sound condition; rates for accommodation are bringing buyers forward, but a further fall in the Bank rates is necessary before any great improvement can take place.

MILITARY ORDERS.

BARCLAY, Surgn. A., appointed to Bengal.
BAUGH, Col. F. W., to Kumaon and Gurhwal, to the 15th October.
BOMFORD, Surgn. G., appointed to Bengal.
BRIGHT, Brigadier-General R. O., to the Divisional Staff of the Army, temporarily.
BROWNE, Col. H. R., to the Brigade Staff of the Army, temporarily, with the rank of Brigadier-General.
GARTON, Major W. H., furlough for two years.
IRVING, Lieut. J. C. S., to Bombay, to the 21st November.
JAMESON, Surgn.-Major G. W., furlough for six months.
LETHBRIDGE, Surgn. A. S., furlough for two years.
MCMEMINEY, Lieut. R., ditto.
OLPHERTS, Brigadier-General W., to Bombay, to appear before a medical board.
PERKINS, Surgn.-Major R. H., furlough for two years.
ROSS, Lieut.-Col. C. C. G., to the Brigade Staff of the Army, temporarily, with rank of Brigadier-General.
SPURWAY, Lieut.-Col. J., to 31st December, in extension.
STOKER, Surgn. R. N., appointed to Bengal.
WAUCHOPE, Capt. R. A., to Simla, furlough for three months.
WOODRUFFE, Capt. C. L., furlough for 2 years.

CIVIL GAZETTE.

IMPERIAL.

ANDERSON, Mr. G. D., British Burmah, to officiate as District Superintendent of Police, 2nd Grade.
BRERETON, Surgn. S., to officiate in medical charge of the Erinpoorah Irregular Force.
DAVIDSON, Mr. B.H., to officiate as District Superintendent of Police 3rd Grade.
FFORDE, Mr. J. F. F., to officiate as District Superintendent of Police, 5th Grade, British Burmah.
GRANT, Capt. F. W., to officiate in the 1st Class, Political Department.
LOCH, Major J. L., to officiate as Deputy Commissioner of the 3rd Class, Central Provinces.
MAXWELL, Lieut. H. St. P., to officiate as Assistant Commissioner of the 2nd Grade, Assam.
PLAYFAIR, Lieut.-Col. E. M., to officiate as Deputy Commissioner of the 2nd Class, Central Provinces.
REDPATH, Mr. R., to officiate as District Superintendent of Police 4th Grade, British Burmah.
SMITH, Lieut.-Col. C. B. L., to officiate as Deputy Commissioner of the 1st Class, Central Provinces.
SMITH, Capt. C. B. E., to officiate as Political Agent of the 1st Class, Zanzibar.

BENGAL.

BANERJEE, Baboo R. N., to act as Sub-Deputy Collector, Banka.
BHADOOREE, Baboo K. C., to act as Moonsif of Amtah, Hooghly.
DUKE, Surgn. W. A., to have temporary charge of the Lock-hospital at Dum-Dum.
DUTT, Baboo B., to act as First Subordinate Judge and Small Cause Court Judge of Patna.
DUTT, Baboo J. N., to act as Moonsif of Cutwa, Burdwan.
FLYTER, Mr. J. A., to act as Sub-Deputy Opium Agent of Mozufferpore.
FUCHS, Mr. E., to have charge of the Julpigoree Forest Division.
GANGOOLY, Baboo N. C., to be Second Subordinate Judge of Burdwan and Subordinate Judge of Beerbhoom.
GHOSE, Baboo P. C., to act as Personal Assistant to the Commissioner of the Cooch Behar Division.
HOME, Mr. A. L., to have charge of the Soonderbun Forest Division.
JERMYN, Rev. E., to act as Second Chaplain of St. Paul's Cathedral and as Chaplain of the Presidency Jail.
KADIR, Moulvie A., Deputy Magistrate, posted to the sudder station of Cuttack.
KNIGHT, Mr. J. B., to be a Commissioner for making Improvements in the Port of Calcutta.
MATTHEWS, Mr. H., to act as Sub-Deputy Opium Agent of Bettiah.
MONEY, Mr. E. M., to have charge of the Seetamurhee Division of the Mozufferpore District.
NUGENT, Mr. J, Assistant Magistrate, posted temporarily to the sudder station of Shahabad.
O'REILLY, Mr. W., Deputy Magistrate, leave for six months.
PAUL, Mr. A. W., to act as an Assistant Commissioner of the 2nd Grade.
ROY, Baboo J. C., to be a Subordinate Judge and Small Cause Court Judge of the 4th Grade, Tipperah.
SANDYAL, Baboo G. C., Patna, leave for four months.
SCANLAN, Mr. A. W., to act as a Deputy Magistrate in Maldah.
WOOD, Mr. C., Quinologist, at Rungbee, to act as Professor of Chemistry and Chemical Examiner, Medical College.

MADRAS.

BURROWS, Mr. L. R., to act as President of the Municipal Commission.

FOSTER, Mr. W. S., to be Collector of the Godavery District.

MACGREGOR, Mr. A. to act as Secretary to Government in the Revenue Department.

SIMPSON, Mr. C., to be Sheriff of Madras for the current year.

SNAITH, Mr. J. F., to be Sub-Collector of the District of Bellary.

THOMAS, Mr. H. S., to be Collector of Kurnoor, but to continue to act as Collector of Tanjore.

WEBSTER, Mr. A. McC., to be Collector of South Canara.

NORTH-WESTERN PROVINCES.

BARRY, Mr. W. R., to be a Justice of the Peace.

BLUNT, Mr. H., Furruckabad, three months' leave.

CAMPBELL, Mr. D. D. M., Assistant Magistrate, Allahabad, two months' leave.

HILL, Mr. S. A., to be Professor of Physical Science, Muir Central College,

JAMES, Mr. S. H., to be Junior Secretary to the Board of Revenue.

MATTHEWS, Major C. R., Cantonment Magistrate, 2nd class, from Meerut to Bareilly.

PLOWDEN, Major G. W. C., Officiating Cantonment Magistrate, 1st class, from Bareilly to Meerut.

POCOCK, Mr. R. J. M., District Superintendent of Police, from Humeerpoor to Benares.

SMITH, Mr. V. A., Assistant Settlement Officer, Humeerpoor, three months' leave.

SMYTH, Mr. G. C., to officiate as District Superintendent of Police Humeerpoor.

STUART, Hon'ble Sir R., Chief Justice of the High Court of Judicature, leave for three months.

TUCKER, Mr. W. R., to be a Magistrate of the 1st class.

TURNER, Hon'ble Mr. C. A., to officiate as Chief Justice during the absence of the Hon'ble Sir Robert Stuart.

TWIGG, Mr. J. H., Joint Magistrate, from Shahjehanpore to Meerut.

PUNJAB.

BROADWAY, Mr. P., District Superintendent of Police, Jhung, leave for ninety-two days.

BROWNE, Mr. A. G. St. B., to officiate as District Superintendent of Police, Jhung.

HUTCHINSON, J. B., Assistant Commissioner, from Lahore to the Jhelum district.

MONTGOMERY, Lieut. J. A. L., to officiate as Settlement Officer, Bunnoo.

THORBURN, Mr. S. S., Settlement Officer, Bunnoo, leave for ninety-two days.

LATEST TELEGRAPHIC NEWS.

31ST MAY.

London, 29th May.

THE following appointments are gazetted. The Prince of Wales, Sir J. F. Fitzgerald, and the Marquis of Tweeddale to be Field Marshals. Generals Sir Thomas Reed, Lord Rokeby, Sir John Gough, Lieutenant-Generals Van Straubenzee, A Spencer, Charles Stuart, Sir John Garvock, Sir N. B. Chamberlain, Sir Alfred Horsford, to be Knights Grand Cross of the Bath. Lieutenant-Generals Burke, Cuppage, George Cadogan, Sir Francis Seymour, W. O. Haly, Major-Generals E. A. Holdich, E. L. E. Captain Boyton, on his recent successful trip across the Channel, started from Cape Grisnez, reaching Dover in 24 hours, only slightly distressed.

The Miners' strike in South Wales has terminated. The men have accepted a deduction of wages of 12½ per cent.

1ST JUNE.

Berlin, 31st May.

THE King and Queen of Sweden are visiting Berlin and have received a cordial reception.

Washington, 30th May.

PRESIDENT GRANT has issued a decree declining to accept his re-nomination to the Presidentship.

2ND.

London, 1st June.

IT is stated in the *Army and Navy Gazette* that Sir John Michell succeeds Lord Lyndhurst as Commander-in-Chief of the forces in Ireland.

The Playmouth and Aberdare Iron Companies have suspended payment, thereby involving large firms of discount brokers and causing other minor failures.

In the House of Lords last night, Lord Derby replying to Earl Russell, stated that the German Government recently declared that Germany might be forced to strike the first blow in consequence of the increase in the French armaments, but that the threatened danger had been averted by the intervention of England and Russia. A debate ensued on our present recruiting system. The Duke of Cambridge replying to Lord Hardinge and to previous criticisms by Lord Elcho, said that the quality of our recruits was satisfactory. In the House of Commons the resolution proposed by the Marquis of Hartington, on the subject of expulsion of strangers, was negatived; Mr. Disraeli's amendment was adopted. It is to the effect that if at any sitting of the House any member shall notice that strangers are present, the Speaker shall forthwith put the question that strangers be ordered to withdraw without any debate or amendment.

LIFE DEPARTMENT.

The Life Funds are free from any liability to the Fire Department by the Company's Acts 33 and 34 Victoria. Session 1869-70,

Accumulated Funds irrespective of the Paid-up Capital £2,551,589-16-7

Annual Revenue from Premiums and Interest 360,625-18-9

At the last Quinquennial Investigation and Division of Profits for the period ending 31st December 1870, the Surplus Fund divided amounted to £182,274 5 2

The value of the loading reserved for Future Profits and Expenses amounted to £601,554 0 0
Besides which there were reserved for Contingencies, &c. .. 33,925 6 2

Making a Total Reserve of £635,479 6 2

During the five years preceding 1870, the Company transacted the following new business:—

No. of Policies Issued.	Sums Assured.	Premiums.
£4,567.	£4,132,141.	£133,279 16 5.

A Bonus was declared upon the Policies of the Company on the Participating Scale, at the rate of £1 5s. per cent. per annum, which in many instances was equal to £1 19s. per cent. per annum, on the original sum assured, the principle of division being to declare the Bonus not only on the original sum assured, but also on all previous Bonus additions.

THE RATES OF PREMIUM are moderate and generally LOWER than those of other Offices.

REDUCTION TO ENGLISH RATES without Medical Certificate or fresh examination, *from the date of leaving Alexandria, or Port Said for Europe.*

NINE-TENTHS OF THE WHOLE PROFITS in the Life Business are divided amongst the assured in the Participating Scale every FIVE YEARS.

THE NEXT DIVISION OF PROFITS WILL BE MADE AT 31ST DECEMBER 1875.

All Policies on the Participating Scale opened on or before that date, will share in the Fund then to be divided, which will consist of the Profits made during the previous Five Years.

The following Gentlemen have been appointed, with all the usual powers, as

Local Board of Directors:

F. S. Collis, Esq., Officiating Administrator-General.
Capt. H. P. Lovell, Supdt., P. & O. S. N. Co.
